FOR SALE.—THE FOLLOWING PUPPIES, whelped in 1888, by Count Noble ex Lavalette, Roderigo ex Lavalette, Bob Gates ex Belle of Stanton, Cassio ex Allie James. For particulars address RANCOCAS & GLOSTER KENNELS, Warwick, Orange Co., N. Y. mch14,3t

BULLDOGS.

Champion Merry Monarch (7348) winner of 22 prizes. Imported Portswood Tiger (12,490), winner of 20 prizes in England and America, including 11 firsts and 8 specials. Harlequin (11,564), winner of 3d, puppy class, New York and Troy. For full account of above, with prices, pedigree, etc., address R. B. SAWYER, Birmingham, Conn.

DO YOU OWN A GORDON SETTER OF imported stock with full pedigree back to the Duke of Gordon's Kennels? Write for full particulars just how to secure a young breeder with this blood to GORDON, 11 Eliot st., Boston, Mass. mch14,4t.

SALE, TRAINING AND BOARDING KENnel of sporting dogs. D. F. WILBUR, P. O. Box 241, Middleboro, Mass. feb7,tf

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B. RICHMOND, Lakeville Mass. sept22,tf

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, APRIL 4, 1889.

VOL. XXXII.—No. 11. No 318 BROADWAY, NEW YORK.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE NATIONAL ZOOLOGICAL PARK.

AS the Commission created by the act of Congress establishing the zoölogical park approach the task of selecting the most desirable site, and securing it at a reasonable price, they find that it is by no means an easy one. Already there are marked indications that the various owners of the ground which constitutes the site proposed by Senator Beck and Professor Langley are determined to force prices up to the highest possible figure, regardless of the real value of the land or the interests of the public. It is true that Congress authorizes and directs that condemnation proceedings be had in case it should prove impossible to purchase the necessary land at private sale; but even by that method property owners generally manage to obtain a verdict of values much higher than the market value of the property.

Fortunately, however, the Commissioners have a wide area to select from, and there are at least three fine sites available. It is greatly to be desired, however, that the site nearest the city shall be obtained, if it be possible. Professor Langley has expressed an earnest desire to provide a park which shall be not only a great educational institution, but also a poor man's pleasure ground; and for both these reasons he is anxious that it shall be located as near the city as possible.

We understand that the appropriation will not become available until July 1, and it is likely that several months will unavoidably be consumed in selecting and acquiring the site. It will, therefore, hardly be possible that the collection of living animals now at the National Museum can be moved until late next autumn.

It is well understood that the first care of those who will have charge of the Zoölogical Park, and to whom the park is indebted for its existence, will be to bring together an unrivalled series of North American quadrupeds, which shall include nearly, if not quite, all the forms threatened with speedy extermination.

It is a fortunate thing for the public that Professor Langley takes such a deep and active interest in the preservation of living representatives of our characteristic fauna; and in the struggle that is about to come between certain property owners and the representatives of the people we have reason to believe that the interests of the Government are quite safe in the hands of the officers appointed to guard them.

OUR TROUT SUPPLEMENT.

THE wealth of American trout waters has, perhaps, never before been shown in such a graphic and comprehensive manner as in our "Salmon and Trout Supplement" to-day. Everybody knows in a general way that there are several species of trout on this continent, but we venture to say that to most persons—even to those so well informed as are the regular readers of our angling department—the display here made of so many and so beautiful species, will be a surprise and gratification. Here is abundant opportunity for a comparison of the symmetrical forms of the several species and a fair study of their distinguishing markings. Of the thirty illustrations which we promised last week, four have been of necessity deferred; they will be given later.

If we are to estimate by the degree of attention given to it by the press, the opening day for trout is commanding an annually increased share of public attention. The first of April was a wet, disagreeable day in this vicinity, but scores of anglers went out to the Long Island streams, and the reports are of very handsomely rewarded fishing. The credit of high-hook on the Island waters was won by a New Yorker with a 3½lbs. trout, taken at Eastport.

Commissioner Blackford made his usual "trout opening" display of fish from many quarters. There were speckled trout from Long Island ponds, Cape Cod, Rhode Island, Canada and North Carolina; brown trout, a number of hybrids and a veteran salmon trout eighteen years old, from the Caledonia Hatchery.

ADIRONDACK PRESERVES.

WE published last week a letter from the Pacific coast relating the opposition aroused by the game clubs which have taken up shooting privileges on so much of the marsh land in the vicinity of San Francisco. The feeling there between club members and the public is perhaps stronger than anywhere else; but in many different localities the same impatience of preservers and their methods is increasing.

We have received a circular petition, which is said to have been already extensively signed, praying the New York Legislature to repeal that section of the game laws which gives lessees authority to set apart certain tracts of land and water as private parks.

The framers of the petition set forth that thousands upon thousands of acres of land and water, entire township sections, have been taken up as game preserves, where one may travel for miles without license to shoot a gun or cast a fly. Say they: "We believe the Great Architect created this wilderness, with its towering mountains, silvery lakes and ponds, and dense forests, in high altitude, especially for his own glorification and the admiration of a world. That all mankind who could, and so desired, might come, enjoy and admire them; climb to the highest mountain crest; penetrate the deep, shadowy valleys; glide in his boat over and upon the waters. We protest against having any of these privileges denied to any person. We claim that every person has a common law right to visit this great Natural Park; this dense silent forest; this exceptional combination of mountains, lakes, ponds and rivers; to float his boat upon its waters and enjoy the fly and rod in lifting the shining beauties from their retreats; to pursue in the chase the deer and game in the wilds of the forest, and to enjoy the wilderness as seemeth most pleasant to himself, excepting only under the reasonable restrictions which the Legislature may pass for the preservation of wild game and fish."

They decline to accept the validity of the law, whose repeal is sought, which makes game and fish in these preserves private property. This section is one which confers by statute property rights not enjoyed under the common law.

The situation of affairs in the Adirondacks is one naturally growing out of the lax and loose morals of that part of the State with respect to game and its protection. Lessees of shooting and fishing territory have been forced into adopting such a mode of protecting themselves.

Where public sentiment approves of fish and game slaughter everywhere and at all times possible, the individual has no defence save that afforded by such a private game park law. If the public in a given locality be not restrained, either by its own right feeling or by the game officers, there will soon be no game nor fish left. In such a condition of things individual enterprise must protect and defend against the public. Were the conscience of the community sufficiently powerful to save the game, there would be enough for all reasonable demands, and individuals would not go to the expense and trouble of establishing and policing their own preserves. Doubtless in some cases by their harsh and overbearing conduct certain Adirondack clubs have worked hardship to the public; but it is more than probable that the preserve system in the North Woods has not yet been developed to a point where its restriction should be made a subject of legislative enactment.

INDIAN MARAUDERS.

A SERIOUS danger menaces the game and the forests of a portion of the Yellowstone National Park. This danger arises from the invasion of the country to the south and west of the reservation by Indian hunting parties, principally Bannocks and Shoshones from the agencies at Fort Hall, Lemki and Washaki.

These Indians leave their reservation and proceed toward the borders of the Park, where they destroy great numbers of elk, drying the meat for winter use, and carrying it and the hides to their home. A far more serious injury than the destruction of game which thus takes place, is caused by the forest fires which these Indians kindle to drive the game from one place to another, or to prevent it from going in certain directions. In this way thousands of acres of living forest are frequently burned over, and an amount of harm is done that the growth of a quarter of a century cannot repair.

Captain Harris has known of this state of things for years, and has done everything in his power to keep the Indians away from the Park. He has repeatedly notified the Interior Department of these depredations, but the agents in charge of these Indians have met his remonstrances with denials of facts which are perfectly well known to all travelers in the southern portion of the Park.

The destruction of the deer and elk killed by these Indians is in itself a serious matter, but it does not compare in importance with the damage done by the forest fires. The deer and elk, so long as these species are protected in the Park, will soon replace themselves; but a dry time or a favorable wind may result in the destruction of the green timber over enormous areas of the national pleasure ground.

This matter certainly should receive prompt attention at Washington, and we purpose shortly to furnish some facts connected with this topic which will be interesting reading to those who have visited or may contemplate visiting the Park. The abuses of past years should not be repeated during the coming summer, and the remedy is in the hands of the department having the Park in charge.

C. P. KUNHARDT.

THREE weeks had elapsed yesterday since Mr. Kunhardt sailed from this port in the steamship Conserva, bound for Samana, San Domingo; and ten days since word was brought of a wreck believed to have been that of the Conserva. No ground is left for continued belief in the safety of the vessel and her crew, save only that lingering hope in the heart of a friend, which refuses to be quenched so long as mere conjecture of disaster is not supplanted by positive intelligence of the vessel's fate. It is with such a feeling that these notes are written, not as a formal obituary, but to afford those particulars of Mr. Kunhardt's life and connection with the FOREST AND STREAM, which are looked for by the readers of a journal with which he was for years so closely identified.

Charles P. Kunhardt was born on Staten Island, New York, some forty years ago. His father, Geo. E. Kunhardt, was the head of the large shipping house of Kunhardt & Co. The family home was a large stone house, still standing, which occupied a commanding position, overlooking the water; and here young Kunhardt gave early manifestation of those tastes for which in after life he was to become noted. As a child his chief delight was to watch for hours the harbor craft; and his precocity in acquiring a knowledge of the distinctive rigs of the shipping excited the wonder of his family; he called all the home craft by name, and knew ships before he knew people. It was the most natural thing in the world that he should take to the sea, and in 1866 he was appointed midshipman in the Naval Academy at Annapolis. Graduating in 1870, eighteenth in a very large class, he

served on board the Wyoming, the Guard and the Nipsic (one of the ill-fated men-of-war which foundered in the harbor of Apia, March 15, possibly the same day the Conserva met her fate). While stationed at Panama in 1873 he contracted the coast fever and resigned from the service. Then as a naval architect he built two gunboats for the Haytian government, and took them down and delivered them. Several years were spent abroad; and then in 1878 he joined the staff of the FOREST AND STREAM as editor of its yachting department, a position which he held until 1884.

Always a most enthusiastic lover of yachting, Mr. Kunhardt had been known for some time as an able contributor to various yachting publications when he assumed the direction of the yachting department of the FOREST AND STREAM, which position he held for six years, resigning it finally to try a new venture. His powerful pen had already been wielded freely in denunciation of the faulty and dangerous craft then in general use, and in praise of safer and abler yachts; and through his efforts and those of a few other enthusiasts the merits of the cutter type, then entirely unknown in America, had been brought to the notice of yachtsmen. Already the first modern cutter had been begun at New York, and when in July, 1878, he took command of the few columns of the FOREST AND STREAM then devoted to yachting the alleged merits and defects of the new boats were being generally discussed. The writers of the day, in both the daily and weekly press, were unanimous in praise of the existing craft, the Gracie, Fanny, Coming, and their fellows, and loud in their condemnation of the cutter. With them were arrayed the great body of American yachtsmen as well as the general public. Against all these Kunhardt took his stand firmly in favor of deeper yachts, better and lower ballast, seamanlike rigs and more extended and venturesome cruising. The story of the sturdy fight that he made is too well known to need re-telling; how for six years he kept on fearlessly against all odds, and how in the end he saw the utter defeat of his opponents.

It is too soon yet to estimate the value of the work he has done for American yachting, his sharp and trenchant pen made some enemies, the truths he told were unpalatable, and time alone can bring a true recognition of the pioneer work he did, not alone for the yachts themselves, but for the literature of yachting. That he was extreme in his views, and vigorous and uncompromising in his methods, must be admitted, but he was a reformer, moved to his self-appointed work by a sense of many existing evils, and his justification lies in the fact that he succeeded where most others would have failed. The fruit of his labors is seen and recognized to-day in the presence of a fleet of magnificent new yachts and the utter disappearance of the once popular national type.

It is an easy matter to look back now and criticise his errors, and to see where a little different course might have brought home to him the full fruits of his victory; but so it is with all reformers, social, religious or political. The first and hardest of the work is done by the fighters, the men of thought and action; only by their sledge-hammer blows are errors overthrown and the truth made plain, and no one can blame them if, after long and hard fighting, they fail to see at once when the point has been reached at which more may be accomplished by milder methods. This much can be truly said of Mr. Kunhardt; he was thoroughly honest, earnest and disinterested in his work; he took it up solely of his own will, looking for no material reward and knowing full well the abuse and opposition he must inevitably encounter, and he carried it to a successful termination. Whatever fame may be in store for him when the events of to-day have become the history of yesterday, he has left a firm and indelible mark upon American yachting.

In addition to his work on the paper, Mr. Kunhardt found time to prepare for the press an elaborate and indeed monumental work on "Small Yachts," and this was supplemented by another volume on "Steam Yachts and Launches."

The years of his editorial work were, moreover, by no means devoid of incident, for they were interrupted by several excursions, in the course of which he developed a mica mine in Georgia, sunk a shaft for gold in Leadville, and was driven back from an enterprise in the gold fields of Honduras only by his old enemy, the coast fever; here more nearly dead than alive, picked up by a friendly schooner captain, he crawled into a bunk, and lay for days and weeks between life and death, finally reaching New Orleans, and then finding his way back to his old post in the FOREST AND STREAM office.

In 1886 he made a cruise in a catboat from New York to Beaufort, S. C. The spectacle of this sturdy champion of deep keel cutters going to sea in a catboat was naturally one at which there was much amusement, but Kunhardt justified himself by the plea, which was quite true, that under the circumstances it was a catboat or nothing, and he took the catboat. The "Cruise of the Coot," published in our yachting columns, excited wide interest, for Kunhardt had a wonderfully graphic pen; he could see the picturesque and paint it so clearly in his nervous, terse, compact style, that others saw it vividly, too.

Last autumn, when our correspondent "Coahoma," Major T. G. Dabney, a chief engineer in charge of one of the Mississippi levee districts, was here, he called for the skipper of the Coot, and a new cruise was planned, on the lower Mississippi, whose novel phases of life and nature were to afford Mr. Kunhardt abundant material for a series of descriptive papers for this journal. But before the date set for his departure on this expedition, he announced that he had undertaken to provide a war-ship for one of the West Indian governments. The rest is told in a few words. Mr. Kunhardt bought the iron steamship Madrid, made her over into a gunboat, and rechristened her the Conserva. Upon her return from her trial trip the ship was libeled by the Haytian Minister, who represented that she was destined for the service of the insurgent Hippolyte. The Dominican Consul, however, claimed to be her owner, and she was finally released from the libel and immediately put to sea, on Wednesday, March 13, bound for Samana. Monday, March 25, the steamship Colorado reported the finding of a raft with two dead seamen, and a great quantity of wreckage, off Cape Charles. Many circumstances strongly pointed to the wreck as that of the Conserva. The next day, March 26, a pilot boat reported at Philadelphia that she had picked up one of the Conserva's lifeboats, off Wenwick's Island; and then came word from a New York pilot boat of the finding of another of the Conserva's boats. It is now generally conceded that the Conserva has gone to the bottom; and the large amount of wreckage passed through by steamships from the South indicates that more than one vessel was concerned in the disaster, and that there was a collision.

Mr. Kunhardt was unmarried. One brother is a captain in the Royal Artillery of England, and another one he expected to meet on his arrival at Samana. He was a man who held a very warm place in the affections of those who knew him well. His life of adventure had taught him a practical philosophy; and if it was his fate to have gone down with the Conserva, perhaps such an end—were it given to men to choose—is that which would have been chosen by one who loved the sea as he did.

The Sportsman Tourist.

"Sam Lovel's Camps." By R. E. Robinson. Price $1.

MEXICAN NOTES.

YOUR correspondent has added a brief chapter or two to the first experience in this country, which he detailed last December. As your wideawake Chicago representative has found out—few things they don't discover about that town—Mexico has ducks in winter. One Illinois sportsman found plenty on an overland trip to this country, and others found the coast of the Gulf from Galveston south to the line well stocked. If these gentlemen had made their way southward some distance along the coast of Mexico they would have found that the ducks had left their wariness behind them, and in the security of this sleepy land become fat and lazy. The fact is this is the winter quarters of the ducks. That great flight which every fall runs the gauntlet of sportsmen and pot-hunters from Illinois to Mississippi, from Dakota to Texas, passes the winter months in the latitude of the Gulf of Mexico. The rainy season on the Mexican plateau ends about October, leaving ponds, lakes, lagunas and marshes with abundant water and vegetation to welcome the dusky emigrants from the frozen North. Mexico, as a country, is singularly deficient in rivers, but the "elevated plateau," about which we learned in our school geographies, from the very fact that it is defective as a water-shed is an excellent place for lakes. In fact the great Laguna section in the States of Chihuahua, Durango and Coahuila, of which mention was made by Mr. Hough lately, and which, now celebrated as an agricultural region, is destined to be also as a resort for wildfowl, is a great basin, some 4,000ft. above sea level, which has no outlet to either ocean. It has no central body of water of any consequence, its rainfall and the water of the several rivers, one of them, the Nazas, of considerable size, being distributed over the gentle slope of the basin for artificial irrigation. At the end of the rainy season, and more or less all winter, there is much overflowed land, which absolutely teems with waterfowl of every variety.

Speaking of irrigation reminds me of another important characteristic of this central plateau. The scarcity of running streams and their tendency to dry up makes a demand for artificial ponds and lakes. These *presar* of varying size and character are found everywhere and are of no small importance to the ducks.

In these ponds and lakes, artificial and natural, as well as in the rivers and marshes to be found occasionally, the ducks that prefer fresh water pass a jolly winter, while others that like salt or brackish water fare equally well along the bays and creeks of the great Gulf. Breechloaders and that wild desire to "kill a duck," so sympathetically treated in your editorial of Feb. 21, have scarcely invaded this retreat as yet, and while this is so I think that in spite of the bad season of the Middle States, the duck supply is far from exhausted. The dry season here is exceedingly dry, and many of these resorts fail before it is over, but they hold out fairly well till spring—which begins to come in January—sends the ducks away and away in search of a nesting place.

There is another section of the country, which is in winter always well supplied with ducks, and which is somewhat better known than the Laguna district. This is the neighborhood of Acambaro, State of Michoacan. It is a region of lakes with some rivers and marshes. It is only eight or ten hours by rail from the City of Mexico. This city being headquarters for foreigners here, contains a good many hunters, who have made the Acambaro region something of a resort. I have a friend traveling in that section now, who is an enthusiastic hunter and is engaged to get all the "pints." This part of the country is reached by the Mexican National Railroad, the narrow gauge short line for the United States, and is about six days from New York. The Laguna district may be reached by the Mexican International, via Eagle Pass, Texas, or by the Mexican Central, via El Paso, in about the same time.

Supposing that some reader of this may become interested and contemplate a trip to this picturesque, romantic and unique hunting ground, I ought perhaps to speak of some other matters. There are some difficulties to be overcome, though the balmy air and the lack of competition prevent one's having to "tumble out of bed at midnight, row out to a point, lie down in a blanket and sleep till morning to hold the ground," etc. The first to be encountered are the Custom House and the fact that people down this way don't speak "United States." There would be no trouble about the first if it were not for the fact that decent ammunition and camping supplies cannot be found in this country except in the large cities, and then at prices that make your hair stand on end. A gun and two pistols, with 100 rounds of cartridges for each, pass free. After that, on ammunition and camp kit, *quien sabe* how much will have to be paid or how abjectly the traveler will have to supplicate the privilege of paying it. If it were just pay and go, it would not be so bad, for the Mexican Government needs the money. But talk about red tape! There are just miles of it about their Custom House. On the document by which I shipped a few household goods, there were, first and last, some twenty-five signatures of different persons, and stamping to the nominal value of $12.50. It looked like the settlement of an hacienda or mine running back to the time of Ferdinand and Isabella. The only conceivable object of all this foolishness is to keep the officers from stealing the money. But in spite of all this I would say: Don't depend on getting anything here. Bring what you need. Arrange to stop a day or two on the border and get the help of a customs agent. Then whatever you can't get through you can leave. This climate is usually mild, and a heavy camping kit is not needed. A boy, Mexican or American, could probably be picked up at Laredo, Eagle Pass or El Paso at a small cost.

But I had better stop this. I will add, however, that I have not the slightest interest financial or otherwise in the coming of any one to this country. I only write from the natural prompting of a hunter to tell "the other fellows." Other information could be obtained doubtless from the officials of the three railroads. I do not know much of the others but I can by experience vouch for those of the Central as manly and obliging beyond the ordinary. My stock of information, limited but increasing, is at the service of any one interested.

Now wasn't that duck supplement "some?" I took great comfort in the fact that it was No. 1. That means that No. 2 is in prospect. I'm ready. Seems to me FOREST AND STREAM improves all the time anyhow. I never read a journal in which could be found a freer or prompter interchange of opinion on topics of common interest. Two things are a source of constant amusement to me, the hearty good-fellowship of the correspondents—except sometimes in "The Kennel," where naturally there will be some growling and snarling—and the promptness and energy with which, from Maine to California, they pounce upon any heresy either in sportsmanship or natural history which some incautious soul may advance.

Since I made my wail about my lonesomeness here, a friend and former acquaintance has come to live in this city, who adds to a thorough familiarity with the language and people, gained in six years residence and travel in the republic, a love of the gun and field as ardent as my own. Already we have measured swords—or guns, if you prefer—and are laying deep plots for the future. Undoubtedly in the mountains here are bear, deer, turkey, lynx, etc. When I get a chance at them I shall probably be as heavily loaded with a turkey story as the Chicago man who had been to the Indian Territory. By the way, I asked about that Del Rio section, bought up by certain Philadelphia sportsmen, and some who know say it is or was a very paradise for turkeys. I want to express my satisfaction and pleasure in reading the article on the dusky grouse, a bird that titillated my bump of curiosity not a little in the West, but which I never had an opportunity of studying thoroughly.

AZTEC.

SAN LUIS POTOSI, Mexico, Feb. 28.

THE FLYING PEGGY.

EAST SAGINAW, Mich., March 28.—*Editor Forest and Stream:* Your draft at one day's sight for ten lines on account of *Salmo fontinalis* per *Salvelinus*, came to hand yesterday. I make it a point never to dishonor a demand of this kind, but do not believe I can condense anything into ten lines that will be of much interest to the readers of the FOREST AND STREAM; but as *fontinalis* is to be the theme, and the days are at hand when we will enjoy yanking him forth (or fifth) from his cool lurking place underneath the sunken log or from behind a moss-grown rock, perhaps it will not come amiss if I relate our trip taken at the first of the season last year. The Saginaw Crowd (and I have written of their pilgrimages before) are part of them devoted anglers as well as shooters, so it is customary for half a dozen of us to make arrangements with the superintendent of the railroad here, Sanford Keeler, who, by the way, is one of the largest-hearted and best-natured sportsmen in the world, for his special car No. 43. This is a combination of passenger coach and locomotive, and will carry six passengers. It has but two driving-wheels, and the cab is lengthened about 12ft. A partition runs across separating the engineer and fireman from the rear compartment; and in this cosy little room are nicely upholstered chairs that will accommodate our little party. The boys have christened her the "Flying Peggy," and she will run like a streak of lightning. For weeks before May 1 appears friend Brooks, or old "Section 37," has stirred the gang into life, and is talking of the beauties of Kinney Creek and the Sweetwater, until we imagine we are pulling them out by dozens. Scarcely can we wait for the opening of the season, but it comes at last, and the time of which I write the party is composed of Brooks, Ed, the city official, and two outsiders, Sandy and Mac, including of course the scribe. Sandy is the buyer for one of the largest hardware institutions in the State, not much of a sportsman, but does enjoy a good time. He weighs in the neighborhood of 300lbs., and is as good natured as he is fat. Mac is a Scotchman, as his name of course implies, and this happened to be his first fishing expedition since he had left Auld Scotia. With a borrowed rod and a business suit and a pair of rubbers, he imagined he was going to find the same kind of fishing he was familiar with at home.

We meet at the depot at 11 o'clock at night, some of us having been to the theater before, others having a friendly game of "pede" at Gene's. The luggage is stored aboard the Peggy, not forgetting the ground coffee, coffee pot and oil stove for boiling it. All aboard, the whistle screeches for the drawbridge, and away we shoot into the darkness west on the F. & P. M. road, bound for Kinney Creek, ninety miles west of us. Three or four small streams are crossed by this railroad within a few miles of each other, and, as they have been stocked from time to time by the railroad officials, they afford rare sport to the angler for a few days, or until the poacher and pot-hunter have gotten in to deplete them, The Peggy speeds along into the darkness; the cards are gotten out and a four-handed game is soon in progress. It is not long before Brooks has all the gun wads, and some of the party begin to yawn sleepily. We buy back all our gun wads that are in Brooks's possession, fold up the table and prepare to turn in, but not for much of a sleep, as it lacks but an hour or two of daylight and the Peggy is not very good as a sleeping apartment. We curl up on the chairs, and some of us sleep and some don't. We rattle through Reed City, across the Grand Rapids & Indiana road, and ere long the whistle sounds for Stearns's Siding, and just as the east is beginning to turn gray the jolting of the car ceases and one by one the anglers awaken. Brooks gets out the coffee pot, some one else starts up the oil stove, and we soon have a hot breakfast. The tackle is put together and two of the boys are left to fish the Sweetwater, and the Peggy runs back a mile or two to Kinney Creek. The cold water is a mass of white foam where it passes beneath the roadbed through a stone culvert, and goes singing away among the dark shades of the hemlocks and cedars.

Already one or two of the natives are seen sneaking in ahead of us down stream, but we know so well the twists and crooks of these little brooks (for they are no more than 10 or 12yds. wide in some places, in other places not half that width) that we easily take a short cut and cut them off and begin the day's sport. A peculiar feature of these waters is the large size to which the trout seem to have grown; something about the food I imagine, causes the rapid growth, for frequently trout 3 or 3½lbs. in weight are taken from little holes where one would naturally expect a fingerling. Sandy had not fished long before he had succeeded in entangling his

line in an overhanging bough and while peering upward to see what held it there, he was not particularly cautious where he put his foot on the side of a slippery log. Souse, in he goes, and the boys down stream notice the water suddenly rise, attributing it to a cloud-burst, but instead it is poor Sandy. This was enough for him and he immediately went back to the car and passed the remainder of the day in solitude, with the exception of the company of his wet clothing, which we found frescoed around the boiler when we came in later. I shall not attempt to tell the number of fish we caught, what size they were or anything about it, but will only say this, that we had enough to divide up among our friends and give them all a good square meal the next morning at breakfast.

As near as I can remember it, I will give you in Mac's own words his description of his day's sport. He said: "I put my rod together, as you boys very well know, and started out. I thought it was a deucedly mean sort of stream on the go in, but made up my mind that I would follow it down a bit and would soon come to an opening where a man could stand up and cast a line; but I kept dodging in and out, the cedar trees yanking my hat off here and scratching my face there, and falling down and picking myself up, until I overtook Ed. I asked him where the fishing was, and he said if I wanted to get any I must go to work there. I was a bit discouraged, but made the attempt, and the first thing I knew had my line fast in a tree and could not disengage it without climbing the tree. This was in part of a cedar swamp where it was boggy; so I shinned up the tree and had gotten my line and tackle straightened out once more when the limb I was hanging on to broke and down I came with a slide and stuck my head in the soft moss and mud, driving my hat clear down over my eyes: got up and rubbed my shins and cussed, and said this was not much like old Scotland, where a man could go fishing with a high hat and frock coat and gaiters and not get a speck of dirt on him nor his stockings wet in a day's tramp. There you go through a meadow, here you have to dodge through a bramble. After repeating this experience once or twice I concluded I had had enough of it, and put my rod together. Just then I met one of the natives with a lot of big trout on a string. He laughed at me for being discouraged so soon, and I put my rod together once more, but I did not have a rise. Occasionally I would see a trout scurrying away ahead of me through the water to get out of sight, as if it were frightened to death about something. After I had taken my rod apart and put it together at least four times, I gave it up as a bad job, and here I am."

And there he was certainly, and a fine looking object. Smeared with soot from burnt logs, a great long scratch across his nose from a blackberry brier, the brim of his hat mashed in and a long rent in his pantaloons told the story of his day's pleasure as graphically as his woe-begone expression did. Ever since, when the subject of trout fishing has been mentioned to Mac, he gravely shakes his head and says he had had enough of it.

The whistle is tooted for the laggards. The early ones in have a hot supper ready for them by the time they come tired, hungry and happy. Soon we are stowed away on the Peggy; and away we go as the sun is sinking in its regular old chestnutty way "behind the western hills." No cards to-night. We are too tired to do anything but smoke, loaf and lie—every fisherman is entitled to prevaricate about the size of the big fellows that got away. On we speed, and are lucky in not getting side-tracked by long trains. Part of the run is made at the rate of a mile a minute, so we are home in the shank of the evening. W. B. MERSHON.

Natural History.

FIVE DAYS A SAVAGE.—III.

NOTES OF A HUNTER-NATURALIST IN THE NORTHWEST.

GULF OF GEORGIA, British Columbia.—The morning of the third day, as the first far faint blush of dawn streams up the moonlit sky, I wake, and lo, I am not alone. The tide glides by as it did the night before, and on its breast stealing quietly down upon me in his black canoe, his paddle scarcely making a ripple in the dark water, comes a lone Indian. I watch him quietly for a moment, and seeing that he is evidently moving on my position, I raise my head. In an instant with a stroke of his paddle he has changed his course, and gliding round the point rapidly disappears from view. By the shape of his canoe and his appearance I judge him to be a northern Indian, and his object probably was plunder. These savages will steal the clothes off a man's back. I am sure neither he nor his fellows will get a chance to steal from me.

At once I bundle my things into my boat, and taking my gun again, cruise along the shore, killing a few sandpipers. While going after these birds the boat gets aground on a flat, as the tide is going out fast. My stomach now begins to call for food. I dig a few clams and then reflect. I have heard the Indians say that mussels are good eating. Well, why not try them? On the under side of the rocks at low tide I now find plenty of large mussels washed clean by the waves. Having previously built a fire of driftwood, I scoop off the mussels from the rocks in layers with my sharp stick, and laying them back downward on the coals, they soon open, and I can take them out with a knife either well or rare done, as I wish.

I begin now to have great respect for the Siwash and his dishes. The mussels are very nice indeed, and in fact so much better than the clams that the clams are thrown away. So I breakfast on bay snipe, sweet crabs and edible mussels. After breakfast, as my boat is still fast, I take a short stroll along the bluffs. These bluffs on Waldron are from 50 to 100ft. high, and seem to be composed of hard clay. But in places up near the top there are many shells imbedded, which were raised with the island from the bottom of the sea. Along the bluff I found the rough-winged swallow breeding, but could hardly reach their nests alone. However, I secured two specimens of the bird. Here also I found the rufus-backed hummingbird (*Selasphorus rufus*) flitting from flower to flower. Once a pair of bald eagles came out above me over the cliff, swinging and circling. I pulled out one of my small-shot cartridges and hastily inserting a charge of buckshot, shot at one of them at perhaps 150yds. from where I stood, and almost over my head. I plainly heard the shot strike it, and saw the feathers rise from its back as the great shot tore up through its vitals. A luck shot! But after falling some distance it stiffened its wings and managed to sail downward into the great timber that covered the island. Although I knew it must be a dead bird, I did not care to risk my boat and taking the time necessary to go around the big bluff and penetrate the deep woods to find the bird, and so let it go. After climbing part way up the bluff and gathering some of the shells from the clay, I found the tide coming in. Going on board at once, I started out with a fair tide and a head wind to pull to the rocks, the first of which I reach after about an hour's hard pull. This rock is less than an acre in extent, and hardly 100ft. above tidewater. At each end there is a little harbor formed by long points of rock making out for some distance both north and south, so that a boat may be at one end or the other and find perfect shelter. On the northwest side the wall of rock rises perpendicularly from deep water. On the other side the ascent is more gradual. And on these sides the rocks are worn into fantastic shapes by the winds and waves. On the top of the bluffs there is from 2 to 6ft. of soil which has accumulated there through the ages, and this bears grass, cactus and several small plants.

If you have ever approached an island where the sea birds nest, you can judge of the pandemonium which now greets my ear, the wild plaintive cries of the great glaucous-winged gull mingled with the loud plaint of the oyster-catcher, the quack of the harlequin ducks and the hoarse growling of the puffins. As I approach from the southeast I can see the gulls perched on the angles of the rocks or circling wildly about overhead, the puffins, guillemots and oyster-catchers on the reefs and round the point of the rock, a few of the cormorants sitting erect on the very verge of the sea wall. As I draw near the island the ducks rise in a body with a noise like thunder, and skim away down the wind followed by the puffins and others, while the gulls rise in the air and crying louder and louder circle overhead. Now the crows join the din, as they come far and near over the sea in anticipation of a feast, for they are inveterate nest robbers. Pulling strongly to prevent being carried past the rocks, as the tide is setting very hard, I reach the little harbor, and mooring the boat step out and creep carefully round the edges of the rock. Now on a shelving ledge I come upon a gull's nest, well made, hollowed and prettily lined with moss, with two great large eggs as large as goose eggs lying in it. As I round the corner of the rock, there, sitting right before me, is a cormorant. As I fire he falls, apparently dead, into the water, and others go off behind the rock and I cannot see them. Finding they are all gone, and not caring for any specimens of the gulls, I climb about the edges of the rocks and find a few more gull's eggs, and what is stranger still a crow's nest with three young on the ground in the middle of the island. Thus it seems the robbers have the hardihood to nest and rear their young among the birds upon whose offspring they prey. These are the northwestern fish crows (*Corvus caurimes*). I detest the crows, and I cast the young over the rock, shoot at the old ones, to drive them away from the eggs and go down to the boat to get the cormorant. When I get to him I find he has come to life, and I have some little trouble in catching him. There is no bird harder to kill than a cormorant. Two friends of mine chased a wounded one half a day, shooting at it often, and finally, just as their ammunition was nearly gone, a lucky shot brought the bird to bag. My bird is apparently the beautiful violet green species (*P. violaceus*), but as it is an immature bird I am not certain.

While I am occupied in this the puffins begin to return one by one with rapid flight, a curious and beautiful sight, with their creamy crests streaming out and their red feet spread wide on either side behind. They do not light on the island, however, as in circling around they see me and fly away again, lighting far out on the water. Seeing this, I commence to shoot, and soon have three of these beautiful birds floating off on the tide. Then I rush down the rocks to the boat and row after them, but the tide runs so swiftly here that I find that in a few minutes I am more than half a mile away from the rocks. However, by hard rowing I manage to secure two of the birds, and then taking advantage of the eddy manage to reach the island.

The tide is running by here now at about seven miles an hour. It is getting well into the afternoon, and I have had nothing to eat since morning. I hunt around among the rocks and find in the crevices a few fresh eggs of the pigeon guillemot (*Uria columba*). I then climb down to my little harbor and blow the eggs, and of the contents of the fresh ones make an omelet. My tin pail is leaking badly, so drinking up what remains of the water I start a little fire of driftwood and cook my omelet over this in the bottom of the pail. The sun is hot, and I know that I must have water; so after finishing my simple meal, it being now nearly flood tide and very little current, I take advantage of a slight breeze and pull away for the other island a mile to the westward.

Before coming among these isles, a friend had said to me, "You will think you are in fairy land when you get up there." I smiled at this, but now realize that it is no exaggeration. Everything to day is wonderful. All the senses seem to deceive one, and all seems so unreal and strange! Looking astern, a vast mirage appears spread out before me. The air seems clear enough, but away over the sea I see piles on piles, battlements and towers, rocky shores and woodlands—some diverted and some upright—tier on tier, and stretching away into a dim, hazy and shimmering distance. Birds sitting on the water appear like columns or sea monsters, rearing their heads as they rise and dive; and now comes a crash, and then another, and another, and another! a succession of noises like the firing of guns. It is only the strong wing of a cormorant as he rises, beating the water before my boat. How all sounds are magnified. A flock of harlequin ducks rises, fluttering along the surface with a sound like that of armies meeting in battle, and the report of my gun, as I shoot at a white-headed gull, is followed by roar upon roar as the islands and shores take it up and repeat it from one to another. On and on goes the sound like volley after volley of artillery while I listen, amazed at the tumult I have caused. With rumble and roar the puffins rise and circle in noisy flight. The ducks again fill the air with the uproar of their wings, while through and above all come the wild cries of the gulls from the rocks. So loud and piercing are they that they seem to come out of the air around me, but I know they are nearly a mile away, for I can see them circling over the rock like a white cloud. Slowly the rumblings and reverberations die away and the world seems again at peace, and now I can plainly hear people talking. I look around but there is no boat to be seen. They are evidently the voices of squaws and children. And taking my glass I can see their camp quite plainly, and they are away down on the shore of Waldron, two or three miles away.

The clouds which have been hanging about the mountains in the east are now drifting away and I see above the mirage their snow-clad tops, and as the white clouds break and drift, the great white peak of Mount Baker gleams through them tinged with the red light of the setting sun. Slowly the sun, a great red ball of living fire, sinks beneath the Pacific. The mountains now are hazy, blue and purple. But great Baker, towering above them all, catches the last bright sunrays, and looms in all his majesty, white and cold, among the blue heavens. The tide is at its flood. The sea is calm. The beauty of the scene is indescribable. It is worth coming 3,000 miles to see. I have forgotten to row, and the sail flaps idly against the mast. Resting here upon this crimson sea, I now behold the glory of the firmament.

As the sun sinks I take up my oars and on the tide which now begins to ebb, pull and drift toward the Indian camp. Here are a few old sheds, and a fire over which are some square cans in which two squaws are trying out dogfish oil. Children, half-naked and brown, are playing on the beach. As I pull into the harbor I hear the grating of a keel, and looking round, see a man and girl launching a canoe. They step in, each takes a paddle, and the canoe soon glides by me. Neither of them says a word nor looks at me. The old Indian has a little beard and black moustache, which by the way is quite a common thing out here. He has some kind of a fish spear. The girl is really quite good-looking and her dress very picturesque. She is the only good-looking Siwash I have yet seen on the coast.

As my boat drives on the beach, I jump out and address one of the ugly old squaws, asking her, "Where is water?" She points back in the woods with a grunt. I go, and there find a hole in the earth about ten inches round, from which a little water slowly trickles. I cannot fill my pail here, but I go down prone on the grass and drink that hole almost dry. And splendid water it proves.

Now, where shall I spend the night? In answer to this question a sloop puts out from the shore a half mile above and comes drifting along with the tide. I can see with my glass it is a white man's boat. A little boy runs forward and hauls up the jib and foresail, to take advantage of what wind there is, and I see the sails are brown (probably oiled), and she is so near the color of the shores that I did not notice her at anchor. I have a suspicion she is a smuggler, as there is a good deal of smuggling done among these islands. I see the boy run aft and take the tiller, while the man commences to work two long sweeps. With wind, tide and oar she moves up fast, and I launch my boat, give her sail enough to get into the sloop's way, and as she runs alongside I open a conversation with the captain. He says he has been fishing, and lives a mile or two along shore. He invites me to follow him home, which I do. That night I camp on the beach near the fisherman's house. EDWARD HOWE FORBUSH.

IN THE WOODS AGAIN.

Editor Forest and Stream:

During the winter and summer of last year, I was a very frequent contributor to FOREST AND STREAM, and then suddenly ceased or "dried up," leaving some of my stories only half told. This was greatly to my regret, but I could not help it. I have brought upon myself, almost unwittingly, a tremendous amount of work, which has taxed my energies about as much as they could bear and withdrawn me from all other things, and still does tax and withdraw me. This is my first visit to my old retreat in the woods for several months, except one of a single day; and now that the birds are chirping around me all day, and the early wild flowers casting their pretty glances at me, and my friends the wolves saluting me nearly all night long with their deep-toned voices, the old spirit comes upon me and I shall be most loath to go.

What a pity one cannot always do in this world what he most likes to do—that is, if that which he most likes to do is good and innocent and sweet. If I could have my way, I would probably pass all my time in loving nature and discoursing with and of her. However, there is other very important work for us to do; and I am one of those who believe that if we rightly love nature, and to study and discourse with her, we shall have abundant time and talent and opportunity to do so when we have passed over the river; when we can climb mountains and thread forests without becoming tired, and walk over the waters like spirits. Would he who created us have planted these pleasant loves and longings in us, if he did not intend that we shall some day have abundant enjoyment of them? I think not.

But I do not wish to speculate in future things now. I merely write to say that many letters from FOREST AND STREAM'S readers that have come during my long silence have been neglected, and I could not well help it. When a fellow is pushed to the throat-latch, he must be forgiven, not once only, but even unto seventy times seven.

CARBONDALE, Tex. N. A. T.

CONGRES INTERNATIONAL DE ZOOLOGIE.—On the occasion of the Universal Exposition of 1889 the Zoölogical Society of France has made arrangements for an international congress of zoölogy to be held at Paris from the 5th to the 10th August inclusive. Among the subjects for discussion will be: The rules for adoption for the nomenclature of organized beings. The adoption of an international scientific language. Determination of the regions of the globe, the fauna of which is imperfectly known, and which call for further exploration. The importance of embryology as a guide to classification. The relation between existing and fossil types, etc. The charge for admission is fixed at fifteen francs for titulary members, and a minimum of thirty francs for contributary members. Members will be allowed to participate in the discussions and will be entitled to the publications of the Congress. Subscriptions should be sent to the treasurer, M. C. Schlumbergen, 21 Rue du Cherche-Midi, à Paris.

A GROUSE TRAJECTORY.

JUST after dinner recently, I went out as usual to feed my grouse. The male bird was in a coop by himself, and although I noticed that he seemed nervous and frightened about something, I carelessly raised the hinged top, when whirr went a brown streak over my head and into the air at the rate of sixty miles an hour. Jack is a magnificent specimen of his kind, and it was impossible not to admire the grand burst of speed he showed as he rose skyward at an angle of forty-five degrees. Some 234ft. from the point from which he started and in the direct line of his flight the walls of a public school building ran up about 80ft., and it was to clear these that he was obliged to make his rapid climb. Pretty heavy grade, you see, about 1ft. rise in every 3ft. of horizontal distance, but he made it nicely, never so much as scraping the top of the roof.

"Where did he go then?" He went eastward and downward into the heart of a city of a hundred thousand people—downward from an elevation that would easily have carried him a mile if he had simply set his wings and sailed. But where? That was what I asked myself as I took a landing net and wandered sadly out into the cross streets and main streets, feeling that the search for the traditional needle in the haystack was a comparatively easy undertaking. A man whom I met asked if it wasn't "a little early for frogs." I explained.

"I saw a boy," said he, "only a short time ago, walking down Madison street with a strange kind of bird under his arm. Looked like a prairie chicken or something of that kind. Couldn't say what became of him."

Here was a clue, and thanking my unknown friend, I gave him my address and we separated, only to meet a little later in front of an office on an adjacent street.

"I have some good news for you," was his second greeting. "I have just been using the telephone for you, and your friend is all right. The fact is," he continued, "I lied just a little when I first met you. The bird was brought into our office in the Law Building just before by the janitor of Grand Army Hall, who said he came through the plate glass window like a full fledged brickbat, and dropped on the sill inside. The janitor is a friend of my partner's, and thought the bird would make an excellent potpie—a quarter's worth of potpie, and the Colonel (my partner) invested a quarter in him. The bird was badly stunned when first brought in, and I was afraid that he might be dead and thought I would find out before I told you about him."

It did not take long to reach the Law Building, where I found Jack jammed down in a basket not much bigger than himself and apparently a good deal the worse for wear. But I most gladly paid his ransom, and placed him in his coop again. He was evidently glad to get home, but the strangest part of the story is that when he was released he was without mark or injury of any kind, and although his little adventure occurred nearly three weeks ago he shows no trace of any ill effects.

The distance of the plate of glass through which Jack entered the Grand Army Hall (measured with the other distances after his flight) was approximately 720ft., so you will see that this was a case of very high trajectory. We both of us congratulated ourselves most heartily; he that he had escaped the unseasonable potpie, and I that he still lived to be father of a much-desired family.

Let me say in passing that on Sunday last (the 24th inst.) Jack began strutting and parading in regular grouse fashion—the earliest demonstration of the kind of any of my birds in captivity. I hope this spring to find out whether the grouse ever drums in captivity, although I have little expectation of enjoying that sound and sight. Furthermore, I hope to pick up one or two additional hens before the mating (not pairing) season is too far advanced. JAY BEEBE.

TOLEDO, O., March 26.

OPOSSUMS ON LONG ISLAND.

OAKDALE, Long Island, March 20.—*Editor Forest and Stream:* To those interested in the preservation of game on this beautiful island, the serious question of the hour is how to get rid of the greatest game destroyer, the opossum. My attention was first called to this sly sneak about a year ago by the destruction of large numbers of my rabbits, which I was continually finding on the preserve, half eaten. The destroyer commenced always at the head and devouring half of a full-grown rabbit at one meal, so that my stock of cottontails began to diminish very fast. The nuisance got to be so serious I set to work to get rid of all the varmints on my premises, but Long Island is so large I am about giving up in disgust unless others interested will take a hand in and help get rid of the pest.

For the benefit of those interested I will give my experience in the matter. My first step was to set traps in the most likely places in the swamp, baited with raw meat, but that turned out to be a very troublesome and slow way of getting rid of the enemy, on account of the ground mice devouring the bait on the traps about as fast as they were set. So after three weeks of trap setting I abandoned that process, having caught in that time only three possums, one coon and one dog.

My next experiment was to cut raw beef up in small pieces and insert strychnine and place in the low tangled swamp, but to my horror I found that I was the destroyer of my partridges, and upon inquiry learned that all game birds were very fond of meat. As I could not get half-devoured rabbits enough to set for these foxy-looking chaps I determined to try cats, as my neighbors in the village to the east were always very kind to me in keeping my preserve supplied with these pests and destroyers of the feathered tribe. Whenever they had more cats than they wanted they would, out of kindness to Miss Pussy, bring a lot up in bags and dump them out in the woods to destroy the quail and look out for themselves generally. Knowing the cats to be very partial to cooked fish I took small pieces of eel and inserted a little strychnine and I soon had all the cat bait I wanted, besides ridding my premises of some wonderful large, and I may say wild cats; also killing several opossums with the fish, which they liked very much. After getting the cats I had my man strip the skin and fur from a small spot on the side of the animal, so as to expose the flesh, and in which I inserted a little poison. This proved a perfect success, as the partridge and quail would not approach the fur, and I found as many as three opossums dead beside a cat, which they must have thought was a rabbit, for the reason that a gray cat always made the best bait, the opossums not taking to any other color so well.

I have lost in the past year between sixty and seventy hens and chicks by the raids of this pest. I have had them come to the roost several times, kill the setting hens, and after destroying all within their reach carry the largest size old hen to the swamp, where I would track them by the wake of feathers left by the hen in her struggles to get away.

While shooting last fall I found quantities of quail feathers at the mouth of holes in the swamp and woods, which accounted for my not having a full bevy of birds on the preserve. Some pairs hatched out as many as twenty birds, but when the law was off and I began to shoot I found that all the bevies had been depleted, some being reduced to three birds and the largest eleven. It is a perfect mystery to me how the quail takes care of itself, being a bird that sleeps and lives on the ground, with such enemies as skunks, weasles, foxes, cats, dogs, possums, snakes, owls and hawks, and then to be hammered at two months by shooters and dogs. How do the little fellows get through? It is certainly surprising; and although I am an old sportsman it makes me feel sad, and the older I grow the more I feel for them.

ALFRED A. FRASER.

BIRD NOTES FROM MARYLAND.

HOWARD COUNTY, Md., March 25.—On yesterday, March 24, I saw the first robins of the season, two small flocks, and another large flock to-day. Last year they arrived here in large flocks Feb. 19, about the usual time. It is evident that they are fully a month late this season.

On the night of the 23d inst. I heard the first woodcock; they, too, are rather more than a month later than their usual time.

The same is true of nearly all the small migratory birds. In fact, I have never seen so few birds in this locality in my life as during the winter just passed. On the contrary, I do not remember ever to have seen as many as during the preceding winter of 1887-88, the former being the severest winter I ever remember, this last an exceptionally mild one. I suspect that the same birds of the various migratory species return season after season to the same locality, and that the individuals belonging to this immediate locality, remembering the blizzard of the middle of last March, during which very many bluebirds, sparrows, snowbirds and the like froze to death, they have profited by their experience and lingered longer at the South. Be this as it may, certainly the general fact is true, that during the winter of 1887-88 immense numbers of birds wintered here, and the southern migrants arrived earlier than usual; whereas the past winter very few remained all winter, and the southern migrants are only now beginning to arrive, fully a month later than usual.

During the winter of 1887-88 several red-headed woodpeckers wintered in my orchard and grounds, and in the woods belonging to Carroll's Mannor, about a mile from this place. A colony of from forty to fifty of them were observed by my son and myself several times during the months of January, February and early March. We also observed that these birds had stored great quantities of the acorns of the fine oaks in several old trees. During the past winter there was not a single specimen either in that woods or about this place; nor any of the small woodpeckers, commonly called sapsuckers, which were numerous about here the previous winter.

Some three or four winters ago four or five red-headed woodpeckers wintered in the grounds of my father-in-law at Cedar Park, West River, Md., and my sons observed them there stowing the same species of acorn. But this species is very rarely observed wintering in this locality. In the midst of the blizzard last March a small bunch of American crossbills appeared here. One of them was observed picking in the waste hay seed near the barn, and it suffered my youngest son to put his hat over it and pick it up. When brought into the house it showed neither embarrassment nor alarm, but speedily devoured some canary seed and then put its head under its wing and went to sleep. When the blizzard was over its companions were seen in a tree near the house, and being liberated it joined them as if nothing strange had occurred, when they all left together for parts unknown. This was the third occasion in my life I had observed this species as far south as this. In 1877 I saw a small flock about Warrenton, Virginia, and in 1855 I saw immense numbers of them at Ball's Bluff, the place of the severe battle of the late war near Leesburg, Va. Among the birds very numerous here during all the winter and spring of 1887-88 were hawks of divers kinds, roughlegs, red-shouldered and red-tailed predominating, some broadwings and a pair of peregrines, also Cooper's sharp-shins and pigeon hawk. This season only the sparrow hawks have remained in anything like the usual numbers. Of the larger kinds I have noted only one pair of redtails and a single red-shouldered hawk.

By the way, some of my friends over at Washington contended against me in your columns some years since that the sparrow hawk is not a common winter resident here. Yet not a day during either of the two winters I have spent in my home here, but several specimens could be seen hovering over the fields near the house. Certainly the past two winters it has been one of the commonest birds of this locality; one or a pair to be seen about nearly every hay barrack at any and all times. I must mention a very unusual fact reported by a neighbor of mine who is a practical and successful sportsman and intelligent gentleman. He says there are at this time four ruffed grouse on his place not yet fully grown, which were hatched out last fall. He has observed them constantly and is perfectly sure of the accuracy of the statement. I have no doubt whatever of the correctness of the fact, but I have never before heard of a case of the kind. It may not, however, be so unusual as I have supposed. I have shot ruffed grouse for nearly forty years and I never observed a second brood hatched so late. M. G. ELLZEY, M.D.

ALBINO ROBIN.—Oakdale, L. I.—While beating the meadows I saw an albino robin, which specimen I tried very hard to obtain for my friend Mr. William Dutcher, but was unable to get near enough, as the bird was one of a large bunch of robins which were migrating, and very shy.—ALFRED A. FRASER.

SPRING BIRDS. — Concord, N. H., April 1.—*Editor Forest and Stream:* The following birds have arrived on and since the 1st of March. Pewee on the 1st, bluebird 16th, robin and Canada goose 19th, black snowbird 20th, crow blackbird and song sparrow 23d, white-throated sparrow 25th, meadowlark and redwing blackbird 26th, spotted sandpiper 27th. We have had a wonderfully early spring.—P. C.

Game Bag and Gun.

"Sam Lovel's Camps." By R. E. Robinson. Now ready.

HONKINGS FROM THE PLATTE.

KEARNEY, Neb., March 15.—The proper nomenclature of geese and brant is, to me, a regular "13-14-15" puzzle. It has been my hope that with specific names arranged according to the A. O. U. check list the problem would be simplified, but I have found that the only way to do is to determine the species by careful study, without reference to geographical distribution as given by recognized manuals, and then to let local sportsmen decide as to local names. We have, in central Nebraska, as spring and fall visitants, five anserine species, known locally as the "Canada goose," "Mexican goose," "white goose," "speckled brant" and "black-winged brant." Some of these are easily identified, the first being *Branta canadensis* (Linn.); second, *B. c. hutchinsii* (Sw. and Rich.), though why it should be called Mexican instead of Hutchin's goose I cannot imagine. The speckled brant almost corresponds with *Anser albifrons gambeli* (Hartl.), but the upper parts seem to be rather a dove color. *Chen hyperboria* (Pall.) will answer for black-winged brant, but should we not have *C. cærulescens* (Linn.) or does not the blue goose fly so far west of the Mississippi? The white goose I have never shot. In the air it appears perfectly white, and those who have shot it say that it is white with the exception of yellowish feathers upon the neck. Feet yellow. It is extremely rare and shy. From the description given by those who claim to have handled the bird, I cannot make any satisfactory determination of the species, though it seems to be a *Chen*.

My midwinter notes closed with the extremely cold wave of Feb. 22, and the consequent southern flight of all game and ducks. The 23d was warm, and the next day was quite springlike. On Feb. 25, Canadas and Hutchin's geese returned in considerable numbers. Two flocks flew over the Platte and probably did not alight before reaching the Loup. Since then geese have become more numerous each day. The same week brought a few mallards and a great number of pintails. Duck hunters are compelled for the present to devote themselves to the pintails. As yet there are no teal. On March 4 speckled brant began to arrive, and on this date I saw the first robin of the season. Six days later came the black-winged brant, and with them meadowlarks put in an appearance.

Already the migration is well under way. From this point the geese uniformly take a northwesterly direction in their flight. Upland shooting on the feeding grounds is fair, but not as good as at the same time last year. The country about Kearney is getting so thickly settled that the main line of migration has taken another westward move.

There must be a certain social instinct in geese whereby they can select friends and acquaintances from a particular flock and one flock from another. Yesterday afternoon, just before sundown, I heard the honkings of some Canadas, and rushed to the door to see whether the flight was sufficient to warrant a four o'clock call in the morning. Within fifteen minutes six large flocks passed directly overhead on their way to the feeding ground. While the last flock was in full view there appeared to the west and about half a mile distant an equally large flock returning from the feeding grounds to the river. When they were opposite each other the nearer flock was thrown into confusion from some unknown cause. The Canadas lost their line and huddled as though they had been shot at. Suddenly a pair of geese darted from the bunch, in spite of the evident efforts of the rest to detain them, and, instead of going toward the feeding grounds, rapidly retraced their way, flying in a southwesterly direction to the second flock. This, too, became confused in welcoming the new comers, but, as soon as the formal introduction was concluded, the line resumed its proper position. It looked as though the pair of fugitives had voluntarily given up a feast with enemies in order that they might be with friends.

Two of our local sportsmen went to the feeding grounds a day or two since, and as they both have records we expected nothing less than a wagonload of game. They found that the cornstalks in the field had been raked into long winrows, thus affording the best possible cover; so they crawled under the pile and awaited the sound of wings. They had lain there perhaps half an hour, when one of them complained of the great amount of smoke in the atmosphere. A few minutes later they crawled out to find the row in flames and two small boys superintending the conflagration. The opulent sportsmen put their hands in their pockets and offered twenty-five cents apiece if the lads would put out the fire. But the innocents could not be bribed. "Can't do it, boss, for less'n a dollar," was the ultimatum; so the hunters journeyed homeward, and the sad-eyed boys wished that they had taken the quarter, and the geese laughed audibly as they alighted in the next field. Such, at least, is the story of the smoked-out shots.

All that is needed to make first-rate shooting is a hard storm. The weather is too fine at present, and with a moderate south wind the flight of geese is out of range, except near the river, where birds are liable to drop into the stream and be carried away. SHOSHONE.

PICKEREL AND WOODCOCK.—A friend writing me from Haddam, Conn., says he shot in a back-water on the river, 12 pickerel that weighed over 17lbs. How's that for shooting fish on the wing? He also says he started six woodcock in passing through a strip of alders the same day; and says the birds came early this year and in unusual numbers. This looks encouraging for next fall's shooting, and may I be there to see.—A.

CROSS SHOOTING.

THE WHEATLANDS, Maryland.—*Editor Forest and Stream:* There is a subject of discussion among the knights of the trigger that is periodically brought to the fore, discussed, never settled and dies out, only to be revived again, and that is whether it is necessary to shoot ahead of game or other objects in making cross shots, and if so the amount of allowance needful in order to hit the object. I think the large majority of good shots "hold well ahead" in cross shots: but I have known several good shots who maintained that they never made any allowance, but "held on." My own practice being to hold ahead of all objects moving fast across the line of fire, I have often tried to reconcile the statements of sportsmen making the above claim, with my own method, their position being strengthened by my own experience at times, when rather to my astonishment I have occasionally killed these fast cross-flyers with my gun on or but very little ahead of the bird, swinging the gun as fast as I could, but not having it as far ahead as I wanted it to be. Every man who shoots much will understand what I mean by being astonished at the result of killing under such circumstances, since to an old shot the killing or missing, except for an occasional "unaccountable" or where the game gets through the spread of the shot, is settled in his own mind before the gun cracks; in other words, he knows when he is "on" though sometimes he can't help pulling the trigger when he isn't.

Well, how to adjust the claims of the two styles of shooting was a problem to me until I settled the matter to my own satisfaction by thinking they might both be right in a measure.

It is very evident that game is, and can be killed in cross shots by the shooter pointing his gun ahead of the moving object and firing while it is in this position, held still. This is the method adopted by many sportsmen with success. The case is simply that the shot goes to the point aimed at, and if the object aimed at goes fast enough to reach the point where the line of fire intersects the line of flight it is sure to be hit. The other method is to bring up the gun on, or better behind, the moving object, swing it rapidly ahead in the direction of the line of flight and pull trigger at the instant it bears on the object without stopping the motion of the gun. When this method is thoroughly acquired it obviates the necessity of aiming so far ahead of the moving object as is necessary by the other method, for the reason that the shot acquires a lateral motion in the direction of the line of flight before and during the discharge by the swing of the gun.

I do not mean, as I have heard some persons assert, who were more familiar with guns than with the laws of motion, that shot could be distributed in the form of a much elongated parallelogram by swinging the gun very fast, but that the act of swinging and firing together give the whole body of shot two motions, the powder throwing it toward the object aimed at, and the motion of the gun giving it a motion in the direction of the line of flight, the amount of this motion depending upon the rapidity with which the gun is swung along the line of flight from behind the object aimed at until the moment of discharge. I inclose the accompanying diagram to illustrate my meaning. C represents the butt of gun at shoulder of shooter. C B A line of aim when gun is first pointed. C D E line of aim when gun is discharged. Now the shot having acquired a lateral motion from B to D, and that lateral motion being kept up until the shot actually leaves the muzzle, the flight of the shot will not be from D to E, but taking both motions will carry it along the dotted line to F, thus rendering it unnecessary to hold so far ahead as by the other method, thus in a measure reconciling the claims of the two classes of shooters. Those of my friends who shot well at cross shots and were sure they did not hold ahead, were shooters of upland game. I am certain every old duck shooter finds it necessary at times to swing the gun as fast as possible and until well ahead at that, if he wants to stop a quick darting duck, or one coming with a gale of wind after him. Any one who acquires this habit of swinging the gun from behind on to or ahead of the object will, I think, make better shooting at cross shots than he who depends on the other mode, except for quick snap shooting in brush or woods when it is often necessary to shoot by faith and not by sight.

SINKBOAT.

CHICAGO AND THE WEST.

CHICAGO, Ill., March 26.—Mr. Henry Ehlers of the Diana Club bagged 133 ducks last Thursday on the Kankakee, some distance above the Kankakee grounds. He said they were using on marsh that had been burnt over. There were not many bluebills in the bag. The bluebills are not up yet.

Outside of this bag there seems to be a pronounced hiatus in the duck business. English Lake and Maksaw-ba report fair, still weather and no ducks moving, water low, and the best sloughs hard to reach. There were twenty out of the twenty-five members of the Hennepin Club down at their grounds last week, but no reports of consequence came up.

Fox Lake country has not yet shown any bag worth mentioning. Last Saturday Mr. Burton went up, but did not take his gun out of the case. No birds were moving.

I was at Grand Calumet Heights Club Monday last, but could not stay to shoot. Lake Michigan had been full of ducks for two or three days, and a heavy wind Monday morning coming in shore had driven the birds off the lake. They were flying along the shore, and lighting in the basin of quiet water formed inside the ledge of shore ice. There would have been good shooting there on Monday. The ducks were mostly small mixed deep-water ducks, with very few bluebills and redheads. A few mallards were working between the lake and the inland marshes. There seemed to be a great many pintails. Mr. Bird killed five ducks in the sandhills on Saturday, but there was no real shooting. It is probable that the high wind of Monday drove the ducks a good way inland, and I should not be surprised if good bags would now be reported from the Kankakee marshes.

Mr. Matt Benner is another Chicago man who has visited Greaserland. In his late trip Mr. Benner shot quail in Mexico, and grouse in British Columbia and the Northwest. He made the grand rounds.

Mr. Walfred N. Low, president of the State Sportsmen's Association, is now in Louisville. Mr. Low's work at Springfield has been diligent in this session of the Legislature. There is no more unselfish and untiring a worker for the sportsmen's interests than Mr. Low, and the manner in which he devotes his time and means to such work show that he has certainly a high standard in view in his efforts. Mr. Low is an attorney. He has in hand the prosecution of the celebrated Smith case, illegal game selling, which may be tried some day, if the world doesn't come to an end.

Mr. Jenney, of the Jenney & Graham Gun Company, is a member of the Grand Calumet Heights Gun Club. He lately presented to the club a $100 new Lefever 12-gauge. The club drew lots for it, and it was won by Mr. George I. Maillet of Crown Point, Indiana. Mr. Maillet has announced his intention of voting for Mr. Jenney for president of the United States.

Some very decent bags of ducks have been made on the "Sag," about fifteen miles below Chicago, this spring. This is usually a great snipe ground, and the jacksnipe are expected there now almost daily. No snipe reported on the other marshes yet, but Mr. Joel A. Kinney killed half a dozen upland plover near Mak-saw-ba Marsh last week.

I met a man in Mr. Fisk's gun store the other day, and he looked wild. He wanted to go duck hunting and he didn't know where to go, and didn't know what kind of a gun to use, or what it cost, or how to load it, or whether he needed rubber boots or not, or whether his business suit would do for a duck suit, or whether he could shoot ducks all summer, or whether almost anything else. Pretty fair looking kind of a man too, but I guess he had just got out. I sat and talked to him for about an hour, and when I came away I left a copy of FOREST AND STREAM in his hand. A tear came into my eye as I thought of the heathen near at home whom we neglect in favor of the inhabitants of Borneo and Siam. This man troubles me when I think of him. He was so portentously ignorant. He didn't know there was such a thing as a sportsman's paper; yet he was a well-to-do man, apparently of more than average means. Likely enough he had softening of the brain, and his physician had prescribed duck hunting.

March 27.—Messrs. C. D. Gammon and W. W. McFarland returned from their Hennepin trip and soon thereafter went down to the Cumberland Club on the Kankakee. They seem to have met the birds in numbers, for a day or so ago they shipped 200 ducks and a number of geese.

Mr. John Taylor, superintendent of the English Lake Club, telegraphs Mr. John Gillespie to-day that the bluebills are beginning to make their appearance on the lake, and that there are large numbers of ducks on the north marsh. This telegram is displayed on the Jenney & Graham bulletin board, they having put up such a board, with spaces bearing the names of the different clubs, for the posting of telegrams and letters from the different club grounds. This is a mighty good idea, too.

The birds seem to have slipped on up the Illinois River, as that section does not show very heavy shooting. Fox Lake remains silent, and the inference is that the bluebills and other deep-waters have not got up there yet.

Ducks are reported in large numbers pretty much all over Dakota. The flight is now well in the north. Open weather and low water in our section have taken the birds past us again, it is feared. The harder and heavier and longer the winter is here the better the spring shooting is. A gradual opening of the waters, such as we have had this spring, brings the flight up in scattered squads and bunches. Such a flight is not held beautiful by the man who wants a hundred ducks a day, but it is all the better for the ducks.

March 29.—C. F. Overly writes from English Lake, March 28, that there are more ducks in than at any time yet. Mr. Ab. Price had gone out again after geese. John Taylor, club superintendent, March 28, says in a telegram, "Shooting good. Simmons killed fifty yesterday." This news has sent a crowd of shooters down to English Lake to-day, and more will follow to-morrow. It is probable that this good shooting is due to the storm on Lake Michigan, which drove the ducks inland.

It snowed vigorously here this morning, but the snow melted at once. The cold snap may put a new phase on the ever-changing features of duck shooting here.

Fox Lake reports one good bag for last week; nothing regular is in there yet.

A letter to Mr. D. P. Wilkinson from Mr. Bullock, of Fort Atkinson, Wis., says that the ducks are having great times on Lake Koshkenong, where they are protected by the Wisconsin law in the spring. There are large bodies of fowl out in the lake. There is still some little ice left in Lake Koshkenong.

March 30.—Under date of yesterday Mr. W. W. McFarland writes Mr. W. P. Mussey from the Cumberland grounds: "If any of the boys ask about shooting, tell them there is good shooting here. C. D. Gammon and I have in three days killed 350 ducks, 21 geese, 2 sandhills and a lot of jacksnipe."

Mr. McFarland, Mr. Gammon, Mr. Wolfred N. Low and one other shooter last Monday killed over 150 ducks on Cumberland Marsh. For some unknown reason that part of the Kankakee is looming up this spring. Maksaw-ba Marsh is in hard luck. The water is very low, and it is impossible to get into the best part of the marsh at all. Dr. Buechner says that last week he saw thousands of ducks over the State ditch, within three miles of the Mak-saw-ba Club house, but a camping party of Hoosiers were driving them out of that end of the country.

Capt. Hill, of Fox Lake, says that there are some good bunches of bluebills, redheads and canvasbacks on Fox Lake. It is a pretty safe prediction that by about next Tuesday or Wednesday some big bags will be made on Fox Lake. The ducks are now evidently well up into the country, and the music has begun.

The E. W. Blatchford building, next to the Blatchford shot tower, was destroyed last night by a stubborn and dangerous fire, which came very near making ruin of the Blatchford cartridge plant. Charlie Willard, manager of that business, is a little bit scared yet, and a good deal thankful matters are no worse.

LOADING FOR TARGETS.—Philadelphia, March 29.—In reply to "Wing's" communication in your last issue, after several experiments, I have found the following load to give the most satisfaction: 3drs. Oriental powder No. 2, one card and two Eley pink-edge, pushed well home but not pounded, 1¼oz. No. 8 Spark's chilled shot, one card board wad on that and the whole crimped tightly in a club shell. The above measures are B. G. I. Co.'s struck. Other loads that I have tried gave too much penetration, making shot holes but not breaking the targets. Since I have used the load above mentioned I feel confident that I have not hit a single target that did not break.—ROBIN.

HE HIRES GUNS.—Meriden, Conn., March 28.—*Editor Forest and Stream:* Please caution gun dealers to beware of a man, medium height and weight, or a little above, black heavy moustache around corners of mouth, who hires a gun to try, with idea of buying, and skips out. He has just stolen two here in that way, one an English breechloader, the other a Parker 10-bore, Damascus barrels with stock cracked and checked around the tang higher up than usual to cover the crack. The gun is somewhat noted for its kicking qualities, and I hope will kick that man's conscience if he has any. It is needless to add I am one of his victims.—J. F. IVES.

MAINE DEER.—Oxford County, Me.—Splendid winter for deer here; so little depth to the snow that the deer either punch right through to the ground or run on the morning crust. I do not think the winter "deer hog" has got in his work, or can without a good dog.—C. B. S.

TITUSVILLE, Fla., March 29.—Ducks along Indian River are about played out for this season, with exception of some bluebills and spoonbills. Quail are fairly plentiful. The plume hunters are commencing their slaughter of the egrets, etc.—MAX.

FIRST SNIPE.—The Cedars, Oakdale, L. I., March 28.—I bagged the first brace of English snipe this A. M.—A. A. F.

CLUMBER SPANIELS FOR QUAIL SHOOTING.

Editor Forest and Stream:

I am frequently asked if the Clumber spaniel would be a good dog for quail shooting, more especially where the birds scatter in covert; but as I have never had the opportunity to test their merits in the pursuit of "Bob White," I could only reply that, judging from their manner of working, they would answer admirably. The following letter, written to me by Mr. W. J. Middleton, of Somerville, Mass., answers the question conclusively and, as will be seen, favorably to the Clumber. He writes:

"I noticed * * * your most interesting article * * *. I think a few more of like character would greatly advance the now slowly (?) growing interest in that peer of field spaniels, the Clumber.

"Permit me to state in addition to your mature knowledge of this valuable dog, that for quail shooting they are the dog.

"I think I may safely say the most pleasant day I ever spent afield was on the opening day of last season, in company with a friend in a cover known to few, and not three hours from my home, with the quail.

"I had with me Bess I. (Jackey—Romp) and her daughter Bess II. by champion Johnny. Talk about 'bird sense!' I think Bess II. has more to the square inch than any other dog I ever shot over does to the foot, and I have shot over some pretty good ones of most other breeds of field dogs, and her nose is phenomenal.

"Now this trip was the third time she had ever been afield and the very first time after quail, she having been worked on snipe before.

"We had been having perfect weather for a week and at last when I could stand the strain no longer I arose one morning fully determined to make arrangements for a day of it on the morrow. My friend was notified, business arrangements made, and 7 P. M. found my friend F. at my house with gun, shells, etc. Next morning bright and early we were off and arrived at the grounds at about 8 o'clock and climbed over the fence, jumping right into a bevy, which whirred up on all sides and scattered in the cover. This cover has been considered impenetrable to pointers and setters. We succeeded in bagging two when they flushed.

"The cover is composed of thick bramble bushes and low, stunted thorn-apple shrubs, making an impregnable retreat for the quail for many years, because they were not pursued with the right kind of dogs, pointers and setters being used principally here, with a few cockers.

"F. sized up the cover there, with a disgusted expression, turned away to hunt up another bevy. I told him not to be in a hurry, but to walk around to the other side of the cover, while I stood where I was and sent in the dogs. F. laughingly consented to do so, and at the word, in went the Clumbers. Being so low they could thread their way under, not through, the bushes, and in a very short time the fun commenced. Up popped the quail one at a time and when they would rise above the bushes they offered excellent shots. Most of the birds went toward F., who bagged nearly every bird, while a few came within range of your humble servant.

"'Those Clumbers did work to perfection,' were the first words spoken by F., after the dogs failed to put up any more birds and we had sat down to compare notes and count the birds. I could simply say 'you bet,' being as agreeably surprised as he was, for I had never seen Clumbers work on quail before, nor F. neither, and, as I said before, it was the first time either dog had had experience on quail.

"Every bird was retrieved in grand style and I don't believe they left a foot of ground unsearched.

"The rest of the time out was spent most pleasantly and profitably, though our best shooting was in the forenoon. We returned home about 3 P. M., and after a substantial dinner my friend started for home, assuring me that the next dog he purchased would be a Clumber. Another convert.

"If my experience with Clumbers in quail shooting will be of any use to the breed in general, you are at liberty to publish this and to use my name. I am anxious to see Clumbers pushed to the front where they deserve to be.

"As for their being too heavy, well, the less argument with persons making this charge the better, for they are simply a class of people we all meet during our lives, who are satisfied with nothing belonging to any one else, and think that the cross-bred cur, part terrier part most every dog in the neighborhood is the only perfect dog in the world if it will only 'tree partridges' provided it belongs to them."

CLUMBER.

NEW YORK LEGISLATURE.

[*Correspondence of Forest and Stream.*]

ALBANY, April 2.—The Assembly committee on game laws has reported Mr. de Peyster's bill. Mr. Tefft's bill relating to fishing by nets and Mr. Fitt's bill relating to fishing in Owasco and Cayuga lakes. The Senate committee on game laws has reported Mr. Maynard's bill relating to fishways in Chittenango Creek, and it has been ordered to a third reading.

NEW JERSEY GAME LAW.

HERE is the text of the bill prepared by Mr. W. L. Force and the president of the New Jersey Fish and Game Protective Society, and introduced into the Legislature by Judge Ulrich:

Supplement to an act entitled, "An act to consolidate the several acts relating to game and fish in this State."

1. Be it enacted by the Senate and General Assembly of the State of New Jersey, that hereafter it shall not be lawful for any person or persons to capture, kill, or have unlawfully in possession after the same has been taken or killed, any quail, commonly called partridge, or any ruffed grouse, commonly called pheasant, or any rabbit, except only between the last day of October and the sixteenth day of December in any year, under a penalty of twenty dollars for each quail, grouse or rabbit so taken, killed, or had unlawfully in possession.

2. And be it enacted, That no person or persons shall take, kill, or have unlawfully in possession after the same has been taken or killed, any woodcock, except only during the month of July, and also between the last day of September and the sixteenth day of December in any year, under a penalty of $20 for each bird so taken, killed or had unlawfully in possession.

3. And be it enacted, That no person or persons shall take, kill, or have unlawfully in possession after the same has been taken or killed, any upland or grass plover, except only between the last day of July and the sixteenth day of December in any year; or any Wilson snipe, commonly called English or gray snipe, except only during the months of March and April, and also between the last day of September and the sixteenth day of December in any year, under a penalty of $20 for each bird so taken, killed or had unlawfully in possession.

4. And be it enacted, That it shall be unlawful to take, kill, or have unlawfully in possession, any reedbird, rail bird or any marsh hen, except only between the last day of August and the sixteenth day of December in any year, under a penalty of $5 for each and every bird so taken, killed or had unlawfully in possession.

5. And be it enacted, That nothing in this act shall prevent any one, duly authorized by an incorporated game protective society in this State, from capturing alive any quail for the sole purpose of protecting and preserving them alive during the winter months; provided the birds so taken are released within the borders of this State.

6. And be it enacted, That nothing in this act shall prevent any licensed or established dealer in game to dispose of such game mentioned in this act ten days after the periods therein mentioned; provided that such game was killed within the period allowed by this act, or was killed and purchased outside the limits of this State.

7. And be it enacted, That all laws now existing, relative to the preservation of game treated of in this act, be and the same are, so far as the same are inconsistent with this act, hereby repealed.

8. And be it enacted, That this act shall be taken to be a public act, and shall take effect immediately.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Camp-Fire Flickerings.

"That reminds me."

265.

THE Little Blue is a bewildering, tortuous stream that takes its rise about four miles north of Hastings, Neb. It flows in a southeasterly direction and finally empties I don't know where. Crooked hardly describes it. It forms a number of double-backed S's that are simply disheartening. The duck hunter can wander along its banks for five miles and come out within a mile of his starting point. To the initiated, however, it forms a delightful hunting spot. The hunter keeps on the prairie and the hunted ducks do the long distance flying up the creek, while he walks over a couple of hundred yards and waits for them to come round the bend. In the fall the stream partially dries up, and thus forms a succession of ponds in which the teal abound; and it is quite common to make bags of from 25 to 50 ducks a day. In the fall of 1884, Mr. A. and myself were on the Blue, and as it was blowing a regular "Nebraska zephyr" we concluded to shoot against the wind. We could get on the edge of a pond, shoot, and the report of the guns would not disturb anything north of us. We had succeeded in bagging a few teal, when I proposed that I should go up stream and stir them up a little. To this A. cheerfully assented, and I started off. I crossed a roll of the prairie, slid to the edge of a pond, and as usual it was fairly black, or rather blue, with teal. I smacked my lips, cocked both barrels and concluded to take nothing less that a dozen for both shots, but alas! I pulled both barrels to discover that my loads consisted of empty shells. As the click-click sounded, up rose the ducks and sailed down stream, on the edge of the wind, as only a startled duck can go. I yelled to A. to look out for them. He swung up his gun in answer. In doing so the hammer of the right barrel caught in his coat collar, the gun went off, and down came two ducks out of another flock flying directly over his head: and the first he knew of his good luck was when the pair fell within ten feet of him. What became of those I sent down stream I don't know. I got one out of his flock, and we wound up the day with a large tin dish pan rounding full: but if A. lives for fifty years he will not better his shot on the ducks he did not see.

A. H. B.

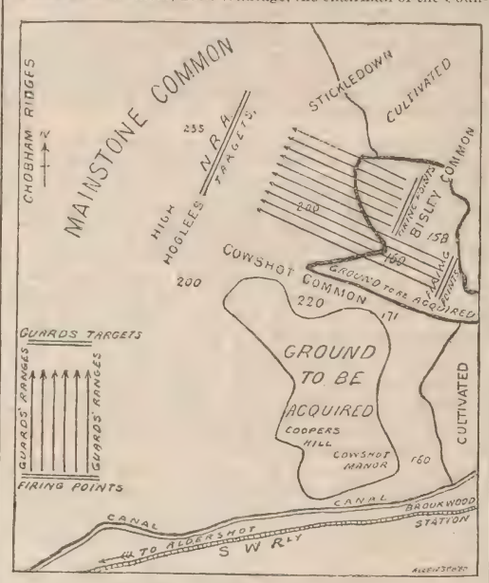
GARDNER, Ill.

266.

John and I were returning from our morning sheldrake shooting at Piney Point, in Marion. The road was lined on either side with horse briers so thick that it was almost impossible to see through them. In a particularly bad patch, about twenty feet on my right, I heard a light fluttering, which I knew was made by a grouse getting into position for flight. I swung my gun in that direction, raising the hammer as I did so. It was a bitter cold day, and I had on an overcoat and mittens, with a pair of wooden decoys and a full game bag slung over my shoulders. Before the gun was fully cocked my thumb slipped from the hammer, and at the report the fluttering ceased. Don, who had been running to his own head, coming up at the report of the gun worked his way in, at my order, and brought out a fine cock grouse. It was a year or more before I told John it was an accident.

HYDE PARK, Mass., March 20. M. E. N.

TUSCALOOSA, Ala., Sept. 15, 1888.—*United States Cartridge Co., Lowell, Mass.*: Gentlemen—The two hundred Climax shells sent me have been tried with Schultze and Black powder. I am very much pleased with same. Could not get good results with Schultze in any other shell. Will use no other shell so long as you keep this at its present standard. You are at liberty to use this or any other recommendation I can give you. Most respectfully, (Signed) W. C. CROSS.—*Adv.*



FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE NEW WIMBLEDON.

THE site of the new shooting ground of the National Rifle Association of Great Britain has been fixed within reasonable distance, viz., at Brookwood, about twenty-eight miles from Waterloo, and so far as time is concerned, not much further from London than the shooting ground at Wimbledon. The task of the Council in selecting a new site has certainly been a very difficult one, and their constituents are greatly indebted to them for the way in which they have executed it. Not only had they to consider the nature of the ground at a very large number of places offered to them, but the facilities of access, the accommodation offered in the neighborhood, and so on, as also the financial question of the amount of money required for the purchase of the necessary ground, and for adapting it to the purpose required. The amount of money required went inversely as the distance of the site from London. The obvious sites round about London were not to be acquired except at prohibitive prices. As to those further afield, Lord Wantage, the chairman of the Coun-

BROOKWOOD—THE NEW WIMBLEDON.

cil of the Association, most liberally offered a site on the Berkshire Downs, which would have been a "Paradise of riflemen" if it were only accessible from London. A site nearly perfect was offered absolutely free of cost on Cannock Chase, in the middle of Staffordshire, within twenty miles of Birmingham and within easy reach of many other great towns. Nevertheless, the Council of the National Rifle Association has managed to resist the temptations of both Cannock Chase and the Berkshire Downs, though they fully recognize the great liberality, and even munificence, of the Staffordshire people in regard to Cannock Chase, and of Lord Wantage in regard to the Berkshire site.

It was very shrewdly held that a site near London would draw better than any other spot, and besides Aldershot with its large gathering of regulars is near the proposed range. There are many objections to the new range, especially in the layout of the shooting lines. It is especially needed in such a range where men are squadded by chance to give the morning and evening shooters equality as to sunshine and shadow. There will be some considerable fixing up of the ground necessary, but once fixed up, the new Wimbledon will play as big a part in English life as did the famous old ground, which, by the way, is to continue in use for this year only, the Duke of Cambridge having consented to one more year's use of his property. The *Volunteer Service Gazette*, with the interests of the shooting men of the force always at heart, gives the new choice its unqualified approval, and gives the Council a warm amen on its work.

BOSTON, March 30.—The regular weekly shoot of the Massachusetts Rifle Association to-day was well attended. A strong wind from 10 to 11 prevented high scores. Next Thursday, Fast Day, the range will be open for rifle and pistol shooting and the rest prize match will close. Mr. Wilder won the gold medal today in the 20-shot rest match, and Mr. Lee won the gold champion medal. Following are the best scores:

Twenty-shot Rest Match—200yds.

S Wilder	10	11	9	9	10	12	10	9	10	7	
	11	11	10	12	8	8	12	10	10	10	10—199

A NEW MAGAZINE.—St. Petersburg, March 21.—Russian officials have tested and reported favorably upon a Russian invention for applying the revolving principle to the barrels of Berdan rifles. By this arrangement a machine gun is obtained which will fire 480 shots a minute.

WILMINGTON, Del., March 26.—The regular weekly shooting took place at Healdmoor Rifle Range yesterday afternoon. Owing to the strong and variable northeast to north wind the shooting was very difficult, requiring variations from 1½ to 4 points windage, so that the scores were much below the average. Standard American target:

Revolver Match, 50 Yards.

H Simpson	2	6	10	3	6	9	8	6	8	9—67
W H Clabaugh	4	4	7	4	10	10	2	6	7	6—60

C Grosse	8	4	6	6	6	3	3	4	7	5—52

CINCINNATI, O., March 26.—To-night was the time for the third weekly shoot of the Queen City Pistol Club, and Curley's gallery on Vine street was occupied by an anxious crowd of cracks and experts. The shooting as a whole was fair, and in some few cases was exceptionally fine. This was noticeable in the work of Robertson and Copeland, while several of the youngsters did splendidly, considering the practice they have had. Following are the official scores:

Robertson	12	12	12	12	12	12	12	12	12	12—	120
Copeland	12	12	12	12	12	12	12	12	12	12—	120
Hopkins	12	12	12	12	12	12	11	12	11	12—	118
Goodman	12	12	11	12	11	11	12	12	12	12—	116
Taylor	12	12	10	12	12	12	12	12	12	10—	115
Wick	12	11	11	12	9	12	12	12	12	12—	114
Hurst	10	11	12	12	12	12	10	12	12	12—	115
Beiser	12	11	11	12	9	11	10	11	12	12—	111
Reilly	11	12	11	10	12	9	10	12	10	10—	107
Kauffman	10	11	12	10	10	12	11	7	12	11—	106
Mastin	11	12	11	12	12	10	11	12	11	10—	112
Bob Smith	12	12	12	11	11	10	11	12	9	9—	109
Bandle	12	12	9	11	11	12	12	12	12	11—	114
Schofield	12	5	12	12	9	12	9	12	11	10—	104
Wilson	12	11	9	12	12	10	11	11	12	12—	112
Taylor, Jr	12	12	11	12	11	12	10	11	11	11—	113
Reif	6	5	7	6	8	11	12	12	12	12—	91
Boesherz	10	10	12	8	12	11	10	11	11	7—	102
F B Ollendick	12	12	10	11	9	12	10	9	10	10—	105

SAN FRANCISCO, March 24.—The California Schuetzen Club held a grand shooting festival at Harbor View to-day. The affair was one of the most successful of the kind in the history of the club, in point of attendance, excellence of the shooting and pecuniary results. The receipts from the shooters alone amounted to $1,183. The shooting began at 10 o'clock in the morning and continued until 6 o'clock in the evening, over 150 lovers of the gun trying their luck at the target. The shooting was divided into two classes, the Honorary Target and the Public Target. On the Honorary Target the following are the scores of the first eight winners: First, T. Kuhnle, 74 rings out of a possible 75; second, A. Johnson, 74; third, A. Rahwyler, 71; fourth, A. Hatge, 71; fifth, F. Freese, 70; sixth, J. H. Browning, 70; seventh, A. Ackerman, 70; eighth, George Helm, 70. These eight will have the first pick out of seventy-five prizes, consisting of silverware, watches, cones, medals, orders for clothes, and many other valuable articles. Owing to the large number of shooters and the number of tickets they purchased it will be impossible for several days to determine who are the seventy-five winners and to segregate them in their order of precedence according to their scores. On the Public Target thirty prizes were offered, all of them consisting of money in sums of $30, $20, $10, all the way to $2.50. The scores of the first seven winners on this target are as follows: First, A. Johnson, 93 out of a possible 100; second, George Helm, 92; third, C. Meyer, 92; fourth, H. Brown, 92; fifth, T. Kuhnle, 92; sixth, H. Carr, 91; seventh, H. Heath, 91. The first bullseye in the forenoon was made by A. Rahwyler, and the last by H. Brown. In the afternoon the first bullseye was scored by H. Heath, and the last by A. Rahwyler. The honor of the first 25-ring shot fell to A. Johnson.

NEWARK, N. J.—The Newark Shooting Society has arranged a fine list of prizes for its thirty-seventh annual festival, which will be held in the Shooting Park on July 4, 5 and 6. Shooting on the first day will be from 1 to 7 P. M.; on the second day from 9:30 A. M. to 12:30 P. M., and 1 to 7 P. M.; on the third day from 9:30 A. M. to 12:30 P. M., and from 1 to 6 P. M. The bullseye targets, however, will close at 4 P. M. on the third day. The prizes, which aggregate about $750, will be as follows: Ring Target—All comers. First prize $50, second prize $40, third prize $30, fourth $20, twenty-six other prizes, ranging from $18 down to $2. The shooter making the most points on one ticket to take first prize, and so on. A premium will also be paid for the best three tickets, and $3 for the second best. Tickets for three shots—first ticket purchased by each shooter $2, succeeding ticket $1. Man Target—Ticket for three shots $1, best single ticket to count. First prize $30, second $20, third $18, fourth $16; twenty-one other prizes, ranging from $14 down to $1. Bullseye Target—Only shots in a 4in. bullseye to count. Tickets for 10 shots $1. The best center shot to take first prize, and so on. First prize $35, second prize $25, third $18, fourth $15; twenty-six other prizes, ranging from $13 down to $1. One dollar will be paid for the first and last bullseye each morning and afternoon. The following premiums will also be awarded: For the most bullseyes during the festival $10, second most $8, third $5, fourth $3, fifth $2. Champion Target—Tickets for 5 shots, 50 cents; any rifle, without restrictions as to weight, sight or trigger pull. Twenty per cent. of receipts will be deducted for expenses, balance to be divided into prizes according to number of competitors. First prize to consist of 25 per cent., balance to be divided *pro rata* among one-half the competitors. Best single ticket to take first prize, and so on. Entries unlimited. All prizes and premiums will be distributed at the close of the festival. Shooting will be governed by Schuetzen rules.

NEWARK, N. J.—The regular match and practice season of the Newark Shooting Society will open on Thursday, April 4, and from that time to October lively times are expected. The Expert Record match will be shot every Thursday and Saturday, and on the second and fourth Thursdays of each month the Members' Trophy match will be shot. The former match, on the American champion target, will be open to all comers, and is expected to draw a big crowd. All but 20 per cent. of the entrance fees will be divided among the competitors, while bronze, silver and gold medals will be given for ten scores of 57, ten of 62 and ten of 67, respectively. At the end of the season the shooter having the highest number of scores, containing 62 or over, will receive a special gold medal. The match is open to any style of rifle; tickets for five shots are 25 cents each, and entries are unlimited. The three targets on the western end of the range in the Shooting Park are to be made open, for the use of the National Guardsmen. The bulkhead and backings are to be strengthened, and full 6×4 targets put up. In order to make the targets open the two shields will be removed.

THE MASSACHUSETTS TEAM.—The business men of Boston are subscribing liberally to the fund for sending the team of Massachusetts militiamen abroad. Maj. J. P. Frost, assistant inspector-general of rifle practice, M. V. M., some two weeks since addressed a neat statement of facts to leading business men, in which he outlined the projected trip. He stated that for three years the rifle team of the Mrssachusetts volunteer militia had swept all before it at Creedmoor and Chicago, defeating alike the picked teams of the army, navy and national guard, and that to-day Massachusetts, through these men, holds not only the "Soldier of Marathon," representing the championship of the national guard of the United States, but also the famous Hilton trophy, emblematic of the military and naval championship of America, and that the team now holds the record in both competitions. "Naturally," he says, "such results have only been made possible by enthusiastic and self-sacrificing work on the part of every soldier composing the team. The Massachusetts rifle team wishes to visit Europe the coming summer and participate in the annual meeting of the National Rifle Association of Great Britain at Wimbledon, Eng., July 8 to 20. The members desire to study the English system of rifle practice, and believe that the experience gained by a two-weeks' encampment with 3,000 riflemen coming from all parts of the world cannot fail to be of great benefit to every officer and man. About $6,500 will cover the expense of the trip and carry out every detail in a manner worthy of the reputation of the State. This amount must be raised by private subscription."

IRA PAINE.—Before leaving Paris and his long engagement at the Folies Bergère, Mr. Paine invited a number of well-known French pistol experts to witness some of his work at an outdoor range. The exhibition took place at the testing ground of Leopold Bernard, 129 Ave. de Versailles, and Gastinne Renette, the gallery keeper, attended to the targets, etc. It was a test of speed and accuracy, and 50 rounds from a S. & W. Russian model revolver were fired at 50 meters in less than three minutes. The target was 50 millimeters across, with a black of 25 millimeters. In spite of a strong, unfavorable wind the shooting was fine, and 37 of the shots were in the black. For some late comers Mr. Paine fired 12 bullets, putting all in the black.

AMERICAN SHOOTING ASSOCIATION.—The first tournament given under the management of the American Shooting Association will begin June 10 at Cincinnati, Ohio.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

April 10.—Opening shoot of South Side Gun Club, Newark, N. J.

April 11 and 12.—Elm Grove Gun Club Tournament, Albany, N. Y.

April 16 to 18.—Gilman, Ill., Amateur Tournament, Frank Mosher, Manager.

April 16, 17 and 18.—Omaha, Neb., Gun Club Tournament.

April 17 and 18.—Norwich, Conn., Shooting Club Tournament. E. W. Yerrington, President.

April 24 and 25.—Willimantic, Conn., Rod and Gun Club Tournament, open to all.

April 30.—San Antonio, Tex., Tournament. Open to all comers.

May 21 to 23.—Minneapolis Gun Club Tournament, Minneapolis, Minn. James Pye, Secretary.

South Side Gun Club Tournament, Milwaukee, Wis., May 29, 30 and 31. C. W. Milbraith, Secretary.

June.—Annual Tournament Sportsmen's Association of the Northwest, Tacoma, Wash.

June 4 to 7.—New York State Association for the Protection of Fish and Game. Convention and Tournament, Albany, N. Y.

June 10.—First Tournament of the American Shooting Association, at Cincinnati.

June.—Kansas City Tournament.

HAVE WE FOUND IT?

IT is very well known that the grave question confronting all supporters and lovers of our system of trap-shooting is that of devising some plan which will put the amateur on some sort of an equal, or substantially equal footing with the professional. As at present conducted the large shoots and tournaments which offer any considerable prizes are simply opportunities for a dozen or twenty professionals, who make their living out of shooting, to divide up the money contributed by the remainder of the shooters, whom we may, for want of a better name, call generous-minded and plucky suckers. Such a proceeding as this, however, has certain virtues or features in it, which the vast majority of shooters have long since discovered, and against which many or most are now beginning to rebel. So much for that.

It has on this basis become apparent to manufacturers of inanimate targets that whoever would invent a system which would do away with this obvious inequality would double the sale of such targets, would infuse into trap-shooting a new and vigorous life, and confer upon the great body of our shooters present and to come a substantial and lasting benefit. Mr. Tucker's system was accordingly received with interest and investigated with care. Already the shooters, in the West at least, are nearly prepared to pronounce it not a solution of the difficulty. It has been shown that the professionals can beat this system and manipulate it easily; or, if the number of the tie birds is selected quite by lot, there is the objection of the less skillful shooter that it is all a matter of luck. In other words, while almost any shooter is willing to admit that trap-shooting is partly a matter of skill and partly of luck, it is claimed that the Tucker system does not involve that just proportion of luck and skill which any successful adjustment of this problem must possess. Be that as it may, the interested parties feel as if something was still wanted which will bring numbers of young shooters into the tournaments and large meets, and which, moreover, will give these same young shooters some sort of encouragement to come and enter again the next time. And it is all in the air as yet.

I have no system of my own to offer, but I wish I were the author of the system which I will here try to present, and which, in respect to its designer, I beg to call

THE LOYD SYSTEM.

Mr. Alex. T. Loyd, the inventor of this plan, is the president of the Grand Calumet Heights Gun Club of Chicago. He has been figuring on his system of trap-shooting for some time, but would not yet have made it public save at urgent instance. Neither he nor this writer would like to call the system perfect yet, or to herald it abroad with any great flourish of trumpets. It is the intention now only to present a few schemes which Mr. Loyd figured out for me to-day, and to offer others later on, inviting careful study and discussion of them by all readers of the trap columns of FOREST AND STREAM, in order to a prompt ventilation of their merits or demerits. I believe there will be many, even at the close of this first paper, who will be ready to say that a Chicago man had found the key to the puzzle. If this should prove to be indeed the fact, I should be very happy over it, and very glad that FOREST AND STREAM is the first journal to get hold of it.

It should be premised that any system of this kind means a compromise, and that any compromise must draw its support from somewhere between the two ends of the rank of shooters. It can hardly suit each individual, but it will have served the function of any compromise if it have suited the majority. The greater that majority, the better the compromise. This particular compromise is in favor of the ordinary shooter, and against the professional, yet it does not bar out the professional, but allows him a legitimate and a proportionate reward for his skill. And if the professional shooter needs to shoot in more matches to earn a hundred dollars, he should remember—as the clay bird makers will pleasantly note—that there will under this system be more matches made to shoot, because the amateur and the novice will find incentive to go in and shoot, not feeling himself so sure to be robbed. To this it should be added that this system is not useful in live bird matches, and is not suitable for application in very small clubs. It is intended to be applied to blackbird shooting in tournaments and large meets. The best way to understand it is to figure out a sample match or so.

MATCH NO. 1.

Nine birds, $1 entry, 100 entries; total entry money $100, less $18 (cost of birds), $82.

Call $82 the "pot money." Divide this pot money into five moneys; each money will then be $16.40

Divide each money into four pots of 40, 30, 20 and 10 per cent. Each of the five moneys will then present the following appearance:

$16.40 { (1)..$6.56=40 per cent. (2).. 4.92=30 per cent. (3).. 3.28=20 per cent. (4).. 1.64=10 per cent.

It will thus be seen that at least twenty prizes, instead of three, are offered to the competing shooter, and he must be both a poor shooter and an unlucky shooter if he does not get his entrance money back.

The all-important question of deciding the ties remains to be considered. Everybody knows the long and tedious delays of shooting out ties which are necessitated under the old system, and which the Tucker system is calculated to partly remove. Under the Loyd system this is decided briefly by lot, as follows: It should be kept in mind that under this system the scores for place are always the same in number as the number of moneys. Thus, there being 5 moneys in our 9 birds race, the winning tie scores in the match would be 9, 8, 7, 6 and 5. A few shooters would break 9 straight; yet more would get 8, and so on. Let us tabulate that as follows:

No. of birds broken.	No. of shooters breaking.
9	7
8	10
7	12
6	15
5	21

Our shooters are now classified. They classify themselves in each shoot, as is the only possible fair way. The arbitrary method of allowing a club average to classify a shooter has in it a large element of nonsense. Under the Loyd system each shooter is freed from the annoyance of finding himself classed by somebody else. He has the whole field free, and is as good as anybody if he shoots as well in any given match.

We now have five classes of shooters of different numbers in each class. To each of these five classes goes the same amount of money, whether the birds killed be 9 or 5 out of 9; but only four out of each class may win a pot. There is no real test of skill in shooting 9 birds, and a miss and out tie is always more or less of an accident for one man or another. For instance, any one of our seven shooters who have broken 9 straight might miss his next bird, and then run 50 straight if he had a chance. The element of chance enters into all these short races. Very good; we may forestall this element of chance by allowing our seven shooters in the nine class to determine by lot which shall be the four of them to take the money, and which shall be the three to take nothing. They have tried their skill to get their place, now let them try their luck to hold it. It is a combination of skill and luck. The man who draws the tie shooting may win the first money of his class in the shake off. In other words, the poorer shooter has a chance. Therefore, into a jar put seven balls or gun wads, four of them numbered 1, 2, 3, 4 and three of them blank. The men of the 9 class draw. He who draws No. 1 wins $6.56, No. 2 wins $4.92, No. 3 $3.28, No. 4 $1.64. The remaining three men win nothing.

In the 8 class there are ten men. These draw in precisely the same way as above. No. 1 wins $6.56, No. 2 $4.92, No. 3 $3.28 and No. 4 $1.64. The blanks win nothing.

In the 7 class the same course is pursued. No. 1 wins $5.76, No. 2 $4.02, No. 3 $3.28, No. 4 $1.64

In the 6 class the same plan is followed, and the same amounts won as above.

In the 5 class the same plan is followed, and the same amounts won.

Thus it will be seen 20 men out of the 100 have won an amount greater than their entrance fee. Five of these 20 have won an amount six times greater than the entrance fee, and one of these five may be a shooter who is just beginning to shoot, and who only made 5 out of 9 in the match. Here is encouragement for such a shooter, and he may snap his fingers in the face of the disgruntled professional, and tell him he has won as much money as the champion of All-America and Fiji. If the latter doesn't like it he can quit shooting, or go into another match, for which latter he will not have long to wait. Or, if there should happen to be 4 of these professional brethren in the 9 class, and if their notions of a fair division did not happen to hold it seemly that one of the "perfesh" should carry off so much money as $6.56, while another got only $1.64, they might divide their $16.40 into four equal parts, and each take $4.10. Or they might speculate their chances and throw dice to see which should take it all. The pot-money of any class belongs to the class, and they can divide it as they like, provided only they do not bore the crowd by shooting out the ties. This is not a professional's good day. The system is not devised for him. But while the temperature grows frigid for him compared with what it used to was (although he still can win enough to make a living by strict attention to business and careful economy), the thermometer rises in the breast of the amateur, and he begins to think that after all he is something of a fellow himself.

By increasing the amount of the entrance money, the size and number of the pots can be increased very nicely. Let us take another sample:

MATCH NO. 2.

9 blackbirds, at $1.50 entry; 100 entries.

100×$1.50=$150; $150—$18 (cost of birds)=$132=pot money.

Five moneys, $26.40 each, with six pots in each money, may be divided as follows:

$26,40 { (1)..$6.60=25 per cent. (2).. 5.28=20 per cent. (3).. 3.96=15 per cent. (4).. 3.96=15 per cent. (5).. 3.96=15 per cent. (6).. 2.64=10 per cent.

The tie classes will be 9, 8, 7, 6 and 5. There will be six pots in each class. There will be 30 winners, and of the 100 shooters of these, five will win $6.60, five will win $5.28, fifteen will win $3.96, five will win $2.64. There is some inducement to go into a shoot of this kind. Take one more sample:

MATCH NO. 3.

9 birds at $1.50 entry, 50 entries.

50×$1.50=$75; $75—$9 (cost of birds)=$66=pot money.

Four moneys, and five pots in each money, will show as below:

$16.50 { (1)..$4.95=30 per cent. (2).. 4.12=25 per cent. (3).. 3.30=20 per cent. (4).. 2.47=15 per cent. (5).. 1.65=10 per cent.

There being four moneys, the scores to win would be 9, 8, 7, 6. Four men win $4.95, four win $4.12, four win $3.30, four win $2.47, four win $1.65; 20 men win more than their entrance money.

In case there should not be so many men as four in any one class, there would be one money left unprovided for. The disposition of such a case as this will be taken up next week, together with another test case or two. A few words will then also be said about a scheme for arranging the batteries of traps, for all of which there is not space here. In the meantime it is to be hoped that some comment will be excited, favorable or unfavorable, as it is not improbable that this system will be given a trial at some important Western shoots. Mr. Loyd has never made it public before now, but the Illinois State Sportsmen's Association is anxiously inquiring for some scheme which will fill its entries at its next annual meet (in June), and it is not likely that one will offer which will suit its purpose better than this, which will put new blood into its veins. Had the American Association known this before its last meet it might possibly have found what it also was looking for. That there is the most urgent need for this system, or a better one, all intelligent students of the present conditions of trap-shooting will admit, and Mr. Loyd will have a large feather in his cap if, after further consideration of his system, it shall be determined in open council that he has found the solution to the puzzle and devised a scheme which will cause professional shots to shoot the more, and make those shoot who never shot before. The poetry is not mine, neither is the system, but as I said, I am inclined to think the latter wouldn't be anything to be ashamed of.

E. HOUGH.

CHICAGO, Ill.

TRAP CHAT.

E. W. YERRINGTON of Norwich, Conn., is acquiring quite a reputation as a trap shot, and his name has been advanced by admiring friends as the champion shot of his State, and by some others as champion of New England. To neither of these two titles does Mr. Yerrington aspire, and it was entirely without his knowledge that such claims were made in print. He is an unassuming gentleman who started in a few years ago at trap shooting as a recreation, and as a tournament shot ranks among the best. He has no desire for honors as a match shooter, but as the articles in question have been the means of drawing out a challenge from Mr. C. B. Manley of Danbury, Conn., he has decided to accept this challenge with some modifications. Mr. Manley's challenge called for a match at 100 bluerocks from 5 traps at 18yds. rise, for $50 a side, to be shot on Colt Gun Club grounds at Hartford, and limited Yerrington to a 12-gauge 8lb. gun. As the challenged party Yerrington claims the right to have some voice in the conditions, and accepts with the right to shoot any gun, 10-gauges at 18yds., and 12-gauges at 16yds., and match to be shot during the Norwich Tournament, April 17 and 18, on Norwich Gun Club grounds. This should make a good race, and we hope to be able to announce Mr. Manley's acceptance soon.

The Norwich Shooting Club offer a very attractive programme for their shoot on Wednesday and Thursday, April 17 and 18. There are 13 events for the first day and 12 for the second, and, as Keystone rules will be used the shooting will be constant and lively. Sweepstakes of all kinds are provided, from 7 to 30 birds, entries ranging from fifty cents to $3, with several matches at double rises, so there will be no lack of variety. On each day a race at 30 birds will be shot under the new Tucker system, which is to be given a practical test. These races are for guaranteed purses, $50 the first day and $75 the second day. The club promises visitors a good time, with large entry lists. A hot dinner will be served on the grounds each day at a charge of fifty cents.

NEW JERSEY PIGEON LAW.—By the united action of the several gun clubs having grounds in New Jersey the law which has been interpreted as prohibiting the killing of pigeons from traps has been changed to permit the sport by the members of regularly incorporated clubs.

BRYN MAWR, Pa., has a newly organized gun and rifle club, with Hugh W. Barrett, Pres.; Christian Moore, Vice-Pres.; F. Howard Shank, Sec.; Geo. W. Foley, Treas., and John J. Kerrigan and Joseph Hamilton, Field Captains.

KEYSTONE RULES.

RULE 1. A referee shall be appointed to judge all matches, and his decision shall be final.

RULE 2. *Special Duties of Referee.*—The referee shall see that the traps are properly set to throw the proper angles at the beginning of a match, and that they are kept in order to the finish.

RULE 3. The referee shall announce the score in a loud voice.

RULE 4. *Keeping the Score.*—There shall be appointed a scorer, and the score kept by him shall be official. The scoring of a dead bird by a "1," and the scoring of a lost bird by a "0."

RULE 5. *Traps.*—All matches shall be shot from either 3 or 5 traps. Shooting from 3 traps, four shooters shall step to the score, one facing each trap, according to his number. No. 4 to step to No. 1 score after No 1 shoots, No. 1 to step to No. 2 score after No. 2 shoots, etc., until all have shot, when No. 3 steps behind No. 1 score and the rotation continues. Starting at No. 1, shooting shall continue in rotation down the line. Shooters shall load guns while walking from trap to trap, so that shooting will be continuous; a shooter must never shoot until the shooter to the left has shot. Any one shooting out of turn must shoot at another bird. In using five traps the rotation is the same, having five shooters face the traps and the sixth shooter to stand behind No. 1.

RULE 6. The traps must be well screened; there must be a number put on each screen opposite each trap, and the shooter must stand opposite the number.

RULE 7. *Adjusting Traps.*—The traps shall be so adjusted that the elevation of the bird in its flight, at a distance of 10yds. from the trap, shall not be more than 10ft. nor less than 6ft., and the angles shall be as follows: In using 3 traps No. 1 shall be set to throw a left-quartering bird; No. 2 shall be set to throw a straightaway bird; No. 3 shall be set to throw a right-quartering bird. In using 5 traps No. 1 shall be set to throw a right-quartering bird; No. 2 shall be set to throw a left-quartering bird; No. 3 shall be set to throw a straightaway bird; No. 4 shall be set to throw a right-quartering bird; No 5 shall be set to throw a left-quartering bird, same as National rules.

RULE 8. *Pulling Traps.*—The trap puller shall be at least 6ft. behind the shooter, and when the shooter calls pull, the trap or traps shall be instantly sprung, in single-bird shooting he should pull the trap consecutively, 1, 2, 3, 4, 5. He shall pull regularly for all shooters. If the bird is sprung before or at any noticeable interval after the shooter calls pull, he can accept the bird or not; but if he shoots the result shall be scored.

RULE 9. *Gun.*—No gun of larger caliber than 10-bore shall be used, and the charge of shot shall not exceed 1¼oz. Dixon standard measure, No. 1106.

RULE 10. *Loading Guns.*—In single-bird shooting only one barrel shall be loaded at a time, and the cartridge shall not be placed in the barrel until after the shooter has taken his position at the score. In double-bird shooting both barrels to be loaded at the score.

RULE 11. *Position of Gun.*—The gun may be sighted at the score. But when ready to shoot the butt of the gun must be held below the armpit until the word pull is given.

RULE 12. *Broken Birds.*—A bird to be scored broken must have a perceptible piece broken from it while in the air. The decision of the referee on this point shall be final. No bird shall be retrieved to be examined for shot marks. If a bird be broken by the trap, the shooter may claim another bird.

RULE 13. *Single-Bird Shooting.*—Each contestant shall shoot at number of birds decided on by the referee before leaving the score. If two birds are sprung at the same time it shall be optional with the shooter to accept or not. If he accepts either bird the result shall be scored.

RULE 14. *Double-Bird Shooting.*—Both traps must be pulled simultaneously, and each contestant shall shoot at three pairs consecutively thrown, as follows: Three shooters face the traps, the fourth man standing behind No. 1. No. 1 shoots out of Nos. 1 and 2 traps; No. 2 a left quarter and No. 2 a straightaway; No. 2 shoots out of Nos. 3 and 4, No. 3 a left quarter, No. 4 a straightaway; No. 3 shoots out of Nos. 5 and 6, No. 5 a left quarter, No. 6 a straightaway. The rotation to continue the same as in 3 trap shooting at singles.

RULE 15. *Four Trap Rule for Double Shooting.*—Two men to face the traps, with the third to step in after No. 1 shoots. No. 1 to shoot out of Nos. 1 and 2; No. 2 to shoot out of Nos. 3 and 4, and rotate until shot out.

RULE 16. *Tie Shooting.*—All ties shall be shot off at 21yds. on singles, and at 18yds. on doubles, and at the number of birds agreed on by the contestants. If, however, the contestants cannot agree promptly on this point, the referee shall fix the number, and his decision shall be final. The rules prescribed for single and double bird shooting shall prevail in tie shooting.

RULE 17.—In case of a tie, any one in the tie can ask for a divide any time when his interest in the purse amounts to as much as his entrance money, and the balance can shoot out after the interests of those asking for a divide have been deducted from the purse.

RULE 18. *Challenge.*—No challenge shall be considered unless the parties challenging are contestants.

RULE 19. Distance in single-bird shooting shall be 18yds. for 10-bore guns, 16yds. for 12-bore guns weighing 8lbs. or less, and 15yds. for all smaller bores weighing 7lbs. or under. In double-bird shooting the rise shall be 15yds. for 10-bore guns, 14yds. for 12-bore guns, and 13yds. for all smaller bores.

RULE 20. *Handicaps.* Every time a contestant wins a first money he shall be handicapped 2yds. and remain so as long as he shoots in a tie for any money. A contestant cannot be handicapped more than 4yds., and when shot out of all moneys can enter the next contest without a handicap.

RULE 2. *Semi-Professional Rule.*—Our semi-professional rule is the same as our amateur rule, excepting that the angles of the traps are changed each time to throw either a right-quartering bird, left-quartering bird or straightaway. The trappers are compelled to change the angles every time their traps are sprung. Five traps are to be used, the same as in our amateur rule.

RULE 3. *Expert or Professional Rule.*—In our Rule 3 six traps must be used and seven men constitute a squad. Unknown traps and unknown angles. Traps must be pulled according to indicator. No. 1 must throw a right-quartering bird, No. 2 a left-quartering bird, No. 3 a straightaway, No. 4 a right-quartering bird, No. 5 a left-quartering bird, No. 6 a straightaway. Shooters' positions are the same as in the amateur rule, and rotate the same; 1, 2 and 3 are to get either 1, 2 or 3 traps; 4, 5 and 6 are to get either 4, 5 or 6 traps. No guns of larger caliber than 10-bore are allowed. Every shooter shall have the privilege of the same number of shots with his gun properly loaded.

NEW YORK STATE TOURNAMENT.

Editor Forest and Stream:

I beg leave through FOREST AND STREAM to notify all the gun clubs of the State of New York that they can be admitted to membership in the New York State Association for the Protection of Fish and Game on the payment of an initiation fee of one dollar. The admission of any organized gun club to membership will give it representation in the convention to be held in Albany, June 3, and render its members eligible for competition in all the events of the great tournament to be held at the shooting park of the Elm Grove Gun Club, June 4, 5, 6 and 7. The executive committee of the Elm Grove Club, having charge of the projected State tournament, are preparing an elaborate programme of the events arranged for the four days above designated. Prizes are being constantly donated by merchants and others, and a gratifying list is already shown at the committee's headquarters, greatly varied in quality and value. Any club desiring admission to the State Association should send application to the undersigned at once; and as soon as the official programmes of the convention and tournament are issued, copies will be sent to all clubs whose applications are filed at headquarters.

Another suggestion I make to all shooters who contemplate taking part in the State meeting, is to come here and take part in the tournaments held at Elm Grove, prior to the great event. It is generally conceded that most men, however skillful, are handicapped by shooting on strange grounds; and to such I would say come to Albany and take part in our next tournament to be held at Elm Grove Shooting Park, Thursday and Friday, April 11 and 12. Programmes furnished on application. All persons desiring further information regarding the New York State Sportsmen's convention and tournament will please address

HORACE B. DERBY, Sec'y.

448 BROADWAY, Albany, N. Y.

BERGEN POINT, N. J., March 30.—The ninth match of the clay-pigeon shooting tournament for the New Jersey Athletic Club's challenge cup was shot this afternoon on the organization's grounds at Bergen Point. There were eight entries for the event, and each contestant shot at 15 targets from 18yds. rise. Edwards O. Schuyler and Bayard T. Kissam tied at 12 breaks each. In shooting off, the former missed his first bird and the latter broke. Geo. S. Virden scored 11, and Edward L. Vredenburgh and Elmer E. Bigoney each scored 10 breaks. Kissam will probably capture the trophy, as he has won five matches of the series shot to date. Virden has won two, and J. D. Berdan and Richard Sunderman have each won one event.

THE SUBURBAN GROUNDS.

Editor Forest and Stream:

I recently desired to shoot a little, but was unable at first to find a place where I could go and have a short practice now and then. At last I struck upon a place on the grounds of the New York Suburban Shooting Grounds Association at Claremont, N. J. I took the 2 o'clock train from Liberty street, and at 2:18 I was at the grounds, which adjoin the railroad station. I at once heard the welcome sound of shotguns at work, some loud and reverberating, and others, due to the use of wood and Schultze powder, not much louder than a firecracker.

The gate being open I walked in, and following a good hard cinder path reached the club house and entered.

Several men were putting their guns together, and all were good-naturedly exchanging greetings and seemed to be on the best of terms with each other. I saw nothing of the rough element. As I had come to shoot, I at once accepted an invitation to enter a shoot about to commence, called the "trophy" shoot, entrance 25 cents, 25 bluerocks, 5 traps, 5 angles. I was told the shooters for this badge must be amateurs, and all those entered were probably amateurs, but some of them shot like good ones, anything less than 18 out of the 25 was considered poor. I will not say what my score was, but I enjoyed the shoot.

The constant popping of guns over at the other end of the grounds excited my curiosity, and going over there I found a lively sweep in progress; about fourteen were entered and were pulverizing the targets in fine style. Uncle Billy Sigler at once attracted my attention. He looks like a typical sport; sturdy, quick and sure of aim, he seemed to have a mortgage on the birds, and as I stood looking on he broke his 10 straight, and such breaks; in fact the "crockery" was all broke up. E. D. Miller was another commanding figure, tall, well built, cool, every inch a 100 man, and the equal of any. Good-looking Brientnall was not behind any, and I heard him say in a low tone, "That makes 40 straight," as he finished the sweep. Lindsey, in dark corduroy coat and working his "wing" as usual, was not up to his best form but managed to scoop in second two or three times with his wood powder. Tom Kellar was on hand with his chewing gum, Apgar was there mentally comparing the working of the traps here with the perfection attained on the Middlesex grounds under his skillful care of that department. The genial Quimby beamed upon all he concluded a score of 9. Collins who knows what good shooting is; Johnson who has it nip-and-tuck with Miller occasionally; Lever, who won the 50 live bird shoot at Erb's the other day; Hobart, who loves to shoot so well that they say he shoots indoors at targets; Eddy, of California, with his splendid Scott gun; J. T. Richards, the lawyer, who can never get enough powder in his shells and whom no man can bluff; Chas. Richards, small of stature, but a Samson in slaying the flyers with his Westley Richards 12-bore; Hathaway, the bank teller, who they say has a different gun every other Saturday; Scott, who stands up to his work like a drum major; Seehusen, who has a rage for repeaters at present; Albee who shoots a cannon in the shape of a new 10-bore Winchester and goes at it like a sailor about to climb the mast; Morton, the accountant who found out that 5 shooting "cults" did not pay, except on black and blue marks on shoulder, all these were there and many others whom the writer did not know personally and about whom he could not pick up any gossip.

The style of shooting was what is called Keystone rules, which seems to be a favorite with the most of the contestants.

I was tempted into joining the next sweep with these gentlemen, and got laid out flat, but in subsequent sweeps I managed to get my entrance money back; so that all my afternoon's sport cost me was my ammunition and birds. No trappers to pay nor any extras—nothing to do but shoot.

I noticed about fifteen or twenty persons who did not enter any sweeps, but seemed to be practicing only. I am told that over 2,000 birds are often shot at on these grounds between the hours of 2:30 and 5 o'clock. Mr. Richards told me that some improvements are contemplated, such as extending the cinder filling in, rearranging traps, facilities for live-bird shooting, etc. I believe a rifle range is contemplated; there is also a targeting and testing backboard to the left, which, I understand, was put up by the FOREST AND STREAM people, and which has been used some, judging by the shot marks in it. When these improvements are completed the Suburban will possess grounds as good as any, and in the items of nearness to New York city and ease with which any number of boys can be got for working the traps, superior to any.

In addition to usual Saturday shoots, I understand that the grounds are open every afternoon and any one can go there and practice, the only charge being the price of birds. This is a specially good feature. Also, every fourth Saturday an all-day shoot is held, with restaurant open.

I intend taking the next one in on April 27, and may have a few remarks for you to publish if you can stand it. AD VANCE.

CANADIAN TRAP NOTES.

OTTAWA, March 23.—The St. Hubert's Gun Club shot their fourth competition for the club handicap this afternoon, and in spite of a glorious day and everything in favor of a good record, most of the boys were away off, and the scores were away below par. Following are the scores made:

Sweep at 10 blackbirds, 18yds. rise, 5 traps: W. J. Johnson 9, A. H. Throop 9, J. Deslauriers 9, E. White 8, Geo. White 8, Dr. Martin 7, S. White 7, Ed King 5, R. G. Dalton 4.

Sweep at 5 pairs, 15yds. rise: R. G. Dalton 8, W. J. Johnston 8, A. H. Throop 5, Ed White 5, Ed King 5, Geo. White 4, J. Deslauriers 4, Dr. A. Martin 4, Dr. H. Equis 3.

Club handicap at 20 birds each, 18yds. rise, 5 traps: Ed White (1 start) 16, Dr. Martin 15, W. J. Johnston 15, S. White (2 start) 15, J. Deslauriers 14, A. H. Throop 14, Geo. White 13, E. C. Grant (3 start) 12, R. G. Dalton 9.

OTTAWA, March 25.—A bright sun, clear sky, gave hopes for good shooting at the Hunton tournament to-day, but the cold, raw northwest wind fairly chilled every one. At 10:30 the first call for an "individual" prize was responded to by 11 guns; 20 birds each, 18yds.:

W J Johnston	01111110001111011111—15
Ed White	11101010101111100111—14
Dr A Martin	01101111100110111011—14
Geo White	11010101111100011011—13
A H Throop	01010011111010011101—12
J Deslaurier	01010111100011111011—12
R G Dalton	01100110101111111000—12

White second on shoot-off, Throop and Deslaurier divided third. The match of the day was the team match. The St. Hubert's made up two teams: No. 1, Field Capt. Dalton's; No. 2, W. J. Johnston's. The men shot five each in succession. The old vet. it will be noted was in fine order, scoring a straight 20. No. 1 team:

John Deslaurier	11111111111111111111—20
S C Labelle	10101101101100111001—12
R G Dalton	11111000011100011011—12
Geo White	11101001111010110102—12
Dr A Martin	10010111001111011000—11—67

No. 2 team:

P Trudeau	11101110101111111101—16
Ed White	01111101111111110011—16
W J Johnston	11111111001101001011—14
S White	01011101001111101111—14
A H Throop	11010011100111010010—11—71

TORONTO, March 26.—At McDowall & Co.'s grounds this afternoon the following gentlemen assembled for a friendly shoot at blackbirds. Seven sweeps and two team matches were also disposed of. A very interesting and enjoyable time was spent. The following are the scores, at 10 birds:

First sweep: Emond 10, Rice 8, Townson 7, Jackson 7, Andrews 6, C. Pants 5.

Second sweep: Felstead 8, Rice 8, Pants 8, McDowall 7, Townson 7, Jackson 7, Emond 6, Andrews 5.

Third sweep: McDowall 8, Emond 6, Pants 6, Townson 6, Felstead 6, Rice 5, Jackson 5, Andrews 5.

Fourth sweep: Rice 9, Felstead 8, Jackson 8, Emond 8, Townson 6, Pants 5.

Fifth sweep: McDowall 10, Rice 8, Pants 8, Andrews 7, Felstead 6, Emond 6, Jackson 6.

Sixth sweep: Rice 10, McDowall 9, Emond 8, Charles 7, Jackson 5, Felstead 5, Pants 4, Andrews 2.

Seventh sweep: McDowall 9, Emond 9, Pants 7, Jackson 6, Andrews 6, Charles 4, Rice 3.

Team shoot, 6 birds:

McDowall	111111—5	Emond	111111—5
Charles	111110—5	Rice	101010—3
Pants	111000—3	Andrews	110101—4
Felstead	111101—5—18	Jackson	101111—5—17

Team sooot, 6 birds:

McDowall	111011—5	Emond	110111—5
Charles	101111—5	Andrews	011101—4
Pants	011011—4	Jackson	110100—3
Felstead	111100—4—18	Rice	100010—2—14

MONTREAL, March 25.—T. W. Boyd & Son's first annual shoot was held on the grounds of the Dominion Gun Club, when there was a large attendance of both shooters and spectators. The day was a beautiful one for the sport. The first event, the team shoot, owing to the non-arrival of the Ottawa men, was postponed. The entries in the individual shoot were numerous. Mr. W. L. Lumsden made a fine score of 19 out of 20, missing his last bird. There were representatives of all the leading clubs on the ground, St. Lawrence showing up strong, headed by their president, Mr. A. Brault. Mr. Bon and several members of the Thistle, of St. Laurent, were also present. There were 40 entries in the ladies' match, and the excitement was great, Mr. J. Smith (Dominion) and Mr. E. A. Cowley (Montreal) tieing on 9 straight and shooting off 6 ties before Mr. Smith secured the prize. Individual match, 20 birds, open to all shooters, 5 traps, 5 prizes:

Lumsden	11111111111111111110—19	Paquette	10000101101101011110—11
C Aubin	11011010101111101111—15	A Brault	00100111001110111001—11
J Smith	01110111000011111111—14	G Brault	11001101010011101100—11
Thackwell	10000111101111110011—13	A Aubin	11110000011000111010—10
A Boa	11011011010010100111—12	J Cooke	00110010100101110110—10
Vermette	01111111110000110000—12	Bourgeau	01100000111101001000— 8

Ladies' match, 9 birds, 6 prizes:

J Smith	9	J Cooke	7
E A Cowley	9	Lumsden	7
Caughtry	8	C Aubin	7

SUBURBAN SHOOTING GROUNDS.—Claremont, N. J., March 30.—There was a fair attendance at the grounds to-day and some enjoyable sport. Ties divided. The various sweeps ran:

No. 1, 10 birds, 50 cents entry:

Lindsey	1110111100—7	Sandford	0110001110—5
Simpson	0011101101—6	Hathaway	1000010001—3
King	1011111111—9	Apgar	1111111110—9

No. 2, same:

Lindsey	0101110011—6	Sandford	1110111011—8
Simpson	0110111110—7	Hathaway	0010111110—5
King	1111100111—7	Apgar	1110101111—8

No. 3, same:

Simpson	1110000111—6	Sandford	1011111001—7
Hathaway	1011001000—4	Apgar	1100111101—7

DAYTON, O., April 2.—As usual here, the two days' shooting tournament was well patronized, and there was fine sport. There were five live-bird contests under the old rules, 80yds. boundary.

Five live pigeons each, 15 entries:

Mumma	01011—3	Bandle	11010—3
James	11111—5	Bill	11110—4
Benscotten	11011—4	Sheets	00010—1
Schaller	11111—5	Oakes	11011—4
Cain	01010—2	Magle	00111—3
Cole	11111—5	Shorty Webb	01111—4
Emerson	11110—4	Makley	01001—2
Heikes	11011—4		

James, Schaller and Cole divided first, Benscotten and Heikes second, Magle third, Cain and Makley fourth.

Six live pigeons, 15 entries:

James	011011—4	Cole	110101—4
Oakes	100111—4	Mumma	111011—5
Heikes	011111—5	Bill	001000—1
Cain	111101—5	Sheets	010100—2
Bandle	111101—5	Shorty	111111—6
Benscotten	111111—6	Miller	001000—1
Emerson	111110—5	Magle	100001—2
Schaller	101010—3		

Benscotten and Shorty first, Bandle and Mumma second, Cole, Oakes and James third, Schaller fourth.

Five live pigeons, 12 entries:

Bandle	11011—4	Cole	11111—5
Schaller	11111—5	Mumma	10101—3
James	10101—3	Oakes	10 01—2
Heikes	11111—5	Magle	11110—4
Bill	11011—4	Webb	01011—3
Benscotten	11101—4		

Heikes and Cole first, Benscotten second.

Five live pigeons each, 7 entries:

Heikes	01111—4	Benscotten	11110—4
Cole	00011—2	Mumma	00111—3
Harman	10010—2	Elliott	00111—3
Cain	01111—4		

All moneys divided.

Five live pigeons, 11 entries:

Heikes	11111—5	Elliott	01111—4
Cole	11111—5	Keenan	11101—4
Harman	11110—4	Ackerman	01110—3
Cain	11011—4	Makley	10101—3
Benscotten	11111—5	Stockert	11101—4
Mumma	01110—3		

First money divided, Harman won second, third divided.

The three most exciting contests in the standard target matches were 12 birds each. First:

Sheets	000000	Benscotten	111111111111—12
Schaller	111011110110— 9	Cole	111111010101— 9
Oakes	011101111111—10	Gethens	110110111111—10
James	111101011100— 8	Heikes	101011111111—10
Bandle	111111011111—11	Taylor	011111111111—11
Mumma	111100101111— 9	Shorty Webb	111111111110—11
Magle	110101111110— 9	Cain	110111111101—10

Benscotten first, Bandle, Taylor and Shorty Webb second, Heikes and Oakes third, Cole fourth. Second:

Mumma	10111111111—11	Owens	111110001010— 7
Keenan	111111110111—11	Makley	111111100000— 7
Heikes	111101111111—11	Cain	101111110111—10
Harman	011101101111— 9	Benscotten	111111111112—12
Elliott	111111011100— 9	Cole	111000111011— 8
Ackerman	101110101101— 8	Stockert	111101111010— 9

Benscotten broke 12 straight and took first money; Keenan and Heikes "whacked up" on second, Cain took third. Third:

Mumma	111101011111—10	Makley	101111110011— 9
Keenan	111111111111—12	Cain	111111011111—11
Heikes	111111111112—12	Benscotten	111111101111—11
Harman	011111111001— 9	Cole	111110111111—11
Elliott	010111110111— 9	Stockert	001010000110— 5
Owens	101111111101—10		

Heikes and Keenan handsomely acquitted themselves by each breaking 12 straight, and "whacked" up again; Cain won second in the shoot-off, Benscotten third, Owens fourth.

It was unanimously agreed that hereafter all live bird contests here shall be under the new American Association Rules.—A. B.

NEWARK, N. J.—The Southside Gun Club will hold its opening shoot of the summer season at the club's grounds on April 10, beginning the sport at 9:30 A. M. Invitations to participate have been extended to sportsmen of this vicinity and ten matches will be shot for prizes.

PHILADELPHIA, Pa., March 22.—Teams of three from the North End Club and the Philadelphia Sportsmen's Gun Club met at the Fernwood range to-day and had a long good fight, North Enders winning by 21 points. The score stood:

Philadelphia Sportsmen's Gun Club Team.

Singles.

SAN FRANCISCO, March 24.—Beautiful, warm, sunshiny weather, with little wind and a splendid lot of pigeons, gave the California Wing Shooting Club as fine a day before the traps at San Bruno to-day as it has ever enjoyed. The gentle breeze which blew from the traps to the stand made many "in-comers," but they were generally grassed in fine style. At the last shoot, two weeks ago, the weather prevented the score from being shot out, and to-day it was determined to ignore this altogether, and begin anew for the season of 1889. There were 18 entries for the main match, and out of the 156 birds trapped only 32 escaped out of bounds, and a very large majority fell dead. Following is the score:

Raudall	1112010211 21—10	Lewis	2011110021 10— 8
Slade	2211111112 30—11	Liddel	0102100021 10— 6
Robinson	1101121122 10—10	De Vaull	1022111112 1—11
Fay	2111122012 01—10	Smith	1212222212 11—12
Meily	2222221011 20—10	Lowe	0223022212 11—10
Hass	1111112011 11—11	Johns	0120001001 11— 6
Sperry	2110301211 1— 9		

A pool shoot at 6 singles with 3 entries was the next event. The entry fee was $2.50, the pool being divided in prizes of $10, $6 and $4. For the event a box of fine strong bluerocks were procured, and some interesting work resulted. Many of the powerful birds carried charges of shot out of bounds before giving up. Robinson only used his right barrel and made a clean score of kills. Slade and Fay tied with 5 each, and divided second and third money. The score: Robinson 6, Slade 5, Smith 4, Fay 5, Sperry 4, Lowe 4, Randall 4. Another pool under the same conditions, with 7 entries, followed. Fay made a clean score, and Robinson, Smith and Randall killed 5 each, dividing second and third money. Score: Robinson 5, Smith 5, Fay 6, Lowe 4 Randall 5. Johns tried 12 singles and succeened in dropping 11 in fine form after missing his first. This closed the day's sport and the shooters returned to the city, well pleased with their outing.

YOUNGSTOWN, O., March 22.—Following were the scores made to-day at the weekly shoot of the Youngstown Gun Club: First shoot, 25 birds:

John A Logan	1100011100001100111111101—16
J N Whiteside	1101111011111111111111111—22
C E Semple	1010101100011100001100100—11

W J Hitchcock, Jr	1100110101— 6	D F Anderson	1111110111— 9

ERB'S.—New York, March 30.—On the 28th inst., at Erb's grounds Newark, N. J., two very interesting shoots took place. The day was raw and cold, and rain fell all the forenoon; notwithstanding this the largest crowd of the season was in attendance, lovers of the trap from all sections being on hand. The first match, called promptly at 12 o'clock, was between Mose Meyer, "an old-timer" of Arlington, N. J., and Wm. Lever of Elizabeth; 50 birds, one barrel, any gauge gun, otherwise Hurlingham rules, for $50 a side. Mr. Meyer was evidently out of practice, and Lever had no difficulty in shooting him out on the 43d bird. Mr. Erb was referee, Mr. Lindsley and Mr. Terry judges:

Meyer	0010001101011011001011111101010100010011111 w.—24
Lever	0111100110111101100:0111101111101111101110111 —32

The match between Charlie Smith and Gus Manitz was the magnet that drew the crowd, and every one that witnessed it declared themselves more than repaid for braving the storm. It certainly was the prettiest match that has been shot in this vicinity for years. The excitement was at fever heat until the winning shot had been fired. Both gentlemen did beautiful execution, some of the kills being remarkable. The scores are worthy of a champion, for the birds were of the best, those from the 15th to the finish being of the highest order. There was a large amount of money wagered on the result, mostly at odds of 10 to 8 on the "Dutch." Mr. Oswald von Lengerke was the referee, and had an unusually easy task, as he was called on only once for a decision, Mr. Manitz's third bird being challenged for being shot on the ground, he was ordered to shoot at another. There was no kicking throughout the match; it was a most gentlemanly shoot. Mr. W. Lindsley was judge for Smith and Mr. Dan Terry officiated for Manitz. Appended are the scores with the birds lost. Both gentlemen used a 10-gauge L. C. Smith hammerless gun, and wood powder in the first barrel:

Manitz	2121210112111120011011212101112101112212012022—42
Smith	1012111211111101222102110111211222122121202121021—44

Smith lost his second bird, an incoming towerer, fifteenth a right quartrer, his twenty-first, a strong diver, was hit hard with both barrels, but fell dead out of bounds; twenty-fourth a hard diver, forty-third, a towering right quarterer, hit hard with the second, fell dead outside; forty-eighth, a right quarterer, fell a prey to the pot hunters. Manitz's lost birds were his seventh, seventeenth, eighteenth and twenty-second, all right quarterers; twenty-ninth, a straight driver, hit hard; thirty-sixth, a right quarterer; thirty-ninth, a driver, and forty-sixth another right quarterer. There is to be a grand sweepstake shoot at Erb's, Newark, on the last Thursday in April. The conditions are 25 birds, $25 entrance, Hurlingham rules, 12-gauge guns, 28yds. It will undoubtedly be a great event as all the Jersey cracks have signified their intention of entering.—TEE KAY.

THE ARIONS.—The Arion Rod and Gun Club, of New York and East New York, which is composed of a number of well known and prosperous business men, intends to buy a new club house for the accommodation of themselves and their families at Rockaway Beach. The membership, which has been limited to thirty-five, will now be increased to fifty. The officers elected for the ensuing year, the ninth of the club's existence, are: W. H. Frank, President; M. Maver, Vice-President; G. Kahr, Secretary; L. Kolb, Treasurer.

ST. PAUL, Minn., March 27.—Yesterday the Minneapolis Gun Club held its regular weekly badge shoot at its grounds on Bloomingdale avenue, and there were a large number of members present. We had a regular March "howler," the wind blowing furiously from the rear and the sky was overcast and dull. In the double shooting many of the birds struck the ground before the second barrel could be fired, and only the quickest of snap-shooting was of any avail. Of course the scores were low, but under the circumstances some of them were very good. There is considerable challenging and counter-challenging going on between the members, and live birds are the targets used. First came the Babcock-Elliott match, 25 live birds, $25 a side. Babcock won. Then J. G. Bradley challenged any member of the gun club to shoot, and was promptly accepted both by Skinner and Babcock, with other members to hear from. The Bradley-Skinner match will be called Saturday afternoon, April 6, at 30 sparrows, 21yds. rise, both barrels, Monaco boundary. S. Harrison, the president, has challenged Babcock to a 25 live bird match, the winner to shoot the winner in the Bradley-Skinner match. As all are the best of friends, the stakes are the cost of the birds. The following are the scores made:

First sweep, at 10 single Peorias, $1 entrance:

Ensign	1111111111—10	Swanman	0011111101— 7
Skinner	1001011111— 6	Dalton	1011110111— 8
Murphy	1011010111— 7	Morse	1001111011— 7
Shott	1011111101— 8	Nicholson	1101111101— 8
Brady	1111110111— 9	Dodge	1010110111— 7
Whitcomb	1111111101— 9	Curtis	1111110001— 7
Beck	1011111101— 8	Latz	1001110101— 6
Lawrence	1110111111— 9	Shepherd	1111111011— 9
Fox	1100110111— 7		

"Tribune" badge shoot, 9 singles and 3 pairs Peorias, entrance $1, four moneys:

Skinner	110111011 10 10 10—11	Morse	110110101 10 00 00— 7
Murphy	110110101 10 11 00— 9	Nicholson	001101011 11 11 10—10
Whitcomb	101111000 10 00 10— 7	Dodge	111011010 11 01 00— 9
Beck	010101000 00 00 00— 3	Ensign	111111111 11 11 10—14
Lawrence	111110011 01 10 11—11	Cutter	110110111 11 10 11—12
Shott	001100011 00 10 00— 5	Latz	100011100 10 11 00— 7
Fox	101111101 00 10 10— 9	Shepherd	101101011 10 10 11— 9
Swanman	010000011 00 11 11— 7	Scott	011101011 10 00 00— 7
Dalton	101011110 10 10 10— 9	Brady	110101000 11 11 10— 9

Ensign wins badge and first money, Cutter second, Lawrence and Skinner third, Nicholson fourth.

Club Badge shoot, 10 singles and 5 pairs Peorias, $1 entrance, four moneys:

Skinner	1100010101	10 10 11 11 11—13
Brady	0111110010	11 00 10 10 10—11

Stokes senior badge, Fox junior; Stokes first, Dalton and Beck second, Whitcomb third, Murphy and Skinner fourth.

BERGEN POINT, N. J., March 29.—The first of a series of clay-pigeon matches, between teams representing the New Jersey Athletic Club and the Elizabeth Gun Club, was shot this afternoon on the grounds of the former organization at Bergen Point. The visiting team included several marksmen who have made high records shooting at bluerock targets, and easily won the match. The conditions were 15 birds each, 18yds. rise and 50yds. boundary. The score was as follows:

Elizabeth Gun Club.		New Jersey A. C.	
Meller	15	J Taylor	12
Lawrence	9	R Sundermann	12
Lackmann	12	H Cook	12
Conover	13	G Virde	10
Sayre	14	J Edey	11
Johnson	14	T Wilmerding	9
Williams	13	E Bigoney	12
Chetwood	11	H Popham	5
Shangle	8—109	E Vredenburgh	9— 82

BRADLEY VS. VAN SCHAICK.—A match at live birds between Messrs. Dan Bradley and G. G. Van Schaick, shot four weeks ago, having resulted in a tie, these gentlemen determined upon another match to decide the first. It was shot last Thursday at Mr. Bradley's residence near Lake Mahopac, and after some good shooting resulted in a victory for Van Schaick by one bird. The pigeons in both matches were fast flying birds, bluerocks predominating, and the majority were swift drivers. The scores were as follows, Mr. Field shooting outside of the match:

First Match.			Second Match.		
Bradley	1121211202	01—10	Bradley	2221120111111101	—13
Van Schaick	1110111111	—10	Van Schaick	1211111110211111	—14
Field	0102101010	2— 6	Field	2022020012002211	— 9

The figure 2 represents birds killed with the use of both barrels. The three birds missed by the two contestants in the second match were dead out of bounds. Arrangements are being made for another match at a larger number of birds.—ALGONQUIN.

HILLSIDE GUN CLUB.—Dexter's Park, Long Island, March 23.—Match for club medal, to be shot for at 12 monthly shoots and to become property of one who wins it most times; 25 bluerocks, Chamberlin rules; Knebel 18yds., others 16yds.

P Welhardt	1011110011111100100010001—15
P Reiss	1101100111001111111110010—18

Thos Short	1010011101111101110111011—18

BROOKLYN, March 28.—The Hillside Gun Club had a good afternoon's sport at Dexter's Park, Jamaica Plankroad. This club was organized for the purpose of indulging in shooting at inanimate targets, so as to keep the members in practice during the season when game is not to be found. Twelve members went to the traps and shot at 25 birds each, a gold medal to the first and second and a leather medal to the lowest scorer, the contest for the latter causing considerable amusement, as at one time no less than seven tied for it. The full score of the shoot was as follows:

P Welhardt (16)	1011011001101101100110101—15
P Weiss (16)	1101000101100111111101101—18
J Kessler (16)	0011111010010110101000110—15
J Koch (16)	1010100111111011001100111—16
J Reiss (16)	0111101011010100111111010—16
H Berger (16)	1011111110011111010110111—20
H Knebel, Jr. (18)	1111011111111111111011111—23
J Rausch (16)	0101010110111011100110011—15
J Link (18)	1111111110111111111111111—24
E Berger (16)	1010110110100010110110110—14
J Meyer (16)	0101111010000111100111111—15
T Short (18)	0110011011111011111011111—18

J. Link won the first gold medal, H. Knebel, Jr., the second, and E. Berger the leather medal. Several sweepstake were then shot off. Referee, Mr. G. L. Bower; scorer, Mr. Charles Traub.

ROXBOROUGH, Pa., March 23.—The Roxborough Gun Club, of Roxborough, Pa., and Matsunk Gun Club, of Matsunk, Pa., shot a match at the Roxborough Club grounds, this afternoon. The conditions were teams of 10 men, 20 bluerocks per man. The Matsunk boys shot in first-rate form and won by a score of 157 to 127:

Roxborough Gun Club.		Matsunk Gun Club.	
Hoagland	17	C F Crassman	18
Gorniman	15	J Hefenfinger	15
H Blondin	10	W Miller	14
J Weir	13	J O'Brien	13
A Weir	15	T Smith	15
J Linsey	11	J Bell	15
G Blondin	16	Geo Ritter	17
H Ozias	15	H Noblit	18
Gilmore	6	J Nettels	14
Warren	9—127	S Carter	18—157

PINE BROOK, N. J.—Miss Annie Oakley and Frank Class of Pine Brook will shoot a match on April 5 against C. M. Hedden and Sam Castles of Newark. The match will be at 25 live birds each, for $50 a side, Hurlingham rules, 80yds. boundary. Miss Oakley will shoot at 25yds. rise and the others at 30yds. The match will begin at 1 o'clock.

EUREKA GUN CLUB, of New York, shot at Jersey City Heights Gun Club grounds, Marion, N. J., bluerocks, 5 traps, all angles, 16yds. rise for 12-bore and 18yds. for 10-bores, National rules, sweepstakes.

First sweep:			
J H Ficken	1101010011—6	Booth	0110100010—4
Swindell	0011111000—5	Strope	0101001000—3
Buthfer	0000000100—1	Heritage, Jr	1010000100—3

Second sweep, at 5 bluerocks, same conditions:

E H Schmults	00000—0	Schmults	00100—1
J H Ficken	10011—3	Bungar	00011—2
Heritage, Jr	01001—2	Schortemeier	11001—3
Diffley	00000—0	Heckman	00000—0
Swi dell	10011—3	H Ficken	00110—2
Buthfer	00001—1	Dr Sutton	00001—1

Ties, miss and out, on 3 for first: J. H. Ficken 1, Swindell 1, Schortemeier 2. Ties on 2 for second, H. Ficken 1, Heritage, Jr. 0, Bungar 0. Ties on 1 for third, Buthfer 2, Dr. Sutton 0, A. Schmults 1.

Third sweep, at 10 bluerocks:

E H Schmults	0001000110—3	Strope	1011000001—4
J H Ficken	0101101100—5	A Schmults	0110100111—6
Heritage, Jr	0000100110—3	Bungar	0010010011—4
Diffley	0111111001—7	Eaton	0010100100—3
Swindell	0010010010—3	H Ficken	0011011101—6
Buthfer	0010001100—3	Dr Sutton	0110000100—3
Booth	1111100010—6	*Schortemeier	1111110010—7

*Schortemeier barred.

Ties on 6 for second, miss and out: Booth 0, H. Ficken 2, A. Schmults 3.

Medal and prize shoot, best 7 out of 10 scores to count for medal and prize; match at 15 bluerocks, 5 traps:

Schmults(16y)	0000010100100100—3	Booth (16)	0100010001000100— 4
J H Ficken	1800111001100111—9	Strope (18)	0100010101011111— 8
Heritage, Jr	1010000000001111100—4	A Schmults	1600010101101000— 5
Diffley (16)	0001001011011000—6	Bungar (1)	0000001100000000— 2
Swindell (16)	1100011000111011—8	Schorte'ier	1100111101111111—12
Buthfer (16)	0010100100000111—5		

Schortemeier wins medal for month of March, and having made 80 per cent. of total score is handicapped 2yds. at subsequent shoots. The day was a poor one for good scores, as the wind blew very hard from the west. The majority of the members had no experience previous to this shoot at using 5 traps, and several had not shot at an artificial target before. Thanks are due to Mr. Al Heritage for his kindness in superintending traps and making the boys comfortable. The next monthly medal shoot will take place on Tuesday, April 9, and as some of us will practice before that time we may make better scores.—L. H. S.

HOOSICK FALLS, N. Y., March 27.—Cambridge vs. Independent, Hoosick Falls, challenge match, National Driving Park, king birds, 50 each, 3 traps, National rules:

Cambridge.	
Wm Mills	0111111110001110101111110110111111010101001110011111—35
J W McCormic	1011111111110100001101111101101111111111111111111—39-74
Hoosick Falls.	
C A Johnson	1101111111101111101111011111001111111111111011—41
C H Stockwell	1111101101010111111111111011111111101111111111111—45-86

FITCHBURG, Mass., March 28.—The Fitchburg Rod and Gun Club have elected officers as follows: President, C. H. Brown, Sr.; Vice-President, Geo. W. Weymouth; Secretary and Treasurer, E. B. Twitchell; Directors—H. I. Wallace, Fred H. Rideout, Amos B. Small, S. W. Putnam and C. H. Brown, Jr. Plans already under way indicate an unusual interest and much sport the coming season.

WORCESTER, Mass., March 28.—The first of the spring series of classification shoots took place this week. In the shoot for position each man had a possible score of 30 birds, in the prize score there was a possible 10, and in the tie a possible 5. The results in detail follow:

Class B.	Classif.	Prize.	Tie.	Class B.	Classif.	Prize.	Tie.
C R B Claflin	26	10		E S Knowles	22	7	4
A B Franklin	24	9		L S Kilburn	25	7	4
Dr Bowers	23	9		C Rice	24	7	4
E T Swan	25	8	4	G J Rugg	20	9	
M D Gillman	25	8	3	H D Jourdan	13	5	
A R Bowdish	23	8	1	H Colvin	17	4	
G W Russell	27	8	2	F Forchance	7	2	
L F Houghton	27	7	3				

In Class A the first prize of $7.50 went to Claflin. The second prize of $4.50 was divided by Bowers and Franklin. The third of $3 went to Swan, and the fourth of $2 to Kilburn, Knowles and Rice. In Class B the prizes were $4, 2.40 and 1.60.

WELLINGTON, March 30.—There was a large attendance at the grounds of the Wellington Club to-day, and several good scores were made, despite the strong north west wind which blew across the traps. The Merchandise match, which was opened three months ago, was closed this afternoon with the following winners, the conditions being that the best eight scores at 15 birds each be counted: Wardwell first, with 102, Perry second with 101, Shumway third with 96, Sanborn fourth with 95, Field fifth with 94, Schaefer sixth with 93, Snow seventh with 92, Baxter eighth with 85, Savage ninth with 81, Grimes tenth with 79. The following scores were made in the Silver Pitcher match at 8 clay-pigeons and 7 bluerocks: Perry 10, Bradstreet 10, Field 12, Schaefer 15, Snow 11, North 9, Sanborn 11, Stanton 12, Long 13, Allerton 9, Fay 13, Ward 13, Chase 8, Wardwell 14, Bond 11, Baxter 8, Conant 7, White 13, Webster 13, Melcher 8, Short 10. The pitcher was won by Wardwell. The sweepstake winners in the several matches were: Six bluerocks: Lang, Stanton and Baxter 5. Six bluerocks: Chase 6. Five clay-pigeons: Morse 5. Six macombers: Choate 6. Five clay-pigeons: Choate 5. Six clay-pigeons: White, Stanton and Bond 6. Six bluerocks: Sampson 6. Six macombers: Stanton 6. Six bluerocks: Short, Chase and Wood 6. Three pairs clay-pigeons: Choate, Webster and Schaefer 6. Six bluerocks: Bradbury and Fay 6. Eight clay-pigeons: Schaefer, Lang and White 8. Seven bluerocks: Webster, Choate and Wood 7. Six bluerocks: Baxter, Stanton and North 5. The club shot under the new five-trap rule to-day, and nearly all the shooters were pleased with it, although it is more difficult to make good scores than under the old rules.

BALTIMORE, March 27.—The Baltimore Gun Club held a shooting match at Acton's Park, Anne Arundel county, to-day. The shooting, which began at mid-day, lasted until dark. The members tried the Keystone targets, which throw from the traps in all directions. The object of the shoot was to select a team for the match with the North End Gun Club, of Philadelphia. During the day a meeting of the club was called to consider the challenge of the North End Gun Club. Capt. George Hussell presided. Messrs. Walter P. Harvey and Dr. Baughman were elected members of the club. The challenge of the Philadelphia club was accepted, and Acton's selected as the place for the match, April 30 was fixed as the date. Fifteen men will shoot on each team and 20 birds will be shot at by each shooter. The Baltimore Club will entertain the visitors during their stay in the city. If challenged to shoot a return match the Baltimore Club agrees to go to Philadelphia. Messrs. Cleveland, Lithicum and Williar were appointed a committee to select the Baltimore Club's team, Messrs. Denny, Buckby and Dr. Baughman were appointed a committee to entertain the visitors.

STICE,—Chicago, March 30.—Dr. Henry, of Jacksonville, Ill., the home of Jim Stice, says that Stice has rheumatism of the heart. His hands and limbs are badly swelled. Nevertheless Stice declares himself eager to shoot Dr. Carver on April 6 or at some other date. In case such a match is made Carver says he will restore the money forfeited by Stice on the late match. Stice went to Des Moines for the Carver-Budd match of to-day, and the Carver-Stice match may be re-arranged to-day. R. B. Wadsworth and W. L. Shepard also left for Des Moines yesterday to see this match. Several Chicago men are backing Budd in this match, or are interested in it.—E. H.

SOUTH SIDE GUN CLUB, Newark, N. J.—Friends are cordially invited to the opening shoot of the summer season, April 10, at 9:30 o'clock. The club grounds are situated on New Jersey Railroad avenue, near Lehigh Valley coal depot, and may be reached via Pennsylvania Railroad, Emmet street station: Newark & New York Railroad, Broad street, and Delaware, Lackawanna & Western Railroad. All will be class shooting under club rules. Prizes divided 40, 30, 20 and 10 per cent. Targets, three cents each. Ammunition and lunch on hand. Rain or shine.—W. R. HOBART, Sec.

GILMAN, Ill.—The Gilman Gun Club will hold an amateur tournament (professionals debarred) April 16 to 18. Live birds and artificial targets. Purses, 40, 30, 20 and 10. For particulars address I. W. Budd, Crescent City, or Frank Mosher, Gilman.

CLEVELAND, O., March 28.—T. A. Close and A. Forrester shot a match of 50 singles each on the Kirtland range to-day. They tied at 44 and then decided to shoot another 50 to decide the tie. Forrester won by a score of 44 to 38.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

ELIZABETH, N. J., March 28.—In the crow shoot of the Elizabeth Gun Club to-day, R. Williams killed his 21 birds straight, at 30yds., Hurlingham rules.

WILLIMANTIC, Conn., will have a two days' tournament, April 24 and 25, given by the Rod and Gun Club. Artillicial targets, 15 events each day, open to all, National rules.—JAS. H. ROSS, Secretary.

DES MOINES, March 31.—Dr. Carver won in the shooting match with Budd yesterday by a score of 89 to 85. The match was at 100 live birds, Hurlingham rules, for a purse of $500. The weather was very unfavorable.

LAFAYETTE, Ind., Aug. 21, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Dear Sir—I am pleased to be able to give you a most satisfactory account of the paper shells you sent me. I have used Schultze powder altogether for the last seven years, with Elcy's shells, and yours are the first perfect substitute I have found, and I shall take care to recommend their use. (Signed) W. GRAHAM, Champion Shot of England.—*Adv.*

Sea and River Fishing.

THE TROUT OF THE MOUNTAIN STREAM.

SOME sing of the bass with his glistening mail,
Or the giant tarpon with silver scale,
But the angler's joy, and the artist's dream,
Is the spotted trout of the mountain stream.

With his mottled sides and his shapely mould,
And his crimson stars with their fringe of gold,
With his painted fins and his silvery gleam,
He has stolen the hues of his mountain stream.

With mouth wide spread and with glittering eye,
He springs from the depths at the dancing fly,
And swift as the shaft from the bended bow
Shoots down to his home in the waves below.

When soft from the south the breezes blow,
When the waters are cleared of the melting snow,
When the earth awakes from the winter's dream,
I seek for the trout in his mountain stream.

When the apple blossoms are snowy white,
And the swamps with the scarlet maple bright,
When the silvery birch has donned its sheen,
And the marshy meadows are fringed with green;

When the bobolink on the "poke-stalk" swings,
And the hermit thrush in the woodland sings,
Then I'll seek the trout in his mountain home,
In the sparkling verge of the cataracts' foam.

'Tis then in the water's wildest play,
That he lies in wait for his floating prey,
Or shoots like a flash through the swiftest stream,
With an arrowy rush and a meteor gleam!

When the skies grow warm and the sun rides high,
By the spreading alders he loves to lie;
Or he seeks his lair 'neath some mossy stone,
Which the frost from the hanging ledge has thrown.

Then, angler! if you would his capture try,
Choose your lightest line and your daintiest fly;
Let your step be light and your cast be true,
Or the trout will have nothing to say to you.

If the bending rod and the ringing reel
Give proof that you've fastened the tempered steel,
Be sure that the battle is but begun,
And not till he's landed is victory won.

Then, give me the trout of the mountain stream,
With his crimson stars and his golden gleam;
When he, like a hero, gasping dies,
The angler has won his fairest prize!

CHARLESTOWN, N. H. VON W.

SPRINGFIELD TROUT STREAMS.

SPRINGFIELD, Mass., March 18.—*Editor Forest and Stream:* The large brooks of all the district within twenty miles of Springfield afford one of the best natural trout-fishing grounds in the United States. It is not a "sportsman's paradise," of course, but there are few localities where the trout brooks are so easily within reach of the tired, business-pursued dweller in the large cities. There are scores of such streams stretching for miles in all directions from the small rivers which are tributary to the beautiful Connecticut.

Take your team at 2 o'clock any spring morning, and by sunrise you can commence a day's sport on the most entrancing trout stream you ever visited. The brooks to the south and east of us afford the best sport and the largest fish, because they flow through lowlands, abounding in springs and making rich feeding grounds. To the west and north the brooks are shallow mountain streams, where anchor ice in winter precludes the possibility of trout growing to any size. So the large meadow brooks near at home are the chief resort of our sportsmen, who have formed two clubs, called the North Branch and the South Branch, after the two principal tributaries to Mill River, and have leased the streams from the abutters for ten years. Both brooks were for generations excellent haunts for the best trout, but became sadly depleted; these clubs, however, have thoroughly restocked them and patrolled them for several seasons, and hope ultimately to bring them up to as high a standard as they formerly attained. The clubs are made up of business and professional men, whose object is chiefly the protection of the fish, rather than the sport of catching them. Indeed, you would find few in their membership whom you would call real sportsmen; to fish with a worm and sinker, even in such splendid trout streams, is still the popular interpretation of sport. But there are several expert fly-fishermen hereabout, who, be it said to their credit, are among the most persistent members of the local clubs.

Few fish have been taken lately from the protected streams, and the catch has probably cost the members not less than $2 a pound. The only interference they meet is with a few market-fishermen, who brag of having robbed the streams. It is the sentiment of the clubs that any one caught in illicit trouting shall be prosecuted to the full extent of the law, and a lesson or two has had a salutary effect. Several of our sportsmen go to Rangeley every year, and I have heard them speak in great praise of the efforts of FOREST AND STREAM in exposing the law-breakers there. A recent issue of your paper contained an account of our new fishing and game club, which has leased a huge section of the Canadian wilderness, and by the way, nearly all are members of the two local clubs I have mentioned. S.

SHOW-WINDOW TROUT.

THE opening of the trout season in Massachusetts was not a favorable one. The day followed a snowstorm on Sunday, with even a foot of the white mantle of winter in some of the northern towns of the State. Some of the noted sportsmen of Boston and other cities were intending to be about the first at the noted trout streams of the South Shore, but the day began with a heavy rain, which continued till night, and hence the dreams of trout were not realized. Still the sight of trout rods and flies handsomely displayed in the windows of the tackle stores has left its mark, and pleasant weather will send the fishermen to the pools; with what results we wait to see. Until of late the season has been very early, and many of the streams are free from snow water much earlier than usual. Thursday, the 4th, is Fast Day, and a legal holiday in this State, and, though the Governor does not enjoin it upon the people in his message, yet some of the sportsmen will improve the day with rod and reel. The indications at present are that the trout season will open earlier in Maine than usual—that is, that the ice will be out of the trout lakes earlier. The winter has been a very mild one, and some of the rivers in that State, that are sometimes ice-bound till the middle of April, have been clear for a couple of weeks already. It is expected that the appearance of salmon in the Penobscot, at Bangor, will be unusually early. Already more salmon have been taken than usual at the mouths of the rivers.

If one thinks for a moment that sport with rod and line is on the wane he need only to have watched the crowd on Washington street in front of Appleton's window on Monday. The occasion was one of the finest displays of live trout there has ever been made at that noted tackle resort. In spite of the rain the window was thronged all day, and it was a rare sight to see the pile of umbrella tops, one against the other. The display included about seventy trout in the tank and window pool. Among the fish was a landlocked salmon or blackspot that measured almost 24in. in length, and is really the largest fish ever attempted in a window display in this city. The specimen was from the hatcheries of Fish Commissioner Hodge, of New Hampshire. At first there was a good deal of doubt as to whether so large a fish could be brought to Boston alive, but by constant dipping of the water, whereby aeration of the water was kept up, the feat was accomplished. The nose of the fish was somewhat bruised by contact with the can, however. The display also contains a large number of brook trout of good size, and one or two specimens of rainbow trout. Some very fine specimens of hybrids, crosses of our native trout with English trout, attracted the attention of sportsmen, though it was the general verdict that the beauties of the brook trout are lost in the hybrid. These trout are from the Gilbert hatcheries at Plymouth, Mass. In the markets the display of dead trout was much smaller than usual, probably owing to the storm of the day before. SPECIAL.

A LITTLE RANK HERESY.

Editor Forest and Stream:

If I were to meet the demand made on me it must be in counterfeit coin, for I have but a very slight acquaintance with *S. fontinalis*, and in praise of him could only appropriate the words of those who have been and are his intimates.

I never caught more than three dozen trout in my life, and those such little fellows that it was a shame to a grown man to catch them. They were so small that all the gaminess they could show availed them nothing, nor gave their captor any sense of triumph. The sport seemed to me about on a par with that of catching minnows for bait, and the fish caught of about the same value as so many shiners, dace or chubs.

I would rather catch one 3lb. bass than a big basketful of such fry, and I believe that the charm of such fishing lies more in the beauty of the scenes and the close association with wild nature, to which its enthusiastic votaries are led, than in the sport itself.

Though what I have written applies only to the depleted streams of which alone I have knowledge, my opinions will be deemed heretical, and no doubt I shall suffer excommunication by bell, book and candle, but I will not deny them. AWAHSOOSE.

WHITE MOUNTAIN TROUT.

THE following notes are based upon two weeks' experience in the Franconian regions, and upon information gathered from others who had frequented the same locality:

There are plenty of trout in all the tributaries of the Pemigewasset. Near North Woodstock it requires some knowledge of places and skill in angling to get much, but these qualifications will always produce some results. Between the Flume House and the Profile the Pemigewasset will generally furnish fifteen to forty fish in a half day. All the branches coming in from the west have still better fishing than the main river. The streams on the east are very steep and not so good.

The fish in all the region are small except in the lakes, where they are hard to catch. From 6 to 8in. is the average length, though an occasional fish will reach a foot. Some streams have a great many small fish in them, while others have them fewer in number and of larger size.

The upper branches of the Mad River, near Waterville, furnish good fishing, but the best part of the region is the primeval wilderness lying along the tributaries of the East Branch of the Pemigewasset. To reach this one must take at least two whole days and camp out. It can be approached either from Waterville or North Woodstock. Eight miles of good trail from Waterville brings one to the forks of the Hancock, from which point the two forks and the main stream can be fished. There are also other tributaries within reach. Large catches are sometimes made here. In going in from North Woodstock five miles takes one to the Hancock Branch, up which are fine camping and fishing grounds. Four miles further up the East Branch and the Franconia Branch is reached. Above this branch the streams fork in all directions and are full of fish. Professional fishermen can catch from 15 to 25lbs. a day. To reach these waters takes hard and laborious tramping.

The bait usually used is the worm, but a narrow strip of fish an inch long is equally taking with large fish. In the shallower and smaller streams the trout take the fly greedily, and no better place can be found for learning the art of fly-fishing. One can miss two fish out of three and yet make a fair catch. Small plain-colored flies are the best, those with gray bodies and light wings being preferred to all others.

No one should venture alone far into this wilderness, and some light and nutritious raw provision, with salt and some matches should be carried by every member of a party where they separate at all. None but strong and experienced woodmen should go in without a guide. The tramping and fishing are very tiresome work, and do not leave energy enough to do the cooking and the extensive wood cutting which the cold might require. Camping in the White Mountains and camping by a lake or river are very different things.

Guides can probably be procured through S. B. Elliott at Waterville, and certainly at Pollard's, North Woodstock. Charles Huckins of North Woodstock will be found to be a faithful "guide, philosopher and friend."

Keep the body dry with a rubber or oiled coat, the latter is the better, but let the legs from the knees down take care of themselves. They can be dried by the evening fire whenever necessary.

Carry a Nessmuk knapsack, and have a compass and a map of the country. Take "Woodcraft" in the pocket or in the head.

Take plenty of time. Do not let a day's rain rob the whole trip of its fruit. Make ample allowance for mischances. PENN.

TASMANIAN SALMON AND TROUT.—Salmon and trout have been introduced in Tasmania. The first trout was hatched May 4, 1864, and the first salmon, May 5, 1864. The first salmon was caught Dec. 4, 1873. Salmon and trout fishing, with rod and line only, ends April 30. The net fishing for salmon begins Sept. 2 and ends Feb. 28. Licenses to fish with rod and line for salmon and trout cost 10 shillings each for the season, 5 shillings for one month, and 2 shillings 6 pence for one week.—*Walch's Tasmanian Almanac, 1889.*

DAYTON, Ohio, April 2.—Rod fishermen are having early sport catching goggle eyes and rock bass. Channel catfish are biting freely at minnows, and hundreds are taken on trout lines set in the rivers at night. Phil Wenz caught 120 Saturday and Sunday nights. The Sevens Club will bivouac on the Miami River Thursday and Friday of this week, and have invited a party to the first fish fry of the season.

SPRINGFIELD, Mass., March 30.—*Editor Forest and Stream:* Trout fishing in this vicinity has been so poor for the past few years that I have scarcely taken my rod out of its case, but the announcement of a "trout supplement" next week has set my fingers tingling, and as the past winter has been very favorable, I shall ere long with renewed hope spit on my bait and "try, try again."—SHADOW.

THE MENHADEN INDUSTRY.—A communication on the menhaden industry by Mr. Maddox, which was crowded out of this week's issue by the pressure of articles previously received, will be published next week.

S. ALLCOCK & Co., of Standard Works, Redditch, have been awarded a first-class order of merit for fishing tackle at the Melbourne Centennial Exhibition, this being the only first-class order of merit granted for fishing tackle.

SEINES, NETS of every description. American Net & Twine Co., Mfrs., 34 Commercial st., Boston, or 199 Fulton st., N. Y.—*Adv.*

Fishculture.

RAINBOW TROUT IN FRANCE.

IN the Sacramento and the McCloud River the spawning season of the rainbow trout extends over a large part of the year, from January to the middle of May. In the eastern United States it occurs ordinarily from March to May, sometimes in June. At the Jardin d'Acclimatation in Paris, eggs have been obtained April 24; at Andecy, Feb. 18. The South Side Club, on Long Island, have taken the eggs as early as Dec. 22, [and Mr. F. N. Clark has secured them, if we remember aright, about as early as this. At Allentown, Pa., Supt. Creveling obtained eggs Dec. 1.] At Andecy the rainbow furnishes mature eggs in its second year; at the age of 18 months the eggs are developed, and sterile females at this age are rare exceptions. Very few at that time reach the weight of 1½ pounds even among the spawning fish. Hence the rainbow spawns earlier in life than most of the other salmonoids.

A remarkable fact, very favorable to restocking, which we are astonished not to have seen recorded anywhere, is that the rainbow produces double the number of eggs indicated as the average for the other species. It is generally admitted that a trout yields 1,000 eggs for each pound of its weight; but, having had the curiosity to count the eggs of a two-year-old rainbow, weighing just a pound, we found exactly 2,000 eggs. [In the United States the average number of eggs to the pound of the fish is under 1,000 in all the records examined.]

It is above all in the vigor which they show in their infancy that the fry of the rainbow merit attention; in the first place, the egg is less easily affected by sediment and this makes it practicable to hatch them in water containing some impurities, as the Americans have already observed. The absorption of the yelk sac, whether rapid or slow, is accomplished without accident; and when it reaches the age for feeding, the young fish accepts its food without hesitation, while so many others belonging to less hardy species perish with hunger. During its first summer it grows and prospers in waters which exceeds 68deg. Fahrenheit, as observed this summer at the Jardin d'Acclimatation, while a temperature of 50 to 53.6deg. is necessary for the fry of our indigenous trout at this period. Finally, the maladies ordinarily so common at this age are unknown to the rainbow. In short, it is only when speaking of the alevins of this species that we will voluntarily believe a fishculturist who pretends to have suffered no loss in rearing trout.

It appears to us that if the rainbow trout is anadromous, it should vegetate in confinement instead of developing quickly as it does. At no period have we observed among ours a sickly condition, nor even a mere agitation which would seem to indicate a need of migrating to the ocean, and, on the contrary, we have always seen them at Andecy, thriving wonderfully alongside of our salmon which vegetate miserably.—*A. d'Audeville, in Bulletin de Pisciculture Pratique, Jan. 1 and 15, 1889.*

NEW FISH COMMISSION STATIONS.

THE United States is now building at Put-in-Bay, Lake Erie, the largest fishcultural establishment in the world. This location was selected after an examination of all the available sites, the land to be occupied was given to the Government by Mr. Valentine Doller. The object of this station will be to collect, clean up and develop whitefish eggs to the period at which they can be distributed to other stations. The State and Government hatcheries on the Great Lakes will receive their supplies from this establishment and a reserve will be kept for waters adjacent to the station. The full capacity of the hatchery will be 4,000 jars, capable of holding 5,000,000 whitefish eggs; it will be equipped at the start with 2,000 jars.

At Neosho, Missouri, work is in progress on the new hatchery for rainbow trout and such valuable native fishes as may be accessible in the Ozark Mountain region. Rainbow trout have flourished at Verona, in Montgomery county, where they were planted by the U. S. Fish Commission several years ago.

On the McCloud River, California, a building is in process of construction for permanent quarters for the rainbow trout breeding establishment.

In Maine the new station for salmonidæ at Craig's Brook is going forward, and also the auxiliary station at Ellsworth, which will be devoted to rearing salmon in ponds. Mr. C. G. Atkins now has in charge 120,000 salmon fry to hold until they reach the size of fingerlings before they are liberated.

MAINE'S NEW SEINING LAW.

ON March 13, 1889, chapter 261 of the Public Laws of Maine of the year 1885, relating to migratory fish, was amended so as to read as follows: "Section 4. The taking of mackerel, herring, shad, porgies or menhaden, and the fishing therefor, by the use of purse and drag seines is prohibited in all small bays, inlets, harbors or rivers where any entrance to the same or the distance from opposite shores of the same, at any point, is not more than three nautical miles in width, under a penalty upon the master or person in charge of such seines or upon the owners of any vessel or seines employed in such unlawful fishing, of not less than $300 nor more than $500 to be recovered by indictment or action of debt, one-fourth of the penalty to the complainant or prosecutor, and three-fourths to the county in which the proceedings are commenced, and there shall be a lien upon the vessels, steamers, boats and apparatus used in such unlawful pursuit, until said penalty with costs of prosecution is paid, but a net for meshing mackerel or porgies of not more than 100 meshes in depth and a net for meshing herring, of not more than 170 meshes in depth, and a net for meshing shad of not more than 75 meshes in depth, shall not be deemed a seine."

HATCHING EGGS OF SHEEPSHEAD.

CAPT. ROBERT PLATT, commanding the U. S. Fish Commission steamer Fish Hawk, succeeded, March 21, in hatching 3,400,000 eggs of the sheepshead in Charlotte Harbor, Florida. This is the first successful attempt to develop the eggs of this important fish. On March 22 another lot of 3,900,000 eggs was collected and placed in the jars. The eggs are buoyant and measure one thirty-second of an inch in diameter. The time of hatching is about two days. The time of spawning of the sheepshead was not clearly known to the officers of the Fish Hawk, and it was only by the accidental capture of a lot of ripe fish in the seine that the opportunity to develop the eggs occurred. Capt. Platt was very prompt in utilizing the circumstance to the advantage of fishculture.

CHAUTAUQUA LAKE FISH HATCHERY.—A State fish hatchery is about to be established on Chautauqua Lake, about four miles from Jamestown, N. Y. Commissioner R. U. Sherman selected Green and Brown's tract, on the east shore of the lake, as a site for the building. The hatching operations will be under the charge of John Mason. Owners of property surrounding the lake subscribed $500 toward the expense of the undertaking. It is expected that 2,000,000 fry of the muskellunge will be hatched this season for the lake, and in future various bodies of water throughout the State will be supplied from this station. The fry are to be kept until they are a fortnight old and measure three-quarters of an inch in length. The females after being stripped will be returned to the lake.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

E. S. Y., Baltimore, Md.—See our angling department for answer to your query.

WENONAH, N. H.—There is no standard. Write to Mr. J. W. Newman, 6 Hamilton place, Boston, Mass.

A. E. E., Lodi, O.—The New York season for black bass is from June 1 to Dec. 31, inclusive, with exceptions for special locations; for ducks, Sept. 1 to May 1; for squirrels, Aug. 1 to Feb. 1.

C. M. W., Providence, R. I.—Choose a 12-bore, one barrel modified choke, the other cylinder. The gun you name will shoot both styles of cartridges. Write to F. H. F. Mercer, Ottawa, Canada.

C. W., Flatbush, N. Y.—We have no record of the dogs you mention. Write to Mr. Ethan Allin, Pomfret Centre, Conn. A blue belton is a white dog with black ticked markings. Well bred setters are of various colors, and a black, white and tan is not, so far as color goes, better bred than those of other colors.

A. C. K., New York.—Will you kindly tell me if it is possible to get ruffed grouse eggs and where they can be purchased? Also, if they can be shipped to England. I have a friend who is very desirous of starting them on his place at Stampshire. Ans. We think it exceedingly doubtful that you could get the eggs, and even if you did there would not be much hope of raising the young.

SAM LOVEL'S CAMPS.—What George W. Cable has done and is doing for the Louisiana Acadians, Rowland E. Robinson is doing for the New England Yankee. In the present volume and its predecessor, "Uncle Lisha's Shop," he describes with genial humor and, in places, touching pathos, the life of the inhabitants of a little Vermont town 40 years ago. Their days of hard but honest toil, their evenings spent in story-telling and "courtin'" and, now and then, their indulgence in a hunting or fishing trip, are depicted realistically in the best sense of the word. It is principally of these times of recreation, their excursions into the forest or to the lake shore, that "Sam Lovel's Camps" treats. Two of these camps there were, one "on the Slang," where Antoine, Pelatiah, and Sam trapped for muskrat, and one "on the lake," where the same trio, re-enforced by Solon and Jo Hill, hunted and fished and had many startling and comical adventures. The story is interesting throughout, and as it closes with the marriage of Sam and Huldah, the reader cannot forbear a sigh and a wish that it may not be long before Mr. Robinson issues another book equally delightful and worthy of praise.—*Concord (N. H.) Independent Statesman.*

"Sam Lovel's Camps" is full of quaint character drawing.—*Cambridge Tribune.*

FOREST AND STREAM.

SUPPLEMENT NO. 3——SALMON AND TROUT.

SALMON AND TROUT OF NORTH AMERICA.

THE fishes of the salmon family, which are of especial interest to the angler, include the salmon and the trout, numbering in all twenty-six forms whose relationships are shown very briefly in the accompanying synopsis or key.

It should be stated that some of the trout are not recognized as full species by recent writers. The siscowet is usually regarded as a variety of the Great Lake trout. The Loch Leven is hard to distinguish from the brown, even by expert fishculturists, and all ichthyologists will probably admit the difficulty of separating them.

Bouvier's trout, the Lake Tahoe trout, the Utah trout and the Kansas trout are referred to as varieties of the red-throated (*purpuratus*), perhaps without perfect justice.

The species of charr (*Salvelinus*) present as great difficulties as the black-spotted forms, and we can not say with confidence that even the New England species are fully understood. One object in bringing the present series of illustrations together is to show to anglers and other field naturalists the present state of our knowledge, with the hope that they will endeavor to aid in every way possible to arrive at a better understanding of these interesting forms. Many of the illustrations here used are copied by permission of the U. S. Commissioner of Fish and Fisheries from advance sheets of the Bulletin of the U. S. Fish Commission. The Commissioner, Col. Marshall McDonald, is using every available means to help students in their efforts to master the problems presented by this important family of fishes. The three great difficulties to be overcome at present are (1) lack of material from certain localities; (2) great individual variation in many of the species, and (3) a lack of differentiation into forms which may be clearly distinguished by characters generally accepted as having specific value.

The Pacific salmon (*Oncorhynchus*) differ from *Salmo* chiefly in the greater number of rays in the anal fin; five species are known, all of which are black spotted in fresh water, becoming silvery at sea. They run up the streams of our west coast from Alaska to California, and are found, also, in Asia. The humpback extends north to the Colville River and south to Oregon. Another species not yet identified is found in the vicinity of Point Barrow. The blueback ranges from the Yukon to the Columbia. The dog salmon from Putnam River, or Kuwuk, to California. The silver salmon has the same northern limit as the blueback, but extends south to San Francisco. The quinnat, king or chouicha is found in the Yukon and south to the Ventura River, California.

The black spotted species of *Salmo* are found further to the southward in North America than anywhere else in the world; one is known from streams of the Sierra Madre in the southern part of Chihuahua, Mexico, at an elevation of between 8,000 and 9,000ft. This species is said by Prof. Cope to resemble the red-throated trout, *Salmo purpuratus*. The northern limit of *Salmo* in Alaska seems to be the Bristol Bay region.

The Atlantic salmon is found northward to Greenland. Its landlocked form, usually diminished in size and changed in coloration, occurs naturally in many lakes and streams of New England and Canada, as well as in the Scandinavian Peninsula. The most easterly native species of the black-spotted trout is that found in the Kansas River (*Salmo stomias*). The eastward distribution seems to have been arrested by the low plains of the middle region of our continent, which are not favorable to salmon life.

The lake trout is one of the largest and most widely distributed of its family. It seems to be peculiar to North America, ranging across the whole width of the continent from the Arctic regions south to Idaho and New York. The siscowet is a smaller and fatter species with thicker skin and much larger spots than the typical lake trout. Its distribution is quite limited.

The charr, commonly called trout, number nine species, one of which has been introduced. These trout are perhaps more difficult to separate than any others of the Salmonidæ; they extend from the Arctic regions above 80° north latitude, to northern Georgia and California, in some portions thriving at elevations exceeding 5,000ft. Four of the species are completely landlocked, the rest are to a greater or less extent anadromous whenever they have access to salt water.

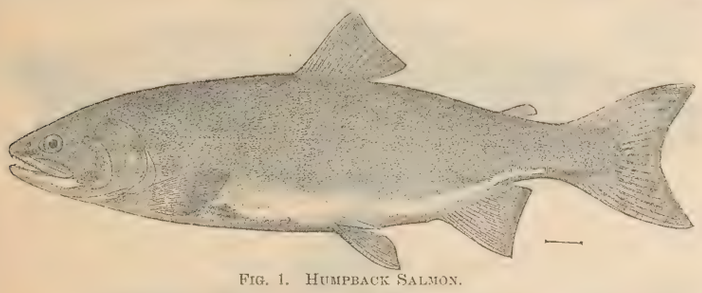

FIG. 1. HUMPBACK SALMON.

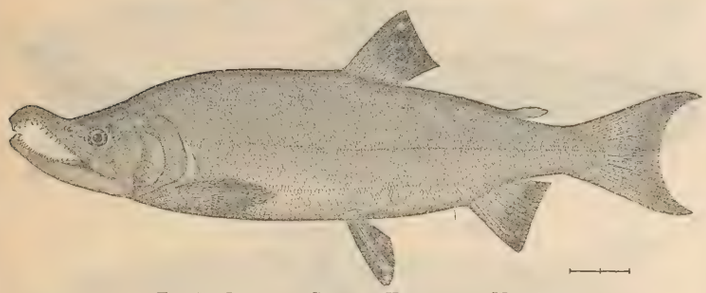

FIG. 2. BLUEBACK SALMON (HOOK-JAWED MALE).

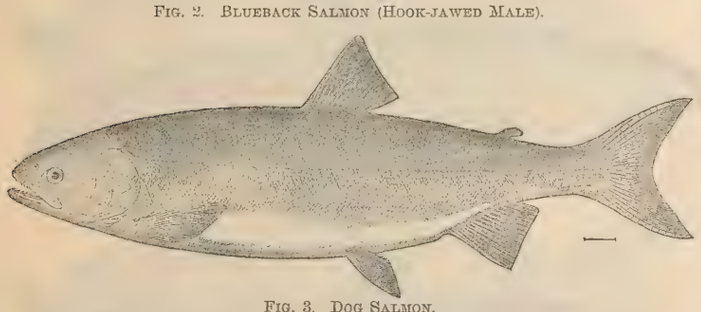

FIG. 3. DOG SALMON.

FIG. 4. SILVER SALMON.

FIG. 5. QUINNAT SALMON.

FIG. 6. ATLANTIC SALMON.

KEY TO THE SPECIES.

PACIFIC SALMON.

A. Scales small, more than 200.....*Humpback Salmon.*
AA. Scales medium or large.
B. Gill rakers 30 to 40.....*Blueback Salmon.*
BB. Gill rakers 20 to 25.
C. Anal rays 13 or 14.
D. Scales about 150, pyloric cœca 140 to 185..*Dog Salmon.*
DD. Scales about 127, pyloric cœca 45 to 80..*Silver Salmon.*
CC. Anal rays 16.....*Quinnat Salmon.*

SALMON AND TROUT.

A. Sea Salmon, anadromous (Subgenus *Salmo*).
Root of tongue toothless; teeth in middle of roof of mouth in a very small patch; scales large; caudal forked except in the adult; gill rakers short, 19 in number.....*Atlantic Salmon.*
AA. River Salmon (Subgenus *Fario*).
Teeth in middle of roof of mouth well developed, in one or two series; scales large or small; species all black spotted in fresh waters.
B. Root of tongue toothless.
C. Scales fewer than 140.
D. Native species; silvery, with small black spots; breeding males with a crimson band along the side.
E. Anal rays 10; height of back fin equals ⅓ length of head, which equals depth of body in young.
Gairdner's Trout.
EE. Anal rays 12; height of back fin equals ⅔ length of head, which is much less than depth of body in young.....*Rainbow Trout.*
DD. Introduced species; brown, with large spots of black or brown on body and sides of head; sometimes red spotted.
F. Upper jaw bone strong and broad; teeth in middle of roof of mouth in a double series, persistent.
Brown Trout.
FF. Upper jaw bone narrow and feeble; teeth in middle of roof of mouth in a single series, persistent; dark spots on sides margined with pale blue in life.
Loch Leven Trout.
CC. Scales about 170.....*Rio Grande Trout.*
BB. Teeth on root of tongue.
G. Black spots generally distributed (absent in sea-run examples).
H. Scales 170 or fewer; head short..*Red-throated Trout.*
HH. Scales 184 or fewer; head long and conical..*Tahoe Trout*
GG. Black spots few or none on anterior half of body; scales about 200.
I. Head long, keeled.....*Utah Trout.*
II. Head shorter, not keeled.....*Kansas Trout.*

SALMON TROUT OR LAKE TROUT.

Bone in middle of roof of mouth with a raised crest, the crest as well as the head of the bone toothed; pyloric cœca very abundant.

A. Distance between the eyes about ¼ length of head; body covered with thin skin; profusely spotted with small pale spots.....*Lake Trout.*
AA. Distance between the eyes about ⅓ length of head; body covered with thick skin; sides with large pale spots.....*Siscowet.*

SPECIES OF CHARR.

A. Root of tongue with teeth.
B. Fins not banded.
C. Lower bone of gill-cover nearly as deep as long and not conspicuously striated.
D. Habitat western North America; migratory; gill rakers fewer than 20.....*Dolly Varden Trout.*
DD. Habitat eastern North America; gill rakers more than 20.
E. Migratory; size large; spawning in large streams and then going to sea.....*Sea Trout.*
EE. Landlocked; size small or medium.
F. Size very small; tail fin not tipped with white in young; back blue.....*Blueback Trout.*
FF. Size medium or large; tail fin tipped with white in young.
G. European species; teeth on root of tongue in a narrow band; stomach slender.....*Salbling.*
GG. American species; teeth on root of tongue in a very broad band; clouded parr marks in young.
Sunapee Trout.
CC. Lower bone of gill-cover twice as long as deep, with coarse striations.
F. Size very large; species red spotted.....*Ross's Trout.*
FF. Size very small; species without red spots.
Floeberg Trout.
BB. Fins with dark bands.....*Dublin Pond Trout.*
AA. Root of tongue toothless (usually); back mottled.
H. Stomach very stout; gill rakers few.....*Brook Trout.*

1. HUMPBACK SALMON (*Oncorhynchus gorbuscha*). Fig. 1.—This is the smallest of the species, seldom exceeding

8lbs. in weight. It may be recognized at once by its minute scales. When it first comes in from sea its flesh is very palatable, but soon deteriorates as the spawning season advances. It is one of the most northerly species of its genus.

2. THE BLUEBACK SALMON (*Oncorhynchus nerka*). Fig. 2.—Other names of this fish are redfish and suckeye; the Russian name is *krasnya ryba*, meaning redfish. This species is next in size to the humpback; its weight averaging less than 10lbs. Its flesh is very red, hence it is a great favorite for canning. It makes long journeys up the rivers, almost equalling the quinnat salmon as a traveler. On Frazer's River it is the chief salmon, and millions of its eggs are artificially hatched annually and the fry liberated in the streams. It ranges from the Columbia River to the Yukon.

3. THE DOG SALMON (*Oncorhynchus keta*). Fig. 3.—occurs only in the large rivers. Commercially it is more important than any of the others, and it has received more attention from fishculturists than the rest of the species.

6. THE ATLANTIC SALMON (*Salmo salar*). Fig. 6.—This is also called Kennebec salmon and Maine salmon. It inhabits the north Atlantic, ascending rivers in northern Europe and America. The size that this species attains is too well known to need mention. A few years ago the British Museum obtained a specimen weighing 50lbs. The results of artificial propagation by which the species has been established as far south as the Delaware River are known to every one. The landlocked form, known as the Sebago salmon, landlocked salmon or winninish, inhabits some streams and lakes of Maine and Canada. It has been introduced into many other lakes southward and westward. Eggs were carried recently to the vicinity of Quito, Ecuador. The variety thrives in is about 6lbs. It is not anadromous to any great extent in its original habitat.

9. THE BROWN TROUT (*Salmo fario*). Fig. 9.—Brook trout of Europe. Native in the rivers of the Maritime Alps, also in rivers and lakes of northern and central Europe. Non-migratory. Extensively introduced in the United States, where it is thriving and constantly gaining favor. It is said to reach 17lbs. in weight, and its game qualities are greatly praised.

10. THE LOCH LEVEN TROUT (*Salmo levenensis*). Fig. 10.—This trout inhabits Loch Leven and other lakes of southern Scotland and the north of England. It is non-migratory. Dr. Day considers it to be a variety of the brown trout. The species is an excellent one, growing to a weight of 10lbs., and affording fine sport to anglers; it has been introduced into New York, New Hampshire and other New England States, Iowa, Minnesota, Michi-

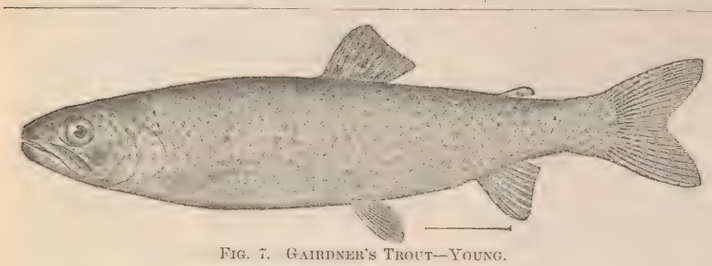

FIG. 7. GAIRDNER'S TROUT—YOUNG.

FIG. 8A. RAINBOW TROUT—YOUNG.

FIG. 8B. RAINBOW TROUT—ADULT.

FIG. 9. BROWN TROUT.

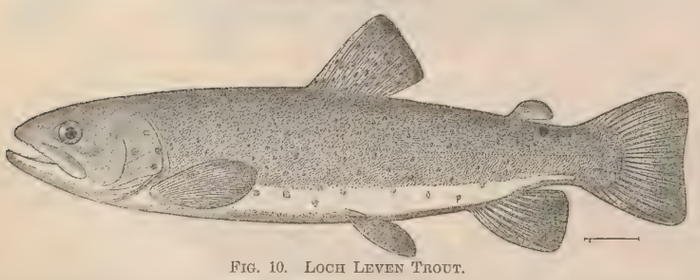

FIG. 10. LOCH LEVEN TROUT.

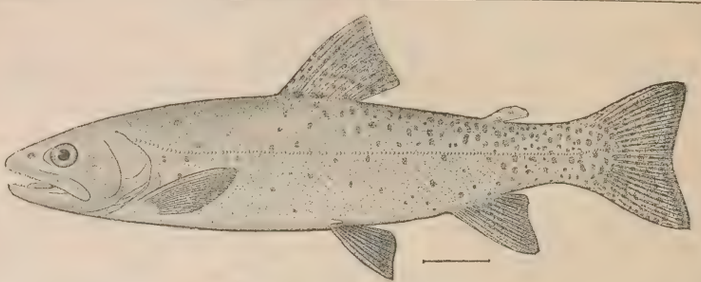

FIG. 11. RIO GRANDE TROUT.

FIG. 12. RED-THROATED TROUT.

FIG. 13. LAKE TAHOE TROUT.

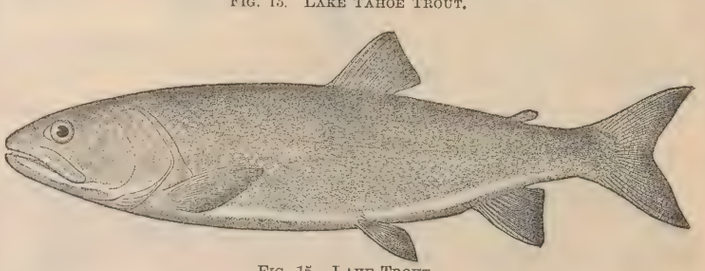

FIG. 15. LAKE TROUT.

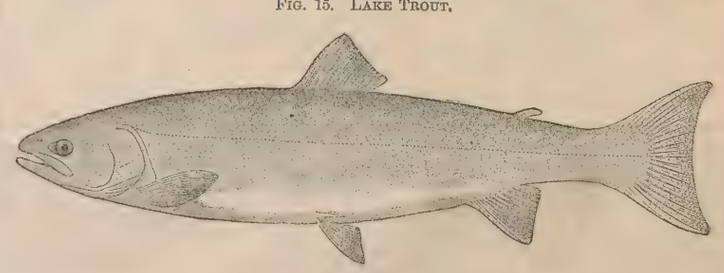

FIG. 16. DOLLY VARDEN TROUT.

Known also as hycho and Le Kai salmon. The average weight of this species is about 12lbs., becoming somewhat larger in Alaska. It is found as far north as Kotzebue Sound. It has very little economic value, except in the dried condition, and is used principally for dog food.

4. THE SILVER SALMON (*Oncorhynchus kisutch*). Fig. 4.—Its common names are kisutch, coho salmon, hoopid salmon, skowitz, *bielaya ryba* (Russian). This is one of the choice salmon of the west; it ranges from San Francisco northward to the Yukon. It is a small species running up the streams in the fall; its average weight is under 10lbs., larger specimens occurring in the northern portion of its habitat.

5. THE QUINNAT SALMON (*Oncorhynchus chouicha*). Fig. 5.—Other names are king salmon; chinnook, Columbia River salmon, Tyee salmon, Sawkwey and chouicha. This is the largest and most valuable species. Specimens measuring 5ft. in length and weighing nearly 90lbs. have been taken in Cook's Inlet and the Yukon River. It makes long journeys, penetrating into the interior more than 1,000 miles to reach the headwaters of streams; it Colorado, at an elevation of 8,000ft. and upward. This form is generally smaller than the anadromous one, and differs slightly in coloration.

7. GAIRDNER'S TROUT (*Salmo gairdneri*). Fig. 7.—Known also as steelhead, hardhead, salmon trout, *ahshut* (Sitka). This species ranges from California to southern Alaska, where it spawns in spring. It spends much of the time at sea. In its adult state it resembles the Atlantic salmon in shape and general appearance. In the breeding season it has broad crimson bands along the sides. Specimens weighing 30lbs. have been taken. It grows to a much larger size than the rainbow, with which it has sometimes been confused.

8. THE RAINBOW TROUT (*Salmo irideus*). Fig. 8.—The rainbow is sometimes called California brook trout. It is a native of streams west of the Sierra Nevada Mountains and ranges southward nearly to the Mexican line. Its northern limit is uncertain, but it probably extends to Sitka, Alaska. This fish has been extensively introduced into the Eastern States, and is now well established in Europe. The maximum weight reached by the rainbow gan, Wisconsin and elsewhere in the West. The black spots of the sides are encircled with a narrow pale blue border in life.

11. THE RIO GRANDE TROUT (*Salmo spilurus*). Fig. 11.—Mountain streams of the upper Rio Grande and Basin of Utah. A handsome trout, reaching 18in. in length. The scales anteriorly much smaller than on second half of body. Teeth in middle of roof of mouth in a double series. Black spots few on first half of body, numerous on second half and on dorsal, caudal and anal fins. A large and fleshy adipose dorsal. This is one of the best food and game fishes in the region which it inhabits.

12. THE RED-THROATED TROUT (*Salmo purpuratus*). Fig. 12.—Clark's trout; salmon trout. This fine game species is common in the Rocky Mountain region and the Cascades; its limit in Alaska is the peninsula of Aliaska. The red-throated trout reaches a length of 30in. and sometimes exceeds 20lbs. in weight. The species is variable; the Lake Tahoe trout, Utah trout and Kansas trout have been considered as mere color variations with smaller scales than the typical *purpuratus*. Bouvier's

trout is published as a variety of the red-throated, but it is certainly entitled to as much consideration as the Utah trout, which has some marked characters. The red-throated trout is profusely black spotted and has a characteristic dash of crimson around the throat.

13. Lake Tahoe Trout (*Salmo henshawi*). Fig. 13.—This is known also as the silver trout and black trout. It is found in Tahoe and Pyramid lakes, Nevada, and in streams of the Sierra Nevada. The average size of the species is 5 or 6lbs., but individuals weighing 25lbs. have been taken. The species is common in the San Francisco markets.

14. The Utah Trout (*Salmo pleuriticus*).—This will be found put down as a variety of the Rio Grande trout, *Salmo spilurus*, but the typical specimens have teeth on the root of the tongue, bringing the species into the group represented by the red-throated trout. It inhabits the Basin of Utah and upper tributaries of the Rio Grande, reaching a length of nearly two feet and a weight of 5lbs. The Utah trout is one of the best of our game fishes.

15. Kansas Trout (*Salmo stomias*).—The most easterly of the black-spotted species, resembling the Rio Grande trout in coloration, but with much smaller scales and a very large mouth. The scales are as small as in the lake trout. The black spots are most numerous on the second half of the length. This trout grows to a length of 24in.; it was obtained in Kansas River, far to the eastward of the Rocky Mountains.

16. The Lake Trout (*Salvelinus namaycush*). Fig. 15.—Mackinaw trout, longe, togue, tuladi, namaycush, lake salmon, salmon trout and peet are other names applied to this species. In general terms we may say that the lake trout inhabits North America from the Arctic regions southward to New York and Idaho, reaching its greatest size in large, deep lakes containing plenty of fish food. The color variations of this trout are remarkable, but in the main it is characterized by small pale spots on a gray to black ground. The largest well authenticated specimen was taken in a gill-net at Racine, Wisconsin, and weighed 60lbs., according to Dr. Hoy. The siscowet may have to be considered as a separate species on account of differences briefly mentioned in the key, but we need fresh specimens to determine this.

17. The Dolly Varden Trout (*Salvelinus malma*). Fig. 16.—Known also as bull trout, salmon trout, malma and goletz. The species occurs in California and northward to the Colville River in Alaska; eastward to tributaries of the Saskatchewan. It increases in size northward, reaching a length of 2ft. and a weight of 6 to 8lbs. At Kodiak it is extensively caught in the sea-run condition and salted under the name of salmon trout. The Alaska natives make waterproof clothing of its skin. In general appearance this trout resembles the sea trout of Labrador; in fresh waters it is beautifully red spotted, but has not much reputation as a game fish.

18. The Sea Trout (*Salvelinus stagnalis*). Fig. 17.—This fine charr is called Greenland trout, salmon trout or sea trout. Little is known of its habits except that Turner says it runs up the larger streams in Labrador to spawn. Most of its life is passed at sea, and the fishery is carried on in salt water. The sea trout reaches fully 2ft. in length. We have never seen a specimen from fresh water, but pale spots are plentiful on the sides of sea-run examples, and these would be red in spawning individuals. The species is long, slender and elegant in proportions.

19. Blueback Trout (*Salvelinus oquassa*). Fig. 18A.—This is known also as oquassa trout. The blueback is certainly known from lakes and streams of western Maine; its range to the northward would be extended to Arctic America if we include Nares's trout under this name; but the justice of this course is open to question, and we ought to devote a little more study to the subject before uniting the two. This is a small trout, weighing only a few ounces, as far as we know from existing specimens in collections. Anglers will doubtless help us to a more complete knowledge of the size and distribution of the species. Individuals of 9in. long are sexually mature. A figure of Nares's trout (Fig. 18B) is introduced for comparison with the blueback.

20. The Saibling (*Salvelinus alpinus*). Fig. 19.—Called ombre chevalier in France, torgoch in Wales, Alpine charr, Windermere charr, Loch Killin charr, Gray's charr and Cole's charr in Great Britain. The species is a native of Alpine lakes in Bavaria and Austria and the Scandinavian peninsula; it has been extensively introduced into the United States. A specimen taken in Sterling Lake, New York, is described in Forest and Stream of Jan. 24, 1889, and figured in the issue of Feb. 7. The saibling reaches a length of more than 2ft. In habits and general appearance it resembles the Sunapee trout.

21. The Sunapee Trout (*Salvelinus aureolus*). Figs. 20 and 21.—This handsome species has not yet been recorded from any other body of water than Sunapee Lake, New Hampshire. The appearance of the species has been so often described in Forest and Stream that it need not be repeated at present. The weight of the Sunapee reaches 10lbs., according to Col. E. B. Hodge, who was the first to bring it to the notice of ichthyologists. The species was well established in Sunapee Lake before the introduction of the saibling, which it strongly resembles in coloration when adult.

22. Ross's Trout (*Salvelinus rossi*). Fig. 22.—This is a little known species and may not be distinct from the sea trout previously mentioned, but is introduced here to call attention to a curious form obtained in Quebec, 70 miles east and 40 miles north of Montreal, early in February, 1886, by Mr. C. H. Simpson, a member of the St. Bernard Alpine Club. Ross's trout is noted for the shape and striation of its gill-covers, particularly the lower bone; it grows to weigh 14lbs. and is most common near the sea in river mouths of Boothia Felix. We have been advised to describe this Quebec trout as a new species, but prefer to await additional specimens before reaching a conclusion.

23. The Floeberg Trout (*Salvelinus arcturus*). Fig. 23.—This is one of the small species, not exceeding a foot in length. It is the most northern salmonoid known, occurring in Victoria Lake (82° 34′) and fresh water pools about Floeberg Beach (82° 28′, north latitude). Seasonal development begins in August. The species is said to be without red spots. The illustration is copied from the original figure in Proceedings Zoölogical Society of London, 1877.

24. The Dublin Pond Trout (*Salvelinus agassizi*). Fig. 24.—This handsome little trout inhabits Dublin Pond, or Monadnock Lake, and other small lakes of New Hampshire. It reaches a foot in length. It is said to spawn two weeks earlier than the brook trout, using the same spawning grounds. The dorsal and caudal fins are banded, but the back is uniformly olive brown or gray and never mottled like the brook trout. The stomach is

very stout. There are teeth on the root of the tongue. Adult specimens become very much bleached in color and uniform silvery. The red spots are large and less numerous than in brook trout of the same size.

25. THE BROOK TROUT (*Salvelinus fontinalis*). Fig. 25.—Generally called speckled trout or speckled beauty. This well-known species ranges naturally from Labrador to Georgia east of the Alleghenies, also in the Great Lake region. It has been widely distributed westward and across seas. It is recorded on good authority that specimens weighing 10lbs. occur in the Rangeley Lakes and Dr. Hoy has seen one of 12lbs., but such examples seem to be rare. The species has quite a reputation for sea going, as will appear from articles recently received by FOREST AND STREAM, as well as from advices from England. The color variations in the brook trout are astonishing.

TARLETON H. BEAN.

TROUT OF THE NORTHWEST.

FROM conversations with Capt. Charles Bendire, U. S. A., we have obtained the following information about the trout of Oregon, Washington Territory and Idaho:

There is no better fishing anywhere in the West than in Williamson's River, Oregon. Gairdner's trout abounds in this stream and its tributary, the Sprague. The Wood River, which flows into Klamath Lake, is an especial favorite for spawning in the winter. Indians spear the trout on their spawning grounds. At the season when crickets are plentiful they must be used for bait in the Sprague; flies will be refused. In Williamson's River, from July to September, Gairdner's trout affords the best fly-fishing I have ever enjoyed. My first sergeant often went out on Sundays, during the summer, and caught as many as 100lbs. of trout, ranging from 2lbs. to 7 or 8. The favorite fly was the white and red-ibis. These flies were made in San Francisco especially for that fishing. Gairdner's trout reaches 21lbs. in weight in this region; I have obtained one weighing 14¼lbs.

Clark's, or the red-throated trout, is very plentiful and affords the best fishing in some of the tributaries of the Snake River, especially Camas Creek in Idaho. Here they average 2 or 3lbs. in weight. Cœur d'Alene Lake, Idaho, and Spokane River, Washington Territory, are good localities for this species. The Indians depend mostly on spearing and traps for their supplies. Bouvier's trout, which is a little color variety of the red-throated, is found only in Waha Lake on the top of the Blue Mountains, or Craig's Mountain, near Lewiston, Idaho. This is a very deep mountain lake, and apparently contains no other fish. The trout are nearly uniform in size and none of them exceed 12in. in length. A species called "salmon trout" runs up from Snake River into Lapwai Creek, Idaho, in March and April to spawn. They are taken in traps and are speared in large numbers, but they will not take a fly or bait—not even their own eggs. These fish vary from 5 to 10lbs., and are full of eggs when they come into the creek. From some of them the eggs will run out when the trout are held up, others are not quite so ripe.

"Bull trout" is a common name applied to the Dolly Varden throughout the Northwest. The fish is not equal to Gairdner's or to the red-throated trout either for eating or sport. It seldom takes the fly in that part of the country, being a ground feeder and softer in flesh than the other two species. The bull trout rarely reaches 7lbs. in weight. It is much more voracious than either of the others, killing every fish near it when closely confined, as in aquaria.

MINGAN RIVER TROUT.

WHILE we were at Mingan, southern Labrador, with the Grampus in the summer of 1887, trout were reported to be abundant at the falls of the Little Manitou River, about 3 or 4 miles from a point on the Mingan River opposite where the vessel lay and across a comparatively narrow neck of land from the harbor. There had, however, been a freshet, and the muddy condition of the water as well as the height of the river above its usual level made fishing impracticable for several days. Finally we were assured that the water had subsided sufficiently to make it possible to catch some trout, and the local Canadian official courteously tendered us the use of his canoe, a kindness for which we were largely indebted to the good offices of the gentlemanly commander of the cruiser La Canadienne.

Mr. Lucas was charged with the responsible duty of providing the outfit of fishing gear, which was soon ready, and, after "a long pull, a strong pull, and a pull all together," he and I reached the foot of the falls. There we met the Indian, Jean Batiste, who had been out with us seal hunting a few days before, and his squaw, and the keen-eyed aborigine told us, "trout, him plenty; him no want to bite."

On our way up we had also passed and hailed a disappointed angler, who was returning to the harbor, and whose story of failure was of the same tenor as that conveyed by the Indian. That trout were as plentiful as heart could desire was evident—and beauties too! They could be seen below the falls jumping out of the water, while every few minutes a nimble gymnast, his spotted sides glistening in the sun against the dark background of ledge or rushing water, sprang high in the air in this effort to leap the fall. Near the fall was a deep pool, about 50 to 75 feet across, that had been filled up by the late rise in the river, but was now separated from the latter by a narrow strip of beach, which was covered with scattering alders. This pool was literally alive with trout that could be seen jumping and breaking water in a manner to make the nerves of an angler tingle to his finger tips. My friend could not accept as final the reports he had received and he would have been far less an enthusiast if he had allowed the assertion, "they won't bite at anything," to deter him from trying his luck. Around and over the pool went the flies of all colors and varying sizes, bait cut with the greatest skill; but no results, while the leaps and the flapping tails still tantalized us. It was trying to the nerves, and no mistake! I became tired and disgusted with our lack of success, and, sitting down by the falls, tried to console myself by watching the magnificent display of power exhibited by the trout leaping up the rush of falling water.

My companion was more patient and persistent. He fairly ached to catch some of those trout. Failing in the pool, he whipped the river above the fall for some distance, and finally came back to his starting point. Luckily at this time he remembered a spoon bait that he had brought along, and, although we had repeatedly been told by the local anglers that "spoons are no good here," he determined to learn for himself the truth or fallacy of the assertion. However indifferent the trout may have been to a spoon at other times, it was soon evident that the glistening silver had great attraction for them on this occasion. No sooner had the cast been made than the hook was struck by a handsome fish, and a few moments later I was aroused from watching the tumbling waterfall and leaping fish by a triumphant shout behind me. Turning I saw a sight that sent the blood coursing through my veins with accelerated speed, for there among the alders stood Mr. Lucas, the embodiment of that special happiness known to the successful angler alone. His face was beaming with triumph as he held up his capture—a trout that weighed 3¼lbs., of which a cast was made after we returned to the vessel.

What possibilities of "fish stories" before the scientific societies and clubs of Washington crowded the brain of my friend I cannot say; but it was plain that he felt that the opportunity he had been looking for had come at last. Like a prudent general, however, he calculated the chances, and the first thing he did was to tie on a new gut leader, so that no unnecessary risk might be taken with the single spoon, which was our only dependence for an afternoon's sport. Two or three medium sized trout, weighing between 1 and 2lbs. each, were soon landed, and the fish seemed so eager for the spoon that we were beginning to settle down to business. I believe I made some mental estimates as to how many it would take to fill a barrel; but, alas for our happiness and the prospective stories! just then the spoon was seized by a big fellow with a vim, making the line hum and sing for a moment, and then—off he went with our priceless spoon. Never shall I forget the expression that spread over my companion's face; it is impossible for me adequately to describe it. It was a fit accompaniment to the emphatic exclamation which greeted my ears and in which surprise, disappointment and disgust were about equally blended. Thus were our ambitions and expectations crushed in a moment, for only a single trout rewarded hours of effort after the spoon was lost, and although he was a noble fellow and fought with remarkable skill and endurance, we could not forget our loss and disappointment in the sport he furnished us, especially as we knew we should sail next day from Mingan, and no other chance would be afforded us to visit the falls.

J. W. COLLINS.

TROUT FISHING IN UTAH.

IN the month of June, several years ago, in company with two friends, I went trout fishing in Lost Creek, Wahsatch Mountain, sixteen or eighteen miles below Park City, Utah. Nobody had fished there that spring and trout were abundant. I was using a large fly with big wings, exactly like the pheasant, but gray, and the mountain trout would not take it at all; they seemed to be striking at something resembling a wasp. I trimmed off the feathers with a knife, to imitate the wasp wings, and then caught with that fly twenty-three trout ranging from ¼lb. to 1¼lbs. The smaller ones were taken in the riffles at the rapids, and the larger ones in pools between the rapids. I had tried two or three other flies, but the trout would not take them. At one of the riffles I failed to get a strike, when I saw on the opposite side a place about two feet wide and two feet deep, where a stone had fallen out from the edge of the bank. I tossed the fly into this hole and three trout jumped at it, clean out of water. I caught five, averaging ½lb. each, out of that little hole when it was impossible to get a rise in any other part of that riffle. These were the fiercest trout I ever saw; there was no such thing as scaring them; if they missed the fly the first jump, they would try it again and again until hooked, sometimes throwing themselves entirely out of water; we took between sixty and seventy in all.

WILLARD NYE, JR.

SELDOM COME BY TROUT.

CAREFUL catechising of the inhabitants of Seldom Come By, who visited the Fish Commission schooner Grampus, on which I was enabled to go to Labrador in the summer of 1887, elicited the fact that there were two ponds "about a mile off," said to contain trout and gulls. Accordingly a scouting party was organized on the morning of July 25, to make an armed reconnaissance in that direction, and soon after breakfast we moved landward. Landing at the upper end of the harbor, the first attack was made on a little trout brook and resulted in the capture of one good trout and three "tinkers." March was then resumed toward the pond—and what a march it proved to be! If, as we were told, there was a "sort of blind path," we were too blind to find it, and stumbled along over stones, through bogs and bushes, and among the burned and fallen spruces that covered the ground with a complete network. Often too weak to bear a man's weight, they were strong enough to trip him up, tear his clothes and ruffle his temper. Half an hour's continual struggle, tormented by flies and bitten by mosquitoes, failed to bring the ponds within range of vision. Capt. Collins led the way with a gun, closely followed by Frank with an oar, from which hung net, rope and boots—paraphernalia to be used in the capture of suppositious small fry. Hot and thirsty, I brought up the rear with an axe, two fishing rods and a bag full of provisions, convinced that if labor met its just reward we deserved at least a barrelful of trout. Still struggling onward, almost discouraged, we forced our way through a perfect abatis of fallen timber, and lo, there was the pond! And a most unpromising looking pond it was, too—apparently a mere flooded bog hole fringed with bushes and here and there walled by the ever present rock. Adopting my usual tactics in such cases, "accoutered as I was I plunged in," throwing out here and there without any hope of success. Ten or fifteen minutes was sufficient to justify my doubts, and wet and bruised I returned to the spot where we first struck the pond. Just then Frank, who had gone in the opposite direction, shouted that he had found some trout, so with a somewhat incredulous spirit I started after him, slipping over rocks, sinking into mud, and stumbling over concealed sticks. The spot where Frank directed me to throw was not a promising one, being a shallow little cove studded with rocks, between two of which my cast was made. A tightening of the line, a tug, a turn of the wrist, and out came a lively, handsome trout. My spirits rose, and a successful throw brought them up to summer heat. Flies and mosquitoes ceased to be unbearable, as one after another a dozen fine trout were safely landed. Now the biting slackened, but diffidently changing bait for a fly showed that trout were still hungry. When the sun came out a smaller fly proved attractive until it was literally worn out. At last, after two hours, a bright sun and dead calm put an end to our sport and we retired with a good basket of the speckled beauties. When counted we found we had caught 50 fish, whose weight was 12lbs., the four largest averaging a half pound each. My own catch (I was selfish enough to do most of the fishing) was 36, weight 9lbs. Another struggle through the woods brought us to our boat and ended my most successful trouting expedition.

F. A. LUCAS.

SALMON FAMILY IN THE FAR NORTH.

WHEN we reach the extreme northwestern corner of our continent, at Point Barrow, where the writer spent the two years from September, 1881, to August, 1883, we leave behind the myriads of salmon and trout, which we have come to associate with the name of Alaska.

Only a few humpbacked salmon (*Oncorhynchus gorbuscha*) with one or two salmon of a species not yet determined, and a very few individuals of the Pacific red spotted trout (*Salvelinus malma*), of large size and bright silvery color from long residence in the sea, are caught in the shallow bays in the immediate neighborhood of Point Barrow during the short summer. These are all caught in gill-nets skillfully made of fine strips of whalebone, or of fine strong twine made by braiding shreds of reindeer sinew. The nets are set with stakes at right angles to the shore, in the shoal water of the larger bay at Point Barrow, close to the great summer camp and fair ground. Here the Esquimaux from the two Point Barrow villages assemble to meet the Esquimaux from Kotzebue Sound, who have traveled up to the headwaters of the Colville during the winter, and have come down the river with the spring floods and traveled westward in the open water along the coast. Whitefish, too, chiefly *Coregonus lauretta*, are also caught in the nets, but the fishing is really a very trifling affair.

The natives, however, who go east to the Colville every summer to meet the people from Kotzebue Sound and the Mackenzie, find fish more plenty. One of my Esquimaux acquaintances, who went to the mouth of the Colville in the summer of 1882, found the trout so abundant that he fed his dogs with them.

They told us, too, of the grayling, the "wing-fin," as they call it, in the Meade River or Kulugrua, a stream which flows into the Arctic Ocean about fifty miles east of Point Barrow. This fish, they said, was never caught in nets, but "ate a hook." We brought home several of these hooks, made after the pattern so common in Alaska, a sort of little "squid," made of a club-shaped piece of walrus ivory, colored by charring the surface with fire, and armed with a barbless hook.

With such a hook as this they probably angle for the grayling, and perhaps also for the trout, using a short, rough rod about a yard long, with a whalebone line, longer than the rod. We never saw these used, for there is no angling near our station, except for the little polar cod, which are caught through the ice in winter.

The three species of whitefish, however, *Coregonus richardsoni*, and *C. nelsoni*, which are large species, and *C. lauretta*, which is a small one, are the members of the salmon family most important to the Point Barrow Esquimaux. These are caught in the Meade River and its tributary, Kuaru, chiefly in winter after the rivers are frozen over. For the Meade River they say freezes down to the bottom on the shallow bars, so that the fish are penned up in the deep holes and cannot escape to the sea, as they do in the rivers further east. Many of the natives go to these rivers to hunt reindeer in October and early November, and again in February and March. Here they stay in camp, and while the men are hunting the women set their nets through holes in the ice and catch a great many fine whitefish. Many a load of these is brought in frozen hard by the returning deer hunters.

On the whole there is very little about Point Barrow to recommend it to the angler. Many a time did I regret the enforced idleness of my Scribner greenheart rod, which I never had a chance to put together during the whole two years.

I believe, though, that the enterprising angler, who will one day cast his flies over the virgin waters of Kulugrua, will have wonderful sport with the grayling and trout. If the Esquimau can catch them with his primitive tackle, what couldn't a man do with civilized gear.

SMITHSONIAN INSTITUTION, March 21. JOHN MURDOCH.

A TWELVE-POUND BROOK TROUT.

THE venerable and genial Dr. P. R. Hoy, of Racine, Wis., is one of the best illustrations of the beneficent effects of natural history studies and out-of-door sports in prolonging life and preserving strength. He recounted to us recently his participation in the capture of the celebrated 12-pound brook trout by Seth Green in the Sault Ste. Marie, in 1875. Readers of FOREST AND STREAM will remember the description in this journal at the time. The Doctor states positively that the fish was a brook trout and that he saw it weighed on a pair of "balances;" the weight was "down weight." When the landing net was used, it was a question at first whether the Doctor should go into or the trout come out of the water. Dr. Hoy made the first studies of the food of the whitefish, and secured many new animals in his early deep-water explorations in Lake Michigan.

BROOK TROUT AT SEA.

ABOUT the middle of the winter of 1886-87, I caught a brook trout in a fyke net at the head of Great Harbor, Woods Holl, in company with tomcod and flatfish. This was the second one obtained by me in salt water. When the alewives, or river herring, strike in about July 1, the trout leave the streams in this vicinity, and are seen no more until the first open spell in February. They come in with the smelt. When they arrive they are of mixed sizes, 2in., 4 or 5in., and adults of about 12in. Their spawning begins here about March 1.

FIXTURES.

DOG SHOWS.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.
April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.
April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. George H. Hill, Superintendent, 31 Monroe street, Chicago, Ill.
April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Francis S. Brown, Secretary.
May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.
Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.
Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.
Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary pro tem., Mill's Building, New York, N. Y.

LYNN DOG SHOW.

THIS was the first show given by the Massachusetts (Lynn) Kennel Club. We cannot say that it was a success, neither can we say that it was a failure. The Boston show kept away a number of good dogs, and the quality in very many of the classes was decidedly poor, whereas in some others it was fairly good, and in several there were either a very seedy-looking lot of dogs or no dogs at all. The management was all that could be desired. A harder worker than Mr. Clark, the superintendent, we have never seen at a dog show. The benching and feeding were done by Spratts Patent, and their work was, as it always is, properly done.

We regret to say that the attendance was hardly what we expected to find; and we doubt if the better class of people have become sufficiently interested in dogs to give much of their time to a study of man's best friend. The club has had many troubles to contend against, but we have no doubt that by next year many of these will be overcome and that Lynn will hold a show of better quality and on a larger scale than the first.

The catalogue showed an entry of 246, 33 of which were absent, and the judging was done by Miss Whitney, Mr. Mortimer and Mr. Krueger.

The awards in the sporting classes, especially at this show, will do good inasmuch as they will be a means of preventing to some extent a repetition of the blunders that were made.

We thank Messrs. Leslie, Tarr, Beede and Clark for the many courtesies extended to us during a pleasant visit to the shoe town—pretty Lynn.

MASTIFFS—(MR. MORTIMER).

The challenge class contained no entries, and the open class for dogs had only one good one, Sears' Monarch. Wyoming Count, placed second, was not entitled to the honor, if there is any honor in being second in such a class. He is much too long in foreface, lacks in width and depth of head and muzzle, is large in ears, throaty, bad in feet, stands back at the knees, straight and weak in hocks, and does not move well behind. Ashmont Major, third prize, while not first-class in head, undersized and short between the couplings, is a better dog and should have been second. Linden King, hc., while heavy in ears, not first-rate in head, undersized and crooked in front, should have been third, with the second prize winner vhc. Ranger's Rex, vhc., is not nearly so good a dog as the highly commended Linden King. He is light in eyes, wrong in expression and in muzzle, bad in feet, not straight in front, light in bone, undersized and lacking in wrinkle.

Bitches brought out a new one in Madge Minting, the best of Minting's get that we have seen. While she is a fairly good puppy her enthusiastic owner must not allow his admiration for her to get away with his better judgment. The bitch fails first where a dog to be first-class must be fairly good—in muzzle; her ears are large and not well carried, she stands low in front in proportion to height at hindquarters and is crooked in front. Large and ugly dew claws give to her hindparts a rather bad appearance, and she lacks in wrinkle and in character. She is a large and strongly built one, with good chest and loins, strong quarters, a fairly good skull, average amount of bone, good color and coat, and she moves well. That she will win other prizes if shown is a moral certainty, but when she gets into select company she will, we think, be defeated. Linden Duchess, second prize, an old face of wrong type, was decidedly better than the only other entry in the class, Fannie K., that is not a show bitch. Dog puppies contained two miserable specimens, and Madge Minting, that was first in the open class for bitches, was the only bitch puppy shown.

ST. BERNARDS—(MISS WHITNEY).

The quality of these classes was not of high order. Challenge classes contained no entries. In the open class for rough-coated dogs Plinlimmon, Jr., fully described in the New York report, was rightly placed first, but he was crowded by the second prize winner, that is a fine, lengthy dog, with only a moderate head, but good in coat and limbs. Leo H., third prize, is not a show dog, being wolfish in head, undersized, light in quarters, weak in knees, short in loin and not first-class in coat. The corresponding bitch class contained one good one, Lady Wellington, that was second at New York. The second and third prize winners are useful bitches, but not quite good ones. Florida has these defects: Muzzle hardly deep enough, cheeks rather too prominent, head markings not correct, light behind, moves badly, light in bone of hindlegs, hocks not well bent. She has a massive and lengthy body and is much above average in other points. Elizabeth, third prize, is better in muzzle and hindquarters, but is not so good in body or in coat. It is a close thing between them, but in their present condition we think the judge got them right. We did not see Agnes, that was vhc. Fanny, hc., is sheepish in head and expression, is undersized and neither massive in body nor straight in front. Of her good points the covering is best. Rough-coated dog puppies were out when we called on them. The judge said they were bad ones, and she should know. Penelope, the only bitch puppy shown, was removed soon after the judging and must be passed.

The six classes that were provided for the smooth-coats brought out two entries. Lola that was described in the Troy report and Lady Bernard that was not considered deserving of notice. The special for the best in these classes was given to Plinlimmon, Jr. We think Lady Wellington a better bitch than he is a dog and would have given her the ribbon.

GREYHOUNDS—(MR. MORTIMER.)

The worst lot we have ever seen together. Stag, the only exhibit in the open class for dogs, while not a show dog, is a better specimen than the first prize bitch that is a light-boned, weedy, flat-sided, bad-hocked flat-catcher. Spice, second prize, while not a show bitch is better in legs and feet, body and head, and quite as good in other points. All prizes should have been withheld. There was not a greyhound in the classes, and no entries in either challenge or puppy class.

DEERHOUNDS AND BLOODHOUNDS—(MR. MORTIMER).

Five classes were given to these breeds, but there were no entries.

POINTERS—(MR. MORTIMER).

Mr. Heath's beautiful brace, Graphic and Meally, were unopposed in the challenge class. In the open class for heavy-weight dogs Pontiac, Brake and Beaufort II. are well known. Pontiac, that was wrongly placed over Brake at New York, Troy and Albany, was of course placed over him again. Brake is decidedly the better dog, as time will show. The placing of the rest of the class was all wrong. If the principle of giving every dog that is shown a "consolation ticket" is carried, Sir Hector, that was vhc., was entitled to the card. Defects: Throaty; rather full in cheeks; light eyes; rather wide in front; too straight in hocks; tail carried too high; hang of ears not just right; Prince, vhc., was one of the worst dogs in the class, if not actually the worst. Defects: Throaty; large and light in eyes; ears set high; light in bone; set of legs not curved; not perfectly straight in front and much too straight behind; moves badly; not a show dog. Wizard, c., is a better dog than Prince. Defects: Eyes too light; lips and stop not perfect; quarters rather light; stern not first-class; rather leggy. Nank, unnoticed, is a better dog than either Sir Hector or Wizard, and a decidedly better dog than Prince. Defects: Throaty; set of legs not perfect; light eyes; rather leggy. Tony was absent. This class was very badly judged. The four entries in the corresponding bitch class are all well known. Bloomo, the New York winner, was rightly placed first, with Belle Randolph, in nice shape, second, and Lott, a Troy winner, third. Queen Fan was the only entry in the light-weight challenge class.

King of Kent, the New York, Troy and Albany winner, was properly placed at the head of the open class for light weight dogs, and then the fun commenced. The distribution of the other cards was too farcical to be considered anything but a joke. Sir Anthony, second prize, is wide in front, lacking in depth of head, not quite right in set of legs, flat in loin, too steep from hips to stern, not very strong in knees, poor in stern and not good behind. He should have been third. Launcelot, a decidedly better dog, although weak in foreface and not right in knees, should have been second. The reserve card was given to probably the very worst dog in the class, an animal possessing three good points—coat, color and quality of ears. He has a nasty shallow head of Meteor type, is wrong in set of ears, has a butterfly nose, is altogether too narrow in front with forelegs close together at elbows, is flat in ribs, almost crippled in stifles and hocks, lathy, and a very bad mover. It was slaughter to place this miserable weed over Spot Dash, who was given vhc. This dog is well-known. Don Quixote, hc., and another well-known one is also vastly better than Prince, the reserve dog. Naso Randolph, unnoticed, although bad in eyes, cheeky, throaty, not straight in front and wrong behind is a better dog than Prince. He is also quite as good as Don Quixote. Spot, that was given c., was one of the best dogs in the class behind the winners, and all over a better specimen than the reserve winner. He is throaty, not straight in front, a trifle cheeky and not perfect behind. Slam, unnoticed, is better than the reserve winner in every point except color.

First in the corresponding class for bitches was properly given to Sally Brass II., a winner at New York and Troy, and after selecting her for the position the judge got all mixed and judged the balance of the class by guess work. Daisy, that was given vhc., is a clean-headed daughter of Bang Bang and Zanetta. Like her sire she has too dark a nose and in addition is rather wide in front and too light in bone. She has also her sire's wrong stifles and hocks. Between this bitch and Daisy A., that is well-known, it is a very close thing, and they might have had equal second prizes. The awarding of third prize to Naso's Belle over Daisy was a most peculiar decision. She has a plain head, bad eyes, is throaty, long and light in loin, not right in set of legs, wrong in carriage of ears, long in tail, and in fact, is not a show bitch. To make matters worse she was in bad condition. Rialto Limonis, hc., was not deserving of notice. She is very cheeky, snipy, small and pinched in nostrils, light in eyes, wrong in set of ears, light in bone, weak in loin, straight behind, weedy, out of condition, not a show bitch in any respect. Louise Isabelle, unnoticed, is a better specimen than the third prize winner. Her defects are in muzzle, set of legs, neck and knees. May B., c., was in no condition for the show bench and should not have been noticed. Fleet View Alice, the only puppy shown, has very bad head, tail, carriage of ears, eyes, knees, set of legs and ribs. She is not nearly so good a specimen as Louise Isabelle that was unnoticed in the preceding class.

SETTERS—(MR. MORTIMER).

Old Foreman, looking fairly well, was alone in the challenge class for English dogs, and there were no entries in the bitch class. In the open class for dogs Lindo and Pride of Dixie II. were placed as at Utica, and the remainder of the class was made up of a very rough looking lot. Third was given to Bow Bondhu, that is very wide in chest and light in loin. His head and coat are his best points. Clyde Bondhu, vhc., is coarse in neck, heavy in head and he does not stand true in front. In other points he is strong and useful-looking. Foreman's Noble, hc., is plain in head, woolly in coat, not quite straight in front, light behind and not a good mover. Why c. was given to Earl Bondhu, a rank bad one, we do not know. In loin and ribs he is wretchedly bad, he has a coarse head and was not in show condition. Paul Dale, unnoticed, is worth a hundred like him. While this dog is too heavy in muzzle and too straight behind and not first-class in coat he was one of the best in the class behind the first and second prize winners. Rab, unnoticed, is heavy in neck, leggy and light behind, yet a much better dog than Earl Bondhu. Rex, unnoticed, is decidedly better than several of those placed over him. His faults are in head and hocks. Dash J., c., is not within many points of the form shown by the unnoticed Paul Dale. Blue Nell, that won first at Boston last year, was here placed first. We judge it was her record that won her the prize. She has grown very cheeky, has gone all to pieces in forelegs and feet, and she was shown with little more coat than a pointer. Zona, second prize, should have been an easy winner. The balance of the cards were distributed at random. Rural Neva, hc., is defective in eyes, stop and hocks, but is a vastly better specimen than Albert's Flirt, that was given vhc. This is a little weak-faced, weedy bitch, with long tail and bad feet. Possibly her flash color covered all defects. Her joints need dressing for the mange. Foreman Fortuna, hc., is not nearly so good a bitch as Nellie F., that was also hc. Her defects are in ears, muzzle, back, coat, knees, tail, neck and hindquarters. Nellie lacks in ears, feet, tail and strength of limbs. The judge did the best thing possible under the circumstances. He gave every dog a card, and while the awards were all mixed and all wrong, the owners were made to feel happy. No puppies were entered.

Laura B. was the one entry in the Irish challenge class. The open class for dogs had five entries and was badly judged. Banker, second prize, while not so good in head as Dick Swiveller, is so vastly superior in back, loin and hindquarters that he should have won. Both dogs are well known. Bevis, third prize, was all out of condition, and he is not the equal of Faugh-a-Ballah, that was vhc. Defects: Stop not right; light in bone; stands back at the knees; light in loin; flat in loin; bad hocks; too straight behind; not perfectly straight in front; coat too short; falls away too abruptly from the hips; rather short in back; stands over at the knees; leggy. Faugh-a-Ballah is a useful-looking dog, light in eyes; not first-class in head nor perfectly straight in front, but all over a better dog in his present condition than Bevis. Mona II., the only bitch shown, is a bad one. Two puppies, neither first-class, but O'Donovan Rossa much the best, although the special went to the bitch Rose M.

Gordons a very weak class. Tom II., winner in the challenge class for dogs, and the only entry in it, is well known as a useful second-rater. Tyrus, first in dogs, and Dash L., second, are well known. Becky Sharp was an easy winner in the bitch class, followed by a couple of very ordinary specimens, both of which have gooseberry eyes. No puppies.

SPANIELS—(MR. MORTIMER).

This was about the worst class of spaniels we have ever seen in America. Patsy O'Connor was the only Irishman shown, and Bridford Gladys was the only fairly good field spaniel. Black Duck, first in cocker dogs, has such a very bad coat that he will never be at the head of a fairly good class. Jim Crow is weak in muzzle, wrong in ears, long-cast, flat-sided, wrong in coat and straight in hocks. Bijou, the only bitch shown, is weak in muzzle, light in eyes, and not just right in forelegs. She is of nice size. The two Clumbers shown would not be noticed in good company.

COLLIES—(MR. MORTIMER).

The challenge classes were drawn blank, and the remainder were very weak, both in quantity and quality. The Kilmarnock Kennels showed all the dogs but four. None of their exhibits would win in good company. Scotland Get, first in dogs, is plain in head, wrong in ears and short in coat. Kilmarnock Chief, also wrong in ears, but better in head and coat, should have won. Kilmarnock Kenmuse, the only other exhibit, has a plain head and prick ears. The third prize should have been withheld from him. The first prize bitch is good in head and bad in ears, and her side coat is soft. The second prize winner is not good in head, but has better ears than the winner. Coat soft and not enough of it.

FOXHOUNDS—(MR. KRUEGER).

In the dog class first prize was withheld and second went to a fine specimen with bad feet, mouth gone and showing age generally. Third was given to a very good dog of the heavy Southern type, not what we want in the true American, racy, clean-cut hounds. In bitches only two were shown, both very good specimens, the winner having the best legs and feet, chest and coat. Puppies were a motly lot, first going to an attractive but poor-headed specimen. Joe Deacon, winner of second, is long-cast, straight in stifles and full under the eyes—a big, coarse, powerful dog all over, looking a workman.

BEAGLES—(MR. KRUEGER).

Fitzhugh Lee alone in the challenge class received the award. In open dogs Frank Forrest was placed over Racket II., who was decidedly lacking in show form, being shown very thin in flesh, which magnified his main faults. Shown in proper shape will add to this dog's chances. Dandy, winner of third, is a taking little dog, trifle light in muzzle and not best in legs and feet, excellent body and skull with ears nicely carried, in all a dog showing much character. Fitze, given hc., is coarse in head, with ears not properly carried, a strong dog lacking elegance. Tenor, the remaining entry, astonished his owner by proving oversized, at any rate he is no show dog, lacking quality and character. In bitches the first and second winner are very good bitches, but wrong in type of head, being too long in muzzle and lacking in depth of same. The winner has the best of it in head, quarters and condition; her eyes are rather small but of proper color and expression, skull not domed enough, ears would be better if longer and finer in leather. She is wide in front, slightly out at elbows and feet, spread some. In body she is very good, just a shade coarse, quarters excellent, coat fairly good, but rather soft in texture. Cleopatra is deficient in drop, ears lacking in length and proper carriage, mouth worn, deficient in bone and feet, light through quarters, lacking strength in these parts, could also be improved in coat and brush, good in chest; better in forelegs and more elegant than the winner. She was lacking some in condition. Daisy, the winner of third, is slightly out at elbows and decidedly bad in feet. She stands unnaturally wide behind, almost approaching deformity, and dew claws are rather ill-becoming. In body she is as good as anything in the class, and in head far better than any in the show. Lady, vhc. reserve, is bad in ear, which are pointed, set on high and lacking in length and proper carriage. In head, body, forelegs, quarters and bone she is good, feet are not good and in coat and brush she lacks decidedly. She was properly placed. Frixie, the remaining entry, is a second edition of Lady with exception of being leggy, ribs not well sprung and lacking substance throughout. Not a show bitch at all. In puppies a splendidly matched brace was first and second, the winner being shorter in body and length and carriage of tail. Both lack in bone and substance, more depth of muzzle would improve them and coat and brush will improve with age. Kathleen W., the remaining entry, has been described heretofore. She will not make a winner.

DACHSHUNDE—(MR. KRUEGER).

Only one was present, Lina L., well-known, who received the award.

BULLDOGS—(MR. MORTIMER.)

A weak class in the absence of Mr. Thayer's kennel. Hillside, well-known, represented champions. Lion, in bad condition and equally well-known, won easily in the open class for dogs and bitches, followed by a couple of plain headed ones that would not receive notice in a strong class. The special was wrongly given to Lion, who in his present condition has no business in front of Hillside.

TERRIERS—(MR. MORTIMER.)

All the winners and noticed dogs in the bull-terrier class are well-known winners. The special was given to Jubilee, but we think Royal Rose, who is better in head and tail, but not so good in shoulders, should have had it. She was in splendid condition. In fox-terriers it was a one-man show. The Blemton Kennels won everything, nobody else got a card, in fact there were only three other exhibitors. Second prize in puppies was wrongly withheld from Hillside Jaunty. This bitch was first at New Bedford and is always worth a card. Sheffield Lass was the only good black and tan. This is a good bitch, coarse in tail and breeched, but showing much quality in other points. There will be fun when she meets the black and tan and white ones. The only Skye shown is pig-jawed and soft in coat. The other entry in the class was a mongrel. Bradford Harry, that is altogether better in head, body, coat and color than his competitors, won very easily in a weak class of Yorkshires. Scotch, Bedlington, Irish and Dandie Dinmonts were not represented.

TOY SPANIELS—(MR. MORTIMER).

Another one-man show. Mr. Fay won everything with his well known team, Milwaukee Charlie, Dolly, Exeter Earl and Exeter Beauty. Beauty, as usual, was short in coat, but the others were looking well.

PUGS—(MISS WHITNEY).

Here there were only five entries in four classes. Budge, first in dogs, open class, is not first-class in lips, has white nails and is rather smutty in color and not perfect in ears. He is decidedly better than average and should, if shown, win other prizes. Floss E., first in bitches, has a beautiful coat, excellent color, but is rather small in head, not first-class in muzzle and has white nails.

MISCELLANEOUS—(MR. MORTIMER).

Agricola, a goodish bob-tailed sheepdog that will beat Sir

Lucifer, was first in this class. His coat is not right. Jack Dempsey, a moderate whippet that was second at Boston last year, was second. On this occasion he was as fat as a pig, and the prize should have been withheld. White Prince, first in the light-weight class, is somewhat too strong in head for a white English terrier, but he is by no means a bad one. Cotswold Jocko was the only other entry, and he took the prize. Following are the

AWARDS.

MASTIFFS.—CHALLENGE—No entries.—OPEN—*Dogs:* 1st, E. B. Sears's Sears' Monarch; 2d, Fred W. Connolly's Wyoming Count; 3d, Dr. J. Frank Perry's Ashmont Major. Very high com., J. M. Ranger's Ranger's Rex. High com., John Coles's Linden King. *Bitches:* 1st, Geo. W. Glazier's Madge Minting; 2d, John Coles's Linden Duchess.—PUPPIES—*Dogs:* Prizes withheld. Com., Albert T. Smith's Don Meir. *Bitches:* 1st, Geo. W. Glazier's Madge Minting.

ST. BERNARDS.—ROUGH-COATED.—CHALLENGE—No entries.—OPEN—*Dogs:* 1st. E. B. Sears's Phinlimmon, Jr.; 2d, Weiner & Lincoln's Gruss Bayard; 3d, Geo. H. Hovey's Leo H. *Bitches:* 1st, E. B. Sears's Lady Wellington; 2d and 3d, Richard Barry's Florida and Elizabeth. Very high com., P. H. Hurley's Agnes. High com., John Flye's Fanny F. Best kennel St. Bernards, rough or smooth-coated, Weiner & Lincoln.—PUPPIES—*Dogs:* Prizes withheld. High com., Weiner & Lincoln's Volunteer and Bonivard. *Bitches:* 1st, Weiner & Lincoln's Penelope.—SMOOTH-COATED—CHALLENGE—No entries.—OPEN—*Dogs:* No entries. *Bitches:* 1st, Keystone Kennels' Lola. *Puppies:* No entries.

NEWFOUNDLANDS.—No entries.

GREAT DANES.—Prizes withheld.

GREYHOUNDS.—CHALLENGE—No entries.—OPEN—*Dogs:* Withheld. *Bitches:* 1st, D. J. Donohue's Belle; 2d, Mrs. W. J. Middleton's Spice; 3d, Withheld. *Puppies:* No entries.

DEERHOUNDS.—No entries.

BLOODHOUNDS.—Prizes withheld.

POINTERS.—LARGE—CHALLENGE—*Dog:* C. Heath's Graphic. *Bitch:* Charles Heath's Mealy.—OPEN—*Dogs:* 1st, E. Dexter's Pontiac; 2d, Stanton Pentz's Brake; 3d, Geo. W. Lovell's Beaufort H. Very high com., Dr. W. M. Lamkin's Prince, and Fleet View & Reading Pointer Kennels' Sir Hector. Com., Clarence Murphy's Wizard. *Bitches:* 1st, Charles Heath's Bluomer; 2d, Fleet View & Reading Pointer Kennels' Belle Randolph; 3d, Charles Heath's Lott. Very high com., Don Quixote Kennels' Nell.—SMALL—CHALLENGE—1st, Thomas H. Terry's Queen Fan.—OPEN—*Dogs:* 1st. Edward Dexter's King of Kent; 2d, Geo. W. Lovell's Sir Anthony; 3d, Chas. Heath's Launcelot. Reserve, Herbert F. Caswell's Ned C. Very high com., Fleet View and Reading Pointer Kennels' Spot Dash. High com., Don Quixote Kennels' Don Quixote. *Bitches:* 1st, Chas. Heath's Sally Brass; 2d, Geo. W. Lovell's Daisy; 3d, Harry L. Rice's Naso's Belle. Very high com., Fleet View & Reading Pointer Kennels' Sav and G. A. Vickery's Daisy. High com., W. J. Middleton's Rialto Lizonka. Com., Geo. W. Lovell's Daisy A.—PUPPIES—*Dogs:* Withheld. *Bitches:* 1st, Frank E. Meyer's Fleet View Alice. Best kennel of pointers, Chas. Heath.

ENGLISH SETTERS—CHALLENGE—*Dogs:* 1st, C. Fred Crawford's Foreman. *Bitches:* No entries.—OPEN—*Dogs:* 1st, Mount Washington Kennels' Lindo; 2d, E. N. Hubbard's Pride of Dixie II.; 3d, J. L. Wells's Bow Bondhu. Very high com., Warren H. Beede's Clyde Bondhu, C. Fred Crawford's Count Petrel. High com., C. Fred Crawford's Foreman Noble, A. J. Hoitt's Cap. Com., J. C. Faxon's Earl Bondhu, Mrs. John T. Jones's Dash J., F. L. Nichols's Shapeless, F. C. Faxon's Baron Bondhu. *Bitches:* 1st, C. Fred Crawford's Blue Nell; 2d, Mount Washington Kennels' Zona; 3d, W. B. Peet and W. A. Lyon's Chatauqua Belle. Very high com., Geo. W. Lovell's Snowflake, C. Fred Crawford's Albert Flirt. High com., J. L. Wells's ——, Rural Kennels' Rural Neva, Fred A. Frazier's Nelly F., B. A. Gage's Foreman Fortuna. Best kennel of setters, C. Fred Crawford. *Puppies:* No entries.

IRISH SETTERS.—CHALLENGE—*Dogs:* No entries. *Bitches:* 1st, Kildare Kennels' Laura B.—OPEN—*Dogs:* 1st, Pierse Cambios's Dick Swiveller; 2d, J. Grosvenor's Banker; 3d, S. Littlefield's Bevis. Very high com., W. M. Warren's Faugh-a-Ballah. *Bitches:* 1st, withheld; 2d, Chas. Hilton's None II.—PUPPIES—*Dogs:* 1st, Michael Flynn, Jr.'s O'Donovan Rossa. *Bitches:* 1st, H. H. Carr's Rose M.

GORDON SETTERS.—CHALLENGE—*Dogs:* F. M. Harris's Tom. *Bitches:* No entries.—OPEN—*Dogs:* 1st, Frank R. Pease's Tyrus; 2d, Chas. H. Leonard's Dash; 3d, D. H. McCashin's Capt. Dan. Very high com., Pine Grove Kennels' Zip. *Bitches:* 1st, J. L. Wells's Maud S.; 3d, Geo. D. Holbrook's Vic II. *Puppies:* No entries.

IRISH WATER SPANIELS.—1st, John R. Daniels's Patsy O'Connor.

FIELD SPANIELS.—CHALLENGE—No entries.—OPEN—*Dogs:* 1st, Fred A. Henry's Ned Ober; 2d, Geo. A. Woodman's Bo; 3d, Fred H. Perrin's Shady. *Bitches:* 1st, Andrew Laidlaw's Bradford Gladys.—OTHER THAN BLACK—*Dogs:* Prizes withheld. Com., Geo. B. Perry's Zip Coon, Henry Myer's Sancho. *Puppies:* No entries.

COCKER SPANIELS.—BLACK OR LIVER—CHALLENGE—No entries.—OPEN—*Dogs:* 1st, W. H. Walton's Black Duck; 2d, Andrew Laidlaw's Giffee; 3d, T. H. Wyman's Jim Crow. *Bitches:* 1st, W. H. Walton's Bijou. *Puppies:* Withheld.—OTHER THAN BLACK OR LIVER—CHALLENGE—No entries.—OPEN—*Dogs:* Withheld. *Bitches:* 1st, G. E. Gilchrist's Blondie G. *Puppies:* No entries.

CLUMBER SPANIELS.—CHALLENGE—No entries.—OPEN—1st and 2d, W. J. Middleton's Jill and Bess II.

FOXHOUNDS.—CHALLENGE—No entries.—OPEN—*Dogs:* Reserve, James McBrien's Spot; 2d, E. W. Whitcomb's Loud; 3d, Orrin E. Welch's Rover. *Bitches:* 1st, W. C. Smith's Kate; 2d, Warren Parrott's Chorus. *Puppies:* 1st, W. A. Small's Waltham Jewell; 2d, E. E. Butter's Joe Deacon; 3d, E. W. Whitcomb's Little Fanny. Com., Geo. P. Berry's Sport, Fred Skinner's Tipy.

BASSET HOUNDS.—No entries.

BEAGLES.—CHALLENGE—*Dogs:* 1st, Clark & Rutter's Fitzhugh Lee. *Bitches:* No entries.—OPEN—*Dogs:* 1st, A. Parry's Frank Forrest; 2d, Lewis Bros.' Racket II.; 3d, Clark & Rutter's Dandy. High com., H. F. McBride's Fitze. *Bitches:* 1st, Clark & Rutter's Norah; 2d, Clark & Rutter's Cleopatra; 3d, W. M. Sanborn's Daisy. Reserve, E. C. Tarr's Lady. High com., Pine Grove Kennels' Frixie. *Puppies:* 1st and 2d, F. Eibel's Lill and Daisy; 3d, Hornell Harmony Kennels' Kathleen W.—UNDER 12IN.—1st, Lewis Bros.' Banner Queen; 2d, E. W. Whitcomb's Cappie; 3d, Clark & Rutter's Queen M. High com., Clark & Rutter's Belle.

COLLIES.—CHALLENGE—No entries—OPEN—*Dogs:* 1st, Robert J. Stronge's Scotland Yet; 2d and 3d, Kilmarnock Collie Kennels' Kilmarnock Chief and Kilmarnock Kenmuse. *Bitches:* 1st and 2d, Kilmarnock Collie Kennels' Kilmarnock Leila and Kilmarnock Mallie. Best kennel, Kilmarnock Kennels. *Puppies:* 1st, 2d, very high com. and high com., Kilmarnock Collie Kennels' Kilmarnock Chief, Kilmarnock Leila, Kilmarnock Flock and Kilmarnock Goldie.

BULLDOGS.—CHALLENGE—I. P. Barnard's Hillside.—OPEN—W. J. Comstock's Lion; 2d, Geo. W. Barrow's King; 3d, Chas. F. Peasley's Doctor.

BULL-TERRIERS.—OVER 25LBS.—CHALLENGE—H. A. Harris's Jubilee.—OPEN—1st, Frank F. Dole's Royal Rose; 2d and 3d, H. A. Harris's My Queen and Miss Norah.—UNDER 25LBS.—CHALLENGE—No entries.—OPEN—1st, H. A. Harris's Marguerite; 2d, H. J. Vinal's Benjo; 3d, F. F. Dole's Nell Bright. Very high com., H. G. Vinal's Nanno. *Puppies:* No entries.

PUGS.—*Dogs:* 1st, Mrs. J. Smith's Budge; 2d, H. F. McLaughlin's Stubb; 3d, Mrs. H. N. Hastings's Ned.—OPEN—*Bitches:* Mrs. W. A. King's Floss E.

CHESAPEAKE BAY DOGS.—No entries.

FOX-TERRIERS.—CHALLENGE—Blemton Kennels' Lucifer.—OPEN—*Dogs:* 1st, Blemton Kennels' Volunteer; 2d, Blemton Kennels' Blemton Braggart. *Bitches;* 1st, Blemton Kennels' Brilliant; 2d, Blemton Kennels' Tiara. Best kennel, Blemton Kennels. *Puppies:* 1st, Blemton Kennels' Blemton Braggart.

BLACK AND TAN TERRIERS.—1st, Frank F. Dole's Sheffield Lass; 2d, Keystone Kennels' Sir Wallace.

BLACK AND TAN TOY TERRIERS.—1st, Thomas Goodwin's General; 2d, H. C. Davis's Jennie.

SKYE TERRIERS.—1st, W. B. Gifford's Prince Charlie.

YORKSHIRE TERRIERS.—1st, P. H. Coombs's Bradford Harry; 2d, Chas. N. Symond's Toons Royal; 3d, John Ludlam's A. Tiny. Very high com., Mrs. Wm. Barrowscale's Zip.

SCOTCH TERRIERS.—No entries.

BEDLINGTON TERRIERS.—No entries.

DANDIE DINMONT TERRIERS.—Absent.

IRISH TERRIERS.—No entries.

KING CHARLES SPANIELS.—*Dogs:* 1st, F. Blackwood Fay's Milwaukee Charlie. *Bitches:* 1st, F. Blackwood Fay's Dolly.

BLENHEIM SPANIELS.—1st and 2d, F. Blackwood Fay's Exeter Beauty and Exeter Earl.

ITALIAN GREYHOUNDS.—3d, Dr. C. H. Geary's Fido.

POODLES.—No entries.

MISCELLANEOUS.—25LBS. AND OVER—1st. W. T. Tebbets's bobtail sheepdog Agricola; 2d, Chas. O. Breeds's whippet Jack Dempsey.—UNDER 25LBS.—1st, What Cheer Kennels' white English terrier White Prince; 2d, Frank F. Dole's Cotswold Jocko.

SELLING CLASS.—Prizes withheld.

SPECIALS FOR BEST.

Mastiffs, dog, E. B. Sears's Sears' Monarch; also for best in show. St. Bernards, dog, E. B. Sears' Phinlimmon, Jr.; from Lynn, Leo H.; puppy, Penelope. Greyhound, Belle. Pointers, dog or bitch, Graphic; native dog, Brake; bitch, Mealy; bitch puppy, Fleet View Alice. Setters, English, dog, Foreman; in open class, Blue Nell; from Lynn, Clyde Bondhu; Gordon, dog or bitch, Becky Sharp; in open class, Tyrus; from Lynn, Dash L.; Irish, dog or bitch, Laura B.; bitch puppy, Rose M.; dog puppy, O'Donovan Rossa; puppy, Rose M. Foxhounds, native bred dog or bitch, Kate; native bred dog, Loud; dog puppy and native bred dog or bitch, Waltham Jewell. Spaniels, cocker, bitch other than black, Blondie G.; from Lynn, Black Duck; bitch from Lynn, Bijou; King Charles, Milwaukee Charley. Bull-terriers, in the show, Jubilee; dog or bitch from Lynn, Royal Sport. Bulldog, dog or bitch, Lion. Pugs, dog, Budge; dog or bitch from Lynn, Floss E. Beagles, bitch in open class from Lynn, and dog or bitch from Lynn, Daisy; dog, Fitzhugh Lee; dog or bitch, Lill; dog in open class, Frank Forest; brace of puppies, Lill and Daisy. Collies, dog or bitch in show, Scotland Yet. Terriers, fox-terrier in open class, Blemton Brilliant; dog or bitch, Lucifer. Skye, dog or bitch, Prince Charlie; Yorkshire, Bradford Harry; dog or bitch from Stoneham, Mass., Fleet View Alice. Miscellaneous, under 25lbs., White Prince; over 25lbs., Agricola.

BOSTON DOG SHOW.

BOSTON, April 2.—The fifth annual dog show of the New England Kennel Club opened this morning. There are 701 entries and among them are a large number of our best known dogs. That the show is a first class one no one can truthfully deny. The attendance during the day has been very good indeed for the first day, and with pleasant weather there is no doubt that the hall will be crowded on the remaining days. Judging began at 11 o'clock and dragged slowly not being nearly finished at night. Following is a list of the

AWARDS.

MASTIFFS.—CHALLENGE—*Dogs:* 1st and stud dog's special and 2d, E. H Moore's Minting and Ilford Caution. *Bitches:* No entry.—OPEN—*Dogs:* 1st. E. H. Moore's Alonzo; 2d and American-bred special, E. B. Sears's Sears' Monarch; 2d, A. F. Cowles's Ilford Caution II. Reserve, T. G. Gram's Benjamin Franklin. High com., F. W. Connolly's Wyoming Count. *Bitches:* 1st, 2d and high com., E. H. Moore's The Lady Coleus, The Lady Dorothy and The Lady Beatrice; 3d, G. W. Glazier's Madge Minting. Reserve and very high com., Millbrook Kennels' Empress III. and Princess Beatrice. Com., J. Cole's Linden Duchess.—PUPPIES—*Dogs:* Prizes withheld. *Bitches:* 1st, G. W. Glazier's Madge Minting; 2d, F. Palmer's Lady Pamelia.—NOVICE—Withheld.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—*Dogs:* 1st, Hospice Kennels' Otho. *Bitches:* 1st, Hospice Kennels' Gemma I.; 2d, E. H. Moore's Miranda.—OPEN—*Dogs:* 1st, E. H. Moore's Ben Lomond; 2d, Chequasset Kennels' Monte Rosa; 3d, E. B. Sears's Phinlimmon, Jr. Reserve, Dr. G. Walton's Scotch Bonivard. Very high com., Hospice Kennels' Alpine Chief and Contocook Kennels' Kastelhorn II. High com., Weiner & Lincoln's Gruss Bayard and Galaxy Kennels' Taso. Com., E. S. Benjamin's Hugenot, C. G. Wheelock's Merchant Prince and G. W. Patterson's Count. *Bitches:* 1st and very high com., E. H. Moore's Saffron and Recluse; 2d, E. B. Sears's Lady Wellington; 3d and com., Galaxy Kennels' Una and Princess Gilda. Reserve and com., C. H. Spring's Duchess of Heathfield and Linda. High com., R. Barry's Florida and W. Sandberg's Stella. Com., Quinsigamond Kennels' Chrysa and J. A. Morse's Yum Yum. PUPPIES—*Dogs:* 1st, withheld; 2d, Weiner & Lincoln's Volunteer. *Bitches:* 1st, L. W. Franklin's Elmstone Brightie; 2d, J. A. Morse's Belva Lockwood.—SMOOTH-COATED—CHALLENGE—*Dog:* 1st, Hospice Kennels' Hector. *Bitch:* 1st, Hospice Kennels' Daphne.—OPEN—*Dogs:* 1st, Teague & Tilton's Beauchamp; 2d, W. P. PHILADELPHIA DOG SHOW.

Editor Forest and Stream:

When I say that up to this evening we have received 150 entries, all but ten of which are local entries, you will acknowledge that in urging out of town exhibitors to send on their entries before the date of closing I knew something of what was going to happen. I believe the local entries will reach well on to 250, and that will leave but scant room for those outside the city. Our space is limited to something like four hundred dogs, and the club has decided to make no distinction other than priority of receipt in deciding which entries will be accepted and which rejected. Therefore I would advise all to get in early. We have received several additional special prizes including a cup from *Reins and Whip*; also: 100lbs. Cheltenham dog biscuit for best bull bitch in open class. Handsome silver card receiver for the best Gordon setter dog with two or more of his get. Handsome collar and chain for the best Gordon setter bitch with two or more of her get. Cup valued at $15 for best pug dog or bitch. Pair of dumbbells valued at $12 for best fox-terrier owned in Philadelphia. Pair of fine game bantam fowls for best Irish terrier dog or bitch. There will also be a challenge class for cocker spaniels, other than black. There will also be a prize of $10 for best kennel of four or more beagles, and the same for cocker and field spaniels. The special prize for Skye terriers should read best dog or bitch, and not dog and bitch as wrongly printed in premium list. The name of the judge of collies is John P., and not Asa A. Gray.

H. I. IRELAND, Supt.

THE CHICAGO SHOW.

CHICAGO, March 29.—*Editor Forest and Stream:* Entries for the Mascoutah Kennel Club show, to be held April 9 to 12, closed March 25 with a total of 566, distributed among the several classes, as below:

Mastiffs 30, St. Bernards 49, bloodhounds 2, Newfoundlands 3, Great Danes 36, deerhounds 5, greyhounds 9, pointers 69, English setters 41, Irish setters 33, Gordon setters 18, American foxhounds 3, Chesapeake Bay dogs 5, English retrievers 2, Irish water spaniels 14, field spaniels 7, cockers 17, collies 45, poodles 5, bulldogs 13, bull-terriers 18, dachshunde 3, beagles 8, fox-terriers 41, Irish terriers 5, Scotch terriers 12, Dandie Dinmonts 13, Skyes 2, black and tans 2, Yorkshires 7, toys (other than Yorkshire) 1, pugs 18, King Charles 11, Blenheims 6, Italian greyhounds, 1, miscellaneous 12, total 566.

The most prominent kennels in the country are represented by their best specimens, and everything points now to an unqualified success.

GEO. H. HILL, Superintendent.

POINTER CLUB.—It is necessary to change the date of meeting of the Executive Committee of the Pointer Club of America to Tuesday, April 9, at 12 M., in rooms of A. K. C., No. 44 Broadway.—GEO. W. LA RUE,

CENTRAL FIELD TRIAL CLUB.

Editor Forest and Stream:

We will advertise our Derby in next week's issue. As previously stated we run a Derby for pointers; also a Derby for setters, with first, second and third places in each stake, and have decided to make the prizes in each $400 to first, $200 to second and $100 to third, making $1,400 for the two stakes; the winners to be known as the winners of first, second and third in the Setter Derby, and first, second and third in the Pointer Derby, respectively. It will be a condition of each stake that the two winners of first must run a heat together and the winner of this heat will be known as the winner of the Derby and receive $400 additional, making the entire amount, thus far decided on, for the winner of the Derby $800.

The first series of heats will be run to determine what dogs the judges shall select to run in the future series. Every dog will be given ample opportunity to show whatever merit he possesses, no heat can be less than one hour and the judges will prolong the time as much beyond that limit as may be necessary to expel all doubt of the correctness of their decision. After all the dogs have run through the first series, the judges will announce those they have selected to run in the subsequent heats and the names will be drawn to see which will run together, and the usual order of running will be continued through the future heats, the beaten dogs being dropped and the winners running together in the next series of heats. In order to bring all dogs to the field in as fresh a condition as possible, we will alternate the running of the stakes—that is, run the setters one day and the pointers the next day—until both stakes are finished. This will give each dog all opportunity possible for rest and, we hope, be the means of bringing them to the field on a keen edge and enable them to show up to the best advantage possible.

The All-Aged Setter Stake and the All-Aged Pointer Stake will be run on the same plan as the Derby, first, second and third places in each stake. The winner of first in the Setter Stake and the winner of first in the Pointer Stake will be compelled to run a heat together and the winner of this heat will be known as the winner of the All-Aged Stakes.

Mr. John Davidson and Mr. Wm. Tallman will judge in all stakes and Col. Arthur Merriman will make the third judge in the Pointer Derby, also the All-Aged Pointer Stake. Mr. J. M. Tracy was to have been the third judge for the Setter Derby and the All-Aged Setter Stakes, but he now finds it will be necessary for him to be absent in Europe. Mr. Tracy is one of our members and, if alive, will be in the field next year. We will endeavor to find a substitute for Mr. Tracy as judge, that will prove acceptable to all owners and breeders, and will be pleased to have them send the writer names of such gentlemen as will be satisfactory to them.

C. H. ODELL, Sec'y pro tem.
Central Field Trial Club.

[The Central Club has made a new departure in sending out its Derby entry blank by publishing it in full in the FOREST AND STREAM. This is to be cut out, filled and returned to the treasurer.]

SOUTHERN FIELD TRIAL CLUB.

MARIETTA, Ga., March 29.—*Editor Forest and Stream:* In this week's issue of the sporting press, I see the announcement of Col. Odell, as secretary pro tem. of the Central Field Trial Club, stating that they would hold trials at Lexington, N. C., commencing Dec. 2, 1889. The Southern Field Trial Club, at their annual meeting last December, claimed that date, and so announced it through through the press. We respectfully ask the Central Field Trial Club that they select some other date. The Southern Field Trial Club will hold their trials again this year at Amory, Miss., commencing Dec. 2. The prizes are the largest ever offered in America. Advertisements of same will appear at the proper time.

T. M. BRUMBY,
Sec'y and Treas. S. F. T. C.

DOG TALK.

WE hear that the youngsters of the Memphis and Avent Kennel are doing well, and if nothing befalls them it is expected that they will come out strong in the Derby Stakes this year. It is also rumored that the kennel will have a Chance in some of the All-Aged Stakes.

The English champion Irish setter Conn II. will arrive in time for Worcester show. He has won several firsts and reserve, puppy class, at Palace show.

Kennel owners will do well to read the advertisement in another column of the Sherman King Vaporizer Co. The vaporizer is a handy little invention for disinfecting and purifying the air when foul from any cause whatever. In the kennel it will prove of great service, as it is self-acting and its work goes on constantly without requiring any attention. The initial cost is not great, and after that it can be run at an expense of from twelve to fifteen cents a year. The vaporizer is applicable not alone to kennels, but to sick rooms or any place infected with bad odors or disease. The company will furnish circulars of information on request.

LORD NEVERSETTLE.—In your issue of the 14th inst. Mr. C. H. Lowe writes: "My latest importation, Lord Neversettle, is by Jester out of Mr. Stone's Squirrel. Jester is the sire of Huic Holloa and many other winners, and is own brother to Paris, sire of Miss Glendyne and Princess Dagmar." This should have been sire of Miss Glendyne and Bit of Fashion, as Princess Dagmar is own sister to Paris, Jester, Pathfinder, Perry Down, Peter, Captain Gill, and sister to Countess Dagmar and Prenez Garde, all being by Ptarmigan out of Gallant Foe. In issue of March 14 Mr. D. N. Heizer, of Great Bend, Kan., advertises a most mixed up pedigree of Little Lady Glendyne and Lady Millie Glendyne, as he makes out Lady Glendyne to be both granddam and dam, and gives her pedigree in one place Don Antonio—Meggie Smith; in another by Countryman, dam by Willie Wylie out of Miss Johnson. Jester's pedigree is given in two places as by Contango out of Petronella; but should be by Ptarmigan out of Gallant Foe, Ptarmigan being by Contango out of Petronella. Then below he mentions: "Jester is the youngest surviving son of Gallant Foe."—J. G. FLOWER.

OAKHURST KENNELS.—Chicago, March 29.—*Editor Forest and Stream:* H. L. Goodman's connection with the Oakhurst Kennels as superintendent ceased March 26, and he is no longer employed in any capacity. All communications should be addressed to the owner.—R. P. H. DURKER, Hotel Woodruff, Chicago.

KENNEL NOTES.

Trixie. Liver and white pointer dog, whelped February, 1888 (Don—Bridget), owned by H. F. McCracken, Urbana, O., March 19, from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. D., Ipswich, Mass.—A pug dog 1 year old has a bad cough and it seems as if there was something in his throat. He has a long spell of coughing. Ans. Give 3 grains of quinine night and morning and a teaspoon of syrup of buckthorn every other day.

B. F. W., Brooklyn.—I have a Yorkshire terrier bitch that was born in September, 1880, and is, therefore, over eight years old, but is apparently as strong and healthy as she has ever been. She has never been lined, having always been a house pet. Is she too old to be bred to now with satisfactory results? Ans. No, she is not too old.

C. V. Y., Appleton, Wis.—A cocker spaniel 8mos. old has had two large abscesses on lower jaw and neck, caused by distemper, I suppose. Have had them lanced twice. Will it be desirable to give any medicine as an alterative, or will he get over it without any further treatment? The first time lanced they discharged freely, but new ones formed within a few days and I feared a continuance of the trouble. Ans. If freely opened they ought to disappear. If the dog is in poor health get Bland's iron pills and give one three times a day concealed in a morsel of meat.

J. M. Y., Albany, N. Y.—I have an Irish setter, 2 years old, which has has had a very fine, glossy coat; but lately she scratches and bites herself a great deal, and I can pull her hair out in great quantities. She sometimes has a cough and throws up a greenish matter, at other times white and frothy; nose warm most of the time. About a year ago she was in about the same condition. Is it a touch of distemper? Ans. Probably dermatiti or eczema, which is generally accompanied by constitutional symptoms. Give 5grs. of quinine night and morning in pill form for a few days. Use zinc oxide ointment over the inflamed portion of the skin. After a few days give 10 drops of nux vomica twice daily.

CONSTANT READER, Fort Assiniboine, Mont.—A pup 8 months old has been very sick for about two months. I gave him cod liver oil to break his cough and 10 drops of tincture of iron for appetite every day. The sickness worked on him so hard that he has become totally blind. I used a receipt that I saw advertised in your paper, and he is so now that he can see a little. He has white specks on his eyeballs, but I think he will be all right in course of time. What I want to know is this: He is very weak, and when he stands he is all the time twitching his hindquarters. When you touch his hindquarters he will crouch down as if in pain. Ans. Give 3grs. of quinine night and morning. Give 2grs. calomel each noontime. Wash the eyes with a solution of zinc sulphate, 2grs. to the ounce, every day, allowing a little to get into the eyes. Keep the bowels regular with syrup of buckthorn in teaspoonful doses.

Canoeing.

THE ATLANTIS AND HER CRUISE.

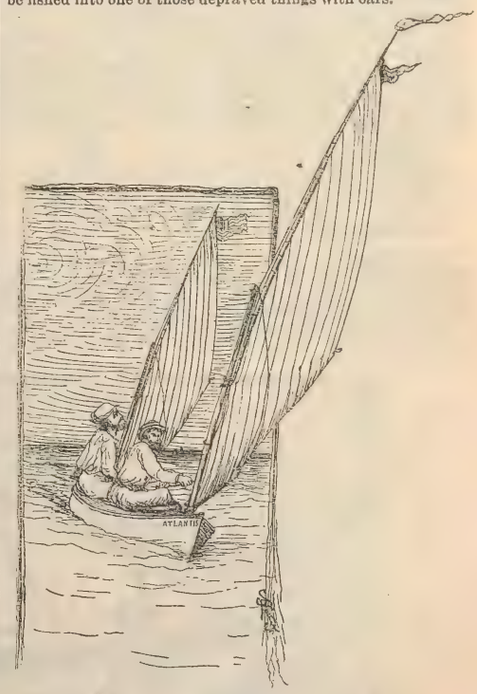
INTRODUCTORY—THE BIG SMALL-BOATS AND THE CANOES.

A YEAR ago last summer, the big small-boats—the sneak-boxes, cruisers, Philadelphia "tuckups" and the like—had a boom. Notwithstanding ancient prejudices in the A. C. A. and the canoe clubs against such boats, there were men among us who, perhaps because of living near the water and having convenient moorings, wanted to use a boat in which they could enjoy an afternoon sail with the company of some other fellow, or perhaps of some other fellow's sister, as an additional luxury. Further, if a vigorous calm chanced to strike them a mile or more from shore, they didn't want to drift around in sight of home till the supper was cold and mammas were anxious, on the one hand, nor, on the other, to feel it an offense against the moral law of canoedum to row or paddle home as they pleased. Handy, all-round boats, neither yachts nor canoes, will be popular wherever there are good moorings. Such boats afford much fun for little work; they are to the yacht as the village cart is to the family carriage.

For exhilarating exercise commend me to a canoe sail in a stiff breeze; but there are tranquil dispositions that don't want to be exhilarated.

My hankering after other fellows' sisters and a disposition that can endure an arduous amount of rest, as Stoddard used to say, excites in me a keen sympathy for those canoeists who admit an occasional weakness for the larger boats. How, for instance, I used to envy Drake, down there at the New York Canoe Club, with his comfortable Rushton cruiser, gorgeously carpeted with Smyrna rugs, and furnished with chairs with backs to them, with plenty of room aboard to oll around, or even to take a walk to the steward's locker forward where the blankets were kept. Just think of the good canoeists going in for big boats: N. H. Bishop and Dr. Piffard with their Barnegats; Tom Buddington, C. H. Roberts, Kirk Munroe with his Alligator, and this winter in Florida with a big sharpie; W. P. Stephens with his Tomboy and half a ton of lead under his feet and his playful Berthon folding Tomcat under his arm; Seavey with his picturesque floating illustrated poem of Hiawatha; Vaux—the now domesticated Vaux—with the 19ft. yawl Penguin, amply large enough for two; the Averill boys, Dr. Grant, etc. I nearly forgot the "Czar," of the Ideal Cruising Association, who had the effrontery to come to the meet last summer with the Goat, a 19ft. canoe that would have been tabooed as a yacht three years ago.

I remember the time, and I am not one of the old 'uns either, when the boys would not tolerate any big-boat heresy with the canoes. The line between yachts and canoes was well marked—somewhere around 17ft. length. It is really funny to look back and see how jealous they were of that line. See this written about the Atlantis by one of the best fellows and one of the most skillful canoeists that ever swung a spruce blade, and published in the "official organ": "Such a craft is certainly outside the limits fixed by the American Canoe Association as those of a canoe. * * * She is nothing more nor less than a small yacht, and not such a very small one at that."



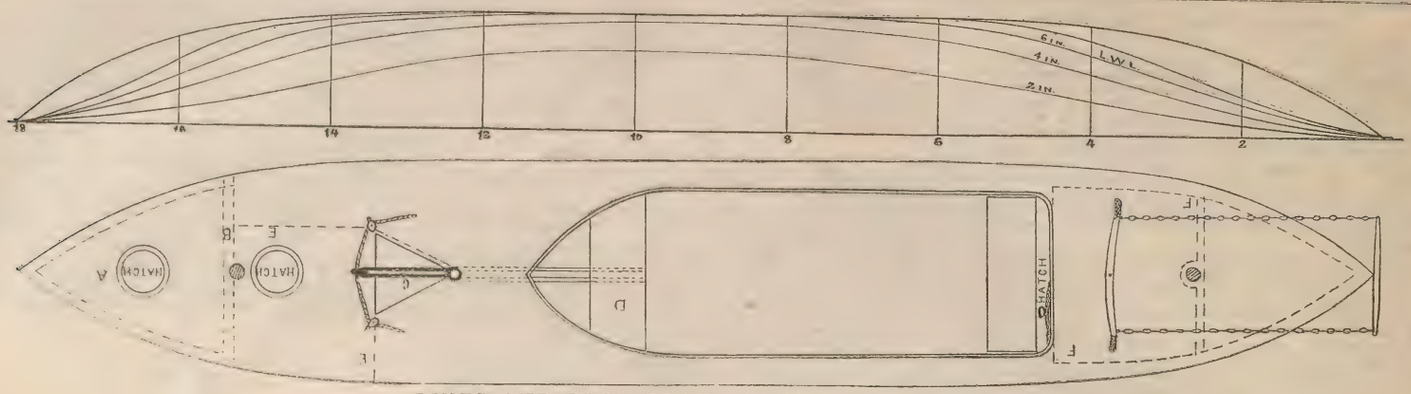
THE ATLANTIS WITH HER FIRST RIG.

Please don't misunderstand me; as long as I can own but one boat, it's going to be one that I can sail on New York Bay, North River, Harlem Creek or Erie Canal; one that I can bribe an amiable baggage man with a few good cigars to take in like a Saratoga trunk (never work off bad cigars on the baggage man, boys; the next canoeist is sure to suffer); a boat that can be to me as Ruth unto Boaz; can go with me to a Lake George hotel and pay no board, or that the astonished farmer will be glad to carry into his front parlor so that the goats may be kept away from the canned food, while I sleep on my cork mattress beside my boat; a boat that can jump dams and run rapids, and come back to hibernate during the winter in my cellar if I choose—in short, while I can have but one boat, it shall be and is a canoe. I can enjoy her without the depressing feeling that I have got to get my money's worth out of her. I can sell her when I'm done with her, and if she's broken up, I'm not.

But if I could have two boats? Of course, I'd like a catboat to take my mother-in-law in, if I had one (catboats are said to be dangerous). I'd like a sloop yacht for royal fun, and a steam yacht to "git thar," or a big cutter like Baden-Powell's to carry my canoe to pleasant cruising grounds. But such extravagance can not be mine, so I enjoy my canoe

"And I bless the man, whoe'er he be.
That first shaped paddle from the tree."

Canoeists are growing up to Stoddard's idea, and I am glad of it. There is no reason why a canoe club house should not have a fleet of little boats moored around it. Those who sail them are glad of the convenience, and the more really good fellows brought together the better the fun, and the stronger the club. Moreover, the canoeists may find it very handy some day in a bad squall to be fished into one of those depraved things with oars.



"THE WORLD OF WATERS IS OUR OWN,
AND MERRY MEN ARE WE!"

It is two years since I took my last cruise with Stoddard, but I believe that, all points considered, there is no better all-round cruising boat to-day than the Atlantis. Her last rig was wonderfully effective, and one could get lots of points by going over her outfit. I have had any number of inquiries about the boat and her great cruise—and it was a grand cruise—so with Stoddard's permission I'll give you, in brief, the whole thing. I. The Boat and its Outfit. II. The Rig. III. The Cruise.

I.—THE BOAT.

"Forthwith he devis'd
Of sundry scented woods along the shore
A little shallop like a quarter-moon,
Wherein Absal and he like Sun and Moon
Enter'd as into some Celestial Sign;
That, figured like a bow, but arrow-like
In flight, was feather'd with a litte sail,
And pitcht upon the water like a duck."

—*From the Persian of Jámi (Lieut. Kelley's "American Yachts.")*

LINES AND DECK PLAN—CANOE "ATLANTIS."

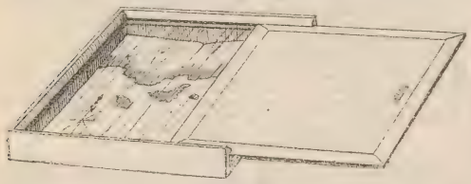
The Atlantis was evolved after a good deal of well-directed study to realize certain specific requirements.

The original idea was to "do" the New England and New Brunswick coast as it had not been done since the days of Captain John Smith, who, after he escaped the wiles of the dusky Pocahontas and the little obligation owing her, cruised from Penobscot to Cape Cod in a ship's boat.

The proposed boat must not be too wide to be conveniently put into a baggage car, nor too bulky to be hoisted at will over a vessel's side. There was at that time no idea of doing the whole trip in the canoe. The boat was rather to be used in following up some of the myriad nooks and corners of the coast inaccessible to larger boats, because of rocks, reefs, mud flats, etc. Certainly, there, was a rich mine for the reflective traveler to work. In the same spirit Lossing, the historian, had gone over the adjacent shores, and our friend proposed to work a similar vein among the islands and out of the way places difficult of access from land. Stoddard wanted a handy little boat that could be transported as a bicycle may be on shore, and yet one sufficiently safe to meet a heavy squall and containing all the comforts of the usual canoe camp.

A block model was made and the lines carefully drafted by Mr. Stoddard, and the whole thing in detail handed over for construction to Joyner, the builder of the Cid, the Peconsic, and other well-known A. C. A. canoes. The materials used were those common in well-built canoes: Keel, oak; stem and sternposts, hackmatack; planking, white cedar, smooth lap on the outside; ribs, red elm, inserted after the shell is formed according to Joyner's method. The deck is formed of lateral ¾in. strips, alternately of butternut and spruce; cockpit coaming, oak; trimmings, walnut.

The lines are here reproduced from a reduction of the original drawings. The floor is quite flat for nearly half its length; the bilges at the midship section are very full and the sides perpendicular; the entrance is sharp as a knife below the waterline; the stem has a slight rake aft above water. At the bow the waterline is almost straight; above water, forward, the bows flare to a marked degree, giving them an unusually hollow appearance, but



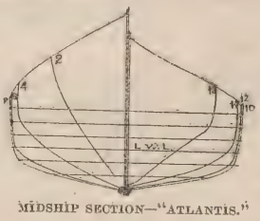


CHART BOX.

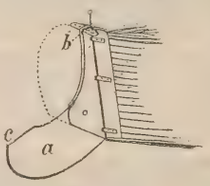
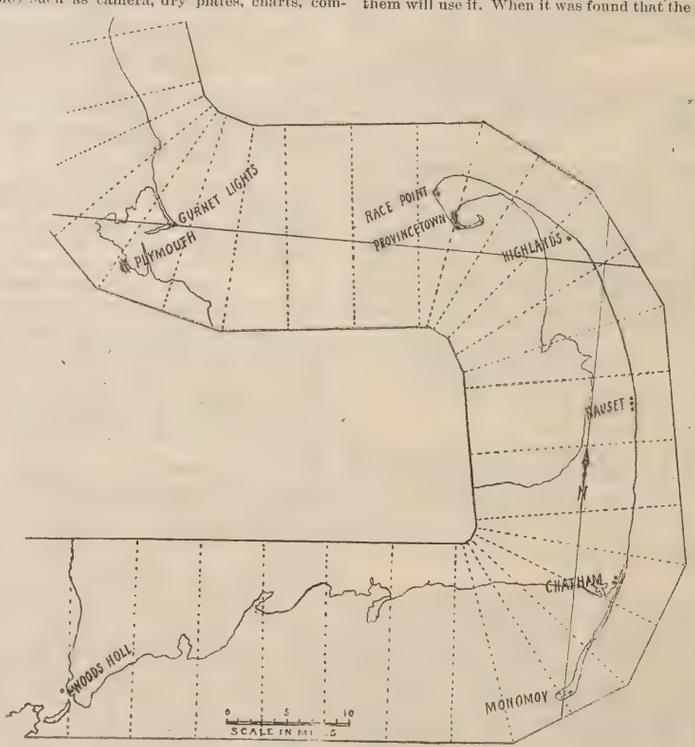
giving the boat great lifting power in a heavy sea, making her dash the water aside instead of taking it on deck. The extreme width of the deck is carried very far forward and aft. The same principle is worked out for the lines of the stern as those of the bow. The quarters are broad above water to make lifting power astern, but the gradual fairness of the run is not sacrificed. The flat floor and straight sides increase the buoyancy and capacity, and the heavy bilges make her unusually steady on the wind for so narrow a boat. She easily carries 150ft. of sail in a stiff breeze. It will be remembered that beam had to be sacrificed to portability. I think great cleverness was displayed in trying to compensate for the consequent loss of stability by her peculiar lines. Her dimensions are:



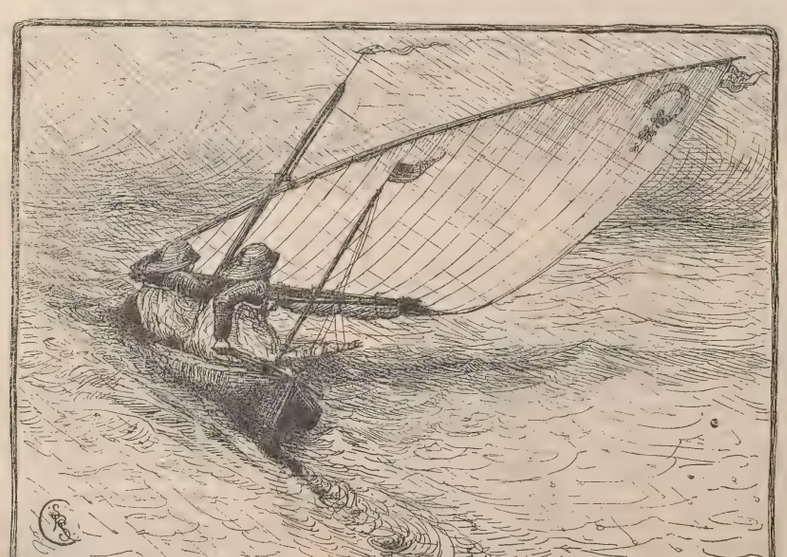
Length over all	18ft.	
Beam, extreme	3ft.	
Draft of water		6in.
Freeboard, bow	1ft.	9½in.
midships		6in.
stern	1ft.	6in.
Cockpit, length	7ft.	
width		28in.

The deck plan will show the internal arrangement. *A* is a metal compartment, originally accessible through a circular metal hatch, and fitted with racks for kerosene and gasoline cans, extra lanterns, etc. *B* is a wooden bulkhead just forward of the mast tube. *C* is the opening for the Joyner deflecting centerboard, which was subsequently replaced by a large Radix folding board. At the same time, experience having taught the unreliability of hatches, the deck was replanked and the forward compartment sealed. *D* is a movable thwart above the centerboard trunk. Forward of the trunk is a metal compartment, *E E*, opening through a second hatch on deck, which extended from the port side two-thirds across the boat, leaving room to starboard for stowing spars, oars and paddles. *F* is a large metal compartment with hatch opening into the cockpit. It could be slid into the cockpit like a drawer, and removed from the boat at will. It contained valuables such as camera, dry plates, charts, compasses, ship's library, medicines, clean collars, etc., lacking only the usual liquid blanket to make it a complete captain's locker.



MIDSHIP SECTION—"ATLANTIS."

The drop-rudder, then a novelty, is now too well known to need description. In this case it was fastened by three common strap-gudgeons to the sternpost by a brass rod. The rudderpost, *b*, was made of heavy sheet brass, folded around the rod, making a tube from which the rod is withdrawn to take off the rudder. Three nicks were cut into the brass to admit the gudgeons, so that the rudder came close to the sternpost.



The tiller, which is shown in the deck plan, was a straight bar, hung at its center upon the usual lock joint. It was parallel to the rudder head and worked with it; it was much handier than the single stick, tiller, which is always in the way.

The Joyner centerboard is interesting merely as a nautical curiosity. It could be deflected to either side, while at any depth, so as to be kept always at right angles to the surface of the water when the boat heeled over. If there is anything in the principle it is useful only to racers, and I notice none of them will use it. When it was found that the trunk compromised

A PIECE OF THE "ATLANTIS" CHART.

APRONED IN—FROM HYANNIS TO MONOMOY POINT.

the comfort of Stoddard's feet the beautifully scientific device had to go.

THE OUTFIT.

Alongside of the centerboard trunk was ample room for a tool chest, about 18×10×7in., and the aprons, oilskins, tent, etc., on one side, and an enormous infernal machine in the shape of a gasoline cooking stove on the other. This stove was made to swing from the coamings like a binnacle, so we could cook or keep warm at sea; when set up it made us look like an amateur steam launch under way. Its description must be deferred until a truthful narrative of events may bring its unhappy being into action.

The stores, comprising a barrel of wheat flour, a barrel of buckwheat, a chest of tea, a side of bacon, a dairy, a hennery, etc., etc. (I'm not speaking of the size of the barrels, chests, etc.), were kept in the locker forward. Stoddard had two weaknesses—the one for food, the other for rest.

He insisted upon keeping the otherwise comfortable cockpit piled up like a May-day truck with feather beds, pillows, comfortables, etc., sheathed in glove-fitting rubber bags. What astonished me was that these unheard-of luxuries would always keep dry. On sundry occasions I blessed his genius of originality, when, in some corned and salt-saturated rookery on a rocky island miles from shore, the no more nautical but now thoroughly domesticated Stoddard donned his spotless *robe de nuit*, and spread carefully over some pile of knotty seines his downy comfortables and snowy sheets for our repose. Yes, sheets on islands where they were known only as the ropes that hold the sails to the wind, or existed only when winter spread her snowy sheets of solitude over the deserted rocks.

I watched the first night's retiring performances as Aladdin may have watched the genie of the lamp, and I fell all in a heap when Stoddard handed me a spare pillow with a linen cover. Had I read "Mrs. Lecks and Mrs. Aleshine" before that time the experience might not have been so strikingly novel. Neide had taught me how to sleep on the ground with blankets of wool and rubber, and I thought a cork mattress was the greatest luxury a canoeist was allowed.

The tent was an ordinary A tent of red striped duck, pointed at either end to shed water in every direction. It was raised over nearly the whole length of the boat upon light wooden stretchers, a stout line sewed in the peak forming the ridgepole. The bottoms of the two sides buttoned close under the gunwale beading. The anchor cables lead inside of the tent fore and aft, so that they could be managed from within.

When we preferred to sleep in some hospitable cabin, lighthouse or hotel, the entire cockpit was covered with a waterproof canvas apron, which overlapped the cockpit coaming and was

secured by brass staples, which were riveted into the canvas and were snapped over screweyes around the coaming. A fine chain or stout line was then run through the screweyes over the staples, like a big puckering string entirely around the cockpit; this could be fastened at the end with a knot or padlock. The ends were supported underneath by strong carlins. The cover thus formed was stronger than the new-fashioned, always-in-the-way hatches, and not a drop of water could get underneath it. It wrapped up into a bundle about 8in. in diameter. It was a capital arrangement, which I have never seen used at the meets.

The boat was moored or drawn up on shore, and we never lost anything by theft on any of our cruises.

The *ignus fatuus* of canoeists is the apron. Ours wasn't all that was desired, but it kept us dry while sailing, and when we did upset we got out of it alive. It was built by a carriage maker in Glens Falls, was of heavy enameled duck, with two manholes fitted with bags which fastened with puckering strings loosely around our bodies under the armpits. I believe I was guilty of its creation. I don't recommend the arrangement, it might prove a terrible death-trap, but I have known the seas break over us broadside when but for the apron the boat would have been filled and swamped. We sailed at times like men clad for a sack race. The water would leak in around our bodies, and little streams now and then made chilly passages down our backs. The confinement filled me with apprehension, but without that apron we would have spent many a stormy day in port. As it was, only twice do I remember waiting for the weather.

The charts and chart box were worthy of notice and illustration. Stoddard had obtained all the charts of the coast published by the U. S. Coast Survey and the British Admiralty. He didn't want the sea out of gunshot of the coast, nor orchards and cornfields inland. So he cut a strip ten inches wide, including the coastline, and pasted the ends together so as to have the coast from New York to Nova Scotia, except for the break of the then unsurveyed portion. This made an irregular paper snake, the shape of the coast, about forty feet long. This he folded where the coast was comparatively straight into pages of five miles each. The irregular places were cut into pieces-of-pie shaped folds which fell between the others. The whole was then divided into convenient portions and the part needed for the day carried during fair weather in the pocket like a long pocket diary. The rest was kept in a waterproof case in the locker.

During rainy or rough weather the part in use was kept, opened for two pages (10 miles) in a flat, glass-faced, watertight box fastened on deck. At the end of the ten miles the chart was taken out, a leaf turned over, and the next ten miles of the unknown exposed.

The marginal cuts of the lighthouses and landmarks, and the tide tables and remarks were carefully posted along the sides of the strip. Had we carried all those charts in their original form we would have had to tow another Atlantis to hold them. In stormy weather an ordinary chart, in use, would have been reduced to pulp by the wind and waves.

A good Singer's patent compass in a plain brass case was, especially in the frequent fogs east of Portsmouth, a great comfort to our feelings. When the sea was rough we held it firmly in our hands and split the difference between its oscillations.

We had also one of those fancy double-jointed pocket binnacle things, which, such times, were a through spirited gyrations upon its own two axes, and the human snake himself could not have followed it far enough to tell northeast from southwest.

The oil-dripping device was simple and effectual; it cost six cents. In a heavy squall off Point Le Preux it saved us a dousing from the breaking waves. It consisted of an earthen ale bottle filled with sperm oil, and fitted with a cork, from the lower half of which a wedged-shaped piece had been cut out. When the cork was jammed in all the way the bottle was tight. Pulling out the cork a little, let the contents drip out. The more the cork was pulled out the bigger the wedge-shaped opening and the greater the flow. The bottle was covered with a cordage net work and slung, when in use, muzzle downward over the boat's side.

The canoe was equipped with paddles, oars and a pair of outrigged folding oarlocks of Stoddard's design. I never saw any others like those outriggers—and I never want to. The use of oars, I know, is a tender point with canoeists. They are, however, on a trip like Stoddard's, an indispensable necessity. With a heavy boat and a heavy sea, paddling is almost as futile as Mrs. Aleshine's broom-like method of sweeping the surface of the deep with an oar.

Two anchors and plenty of spare cable were carried.

It is out of our line to describe the very complete photographic outfit which was carried in the after locker. Stoddard's universal cleverness was here displayed to best advantage. He had a contrivance on his camera different from the ones sold by the dealers for taking snap shots at sea. His plate holders were made of enameled paper and he could carry a dozen plates in the same space usually occupied by four.

The new Atlantis sails will be described next week.

R. B. BURCHARD.

CANOEING ON LAKE QUINSIGAMOND.

LAKE Quinsigamond is six miles long and quarter to half a mile wide, and with a paddling canoe one can travel many miles down the streams and ponds below the lake; in fact, by making a portage of a mile at North Grafton, several canoeists have cruised to Boston. Lake Quinsigamond is more closely associated in the minds of most people with famous rowing regattas and oarsmen; but, notwithstanding the great popularity of rowing here, canoeing is increasing in favor. There are no less than thirty enthusiastic canoeists at the lake; but, I am sorry to say, we cannot boast of a canoe club. The Quinsigamond and Lakeside Boat Clubs have a few canoeists connected with them, but the majority store their canoes in the large boat houses situated about Lincoln Park at the terminus of the Worcester & Shrewsbury R. R., and are not members of any boat club.

The season opened March 24, nearly a month earlier than last year. Six canoeists were afloat in their canoes for the first time, and Mr. A. S. Putnam amused the crowd of visitors at the lake in the afternoon by capsizing his sailing canoe and making a complete revolution of her under him without wetting more than his feet, a trick he learned at the last A. C. A. meet. An amateur photographer succeeded in getting a fine photograph of him as he stood on the bottom of his canoe. The majority of the boys are still working hard overhauling and varnishing their canoes, but will be afloat by another week.

CAROLA.

WORCESTER, Mass., March 25.

PHILADELPHIA C. C.—The annual meeting of the Philadelphia Canoe Club was held at the Colonnade Hotel, March 25, with Com. Kirkpatrick in the chair. The commodore's report for the year was most gratifying, the greater part of the members having made lengthy cruises during the summer, two of the canoes having been on salt water, with additions to the fleet of several new cruising canoes, etc., and concluded by offering two handsome cups for the greatest mileage to be made during the summer on the Delaware River or bay or their tributaries. The report of the purser, Dr. Westcott, shows the club to be in a most encouraging position financially, although the expenses of the club during the past year have been very large, an item of which I might mention, notably the handsome silver challenge cup, first raced for at the fall regatta. The election of officers resulted in Com. Kirkpatrick and Purser Westcott being re-elected, and the election of Messrs. W. S. Grant, Jr., Quartermaster, and J. A. Inglis, Secretary, and Mr. Gerry Warr to the Board of Directors. Active preparations are being made in the way of new sails, rigs, etc., for the spring regatta, which the regatta committee have decided to hold on or about May 15, at which time several new boats will sail their maiden race.

A CANOE RACE ON THE CONNECTICUT.—A match has been made between the canoe Happy-Go-Lucky, L. R. Ingraham, of the Connecticut C. C., and the canoe Rambler, E. Hart Fenn, of the Hartford C. C., to be sailed at some date to be mutually agreed upon, between March 29 and April 3. The course is to be from the Hartford C. C. float to the Air Line bridge over the Connecticut River at Middletown, a distance of 22 miles. The Happy-Go-Lucky in a new 15×42 boat and the Rambler is 16×36. Captain Ingraham will have the assistance of Commodore L. T. Jones in sailing the race, and the Rambler's owner and a friend will handle the latter craft. Considerable interest has been excited by the match as it is the first long-distance race of the season. A pennant will be awarded the winner.

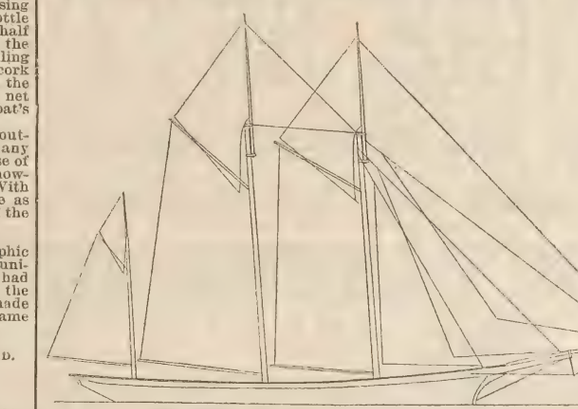
TREATMENT AND HANDLING OF YACHT SAILS

[Lecture delivered before the Seawanhaka Corinthian Y. C., by Mr. Gilbert H. Wilson.]

THE object of this paper is to bring to your notice the necessity of a more careful and intelligent attention to the handling and setting of racing sails. As the sailing master's interest is in the handling and care of the boat, and the sailmaker's interest is in the proper making of his sails, it devolves on the yachtsman to develop and bring out advancements and improvements, especially as such things are largely matters of experiment.



Mr. Watson says "English sails for the last five or six years have been absolutely perfect." It is hoped they will continue to think so. We have the pleasant belief that there is still much to learn.

The suggestions here offered, being the result of observation, are such as would properly and profitably repay your attention.

Mainsail.—In a properly made mainsail the leach should be as slack as possible. To get this our experience is that the best way is to turn a single tabline and have a very small leach rope, just sufficient to prevent the sail from tearing. It should be put on very slack to enable the leach to stretch all it possibly can—then, if necessary, a draw rope can be used to prevent slatting when the sail begins to get damp. The head and foot tablines should not be turned but put on with the same gore as the body of the sail, to insure the sit close to the ropes. The head and foot ropes should be slack to avoid any possibility of the sail being rope bound.

The head should not be urged out, but the slack simply taken out when necessary. If the head rope is taut the sail cannot go out; it is, therefore, better to rope slack and depend on good judgment in hauling out. The foot is roped slack for the same reason, and is generally hauled out too much, because toward the tack where the gore is greatest the sail stretches more than anywhere else, and as this will show by the sail hanging slack at this part, the inference is that the sail needs hauling out, and to straighten this part the whole sail is then unduly stretched. A little slack here, which does not enter up into the sail, does no harm, and had better be let alone; or, if there is too much slack, it can be remedied by a little more broad-seaming. Let the stretch of the foot be a matter of judgment. The sailmaker should give figures at which the sail is made and about how much it should stretch. Skippers talk about sails "going out," as if they had nothing to do with it. A railroad on the boom is probably the best plan for bending the foot. Tacks should never be fixed. Jaws answer very well for heavy booms, and the usual plan of sliding gooseneck with rubber buffers does very well; but there is a much-needed improvement here which will be suggested further on. Care should be taken to have the hoist just right, for if it is there should be very little trouble with the sail; and even this can be regulated to some extent by hoisting fairly taut for light winds and giving an extra pull for strong breezes.

The throat should be a fixed point as near the line of the luff rope as possible. The swing of the boom should always remain the same, and when it does not the reason should be ascertained. Sometimes sails get badly and unavoidably stretched in strong winds with a dry air and hot sun, and become longer in the angles than on the edges. Try the swing of the boom when the sail is well set; by letting go the lifts and slackening the peak halliards the boom should drop but little below its regular swing; if it drops too low the angle is too long, and there is slack canvas in the sail, and probably the luff rope is too taut. This is the best and proper way to try the luff rope, for if it is right when the throat is hoisted taut and before the peak is set up, there should be an easy draw on the sail from the clew to the throat with the boom in its right place.

"INTREPID" RIGGED AS A SCHOONER YAWL.

The roach in sails can be tested when the sail is up, by casting off the foot lacing, when the foot of the sail should swing 5 or 6in. clear of the boom or just sufficient to take a small strain when laced down; this will also show that all the slack of the foot falls toward the tack naturally, which is the best place for it. The matter of hauling out the foot is of more importance than is generally considered, and it would be better if it received more attention, but unfortunately, like many other matters, it is an additional trouble. If properly hauled the effectiveness of the sail would be enhanced, but if it is not done as it should be it would be better not to attempt it at all.

Some years ago we used cotton leach ropes with very good results, and it would be a good plan to try them again, as they act more in unison with the duck than the Russia rope. Good stiff, straight spars are a prime necessity, also plenty of room to spread your sails. A small sail, well held in good form, is more effective than a larger one badly set, and however well your sail may be made it is useless unless set in good shape and held there. Under the present plan of big rigs, where spars are measured for sail area, they are nearly always over-canvassed. For racing sails, where the main boom projects far over the stern, reef pennants are probably better than depending on reef tackles and platts.

Foresail.—As this sail has no gore in the foot, it is not inclined to stretch as much on the foot as is sometimes necessary, and generally requires to be urged out on the boom to keep the sail flat, but the head will go out easy. The only rope to consider and have a care for should be the luff rope. This should be so, that when the throat is hoisted taut, the strain on the canvas should lift the after end of the boom to its right place. The worst fault of this sail is the tendency of the gaff to swing off to a wide angle as compared to the boom. This is probably caused by the leach rope forming a very acute angle with the gaff, which allows it to flow off under very light pressure and destroys the efficiency of one-half the forsail and the gaff-topsail. There is no doubt that a vang from the end of the gaff to mainmast head would hold the sail in position to do good work and remedy this fault. The experiment is easily tried and some yachtsmen have tried it but with what results we are not informed. The vang is used with good effect on all the lake schooners and is considered quite indispensable. A lug foresail has an advantage over the boom sail in this very particular, and it comes from the leach rope leading well aft and the heavy strain on it acting precisely as a vang.

Forestaysail.—This is a hard sail to keep in good shape, so it should not hoist very high, as the extreme point is of little use, and if the hoist is short it gives a better shape to the sail. This sail, like the others, is governed by the luff rope. A number of yachts have tackles for hauling down the tack; this is an excellent plan and easily keeps the sail in shape. The tackle is along the heel of the bowsprit to a single part through a block and to the tack of the sail.

Jibs.—Jibs that set flying have a better chance to sit well than those that are set on stays, as there is always a strong and uniform strain the whole length of the luff rope. It is a good plan to con sails from the end of the bowsprit or masthead, when faults will show that ordinarily pass unseen. Trimming head sails is commonly left to the mates, and there appears to be no uniformity in this most important matter; the common usage is to haul as long as anything can be got. This being the case, it is well to lead the sheets well aft, then all the hard pull comes on the foot where it does no harm. Leads of sheets should be very carefully regulated so that the leach will have the best possible chance to spill the wind clear of the other sails, and at the same time give effective impulse to the sail.

In bending all head sails the upper hank is bent on to the upper grommet hole, whereas the hank should be bent on to the head thimble, which would insure a fair spread to this corner of the sail.

Fibtopsails—Are generally set too high for efficient work to windward, or, if necessary to go so far up, then the foot should be made short, so that when the sheets lead to the quarter the pull will be mostly on the foot. Yachtsmen are deceived about the lead of this sheet, as in light winds it drops into a curve with a pull on the leach. It is generally a large, heavy rope, whereas it should be as light as possible.

All lug sails that have a strain on the leach look all right from the deck, as the sail stands full and looks well when very likely it is holding the boat back. This very common practice should receive more attention, as it is one of the worst faults of handling racing sails. There is alway a desire to stop the leach from shaking, and to accomplish this the sheets are trimmed more up and down. A slight trembling of the leach is not bad, and never does as much harm as it appears to, while the taut leach is a positive injury, holding the boat back although rap full.

Topsails.—The common plan of setting is bad, and we have urged a change, but with so little success that it is quite discouraging, but it appears to have been noticed by others, as the following extract from the New York *Herald* will show:

"*All Along Shore.*—Gleanings about yachts and yachtsmen in sail-loft and ship yard.

"Yachtsmen ahoy. Is there any one of you outside of Genera Paine, of Boston, and Mr. J. Fred Tams, of New York, who knows how to set a gafftopsail? I have been led into this artful inquiry because I am told that the question is now the chief topic of conversation where yachtsmen most do congregate. The Seawanhaka members are most keen about it. If they don't know, who does?

"What is the general practic? This is what I hear: You hoist away on your halliard; you sweat them up until you can get no more; then you haul away on the sheet till all the boys are black in the face. Then for a climax you put a tackle on the tack, and all hands and the cook bowse down on it until they are weary, and then you think you have a well-set sail. Have you? I don't pretend to say, but those who think they know tell me that you have only a bag under the influence of which you sag to leeward like a crab.

"Now, what is the correct way to set a gafftopsail? I have been let into the dodge by one who estimates himself as an authority. The great secret, I am told, is to get the tack well down and the sheet well home and then collect every man jack of the boys on board and swing the halliards as taut as Old Nick will allow you and then you will have a sail that sits as flat as a board and that is the last to shake if a careless helmsman luffs too closely into the eye of the wind.

"But, of course, on these points there must and always be different opinions, *Tot homines, tot sententiæ*. If you were to tell a Seawanhaka man that there is virtue in the standing bowsprit he would curl the lip of contempt and uplift the nose of scorn. He, forsooth, is wedded forever and aye to a running bowsprit and a jib that sets flying. He wouldn't trust himself outside Sandy Hook lightship on a boat whose forestay sets up to the bowsprit. Nothing outside of the knightheads in his. He glories in the cutter pure and simple, and he has a good record to show for the faith that is within him."

Some yachtsmen have used a single part for halliards with a whip on the running part leading from the crosstrees to the deck.

Clubtopsails rarely fall into this error, and are always better set as the sheets are bent on well inside the end of the gaff and the pull is out instead of down, and as you have probably observed, generally sit better than the working topsail, which goes to prove that very likely there is some fault in the setting of the latter.

[The lecturer illustrated the different methods of setting topsails, by means of an ingenious model with sails of sheet rubber.]

Working Maintopmast Staysail.—This sail has generally been condemned for windward work but we think unjustly. The fault was partly the sailmaker's and partly the handling. The foot has been made too long and the sheet pulled too much on the leach. If the foot is cut short and the sheet is led well aft, so the leach has a chance to flow out and spill the wind clear of the mainsail and topsail, it will probably in most yachts be an advantage to windward. This sail has generally been cut to trim to the end of the main boom, but this is bad, as it tends to lift the end of the boom and hurts the sit of the mainsail; it should trim either to the taffrail or on the boom at the slings.

There is one improvement that is needed and should be made, that is to make sails sit without being compelled to sway up on the halliards. This can be done as it is on the forestaysail by hauling down on the tack—you all know how nearly impossible it is to get an extra strain up on a big mainsail when racing. It can only be done while in stays, and the strain to lift the whole sail, peak, boom, everything, by the throat halliards is tremendous and almost impossible, when it would be comparatively easy to pull down the tack. This is one reason of the English loose-footed sail sitting so well. Some way should be found to apply this to our sails, and it would probably be no very great trouble, but this is one of our failings; everything must needs be arranged in the fashion that will make the least work. It should be applied to the foresail, mainsail, forestaysail, and would be an advantage to jibs which set on stays, for you will notice that when it is necessary to get a pull on the jib halliard, especially when the sail is full, that the strain on the hanks holds all the lower part of the sail and only the few upper hanks move up, so we are constantly stretching the upper part of the sail when it is needed the whole length.

We may remark that the canoeists, who are a very clever and ingenious lot, have caught on to the idea, and their sails are generally set by hauling down the tack.

As our remarks have been in reference to large sails it should be remembered that for small yachts and light sails they should be handled with a lighter hand and not use too much force, for two or three heavy men and good purchases raise hob with the light duck and small ropes. It is very easy and very common to spoil yacht sails in this way, and it is quite impossible for the sailmaker to provide against it.

Remember always that handling sails should be more a matter of judgment than muscle, and that sails are finally and unavoidably used up by heavy strains, and the rule should be go easy and not stretch your sail unnecessarily, but keep a reserve for racing.

The most serious objection to a large schooner for sea cruising is the large mainsail and main boom. Some comparison of these with working vessels will be interesting, remembering the small, fine hull of the yacht compared with the large, bulky hull of the working vessel. When our two-masted schooners became so large as to require a 65ft. boom, 38ft. gaff and 2,500sq. ft. in the mainsail, it was found necessary to add another mast. Then the three-master grew till the spanker was as large as the former mainsail, the largest about 2,540sq. ft; beyond this it became necessary to add still another mast. The pilot boats are a very fair comparison to the yacht, and it is found their size must be limited. The Thos. S. Negus has a boom 56ft., gaff 24ft. and 1,020sq. ft. in the mainsail. The Sappho had 31ft. boom, 43ft. gaff and 1,040sq. ft. in her mainsail. The Intrepid has 70ft. boom, 38ft. gaff and 3,150sq. ft. in the mainsail. For her cruising rig she has 60ft. boom, 32ft. gaff and 2,520sq. ft. in mainsail, nearly equal to the extreme limit of the large working schooners, and far beyond any pilot boat.

The Phœnix's plan, shown in the accompanying diagram, by simply adding a jigger mast, does away with all the objections, cuts off the nasty big boom and large mainsail, and, with scarcely any loss in sail area, leaving a handier, safer and more comfortable rig in every respect, making the yacht a schooner yawl.

ANOTHER FORTY-FOOTER.—Mr. A. G. McVey, the designer of the two new cutters building at Salem, has designed a second 40 for Mr. P. D. Wheatland, of Boston. She will be a keel boat, 39ft. 8in. l.w.l., 55ft. over all, 12ft. 8in. beam and 9ft. 6in. draft, with less displacement and canvas than the Helen. The Alice, as she will be named, will be built at East Boston by Mr. J. L. Frisbie, under the supervision of Capt. Crocker. The rigging will be made in Scotland and she will have a Reid windlass. The Helen is now painted outside and her cabin is partly finished. She will be the roomiest of the 40ft. class, owing to her great depth, drawing 10ft. 6in., if not more when trimmed. She will soon be launched. The 30 is now planked and her deck frame is in.

MERLE.—Mr. Allan Ames, of Oswego, has sold his Burgess yacht Merle to Messrs. MacMurchy and Michie, of Toronto,

THE CRUISE OF THE ORINDA.

BY W. H. WINSLOW, M.D.

[*Continued from Page 205.*]

WE started on Monday morning at 11 o'clock for the east, and ran close to Peak's Island, and between Long Island and the Chebeags, getting many pictures of cosy and cute summer cottages and pleasure spots along shore. Between Great Chebeague and Sand Island we gained upon a schooner yacht steadily until off Harpswell Point, where the wind came out northwest in a heavy squall, and there was trouble for awhile. The schooner, a 50-footer, luffed and took in her mainsail; we wore ship and kept on out of Casco and across the Kennebec to Booth Bay. The schooner took courage from us and hoisted her mainsail after getting outside Mark Island, but we beat her so badly that she was off the Kennebec when we passed the Crickolds. There was considerable sea running, the wind was very strong and squally, and quite a number of schooners near us put in double reefs in their mainsails, but we carried all three lower sails, though we presented a very high side to windward. It was apparent that the yacht needed more ballast, as she put her rails under too often for comfort or speed. We had to beat into Townsend and arrived at 5 P. M., having made the passage in six hours. As we were going in a 30ft., 12ft. beam, 3ft. draft, centerboard came out, and seeing a new cutter gave us a trial. She sailed past us like a bird, and it made me provoked that the puffs that sent her flying just knocked us down. Oh! for more ballast and sea. (This was before the second thousand pounds of lead was taken at Belfast.) I visited the boat later and found a cockpit as large as a library and about 3ft. standing room under the high trunk. This consoled me. I would not have such a pumpkin seed for a gift unless I lived on a small pond.

Booth Bay was as lovely as ever, but it was very cold and most of the summer visitors on Squirrel Island had already flown, though it was only the 27th of August. There were many fishermen in port, and we had opportunities to see much of their style, outfit and the personnel of their crews. Mr. Paul, of Auburn Colony, Harpswell Neck, who had just arrived in his 30ft. cutter, came aboard and discussed the accommodations of cutters and sloops, and strongly recommended Casco Bay as a fine cruising ground.

We got under way at 10:30 A. M., and arrived at Rockland at 5:30 P. M., a run of sixty miles in seven hours. There was quite a sea from the southwest, and a strong breeze with occasional squalls. We carried the three lower sails, as the gafftopsail was too much for our comfort. There were many sails around, and the marine and terrestrial panorama was of great interest. We met a beautiful cutter of the Eastern Y. C. coming down the Mussel Shoals, close hauled, with topmast housed and all her lower sails setting like boards. Her straight standing against the stormy breeze, and graceful smooth cutting into the head sea, were wonderful to behold, and a revelation to me of the slight heel lead-keeled cutters show on the wind in heavy weather. The officers were sitting comfortably in chairs upon the flush deck, and hastened to return our color salute as we sped onward.

The big fellows pay much more attention to Orinda than they did to Pilgrim, probably thinking the latter a poor devil's sailboat, while they know that the former cost into the thousands, and has all the distinctive marks of a genuine cutter.

Monhegan Island was prominent all day. Meringue said the Indians spied a white man upon the island and paddled off at night, surrounded his cabin and burst open the door. The man had escaped and they ejaculated "Man-he-gone" (Monhegan). Then they stole a scow up a river and left it upon the shore over night. The wind, tide or a man took it away and they shouted next morning, "Scow-he-gone," the name of the place Skowegan.

We let go the heavy anchor to feel unconcerned, visited the shore for supplies, hauled down colors by the gun on a near cutter, g t a royal supper of beefsteak, fried potatoes, mince pie and claret, and had a good time singing songs and playing upon the mouth organ and flute. Our train was master of the former and Jerry of the latter, and the combined repertoire ran through Willow, Cheese Song, Pins and Needles, Martha, Tycoon Waltz and Miserere. Then Olie said, "The tenor rushes off the stage and takes a bite of the scenery, the stage carpenter lowers the portable moon and the curtain drops." "I feel thirsty," said Olie, and Noir and Jerry proceeded to mix up a bowl of old Jamaica, lemon, sugar and water, which on account of its name and character I named "smoky sou'wester." Then we filled the cabin with smoke to keep off malaria and talked each other to sleep.

Rockland is a poor harbor; the breakwater has been injured much by the sea and ice, and easterly gales have a fair sweep upon shore. There were a few yachts above the steamboat wharf, but, except the 10-ton cutter that fired the morning gun and then sailed away to the eastward, there was no life on any of them. A club house would add much to the interest of the place, unite the lovers of Corinthian sailing, and give an impetus to yachting in Penobscot Bay.

We sailed away at 10:30 A. M., passed Northport Camp Ground at 2, skirted Turtle Head, ran up Penobscot River and around Fort Point to show the beautiful peninsula, the fort, hotel and villas, then beat down river and across Belfast Bay to the city of Belfast, where we anchored at 8 P. M. Off Sears Island Jerry began to fire his Stevens rifle, .22cal., at a loon. He spattered the water all over the bird and tickled him under every feather, but did not injure the integrity of his body, while the loon only laughed the louder and cried "sou'east," as we fawned lazily along.

Sure enough the wind came out southeast during the night and it rained till 9 A.M. The crew went a fishing, and Meringue and I found 1000lbs. of pig lead in boxes at the steamer office, which we lowered down into the tender by bucket loads, took aboard and stowed under the cabin floor. Then we filled the water and gasoline tanks, cooked the cunners and flounders of the fishermen and entertained Mr. Dyer, the city editor of the *Republican Journal*, and other visitors. The next two days were spent in oiling bright work, getting stores and visiting friends on shore, the wind being out southeast and a hard sea rolling in. It rained heavily the last day and developed some leaks about the skylight, which made things a little wet below. An old skipper told me he had never seen a skylight aboard a vessel that did not leak.

Sunday, Sept. 2, dawned pleasant with a good southwest wind blowing; we had the usual N.E. breakfast, brown bread and beans. At 10:30 the anchor was weighed and we made a good run down the eastern channel, through Eggemoggin Reach and up Union Hill Bay to Allen's Cove behind Harriman's Point, where we anchored in seven fathoms, not daring to venture nearer shore in the darkness. It proved a safe shelter, though there was considerable chop and half a gale blowing all night. How uneasy one is, running along a shore that seems in the darkness anywhere from 50 to 500yds. away. Skirting this strange shore just at dusk, we saw several vessels anchored off and we were tempted to run in to them, but upon a nearer view they were found to be boulders and flat-topped ledges, which frightened us and made us sheer further off shore.

Next day Jerry and Noir went ashore and nearly paralyzed themselves by going in swimming. The views all around were magnificent. To the north, Blue Hill cast purple shadows upon the level land at the head of the bay; to the west a long stretch of rolling hills and dark forests had a background of the blue and gray cones of the Lincolnville Range; to the south an immense sheet of dappled silvery water was dotted by sails and many islands, and to the east the water shaded gradually to gray, green and brown and melted into the wooded shores, the dark gorges, irregular hills and mist-veiled summits of Mt. Desert. What a beautiful place, and yet, how desolate! Very few houses were to be seen around the bay. Very few are there, indeed. It seems as if this part of the world had been overlooked and the sterile soil scorned by settlers. Once the shores were peopled by fishermen, but they have gone with the fish.

We ran over to Pretty Marsh Harbor and saw a single house and a dozen seal. Meringue and Jerry dropped away in the tender to get a shot, but were unsuccessful; then we stood along the coast, looked in at Seal Harbor, beat around a headland and had just wind enough to get into Bass Harbor at dark. This has a good outer harbor in northerly and easterly gales, and an inner one beyond a threatening looking ledge offers sure protection for small yachts not drawing over seven or eight feet, but one must have a pilot to get in this snug berth. The surroundings are really very picturesque and beautiful. There are a few small boarding houses and summer cottages perched upon the grassy hillsides and along the wooded shores, but thus far the place has been neglected by the throngs of pleasure seekers, and fashion has gone elsewhere, to its eternal loss.

There was a good S. W. wind next morning, we got under way early, ran around the bell buoy into Southwest Harbor and inside Cranberry Islands, coasted the bold, magnificent shore of Mt. Desert and came to anchor above the bar at Bar Harbor, as the wind had hauled around S.E. and it looked very threatening. After supper the officers and crew had a celebration; the yacht was covered with Chinese lanterns, the harmonica, flute and horns were played, a quartette sang many songs, fireworks of many kinds were burned continuously and were answered by other yachts, and the fete ended at midnight with refreshments *ad libitum*.

At 4 A. M. we were awakened by a sullen, deep-voiced reverberation, that caused the yacht to quiver from keel to truck, and brought two startled, half-clad men upon deck in an instant. A strong N.W. gale was blowing and heaping up the sea at a lively rate, the water had been driven out by the wind, the tide was very low, the yacht had now a great scope of cable and was tailing directly toward the rocky ledge visible off the point of Bar Island. All this was seen at a glance, and Meringue was tugging at the cable as I pattered along the dewy deck to help him. We pulled the yacht ahead a few fathoms, threw the lead and found 10ft., and watched her awhile, then turned in, but not to sleep. The tide turned and there was soon plenty of water; but the gale and sea increased, and we knew it would not be safe to lie out another low tide there. We had breakfast of mackerel, which we had found scarce all along the coast, but had succeeded in getting the night before at ten cents apiece. They were delicious. Then my three friends were set ashore, Meringue and I put in a single reef, hoisted the jib, took in the anchor, beat out of our trap, took a long sell to windward to get washed with the sparkling spray, ran down the wind and beat a handsome 59ft. sloop with all sail set, and let go the heavy anchor south of the bar in quieter water. I never saw Frenchman's Bay so beautiful as it was this cool, crisp morning, and there were plenty of small yachts with amateur sailors that skirted its shores and reached and ran and took long legs to windward, enjoying the best kind of sailing with an abandon that showed contempt for the gale and a hearty affection for Neptune and his kingdom.

The next day we left Meringue ship-keeper, took a 'bus to Eagle Lake, a sail along it in a rattle trap steamer, and a cog-wheel railroad ride up to the summit of Green Mountain. What a view! Nothing in this world can compare with the picture of land and sea spread around Mt. Desert. It was an exceptionally clear day, the temperature was near freezing and a sharp N.W. wind was howling about the pretty Summit House, from whose cupola we observed at our leisure the winders around our central vantage point. The granite ridges of the mountains covered with mosses and lichen, bordered by strips of box and huckleberry, melted away as the plant life below us rose from bush to shrub and tree, and the green forest growth formed glorious fringes and dark borders for the valleys, the cliffs, and the dark sea. Eagle Lake —and veritable eagles were hovering over it—lay like a sapphire set in emerald to the north, then the mountains softened into the hilly pastures and green meadows of Eden, and the eye traveled over sixty miles of woodland, islands and arms of the sea to the purple-tinted mountains of Camden and Lincolnville; and beyond, like a huge sugar loaf, dark, rugged and proud, towered Mt. Katahdin, 100 miles away. This was seen by the naked eye, and

CANOE HANDLING.
By C. B. VAUX ("DOT.")
A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

The Celebrated Smith & Wesson Revolvers

HAVE BROKEN ALL RECORDS FOR REVOLVER SHOOTING.

The Most Perfect Small Arms

EVER MANUFACTURED.

Unrivalled in Beauty of Finish, Durability and Accuracy.

Manufactured in calibers .32, .38 and .44-100. Single and Double Action Hammerless Safety and Target Models, with all latest improvements——Automatic Shell Extractor, Rebounding Lock and Patented Safety Device.

The Smith & Wesson Revolvers are constructed entirely of **best wrought steel,** carefully inspected for workmanship and stock, and GUARANTEED. Do not be deceived by IMITATIONS largely manufactured of **malleable cast iron,** and often sold for the genuine Smith & Wesson. All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and careful attention. Catalogues and prices furnished upon application.

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

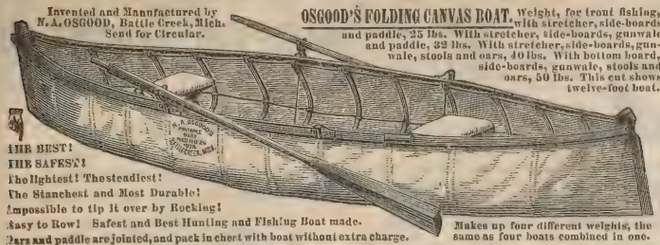
The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

SOLD BY

Forest and Stream Publishing Co.

PRICE, $2.50.



The Diseases of Horses;

Their Pathology, Diagnosis and Treatment. To which is added a complete dictionary of equine materia medica. By HUGH DALZIEL.

A very complete, concise and intelligible treatise, conveniently arranged. Every horse owner should have such a book. Paper, 102 pages. 75c.
FOREST AND STREAM PUBLISHING CO.,
318 Broadway New York.

Yachts and Canoes For Sale.

Cruising Yacht For Sale or Charter.

The owner of a well-known yacht, 47ft. long, 14ft. beam, 6ft. draft, perfectly fitted out for the comfort and accommodation of four to six persons in the cabin, and three men in forecastle, patent w. c. and all modern improvements, will sell or charter her at a reasonable price on account of important business engagements preventing his leaving the port during the summer months. The yacht is built upon a beautiful model, has two rigs, can be sailed as a sloop, when she is very fast, or as a yawl for cruising. She was built during the winter of 1886, of best of material, under the personal supervision of the owner, and is a staunch and excellent sea boat, well suited for cruising in the gulf of St. Lawrence, and has been so employed, where capital sea trout and other fishing can be enjoyed, and salmon may be included, seal and white perpoise hunting, duck and shore bird shooting. This is an opportunity seldom offered. Address P. O. Box 1081, Quebec City, Can. Satisfactory references in New York or elsewhere given and required.

A Portable Camping House.

Fishing and hunting parties may have comfortable quarters in the wilderness or by the sea shore. These houses are light, well ventilated,

substantial, and yet easily put up and taken down. They are handily transported, and have every convenience necessary to a camper. Send for illustrated catalogue to 735 Broadway, New York, which is the address of the

Ducker Portable House CO.

ST. BERNARD PUPS

BY THE CELEBRATED

Ben Lomond

Out of a fine imported bitch.

"In the open rough-coated dog class he admirers of this noble breed had a rare treat offered in viewing Mr. Moore's recent importation **Ben Lomond**, a very large, massively built dog, with a grand head, beautiful expression, lengthy body and excellent coat. He is very superior to anything yet seen in public in America of his breed, and had he the dark shadings around the eyes would be scarcely inferior to **Plinlimmon**, whom he excels in head to my thinking."—Report of Richmond (Va.) Show, Am. Field, Oct. 20, 1888.

ANSWERS TO CORRESPONDENTS.

DR. J. H. KIDDER.

DR. JEROME HENRY KIDDER died at his residence in Washington, April 8, after a brief illness, from pneumonia. Most of his friends did not know that he was dangerously sick, and the news of his death came as a surprise and a shock. The funeral takes place to-day, April 11, and the interment will be at Oak Hill Cemetery.

Dr. Kidder was born in Baltimore Co., Md., Oct. 26, 1842. He was graduated from Harvard College in 1862, entered the Union Army and served until the end of the war. Part of his service was as a military cadet in military hospitals near Baltimore. He took his degree of doctor of medicine at the University of Maryland in 1866, and was appointed an assistant surgeon in the U. S. Navy in the same year, attained the rank of passed assistant surgeon in 1867, and in 1876 that of surgeon. His sea service was performed chiefly in the Mediterranean, Japan Seas, and on the coasts of South America and South Africa.

Dr. Kidder's first opportunity as a field naturalist was offered in 1874 when he became surgeon and naturalist of the Transit of Venus Expedition to Kerguelen Island and, after his return, spent a year in the Smithsonian Institution preparing his reports upon the scientific results of the expedition. His first important contribution to zoölogy was published in 1876 by the National Museum, as Bulletin No. 3, and embraced his "Contributions to the Natural History of Kerguelen Island" and "A Study of *Chionis minor* with Reference to its Structure and Systematic Position." In 1875 and 1879 Dr. Kidder was detailed for special service with the U. S. Fish Commission and in 1882 became the first surgeon of the newly completed steamer Albatross. In 1883 he resigned from the Navy and joined the office staff of the Commissioner of Fisheries. Soon after the appointment of Mr. G. Brown Goode as Commissioner of Fisheries, Dr. Kidder was made Assistant Commissioner, which position he held until the reorganization of the Commission in 1888, when he resigned his connection with the Fish Commission, and was placed in charge of the exchanges of the Smithsonian Institution, continuing in this important service until his last sickness overtook him.

Dr. Kidder's medical work was directed largely in the direction of publications relative to hygiene and the sanitation of public buildings. About 1883 he made a sanitary survey of the proposed site of the new Naval Observatory and in 1885, with the coöperation of the Smithsonian Institution, he made analyses of the air in the House of Representatives.

As a scientific man he will always be best remembered by his publications relating to the Transit of Venus Expedition, his observations upon the temperature of the blood of fishes, and his attention to the physical problems involved in marine explorations. He was a member of the Board of Managers of the Cosmos Club and also of the Biological, Chemical, and Philosophical Societies.

A CASE FOR PROMPT ACTION.

THE injury done by Indian hunting parties to the forests and the game in and near the Yellowstone Park is so serious that it demands immediate attention. The letters and affidavits published this week come from men who have been on the ground and are fully cognizant of the facts. The damage done by these parties has been so apparent to the Superintendent, that ever since he has been stationed in the Park he has urged on the Interior Department the importance of keeping the Indians away from the neighborhood of the reservation. The Indian Bureau has generally seemed anxious to comply with his request, but lately, the agents of the tribes at Fort Hall and Lemhi, while acknowledging in effect that they cannot control their Indians, and that they go when and where they please, still deny that they approach the boundaries of the National Park. Reading between the lines of Captain Harris's official report to the Department of the Interior, it is impossible to avoid the conclusion that the agents who deny the statements made in that and other documents from the same pen are unable to handle their Indians. Competent men would have carried out the orders of the Indian Bureau.

It is clear that these Indians ought not to be allowed to leave their reservations except in charge of some responsible white man who can be held accountable for their actions while they are absent, and it is equally clear that under no circumstances should these hunting parties be permitted to approach the borders of the Park. The statement made by a correspondent that the Indians, during these excursions, meet whisky traders and supply themselves with liquor, is another strong reason for keeping them at home where, under a wise and strong agent, liquor cannot be had.

It is admitted on all hands that the Yellowstone National Park is chiefly valuable to this country as a reservoir, where may be stored the waters which are so essential to all farming operations in the arid West. But its use as a reservoir depends on the preservation of its forests. If these are destroyed it cannot hold the water which falls in winter and spring.

Although the destruction of game by these Indians is to be deplored, this destruction is of but slight importance from an economic point of view. The game has a refuge within the Park, and while protected there will soon reproduce itself, and again overflow into the surrounding country. But the growth of the forests is slow and any extensive fires may carry widespread disaster to a large area of country far removed from the National Park.

We are not among those who believe that the Indian has no rights which should be respected. On this point we are quite prepared to stand upon our record. When, however, the Indian does anything antagonistic to the general welfare he must be restrained, and the Indian method of using fire as an aid to hunting has in it an element of danger to agriculture in the West which is most serious. It will not do at this late day to have our only national forest preserve threatened in this way. It would be far cheaper to supply the Indians complained of with unlimited beef rather than have the forests of the Park perpetually endangered.

The Department of the Interior controls both the Indian Bureau and the National Park, and it is within the power of this Department to remedy the evils here complained of. The matter is one which calls for prompt action on the part of the Secretary, who, we believe, has visited the National Park and no doubt appreciates its uses and its needs.

The subjoined letters from gentlemen perfectly well known to us, and in all respects trustworthy, tell the story:

Editor Forest and Stream:

To the readers of the FOREST AND STREAM interest in the Yellowstone National Park may be presumed to center chiefly in the fact that it affords a safe refuge and breeding ground for the large game of the Rocky Mountain region. The hope and expectation has been cherished that within the area of this large reservation the game might receive such protection, that not only would the different species be preserved from extermination, but that its natural increase would overflow into the adjacent regions, and that thus would be secured in the future a hunting ground in which the sportsman, seeking his annual recreation, might be reasonably certain of finding sufficient sport to reward him for the expenditure of his time and money.

This expectation has been in a moderate degree realized. The Park has been, during the past three years, a safe refuge for the large game. The elk in immense numbers make this reservation their winter home; and the remnant of the buffalo find comfort and security during the long winters in the vicinity of its warm springs and geyser basins.

During the months of October, November and December, the season only in which the Territorial laws permit the killing of game, no better hunting ground can be found on the American continent than the region immediately adjacent to the National Park. And if the excellent laws provided for the protection of the game are observed and the killing of game animals restricted to the proper seasons and to sportsmanlike methods, then the game, having a secure refuge in the Park, must continue to increase, and good hunting will be found in all future years around its borders.

But unfortunately a class of hunters—not sportsmen, but pot-hunters by descent and inheritance—who are restrained by no laws or scruples as to the manner in which game is to be taken, have also discovered that the best hunting grounds are on the borders of the National Park. The Crows on the east, the Shoshones on the south and east, the Bannocks from Fort Hall and Lemhi on the south and west, all send annually their hunting parties into the region surrounding the Park for a winter's supply of meat. Of all the various bands who have raided the Park borders, those from the Fort Hall and Lemhi reservations have been the most numerous and active, and their operations have inflicted by far the most serious injury upon the Park. Their encroachments have been a standing cause of complaint to the Park authorities for the past three years, but the control exercised by the Indian Department over these Indians appears to be of too slight a character to enable it to place any effective restraint upon their movements. The facts which I desire to place before your readers concerning the injuries wrought by these Indians have been gathered during a residence of several years in this section of the country, and in frequent conversations with the Superintendent and other officials of the Park, and can be relied upon as entirely correct as far as the particulars are stated.

During the month of September, 1886, when the Park was thronged with visitors, a band of Bannock Indians, whose numbers were variously estimated at from fifty to one hundred, approached the Park from the west in such warlike array as to give rise to much anxiety and excitement among the tourists, causing many of them to shorten their stay in the Park. Information of the raid was promptly sent to the Department of the Interior at Washington by the Superintendent of the Park and also by gentlemen holding civil positions under the Government, who at the time happened to be in the Park. The Superintendent also sent a detachment of soldiers under an officer to intercept the Indians and to endeavor to prevent them from entering the Park. They were found within the Park and were induced to move outside its limits, but as soon as the officer and detachment had left them, they started two forest fires within the Park, and withdrawing into the mountains to the west, continued their hunting operations, secure from interruption by the troops, whose authority did not extend beyond the Park; a fact with which they apparently were well acquainted. While they were loading their bands of pack animals with the slaughtered game, which had been driven from its refuge in the Park by the fires started through their deviltry, the Indian agents from Fort Hall and Lemhi, where these Indians belonged, having received orders from Washington to recall their Indians, came into the Park, and, while ostensibly looking for their Indians, took the opportunity to visit the Geyser Basins and other objects of interest in the Park, after which they returned to their agencies. The fires started by the Indians at this time in the Park continued to burn until they were extinguished by the snows of winter, destroying the timber over a wide extent of country. It may be noted here, that these Indians invariably make use of fire to facilitate their hunting operations. Having selected a suitable location, fires are started at one or more points several miles distant, by which the game is driven out, and is thus more easily taken. It is a well-known fact among old frontiersmen that an Indian hunting camp is never found without forest fires in its vicinity. At the same time that this large hunting party of Bannocks was operating in the country west of the Park, in September, 1886, another large party from Fort Hall was hunting in the country just south of the Park, near Jackson's Lake, and gentlemen who saw them there are ready to testify that, having started fires to keep the game within their reach, they were slaughtering in such quantities as to have tons of meat drying on their scaffolds.

The hunting operations of these Bannock Indians during the summer of 1887 were repetitions of those of the previous season. During the month of August a large party threatened to invade the western portion of the Park. The Superintendent reported the situation to the authorities at Washington, and an officer with a detachment of soldiers was sent to intercept them. The Indians again located themselves in the mountains west of the Park, and continued their slaughter of game until they had loaded their packs. The agent from Lemhi appeared at the Geyser Basins and other places of interest in the Park a little later, presumably in search of his Indians. His search was probably unsuccessful, as he registered at the hotel at Mammoth Hot Springs on Aug. 30, and departed the next day via Cinnabar and the railroad. About the middle of September following Mr. Ed. Wilson, the Government scout, having with him two soldiers, encountered a party of Bannocks from Fort Hall with a large number of pack animals, all loaded with dried meat, the product of their summer's hunt near the southern border of the Park. When Mr. Wilson met them they were

within the Park limits, but claimed that their hunting had been done outside. The attitude of the party was saucy and aggressive, and, of course, Wilson's little party was powerless to do more than warn them out of the Park. Fortunately, the copious rainfall of that season prevented the destructive spread of the fires started by these hunting parties.

In the early spring of 1888 Captain Harris, the Superintendent of the Park, invited the attention of the Department of the Interior to this subject, and was assured that such instructions would be given to the various Indian agents as would keep the Indians away from the vicinity of the Park. But with the month of August last came reports that a band of at least 100 Bannock Indians were traveling westward along the southern boundary of the Park. This band was subsequently located on Pacific Creek, about ten miles south of the Park line, where they hunted for several weeks. A band of seven lodges of Bannocks from Fort Hall and Lemhi located themselves on Snake River, some three or four miles south of the Park line, toward the last of August, and continued to hunt in that region, with the usual concomitant of forest fires, until the latter part of October. Fortunately the fires started by these Indians last summer did not reach the Park.

The facts concerning the operations of these Indians during the summer and fall of 1888 have been recently testified to in the form of affidavits by several gentlemen acquainted with the circumstances. These affidavits were made at the request of the Park Superintendent, presumably with the intention of bringing the matter officially before the Interior Department. But I will not at this time occupy more of your valuable space. I have desired only to invite attention to this subject, the importance of which would appear to render it worthy of the interest and attention of the readers of the FOREST AND STREAM, and all others who believe that the forests and game of the Great West are worth protecting. Certainly if the protection of the game in the Yellowstone National Park is to have no better object than to contribute to the support of the surrounding Indian tribes, it does not appear to be absolutely essential that a portion of the United States Army should be used for that purpose.

MONTANA.

Editor Forest and Stream:

Ever since this Park has been a reservation set apart for a pleasure ground and for a timber and game preserve, it has annually been invaded by bands of Indians from the Lemhi and Fort Hall agencies, in parties of from one to twenty lodges. For the past three years they have been removed from the limits of the Park, when found inside the boundary, only to camp just outside, where they hunt and slaughter the Park game, besides destroying the timber by fire.

Their principal hunting ground has been in the southern part of the Park, on the headwaters of the Snake River, on the headwaters of the Gallatin and Madison rivers in and immediately about the northern and western portions of the Park. Occasionally small parties of Shoshones from the Washiki agency have ranged through here. They usually confine themselves to the headwaters of Buffalo Fork of Snake River, to Wind River and the mountains south and east of this reservation.

These Indians, besides killing great quantities of game and burning vast tracts of forest—setting out fires purposely to aid in their hunting expeditions, fires that often extend into the Park—meet the whisky traders, to whom they pay or trade anything that they may possess to obtain the vilest kind of liquors. Every summer since white men have been in the Park, great clouds of smoke have been seen rising in the south and west, telling but too plainly that the Indians were out on their annual hunts. Since there has been considerable travel here, and since scouting parties have been regularly sent out, it has been possible to trace all these fires to Indians. The fires have started either from camps from which they had lately moved, or the Indian hunters have fired the country purposely to assist them in their hunts. It is a well-known fact that Indians use these fires for holding or driving the game, cutting off their retreat in one direction or driving it from a section difficult to hunt in.

Since the disappearance of the buffalo the Bannocks have hunted in the mountains about the Park, and since the game has been protected here it has increased to such an extent that to-day these mountains are the finest and best-stocked hunting grounds in the whole country, a fact the Indians have not been slow to learn. They flock about the reservation in greatly increasing numbers every year, often extending their hunts into the Park or passing through portions of it in moving from one game range to another, as the animals they are in pursuit of become scarce or are driven off. They kill and dry great quantities of meat. I will give them credit for not wasting much, for they dry hides, meat, paunch and some of the intestines for winter use.

When hunting about the Park they are in the Territories of Montana, Idaho or Wyoming, where game is protected by law for most of the summer, but these Indians hunt at all seasons, knowing no law nor regarding any. A white man acting as they do would be subject to fine or imprisonment, or both. These Indians have large reservations on which they are supposed to stay, where they are fed and clothed at the expense of the Government; reservations from which a white man is expelled if there without a permit.

A great portion of the southern part of the Park, and nearly all that country to the south of it which has been frequented by Indian hunting parties, has been burned over within comparatively a few years. What little green timber there is is small second growth, or timber so favorably located that fires could not spread in it. The Indian does not have a thought for the morrow, as by the fires he sets out he often blockades the trail he wishes to travel the next year, and renders the country about impassable for himself or any one else. No particular attention has been paid to the work or movements of the Indians in or about the Park Reservation except in a general way, until within the past three years.

In 1886, during the month of September, from seven to ten lodges of Bannocks came into the Park on the north and camped on the Gallatin, where they commenced their summer hunt, killing a great many elk. The officers in command of the troops here sent a detachment of men under an officer who induced them to leave the Park. In moving out they camped on one of the forks of the Madison. From this camp a fire started that burned over thousands of acres of green timber wholly within the Park. The fire swept over on to the Gallatin and burned for weeks. The clouds of smoke could be seen for hundreds of miles, and was noticed by many of the tourists who visited the Park at this time.

There was another party of Indians on the southern borders of the Park, and another fire there. These Indians lingered about the reservation until they had killed all the meat they wanted, and the fires burned without being checked until the storms of Oct. 8 and 9.

In 1887 the Park was again visited by Bannocks. They were removed, but continued to hunt until they had obtained all the meat they wanted. Fortunately this was a very rainy season, the frequent showers extinguishing the fires as soon as started. The Indians about the Gallatin and Madison Mountains were from Lemhi. Those on the south were from Fort Hall reservation. Sometimes parties went from one reservation to another, crossing the southwest corner of the Park at the head of Falls River.

In 1888 the Indians confined their operations more to the south and west. In July there was a party of fourteen lodges of Bannocks on Pacific Creek, within ten miles of the Park; they camped there several weeks, hunting from their camp in all directions; as the best ground to hunt over and the most game was in the direction of the Park, it is supposed they killed most of their game there.

In September the Government scout and soldiers saw several lodges of Indians moving toward the Park and but a few miles from it. They had great quantities of meat. A few days later a gentleman from Portland, Me. with his party of guide and packer, saw what was supposed to be the same Indians, Bannocks. Four lodges were camped on Polecat Creek, where the trail crosses, and twelve lodges were camped on the other side of Snake River, a little further down. The first party was a mile and a half from the Park, the second about three. On about the 26th of October a band of seven lodges of Bannocks were camped on the Snake five miles above Jackson's Lake. These had been to the Wind River Reservation, had been hunting all the way up without killing much. At the Snake River camp they killed a great many elk, loading most of their pack horses. From here they moved to the Falls River Basin, which lies mostly in the Park, where they were going to continue their hunt.

At Jackson's Lake it was learned that Indians had been camped about there most of the summer, one party having remained there from some time in July to the first of October. It was by this party without a doubt that the extensive fire was started on the north end of the Teton Range. This fire did not reach the Park, but destroyed a vast extent of very heavy timber and was not entirely extinguished until the last of October. It is impossible to estimate the amount of damage done by these roving bands of redskins. No one can form an idea of it until he attempts to travel through the country where these fires have burned.

Captain Harris has done everything he could to keep these Indians away, sending out scouting parties and moving them off the reservation when they are found on it.

H.

YELLOWSTONE NATIONAL PARK, March 4.

Editor Forest and Stream:

The time has come to call attention to a growing evil, which, if not checked promptly and effectually, will tend to nullify the efforts of the United States Government in the National Park in protecting what is left of the American big game, and saving from destruction the great tracts of forest which cover this portion of the country.

The injury to both game and forest is largely, and I may say almost entirely, due to the Indians who leave their reservations in the summer and early fall to hunt along the eastern, western and southern boundaries of the Park. It is probable that the Indians from the following four agencies are the ones who should be restrained: Northeast of the Park there is the large and fertile Crow reservation, the Indians from which hunt down along the mountains which lie to the east of the Park. To the southeast lies the Wind River agency of Shoshones and Arapahoes, the Indians from which, by passing up the head of Wind River, easily reach fine hunting grounds immediately south of the Park. These Indians also hunt north along the mountains to the eastward of the Park. Some distance to the southwest is the Fort Hall reservation of Shoshones and Bannocks. These Indians travel northeasterly, and, by working around the head of the Teton range of mountains, reach and hunt the same country that the Indians from the Wind River agency do. To the northwest is the Lemhi agency, the Indians from which probably hunt along the western side of the Park.

Within the Park the most stringent regulations concerning camp-fires are enforced, and very properly, to provide against forest fires; and it is absolutely prohibited that any game whatsoever shall be killed. To see that the law is enforced annually costs the Government a certain amount of money, and a certain number of men to carry out the existing laws; but it is absolutely impossible for a handful of men to perfectly guard and protect 3,600 square miles of wild mountainous country. Is it not folly then for the Government to permit the Indians to lay in their winter supply of meat from the very bands of game they are trying to protect, especially as the methods employed by the Indians to capture their game embraces ruthless and indiscriminate slaughter, in and out of season, of either sex at any age, and a serious destruction of standing timber by the fires they build to confuse game and keep the animals from going in any certain direction to escape their foes?

I think I can safely say that these hunting parties of Indians do more damage than all the white men put together, with the exception of that abominable type of English pot-hunter, who desecrates the name of sportsman. This type is probably growing scarce, and I am inclined to think a much better and more unselfish class of sportsmen than formerly annually visit us from abroad. In any event, the white hunter can be dealt with whether he be a professional hunter, hunting for meat, horns or hide, to sell to him too lazy to get them for himself, or the contemptible pot-hunter that kills every animal unfortunate enough to come within the utmost range of his rifle.

The game laws of Wyoming are, upon the whole, excellent, and they give us control over the above-mentioned white offenders. They can be and are deterred from carrying out their murderous proclivities. But alas! Who can control the Indians? The white man, be he settler, game constable or philanthropist, cannot, their agents say they cannot, and the laws do not seem to. The Government, therefore, should be urged to take proper measures to restrain their charges within proper bounds; especially as the reservations are large and fully adapted to the roving disposition of the Indians that inhabit them.

But do the Indians cause all this damage to the forest and inflict such slaughter of game? The truth of this would seem to be an easy matter to determine, and, in fact, it is not difficult; so much testimony from so many sources is available that it can no longer be doubted that the Indians do incalculable damage every year. Capt. Moses Harris, the very efficient acting Superintendent of the National Park, has already called attention to the damage done by the Indians from the Fort Hall and Lemhi agencies, and he should be warmly supported in his efforts to control the movements of the Indians and keep them from the immediate vicinity of the Park.

Probably I have said too much, and I will close with a little personal testimony, and a request to any brother sportsman who may read this to come forward and tell what he knows about the subject, and there must be many such whose testimony would aid very materially.

In September, 1886, while exploring and hunting in the Teton Mountains, I saw six lodges of Bannock Indians from the Fort Hall reservation. These Indians had pitched their camp on the northeast end of Jackson's Lake, about ten miles south of the Park. I had a talk with these Indians and watched them start off on their daily hunt. I visited their camp and saw literally tons of meat drying on the scaffolds. The Indians had killed all the meat they wanted for their winter supply and were then daily hunting Virginia or white-tailed deer for buckskin. I saw a great many small fires that they had built and there was then much smoke in the atmosphere. Subsequently the fires increased and could be seen burning for many days. Evidences of Indians in other localities were not wanting, and I was told by a trapper whom I met on Snake River that a considerable number of Shoshones from the Wind River agency were hunting up Buffalo Fork. Personally, I did not see these Indians, but I have no reason to doubt the word of those that did see them.

During the fall of 1887 my father and Col. J. H. Jones met Indians hunting not far from the north end of Jackson's Lake, pretty much where I met them the year before. Last fall my father again saw Indians south of the Park, near Two Ocean Pass, and later near the headwaters of Wind River. During the fall of the year 1885 a hunting party of Crows came down from their reservation and in two days killed over 110 elk on Stinking Water River where it comes out of the mountains. During the years 1886, '87 and '88, I know, from personal observation and other reliable sources, that Indians from both the Crow and Wind River agencies were hunting along the mountains that bound the Park on the east, killing what they could find. During the last two years, however, I will say there has been very much less hunting done by these Indians to the eastward of the Park; due somewhat, I suppose, to the scarcity of the game, but probably more to the persistent efforts of some three or four right-minded ranchmen trying to protect the game—I refer to Mr. Otto Franc, Col. Pickett and Capt. Belknap, to whom great credit is due for the stand they have taken.

Now, Mr. Editor, in with your testimony. The Department of the Interior is probably ready and willing to move in the matter, and will certainly do all they can; but they must have absolute proof of the facts that I have called attention to.

ARCHIBALD ROGERS.

HYDE PARK, N. Y., April 6.

Captain Harris's last report to the Secretary of the Interior on this subject leads us to believe that the matter has now assumed the form of a controversy between the Superintendent on the one hand and the agents of the Indians at Fort Hall and Lemhi, in which the Indian Bureau seems disposed to sustain its agents. This is an unfortunate condition of things. The Superintendent's report is fortified by a number of affidavits made by men of experience, and whose reliability will be vouched for by many well-known gentlemen who have long been familiar with the Park. These sworn statements cannot be ignored and they establish Captain Harris's case.

Here are some of them:

COUNTY OF PARK, } ss.
TERRITORY OF MONTANA. }

Personally appeared before me, R. T. Smith, a notary public, one Elwood Hofer, who being duly sworn according to law deposed and says: That for the past ten years he has been engaged in the business of outfitting hunting and tourist parties, at and in the vicinity of the Yellowstone National Park; that he is well acquainted with the country surrounding said Park and the boundaries of the same as far as determined; that during the month of August 1888, he was in the region of country immediately south of the Yellowstone Park in company with Mr. W. Hallett Phillips of Washington, D. C., and that while in camp on Pacific Creek some Indians came into his camp and stated that fourteen lodges of Bannock Indians were then in camp on the same creek, about ten miles south of the Park line and engaged in hunting in a direction toward the National Park; and that subsequently during the month of September 1888, he being then in company with Mr. Lewis A. Eldridge of Brooklyn, New York, he visited the locality where these Indians had been in camp and saw by the remains of camp-fires and other evidences that a large number of Indians had been in camp at that place and had been engaged in drying meat.

And further that about the 24th day of October, 1889, he was with the above named Mr. Lewis A. Eldridge on Snake River about nine miles south of the southern boundary of the Yellowstone National Park, and at that place he found a camp of Bannock Indians consisting of seven lodges, numbering probably fifty people; that these Indians stated that they were from the Fort Hall and Lemhi Agencies, and that they were then about to return to their agencies, having had a successful hunt; that they had a large quantity of dried meat and hides in their possession; and that upon the following day they started upon their return with a large number of animals packed with dried meat going toward the southwest corner of the Yellowstone National Park, saying that they were going to hunt on Fall River, which is within the Park limits.

The deponent further swears that at this time a forest fire was raging in the country immediately south of the Park line, which had destroyed the forest over an extent of many miles, and that in his opinion this fire had been started by Indian hunting parties for the purpose of facilitating their hunting operations, or through the careless use of fire.

And further the deponent sayeth not. ELWOOD HOFER.

Subscribed and sworn to before
me this 2d day of February,
1889. R. T. SMITH, Notary Public.

COUNTY OF PARK, } ss.
TERRITORY OF MONTANA, }

Personally appeared before me, R. T. Smith, a notary public in and for said county, one James J. Pearson, who being duly sworn according to law deposes and says that he is a soldier in the service of the United States stationed at Camp Sheridan, Mammoth Hot Springs, Wyoming Territory, that on or about the 13th day of August, 1888, being at that time on duty at the Grand Cañon of the Yellowstone, for the purpose of enforcing the rules and regulations of the Yellowstone National Park, he met and conversed with two Indians, a buck and a squaw, near the Grand Cañon; that these Indians said that they were Bannock Indians, and that they came from Beaver Cañon, which is a station on the Utah Northern Railroad, west of the Yellowstone National Park; that they were both mounted, and had with them a pack animal, the buck being armed with a rifle; and further the deponent sayeth not.

JAMES J. PEARSON.

Subscribed and sworn to before me this 14th day of February, 1889.

R. T. SMITH, Notary Public.

COUNTY OF PARK, } ss.
TERRITORY OF MONTANA, }

Personally appeared before me, R. T. Smith, a notary public in and for said county, one Edward Wilson, who being sworn according to law, deposes and says, that since the month of May, 1887, he has been employed in the military service of the United States as a scout and guide for the protection of the Yellowstone National Park, and that for several years previous he had been employed under the Department of the Interior as a game keeper and assistant superintendent in the Yellowstone National Park; that he is well acquainted with all of the region of country adjacent to the said Park and with the boundaries of the same as far as determined.

The deponent further swears that on or about the 7th day of September, 1888, he was in company with Saddler Joseph M. Loynes, Troop M, 1st U. S. Cavalry, on Snake River, Wyoming Territory, about four miles south of the Park line, and at that point he saw a camp of Indians, consisting of three lodges, and numbering, as estimated, about twenty-five people, men, women and children; that these Indians stated that they were Bannock Indians from Salmon City, and that there were four lodges of Bannock Indians from Fort Hall, about two and one-half miles further down on the west side of the river; that he went near enough to the last named camp to see the lodges but did not enter it; that these Indians had large quantities of elk meat in their camp and stated that they had been in that vicinity about ten days, and were engaged in hunting; that at this time two large forest fires were raging in the adjacent country, one some distance south of the camp of these Indians, and one to the north and west of their camp, near the edge of the Park; and that from his knowledge of the habits of these Indians, he thinks it probable that these fires were either intentionally started by them or that they originated through their careless use of fire; and further the deponent sayeth not.

EDWARD WILSON.

Subscribed and sworn to before me this 4th day of February, 1889.

R. T. SMITH, Notary Public.

COUNTY OF PARK, } ss.
TERRITORY OF MONTANA, }

Personally appeared before me, R. T. Smith, a notary public in and for said county, one Joseph M. Loynes, who being duly sworn according to law, deposes and says that he is a soldier in the service of the United States, holding the rank of Saddler in Troop M, 1st Cavalry, stationed at Camp Sheridan, Mammoth Hot Springs, Wyoming Territory, and that on or about the 7th day of September, 1888, he then being on a scout for the purpose of enforcing the rules and regulations of the Yellowstone National Park, in company with Mr. Edward Wilson, a scout and guide in the employ of the Government, found a party of Indians in camp on Snake River in Wyoming Territory, the party being divided into two bands, one of three lodges being camped on the east bank of the river, about four miles south of the Yellowstone Park, and the other of four lodges some two miles or more down the river on the opposite bank; that these Indians said that they were Bannocks from Lemhi and Fort Hall, and that they had been in that vicinity ten days; that they stated that they were engaged in hunting and that he saw a large quantity of elk meat in their camp.

The deponent further swears that at this time two forest fires were raging in the vicinity of these Indian camps, one very large one some distance to the south, and one less extensive to the north and west and near the south line of the Park; and further the deponent sayeth not.

JOSEPH M. LOYNES.

Subscribed and sworn to before me this 6th day of February, 1889.

R. T. SMITH, Notary Public.

COUNTY OF PARK, } ss.
TERRITORY OF MONTANA, }

Personally appeared before me, R. T. Smith, notary public in and for said county, one Charles H. Stuart, who being duly sworn according to law, deposes and says that he is a resident of Mammoth Hot Springs, Wyoming Territory, and that he is associated with the lessees, Heiss and Walter J. Henderson of that place in the Yellowstone National Park, in the business of hotel keeping and the outfitting of tourists and hunting parties; that he was for several years employed with the division of the U. S. Geological Survey in the Yellowstone National Park under Mr. Arnold Hague, and that he is well acquainted with the country in and adjacent to the Yellowstone National Park and the boundaries of said Park as far as they are determined; that on or about the 15th day of September, 1888, being at the time in company with Mr. Frank C. Crocker, of Portland, Maine, he saw a party of Indians in camp on Snake River, there being two separate camps, one of three lodges on the east bank of the river, about four miles from the Park line, and one of four lodges further down the river on the opposite bank; that he camped near these Indians and conversed with them both in their camps and in his own, that they stated that they were Bannocks, and that one band was from Fort Hall and that the other was from Salmon City, and that they were engaged in hunting on Huckleberry Mountain, which is near the Park line, and in conversation they stated that they had been instructed not to go near the Park, and asked where the Park line was; and that upon being told expressed surprise that it was so near to them; that he saw a large quantity of elk meat and some hides in their camp. The deponent further swears that at this time two forest fires were raging in this vicinity. One in the country south of the Indians' camps and one to the west near the south line of the Yellowstone National Park; and further the deponent sayeth not.

CHARLES H. STUART.

Subscribed and sworn to before me this 5th day of February, 1889.

R. T. SMITH, Notary Public.

About the 21st of August, 1887, under orders from Capt. Moses Harris, 1st Cav., Comdg. Camp Sheridan, Wyoming, I made a reconnoissance of the country just outlying the Yellowstone Park, at the northern portion of the western boundary. In accordance with my instructions, the object of this scout was to discover the presence of hunting parties of Indians (Bannocks) reported to have been seen in that locality or en route there, and to return them to their reservation. After three days I found a party from the Lemhi Agency, encamped about three or four miles from the western boundary line, near the head waters of the Gallatin River. They had been one day in camp and had killed quite a number of elk. With good rifles and ammunition, over a hundred fine looking ponies, within such easy access of the Park—and judging from the amount of elk meat already in camp—their facilities for slaughtering game within the Park limits seemed the best possible. I ordered these Indians back to their reservation, and told them they would not be allowed to hunt in the vicinity of the Park. They promised to return and started the following morning; in the morning I also started back to the Lower Basin to report my action to Capt. Harris. I had no confidence, however, that these Indians would return to the reservation, believing that they would only change the locality of their camp, and continue to hunt in the vicinity of the Park line, where, on one side or the other, they were certain to find abundance of game.

On my way back to the Lower Basin I passed a man on the road traveling in a covered wagon; he hailed me, said he was the Agent at the Lemhi Agency, and asked if I had seen any of his Indians hunting in that vicinity. He also said he had made inquiry of some men living on the road, at Henry's Lake, and could get no information.

I told him that I had been sent out by Capt. Harris to intercept Indians who were coming to hunt in the Park, and had found a party of about fourteen (bucks and squaws) just outside of the Park limits; that they had killed quite a number of elk, and that, although they had promised to return at once to the agency, I believed they had no such intention, and would continue to hunt in the vicinity and would in all probability go into the Park, where the elk were most plentiful.

In answer to his inquiries, I gave him directions for finding these Indians; telling him it would be necessary to proceed most of the way mounted, but the trail was fresh and very plain. He said he was unaccustomed to riding, and could not possibly make such a journey; that a ride of ten miles (I think that is the distance) would wear him out completely. He said he would proceed on to the hotel and confer with Capt. Harris.

At the hotel Lower Basin I reported by telephone to Capt. Harris, relating all the circumstances, as nearly as possible over a badly working wire, and he ordered me to return to the post.

Whether or not this agent communicated with Capt. Harris from the Lower Basin I do not know. I got the impression that he was not at all concerned about his Indians. At that time and subsequently he appeared to me like a tourist and pleasure seeker, but not like a government official in the discharge of his duties. According to my recollection this man made the regular tour of the Park and took his departure thence without having spoken to Capt. Harris of the business which was the ostensible cause of his presence there. I cannot assert this positively at the present time, but I do remember distinctly that his conduct was discussed; that Capt. Harris and myself both pronounced him guilty of neglect of duty, because he had made no effort, and shown no desire to control the actions of these Indians for whom he was responsible.

GEO. W. GOODE, 2d Lt. 1st Cav.

FT. MAGINNIS, M. T., Feb. 5. 1889.

Editor Forest and Stream:

I trust that through your paper some effective protest will be made against allowing Indians from the reservations to use the Yellowstone National Park for a hunting ground. At present bands of roaming savages bid fair to destroy not only all the game, but also all the forests. Every Indian hunting party habitually starts forest fires, which destroy vast quantities of woodland. The forest fires started by these roving bands have caused such devastation as to become a serious menace to all the settled districts. The water supply is a matter of vital consequence to the settlers on the plains near the Rockies, and nothing interferes with it so seriously as the destruction of the woods. It is urgently necessary that these bands be restrained; they should never be allowed off the reservation unless a responsible white man is with them. Capt. Harris has done all he could for the Park. I hope the Indian Department will back him up more efficiently than it has done for the past four years. The Agent of the Bannocks, Shoshones and Crows must be made to understand that these Indians can no longer be allowed to waste and destroy round the Park at their pleasure.

THEODORE ROOSEVELT.

NEW YORK, April 6.

At a meeting of the Boone and Crockett Club, held April 3 at the Knickerbocker Club in New York city, Mr. Grinnell offered resolutions printed below, which were unanimously adopted. The mover was appointed a committee of one to communicate with the Secretary of the Interior on this subject, and was authorized to sign the resolutions for all the members of the club. The resolutions were as follows:

Whereas, It has for some years been the custom for Indians from the Fort Hall and Lemhi agencies, and from Washaki and, perhaps, the Crow agency, to spend the summer or a part of it on the borders of the Yellowstone National Park hunting and collecting dried meat and hides of game, and

Whereas, These hunting parties destroy great quantities of game without regard to the game laws in force in the Territories where their hunting is done, and

Whereas, In addition to this destruction of game, they cause incalculable damage to the forests of the continental watershed by the fires which they start, either through carelessness or intentionally, as adjuncts to their hunting, and

Whereas, The acting superintendent of the Yellowstone National Park has repeatedly brought this matter to the attention of the Interior Department, and has fortified his reports by affidavits from intelligent and trustworthy men, most of whom are well known to many members of the Boone and Crockett Club, and

Whereas, The destruction of forests and of game caused by these Indian hunting parties is a serious evil and ought at once to cease, therefore be it

Resolved, That the Indians of the Fort Hall, Lemhi, Washaki and Crow agencies should not be permitted to leave their reservations in large parties, except when in charge of some reliable white man who can be held responsible for the conduct of the Indians whom he accompanies, and that under no circumstances should these Indians be permitted to approach within twenty-five miles of the borders of the Yellowstone National Park, and

Resolved, That the Secretary of the Interior be respectfully requested to call this matter to the attention of the Commissioner of Indian Affairs, and to instruct him to direct the agents in charge of the above named tribes to keep their people on the reservations.

SEA TROUT FISHING IN CANADA.

IT was the opinion of Don Quixote that many troutlings might be equal to one trout, but such is not the angler's estimate, and those who aspire to something better than the 4in. troutlings of New Hamshire brooks should try the sea trout fishing of Canadian waters.

Doctors disagree about this fine fish. *Salmo canadensis* (Hamilton Smith), some pronouncing it identical with *S. fontinalis*, others recognizing it as a distinct species under the above name. For myself, having very carefully compared the two together, I am unable to detect any difference in fin rays, gill covers or labials, though such may exist. The difference in color between the two is very marked, but color is not a sufficient test as between species. The habits of the two are very different, however. The brook trout makes its permanent home in fresh water, and is rather a stationary fish; while the sea trout lives most of the year in the ocean, only ascending the rivers in summer for spawning purposes. It is what is called an anadromous fish, like the salmon. Like the salmon the sea trout stops in certain pools when ascending the rivers, and it is only when in these pools that it will rise to a fly. When hooked, the sea trout fight differently from the brook trout, and with even more vigor and activity; their average size is greater, and on the table they are admitted to be the better fish.

In the human species we recognize many races of men, and *S. canadensis* is, even if identical in structure with *S. fontinalis*, a roving nomad, as different in habits from its home-keeping brother as the red Sioux of the plains from the white citizen of New York. This question, however, must be left to the naturalist for settlement, and I will proceed to relate some experiences in the capture of the sea trout.

Being in Dalhousie, on the Bay of Chaleurs, in July, 1872, and hearing much of the Nouvelle, a river in the vicinity, famous for its large trout, three and four-pounders being quite plenty, as I was told, and five-pound fish not unknown, I determined to visit it and verify these wonderful tales.

By the help of my landlord, William Murphy, I procured the services of two Micmac Indians with a canoe, no other craft being capable of ascending the river. As the distance from Dalhousie was fifteen miles, and we must be absent at least one night, my worthy host provided me with pork, bread, tea and sugar and a bottle of brandy, which in that happy land can be obtained of pure quality for one dollar a bottle. As we expected to catch at least fish enough to eat, these supplies were thought to be sufficient.

About 9 A. M. on the 15th, my Indians reported themselves ready at the beach. Although their canoe was a real bark, like those of the Chippewas of Lake Superior, Joe Le Beau and his son Louis had little of the savage about them. They were attired in the garb of civilization, coat, trousers and hat, and instead of moccasins they wore long boots. In the far Northwest the Indians would not permit me to enter their canoes with boots for fear of damage to the frail structure, but Joe had laid thin boards along the bottom to protect her. He and Louis looked more like Frenchmen than Indians, and I found them to be sober, industrious and obliging men.

We left the beach at Dalhousie about 10 o'clock. The morning was calm and the men paddled right across the bay, here about three miles wide, to the Eastern Point, a high bluff of red sandstone, crowned with evergreens. Rounding this point they kept along shore to the N. E. The bluffs were high and rocky, with the shallow green water at their base flowing over beds of seaweed, above which floated great purple medusæ, large enough to fill a water bucket. After about three miles we came to what seemed the mouth of a river, with a small village on the further bank. Entering through a narrow channel we find ourselves in a shallow lagoon, or salt lake, three or four miles across. There was scarcely water enough to float the canoe, the tide being out, and the men stepped overboard and lifted her along. As they were for the next two or three miles in the water more than half the time, it was plain why they wore high boots, and nothing but a bark canoe could have got along at all.

On the other side of the lagoon we came to the real river mouth, a swift, crooked stream, full of shallow holes and drift logs, where the canoe had to be lifted along every twenty yards. After about a mile of this sort of work we came to a jam of logs and trees, where the canoe must be unloaded and a portage made over the raft, which filled up the river for a distance of fifty or sixty yards. This jam had existed so long that small trees were growing upon it in many places. Joe said there were plenty of trout under the logs, but it would have been impossible to kill a large fish in such a place. Just below the raft Joe's sharp eyes had detected a large trout in a shallow; which he killed with a thrust of his setting pole, a handsome fish of 3lbs.

Three of these jams we had to pass, so that many hours were gone before we reached open water. By that time the sky was overcast, a high wind roared through the forest, and everything looked like rain. The river was here about 30 or 40yds. wide, with a very swift current over a bed of rocks and pebbles; the water the clearest and coldest that I ever saw out of a mountain spring. It looked like liquid glass. Its course was very winding, and the shores were high rounded hills, covered with forest. The current was so hard to stem that the men were often obliged to stop for breath, and I got out my rod and fished, both with fly and spoon, but could get no rise.

About 6 P. M. we arrived at the bridge, six miles from the mouth of the river, though it seemed twelve. As the rain was beginning to fall, Joe thought we had better camp here for the night; we landed and the men built a fire in a thick grove which promised some shelter, and we supped on the big trout. Joe said there was a decent house near by, and he would go and ask for lodgings for me: as for Louis and himself, they could sleep by the fire. While he was gone an old Frenchman, who lived across the river, came over to our fire and invited me, with many compliments, to go to his house. He was polite, but dirty, and I thought I would try the other house, but softened my refusal of his hospitalities with a glass of brandy, which he enjoyed hugely.

"Aha! dis is de eau de vie—much better as de dam whisky."

Presently Joe returned with Mr. Carr, the owner of the nearest house, who invited me to stop with him for the night, which I was glad to do, as the rain was falling fast.

His house was new and unfinished, but Mrs. Carr made up a bed for me on the floor. They were Scotch people, who had been some years in Canada; they had four or five children growing up in this wilderness, which seemed a pity, as the parents were evidently emigrants of the better class. One can hardly understand how a living can be got from the soil in this rough country, with its seven or eight months of winter; but the people depend chiefly for their subsistence on the products of the forest.

I turned out at sunrise, the rain had ceased, though the clouds still hung low and heavily. I went to the camp, where I found the men getting breakfast. Having heard that large trout were often taken at the bridge I tried several casts, both above and below, but without success. We went about six miles further up the river, now and then making a cast in spots likely for trout, but saw none. The river was swift and clear, with many heavy rapids, which taxed the muscle of the men, and once they had to lift the canoe over a boom at a sawmill. Very few houses or farms on the river, only unbroken forest; the day was dark and lowering, good weather for trout fishing, if any were in the water, which I was beginning to doubt.

Now we began to meet with logs and branches of trees floating down the stream, indicating that men were above getting out timber, which Joe said would scare the fish, and we must push on and get above them.

About two miles further on we landed for dinner, near a gang of men who were cutting timber for a bridge, but a little way above them, and while Louis was frying the pork, Joe and I went out in the canoe to try a cast; he held the canoe at the head of a deep pool, and I cast down the stream with a dozen yards of line and two small salmon flies. My rod was of bamboo, with a lancewood tip, rather too stiff for fly-fishing, it having been made for a bait-rod. I allowed the flies to be taken slowly down by the current for about thirty yards, when a large trout rose and fastened himself; away he went with a rush, salmon fashion, the reel giving out line so freely, it having no click to it, that I was obliged to check him by pressing my hand on the line. He ran

about the pool very freely, but did not leap like a salmon. Yet he fought very hard, keeping up a continual struggle and rolling over and over in a way which bore very hard on the tackle. This for about ten minutes, when I got him alongside the canoe, and Joe lifted him in with the net, a beautiful 3lb. trout, fresh run from the sea. Directly I hooked another, which after a contest of five minutes escaped. Then a third, which I killed in ten minutes, of the same size as the first. I then rose and killed two more in the same pool, of 2½ and 2lbs., when they stopped rising, and we went ashore and cooked one of our trout for dinner. It was almost alive when dressed, and was, I think, the finest trout I ever tasted.

About 3 o'clock we went up the river two miles further where we found some lovely pools, with rapids between them. Joe's eyes were so keen that he was able by looking into the pools to tell me if there were fish in them. Casting from the bank I took five trout of from 2 to 3lbs. weight from the first two pools, then to a third, where I hooked a pair. I landed one, 3-pounder, but the other escaped by breaking my hook at the bend. As with that hook I had killed a 9lb. salmon, the week before, I shall always imagine that the size of this trout was tremendous.

By this time sunset approaching, the sand flies and mosquitoes were becoming very troublesome, so we went into camp, building a fire in a thick hemlock grove, and covering the ground with a thick bed of boughs, which with our blankets made a soft and elastic couch, with a freshness and fragrance all it own. After a delicious supper of trout and tea (tea is the one thing needful for these Micmacs, they want it at every meal) I turned in, but was aroused about midnight by Joe, who told me that a heavy storm was coming on, and we must seek shelter under the canoe. With the aid of a torch we found our way through the black night to the river bank, where we crept under the canoe, and staid there for more than an hour, the rain pouring in torrents, from which, however, we were entirely protected by this birch bark umbrella. Rekindling our fire when the storm had passed by, we slept well for the rest of the night.

After an early breakfast the next morning we went up the river to another pool. The rain had ceased, but a heavy fog hung about the river, and the insects were so savage that after killing a brace of good trout I concluded to return down the river, the rather that there were indications of an approaching storm.

Going down stream was easy, it took not much over an hour to reach the bridge, a distance which had used up most of the previous day to perform. Three miles below our camp we found some Micmacs, who had been up and down the river spearing the fish by torchlight. They had driven the trout from the pools, and killed a large number, which they were taking to Dalhousie for sale. Hence our ill success in the lower part of the river. Nothing so much alarms trout and salmon as this night spearing, which is forbidden by the laws of the Dominion, but as there is no fish warden on the Nouvelle, these Indians from Campbellton are spoiling the river.

The absence of small trout, however, in this river is a mystery; they breed here, but probably the small fish remain in the headwaters until they are large enough to seek the ocean. I had also expected to find brook trout, as in the Restigouche; but saw none. I caught two or three young salmon, or parr, about 4in. long, which I restored uninjured to the river. This shows that salmon do sometimes enter the Nouvelle.

In the pool where I took the first trout the day before my Indians espied trout running up; they stopped the canoe, and by careful casting I secured a brace, of 2½lbs. each.

By this time the wind was blowing in heavy gusts from the eastward, and thick clouds had shut in all around. A storm was coming on fast, and Joe declared that it would be impossible to go round the point with a heavy sea on, and that by landing at the ruins of the old bridge, about five miles from the river's mouth, we could get a horse and cart to take the canoe across the hills to the bay, opposite to Dalhousie, and I, for my part, was glad to avoid the three portages.

So we stopped at the ruins of the old bridge, where the road formerly crossed the river; not far off lived a farmer who let us have his horse and cart with a boy to bring them back, to convey canoe and baggage to Muskoka, on the Bay, a distance of three miles, for the charge of a dollar.

The road over the hills was good; it skirted the forest, where the ground was carpeted with the richest of mosses and spangled with blossoms of epigea, linnea and other spring beauties, although it was the middle of July. By noon we embarked on the bay, here about three miles wide. When we got out from the shelter of the land the wind struck us heavily and the sea was high; a bark canoe, however, if not too deeply laden, is a very buoyant and lively vessel, and although in mid channel, where there was a choppy sea, we took in some water, on the whole we made very good weather of it and landed at Dalhousie about 1 P. M., just in time to escape a heavy storm of wind and rain, which lasted twenty-four hours. I had a string of twelve trout, which weighed 31lbs., besides those we had eaten, but it was thought to be a poor showing for the Nouvelle, excusable only by the Indian depredations on the river. I have heard of 200lbs. being taken on this river by one rod in three days.

S. C. CLARKE.

NEW YORK, Aug. 9, 1888.—*U. S. Cartridge Co., Lowell, Mass.*—Gentlemen: Your new primers gave me the best of satisfaction. I have averaged nearly 80 per cent. of kills both on live birds and targets ever since I began to use them. Yours truly, (Signed) M. M. F. LINDSLEY, Supt. American Wood Powder Co., West Hoboken, N. J.—*Adv.*

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

FORCEFUL FACTS.—Humphreys' Veterinary Specifics are not an experiment. They have been in use among farmers, livery stable, horse railroad and turfmen and in the United States Army for many years. Their use is free from danger to the animal. They are simple. They are readily and easily given. They cure more quickly than any other medicine, and every ten dollars invested in them saves one hundred. The treatment is humane, and the diagnosing the disease and giving of medicine is such as any man can master without difficulty. A complimentary copy of Dr. Humphreys' Veterinary Manual (500 pages) on treatment and care of domestic animals sent free upon application to the company, 109 Fulton street, New York.

Natural History.

THE INSECTIVORA.

BY R. W. SHUFELDT, M.D., C.M.Z.S.

IN the Insectivora we have to deal with a small though markedly diversified order of nearly cosmopolitan range. With us in this country they are represented only by such diminutive animals as the shrews and moles, but notwithstanding this modesty in size, we see in the structure of these creatures, especially in their dentition, characters which point in the direction of a far more formidable group of animals, the Carnivora, while, as I said in my last contribution, they also hold in common certain characters which link them with the bats.

To continue the Provisional List of the U. S. National Museum, we find them classified as follows:

ORDER INSECTIVORA. INSECTIVORES.

SUBORDER INSECTIVORA-VERA. TYPICAL INSECTIVORES.

Family SORICIDÆ. *The Shrews.*

Neosorex navigator, Cooper. Water Shrew. Washington Territory.
Neosorex palustris (Rich.) Coues.
Sorex trowbridgei, Baird. Trowbridge's Shrew. Washington Territory.
Sorex parvus, Say.
Sorex fosteri, Richardson. Foster's Shrew. Hudson's Bay, New York, Pennsylvania.
Sorex platyrhinus, Wagner. Eared Shrew. Vermont, Massachusetts and Ohio.
Sorex cooperi, Bachman. Cooper's Shrew. Labrador to Nebraska.
Sorex hoyi, Baird. Hoy's Shrew. Racine, Wisconsin.
Sorex crawfordi, Baird. Crawford's Shrew.
Sorex pacificus, Baird. Oregon.
Sorex sphagnicola, Coues. Hudson's Bay Territory.
Sorex veræ-pacis, Alston. Guatemala.
Atophyrax bendirei, Merriam. Bendire's Shrew. Oregon.
Blarina brevicauda (Say), Baird. Short-tailed Shrew. Illinois to Nebraska.
Blarina cinerea (Bachman), Baird. Pennsylvania to Florida.
Blarina mexicana, Coues. Mexico.

Family TALPIDÆ. *The Moles.*

Scalops aquaticus aquaticus (Linné), Coues. Common Mole. Eastern United States.
Scalops aquaticus argentatus (Aud. and Bach.), Coues. Silver Mole. Prairies west of the Alleghanies.
Scapanus brewerí (Bachman), Pornel. Hairy-tailed Mole. Eastern United States.
Scapanus townsendii (Bachman), Pornel. Oregon Mole. Pacific Slope.
Condylura cristata (Linné), Illiger. Star-nosed Mole. Northern Cismontane States.
Neurotrichus gibbsii (Baird), Günther. Cascade Mountains, Washington Territory.

Family SOLENODONTIDÆ. *The Solenodonts.*

Solenodon cubanus, Peters. Cuba.
Solenodon paradoxus, Brandt. Hayti.

This important order is so small and compact that it becomes possible for me to present a scheme, which I herewith subjoin, showing a complete classification, based upon our present knowledge of the group as a whole; and in this I have been assisted by the author of the "Order Insectivora" Art. Mammalia, in the 9th edition of the Encyclo. Brit. A glance at this comprehensive scheme at once shows us the order *Insectivora* to be composed, as it is at present known to us, of the colugo, or flying lemur (*Galeopithecus*), an animal found inhabiting Sumatra, Borneo, the Malay Peninsula, and the Phillippine Islands, and which the older zoölogists referred either to the bats or to the lemurs, but which is now generally considered to be an aberrant type of the Insectivora, and has been awarded, as shown above, a suborder of its own; of the tupaias, the macroscelides, the hedgehogs, the shrews, the moles, the potamogalides, the solenodontes, the taurecs (*Centetidæ*), and the golden moles (*Chrysochloridæ*).

Either species of *Galeopithecus* are extremely interesting forms to study; *G. volans* has a total length from tip to tip of about 2ft., and is at once to be recognized by its volar membranes, which at its sides stretch between its long, slender limbs as in the flying squirrel, then all its fingers are webbed to the bases of the claws, while finally it has an immense interfemoral membrane as in the bats, which includes its tail.

This animal is nocturnal in its habits, and lives on insects and the leaves of certain trees; while during the day it may be occasionally found in the shades of its native forests, hanging head downward by its feet from some branch of a tree, precisely as some of the bats do. By means of its integumentary parachute, it sails through the air much in the same manner as do flying squirrels, often making flights of some 70yds. or more. In the female the breasts are pectoral as in *Chiroptera*, and she never bears more than twins, though one young one at a time is the rule with her, and this clings to her breast, nursing even while she makes her aeriel flights from tree to tree.

The tupaias are squirrel-like, arboreal Insectivora, which are also found in the Malay Peninsula and the larger islands of the East Indies. A very interesting form is the pentail (*P. lowii*), a species of this family, the only representative of its genus and a native of Borneo. It is "remarkable for its long tail, two-thirds naked, having the terminal third furnished with a double fringe of long hairs. Its habits are probably similar to those of the tupaias, of which it may be further noticed that they alone among Insectivora are day-feeders." (Dobson). The macrocelides are small terrestrial animals confined to the African continent. They look something like mice and have hindlimbs much as in the jerboas, being like them, jumpers. They have proboscis-like snouts, which has given them the name of elephant mice in some quarters. Insects and certain vegetables are their principal foods, while they are found to live in dry, rocky localities. It is said that they are easily tamed, and make very interesting little pets. Their fur is soft, and usually of some shade of tan color. Ten species have up to the present writing come to the knowledge of science.

We next note the hedgehogs, of which there are nineteen species known, inhabiting various regions of Europe, Asia and Africa. England's little spiny, nocturnal, ball-rolling-up hedgehog is almost as well known to us as our own woodchuck.

Then next follow the shrews (*Soricidæ*) and the moles (*Talpidæ*), but as these are the only two families of Insectivora represented in our United States fauna, I will devote space to their consideration further on.

Coming to the family *Potamogalidæ*, we find *Potamogale* and *Geogale* tersely described by Dobson, and of *P. velax* he says that "this most interesting species inhabits the banks of streams in west equatorial Africa, and its whole structure indicates an aquatic life. It is nearly 2ft. in length, the tail measuring about half. The long cylindrical body is continued uninterruptedly into the thick, laterally compressed tail, the legs are very short, and the toes are not webbed, progression through the water evidently depending wholly on the action of the powerful tail, while the limbs are folded inward and backward. The muzzle is broad and flat, and the nostrils protected by valves. The fur is dark brown above, the extremities

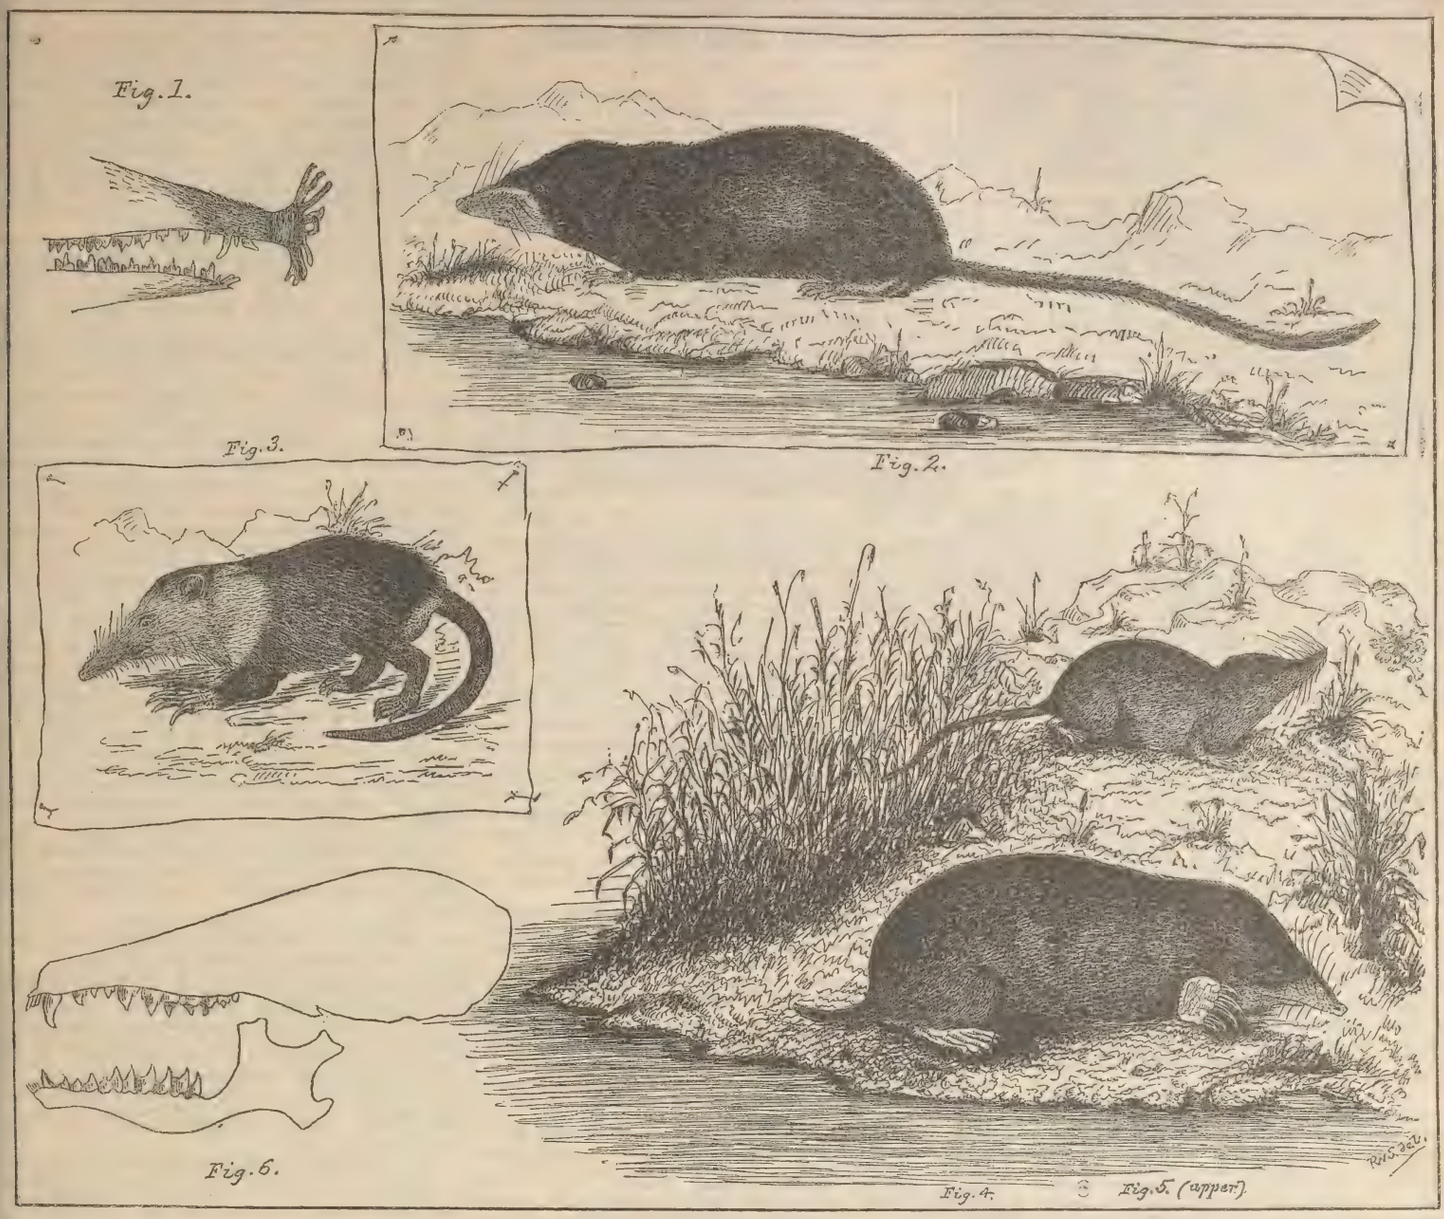

Fig. 1. Snout with appendages in the Star-Nosed Mole (*E. cristata*); enlarged from life.
Fig. 2. Bendire's Shrew (*A. bendirei*), adult male; life size.
Fig. 3. A Solenodont (*S. cubanus*), × one-fifth.
Fig. 4. Common Mole (*S. a. aquaticus*); male, life size.
Fig. 5. The Eared Shrew (*S. platyrhinus*); male, life size.
Fig. 6. Dentition of European Mole (*T. europæus*); enlarged.

All these figures were drawn by the writer; Fig. 1, from a cut in Goodrich's Natural History; Fig. 2, from E. E. T. Seton's drawing which illustrates Dr. Merriam's memoir on the genus *Ataphyrax*; Fig. 3, from Dobson, after Peters; Fig. 4, from Packard, after Coues; Fig. 5, by the author; and Fig. 6, after Dott. Lorenzo Camerano, of Turin, Italy, to whom I am indebted for a copy of his work (Ricerche intorno alle Specie Italiane del Genere Talpa, Linn. Tav. II., Fig. 1).

of the hairs on the back being of a metallic violet hue by reflected light, beneath whitish." *G. aurita*, "a small mouse-like species of Madagascar, agrees closely with *Potamogale* in the general form of the skull and teeth; the tibula and fibula are distinct, but it is not known whether a clavicle exists or not, and the material at present available is insufficient to definitely fix the natural position of the species."

As will be noted in either of our above classifications, the solenodonts are represented but by two known species from the West Indies. They are among the largest of the Insectivora, but their habits as yet are not fully known. In Fig. 3 I present the form of one of these interesting mammals, it being characterized by its long subcylindrical snout, naked tail, coarse fur and ponderous feet. For the rest, the female is found to have her mammæ situated quite on the buttocks behind, a unique state of affairs for the order to which it belongs. About two years ago there was received a living specimen of *S. cubanus* at the U. S. National Museum, and Mr. True favored us with some notes in reference to it in *Science;* since then Dr. Dobson has written me from England that a fine specimen has come to his hands, and this latter will no doubt in time be handsomely monographed by that eminent author.

Of the next family, the *Centetidæ*, the best known species is the peculiar Madagascan *C. ecaudatus*, the tailless ground hog, which is now the largest animal of the Insectivora known to us. Prolific to a degree equalled but by few of its class, this creature may bring forth as many as twenty-one young at a birth. These are characterized, it is said, by having a row of white spines down their backs, a feature which is lost as the animal attains maturity. My space will not admit of my entering upon a number of the interesting traits attributed to this creature and its allies of the same family.

Lastly we find the fossorial golden moles of South Africa, species akin to the last mentioned group. They are famous for the extraordinary metallic tints of their fur, which may possess in the various species, any shade of violet, golden, bronze or even metallic green. They are chunky-bodied little chaps, with mole-like eyes, and profoundly modified fore-limbs, eminently fitting them for their burrowing propensities, as they spend most of their time in such pursuits. No external tail is to be found in these animals, and their ears are nearly rudimentary.

Turning our attention now to the shrews (*Soricidæ*), of which there are some sixteen species in this country, distributed through four genera, as shown in the List, we are met by an exceedingly engaging group of little animals, to which anatomists and zoölogists have paid no small degree of tribute.

Shrews stand among the smallest existing mammals, and if we choose any one of the commoner forms as an example, we are at first struck with the animal's close resemblance to our little house mouse; this is owing chiefly to the similitude which obtains between the general form of their bodies, the tail and the feet, and finally, of course, the size. But the shrew has nothing further in common with the mouse, for the nose of the former is long and pointed, the ears and small eyes nearly concealed by the surrounding fur, while the nostrils are prominent, and the lower jaw much overshadowed by the anteriorly projecting muzzle. These little animals have also a dentition characteristic of the family to which they belong; and according to Dobson the common shrew of Europe (*S. vulgaris*) has thirty-two teeth, all tipped with deep crimson.

The study of the dentition in these as in all mammals is a matter of the highest importance, and one of the best, if not the best, guide we have to their classification. Most shrews have a soft and flossy coat, but this attractive feature is offset by the abominable odor which some of the species emit. This odor arises from the material or fluid which is secreted by a pair of glands, one on either side of the animal's body, between the limbs. So strong is it that many of the mammalian carnivora which prey upon mice will not touch a shrew; they, however, often kill them by mistake, but leave their bodies where the tragedy took place. Protective as this is against such predaceous animals, it does not offend the taste of the nocturnal birds of prey, for owls kill and eat these little creatures in large numbers. Doctor Dobson, in speaking of the common (*S. vulgaris*) and lesser (*S. pygmæus*) shrews of Europe, remarks that "They live generally in the neighborhood of woods, making their nests under the roots of trees or in any slight depression, occasionally even in the midst of open fields, inhabiting the disused burrows of field mice. Owing to their very small size, dark color, rapid movement, and chiefly nocturnal habits, they easily escape observation. They seek their food, which consists of insects, insect larvæ, small worms and slugs, under dead leaves, fallen trees and in grassy places. Like the mole they are very pugnacious, and if two or more are confined together in a limited space they invariably fight fiercely, the fallen becoming the food of the victorious. They also, like the mole, are exceedingly voracious, and soon die if deprived of food; and it is probably to insufficiency of food in the early dry autumnal season that the well-known immense mortality among these animals at that time of the year is due. The breeding season extends from the end of April to the beginning of August, and five to seven, more rarely ten, young may be found in their nests; they are naked, blind and toothless at birth, but soon run around, snapping at everything within reach, the anterior pair of incisors in both jaws quickly pierce the gum, followed by the last pair of upper premolars, which at birth form prominent elevations in the gum."

Water shrews all swim and dive well, and no doubt subsist chiefly upon the insects found in that element, as well as small crustaceans and perhaps the fry of fishes. In collecting these little animals it is a good plan to sink to its full margin a large-mouthed glass bottle or jar, directly in the little paths they make along the water courses. Into the pitfalls the shrews tumble at night, when in the morning the collector has them at his mercy. Many of our shrews still require much work and observation upon their more intimate habits, and undoubtedly there are several species yet to be found and described for our fauna. It is not so very long ago that Captain Bendire discovered an entirely new genus and species of shrews in Oregon, which proved to be the largest representative of the family. (See List, *A. bendirei*, and Fig. 2.) Nothing is as yet definitely known of the habits of this species, although from the locality in which it was taken, it may possibly be more or less aquatic in its pursuits (Bendire's shrew has been carefully described by Dr. C. H. Merriam; see Bibliography). In the common short-tailed shrew (*B. brevicauda*), the teeth are often found much worn away, which Merriam has discovered to be due to the animal supplementing its insectivorous diet by feeding upon beech nuts, a taste quite at variance with the rule among these little animals, so far as we at present know.

Speaking of short-tailed shrews, I find that a very close observer and most entertaining author, Dr. C. C. Abbott, says of them that they "are full of life and activity all winter. No severity of the weather chills their ardor; but this is not to be wondered at. Their favorite food is grasshoppers, and these are to be had in abundance the season through. Every warm day brings hundreds of half-grown, wingless grasshopers to the surface, where

they move about very actively. Feb. 3 of this year [1884] I found literally millions of them hopping over the dead grass in the meadows, as restlessly as though it were August. The ground was frozen and the sunlight had merely dried and warmed the tangled mat of dead grass upon the surface. At various points I found the openings of tunnels, which I took to be the pathways of the crepuscular shrews—shy little creatures, that toward sunset come to the surface, and forage during the twilight."

Among the ancient Egyptians, shrews were among those animals considered by them to be sacred; they figured them upon their monuments, and large numbers of mummified specimens were preserved with their bodies, where we now often come across them when such remains are unwrapped for investigation. Later than this, however, the writers of old record the fact that these "shrew-mice" were regarded with no little superstitious dread and fear; Pliny states that its bite is venomous, and even Aristotle has it that the bite of a shrew-mouse is fatal to all beasts of burden, invariably so if the shrew be pregnant at the time she inflicts the wound. These notions and many similar nonsensical ones prevailed even in England down to a very late day.

In number the Soricidæ include far more than half the known species of Insectivora of the world's fauna, and their distribution is almost as equally extensive. Some are characterized in having bright red or crimson teeth, while in others they are white or brown. The upper front incisors are always large, and moreover possess in many instances a posterior basal cusp. Canines are present, but can only be distinguished with certainty by taking into consideration the location they occupy with reference to the bones of the face. The lower jaw always contains twelve teeth in shrews, and its incisors are much depressed, so as to be nearly horizontal in position. Water shrews, as a rule, have webbed feet, and, as their name indicates, are amphibious. In some the tail is short, in some it is angular, and in most species sparsely covered with hairs, terminating in a "pencil" at its tip.

[TO BE CONCLUDED.]

LONG ISLAND BIRDS.—The April *Auk*, just out, contains two interesting papers on Long Island birds. The first is by that promising young ornithologist Basil Hicks Dutcher, who seems to be following in the footsteps of his father, Mr. William Dutcher, whose investigations into the bird life of Long Island are so well known. Mr. Basil Dutcher's paper treats of the birds of Little Gull Island, which is situated near Fisher's Island, at the east end of Long Island Sound. Twenty-three species of birds were observed here. The island is a breeding ground for the common and, perhaps, other terns. Jaegers (*S. pomarinus* and *stercorarius*) occur there and constantly persecute the terns. Mr. William Dutcher's paper deals with Long Island birds in general, and contains notes on seventeen species. Mention is made of an interesting hybrid between a black duck (*A. obscura*) and a mallard (*A. boschas*) killed near Amityville, Suffolk county, in March, 1888, by Andrew Chichester, a South Bay gunner. There are interesting notes on two species of petrel, two phalaropes and other birds.

A RARE LITTLE WHALE.—On March 28 the life-saving crew at Atlantic City, N. J., captured one of the most interesting cetaceans found in the Atlantic, a small whale or bottle-nosed porpoise, *Mesoplodon sowerbiensis*, about 13ft. long. The whale was stranded in shallow water inside of the bar, and was brought ashore after it had been harpooned. Notice of its capture was telegraphed to the National Museum, and, after having been exhibited in Atlantic City for a few days, the animal was forwarded to Washington, where it attracted much attention on account of its great rarity. The whale has been photographed, and will next go into the hands of the modeler, who will make plaster molds of both sides; finally the osteologist will prepare a skeleton for the comparative anatomy section. The United States Life-Saving Service is always active in aiding scientific research by contibutions similar to the above.

Game Bag and Gun.

SPRING SHOOTING NEAR ST. LOUIS.

ST. LOUIS, Mo., April 6.—*Editor Forest and Stream:* Snipe are now plentiful in this immediate vicinity, and the sportsmen of this city are devoting much time to the pursuit of them with varying success. A few were to be found around about here three weeks ago, but not until the past week were they what might be called plentiful as they are just at present.

Wet Prairie, which is located in the State of Illinois, about 20 miles above this city, is a famous place for the shooting of longbills, and many of our local nimrods have paid the marshes up there a visit during the past week with satisfactory results. Perhaps the most famous snipe grounds in this vicinity are those situated in St. Charles and Pike counties, Mo., and lying between the St. Louis, Keokuk and Northwestern Railway and the Mississippi River. Extending for 20 miles, with now and then a spur of timber to break the monotory of things, this prairie is the largest and by far the most visited by local sportsmen of any in this part of the country. In the country referred to there are located no less than four preserves controlled by gentlemen who reside in this city. They are all inclosed within a lawful wire fence and each club has a handsome and commodious club house for the accommodation of its members.

The latest of the clubs to locate a preserve in this prairie is the Dameron Hunting and Fishing Club, which is destined in a very short time to be the representative club of its kind in this locality. When the club first took possession of its leasehold, it had about 4,000 acres of snipe and ducking grounds, but in the short space of a month the officers of the club have secured control of several small pieces of property lying adjoining its holdings until now fully 6,000 acres are held by it.

Bluewing duck are very plentiful with us at present and several good bags of them are reported by parties who have been out. The larger ducks, such as mallards, blackjacks, sprigs and others have made themselves extremely scarce and it is reasonable to suppose that they have hied themselves to their northern breeding haunts for the season.

UNSER FRITZ.

CHICAGO AND THE WEST.

CHICAGO, Ill., April 2.—Glory awaits that sporting paper which shall head and lead to a successful issue a movement looking toward the establishment of a uniform, or nearly uniform, game law for the different States, or for all those States containing the prominent game markets; and all that ignominy which attaches to unsuccessful effort lurks on the path of sporting press and sportsmen if some such measure be not inaugurated. The lessons which lead to such a conclusion are becoming too plain to be much longer mistaken. It grows too obvious that, while protection doubtless does protect where applied and where applicable, it certainly does not protect where no pretense is made of its being applicable. In other words, no matter how well I house up my pigs from my garden, I do not protect my garden if my neighbor, protecting his own garden, yet looses his swine upon my plantings. I satisfy a moral obligation by fencing in my pigs, but I do not save my garden. The moral is, not that I shall loose my pigs upon his garden and my own, but that I shall set about inducing my neighbors to protect all gardens, theirs and my own, promising to do as much for them; and thus to begin a general amnesty and mutual armistice, whereunder swine in general shall be kept from gardens in general at least during set seasons of the year.

This simple proposition, easy as it is, has not been grasped by sportsmen as yet, even as a proposition, and it is probable that the carrying it out to its conclusion has in it too much difficulty to allow hope of its ever being done by sportsmen. We sportsmen have always been too busy talking to do very much. Doubtless a project involving so much actual accomplishment as an interactive game law will always seem to sportsmen a task too great to do more than look at, sigh over and talk about. Meantime the game will go, unless the game dealers conclude to do something. The game dealers are pretty good business men, and they might accomplish something if they started in. They may start in some day. They would be willing to-day, perhaps, to start in with the sportsmen, but the sportsmen will not have it that way. The sportsmen know it all, and besides they are afraid of a law, and don't want a law that will actually protect the game. The sportsman is looking for a law which will protect the game and yet allow him—and no one else—to kill it all. The man who has such a law can get a job with the sportsman class. As a sportsman, I admire myself for the delightful simplicity in which, upon this point, we all think alike.

Recent talks with Chicago game dealers have furnished the main motive for such ideas as the above, and have furnished also some further facts which I do not see much quoted, and which I believe will be news to many sportsmen readers. A prominent South Water street man said to me, in the course of an extended and repeated conversation:

"You sportsmen are not fair in your estimate of the game dealers, because you do not know all the facts. You are not effective in your attempts at legislation, equally because you do not know the facts. I presume you think that if you frame a protective law for Illinois—which you won't—you will have done your duty. As a matter of fact, what will you have done? Very little. There was not $500 worth of Illinois game sold on South Water street in 1888. You may be sure there was plenty of game from other States sold. If you shut down on us with a law to prevent our handling game at the seasons of the year when game is naturally sought by buyers, what do you really accomplish? You protect the $500 worth of Illinois game, and you lose for this one firm alone—if we choose to respect the law—more than $10,000 of business. You don't see how? Well, I'll tell you. We don't handle very much game in comparison to our poultry trade. We make our money off the poultry trade, not off the game, and very often handle the latter mainly as an accommodation to the customer. Suppose a small local buyer in Missouri has half a carload, or a carload of poultry and a few dozens of mallard ducks which he has bought from local hunters. Almost all local hunters sell to the local buyer now; they don't kill enough to ship in large lots for themselves. Very well; my Missouri man wants to ship his mallards along with his poultry, so that he can get the benefit of the car rate. It wouldn't pay him to fool with so small a matter as a separate shipment for a few dozen ducks. He sends them right along to me. They reach me in the off-season, which you fellows have in your wisdom established. The ducks were killed legally in Missouri, but they are not legally killed when they reach Illinois. I write back to my customer, who may be a plain man, and one who don't have much theory about him. I say, 'Dear Sir; Your hens are all right, but I must draw the line at the ducks. Do you want to get me arrested by the Illinois State Sportsmen's Assassination?' He writes back, 'Dear Sir: I do not want to get you into trouble, and so will ship my ducks, and also, of course, my hens, to Boston. Yours truly.' That means good-bye.

"Now what am I to do in a case like that? I have got to buy that man's ducks, or lose his trade. That's business; and that's fact. No theory about this. It's just cold hard dollars to me, one way or the other. It isn't the ducks I care for; it's the poultry. The game question don't mean anything to you. It's a question of fun, not money. But don't you see, it may draw me into a question of bread and butter. My trade doesn't lie in Illinois alone, I buy all through the West, and no matter what the local law is here or there, all those shippers expect me to take their ducks.

"Very good. I do buy their ducks. I have bought carloads of ducks at a figure above the market price, and have sent them through on East to a legal market, selling them there at an actual loss. I am obliged to do this, in order to hold my trade. I do it constantly. Other dealers do it also. In buying thus, I must either pass the carload lot, untouched, on to New York or Boston, or I must unload it here. What shall I do with the stuff if I unload it here out of season? Sell it openly, or freeze it down secretly?

"Now, here are three alternatives: I may ship through to the East, or I may sell game here illegally, or I may freeze it down and hold it till the open season of Illinois. I must take one or the other of these, or leave the poultry and produce trade which makes my living, and which, indeed, makes the living of this street. Even if I accept one of these courses, and pay above market price, I lose money. But, to hold my trade, I do accept one of these courses. Permit me to ask you, has your close law in Illinois saved one head of game? A little in Illinois, perhaps, but elsewhere not a head. The game is killed and sold just the same. The conflict in the game laws in the different States leaves some game market open all the time; if one big market East is open legally, it forces all these big Western markets to remain practically open illegally. The game will be killed and shipped to any of these markets so long as one of the lot is open legally. That is not the theory of it, but you can bet your life that is the practice of it, and always will be.

"Can you blame us for not respecting laws that are made without respect to us, and which affect business interests amounting to hundreds of times the actual value of the game concerned? Blame us or not, the matter is practically in our hands. We are doing something. You are talking.

"I am sure that game dealers do not wish to violate the laws. They make little by it, so far as the actual value of the game itself is concerned, and they would make as much under a uniform inter-State law. That is what the game dealers would like to see—a law with some signs of uniformity in all the different States. You will pardon me when I say to you, my dear sir, that until such a time does come to pass, all your big hurrah about game protection will not amount to a hill of beans. I am here on the street. I have heard much talk on game legislation, but I observe that hundreds of thousands of Western ducks are annually rolled in and out of South Water street wagons. What does the talk amount to? Nothing. What would a good law in one State amount to? Only to that much. It would be a step in the right direction, but it would not be effective. It framed with special view toward protecting only the game of that one State, and with no view to a wider significance, it would be a stumbling block rather than a step toward actual game protection. If any general game law could be proposed it would have to be some giving and some taking. Some States would have to sacrifice part of their close season, and some game birds might have to be sacrificed in the compromise. For instance, I believe I should be willing to throw open the year round to shoot snipe and woodcock, in order to gain concessions for more important, more generally plentiful, less erratic and more regular game birds, such as ducks and prairie chickens. The diminution of the snipe and woodcock would not even then be an extermination while for the other birds it might nearly amount to that. To-day the actual amount of shooting at woodcock, for instance, is not in proportion to the amount of legislation on it.

"The game, we say, belongs to the people. The sportsmen wish to prove that they alone are 'the people.' Each State thinks that its inhabitants are 'the people.' As a matter of fact, the game—wild, winged, migratory, changeable—belongs to the people of the United States. Class legislation or State legislation does not really protect it, as I should think any sensible man could now see. Class must consult class and State must yield to State before our game will ever be protected. There must be a foundation for any law before it can be respected. Let the foundation of a game law be laid in common sense and upon the basis of commercial necessities; on such wide bearings it might be supported, not upon the selfish preferences of a few.

"You think that the different Legislatures could never be induced to make enactments of substantial agreement on the game question? You think that no formulation of the general good sense could be had? You think that committees from the sportsmen's State organizations could not meet in a national assembly and agree upon a compromise game law, whose general features should be the game for the different States? You don't think any such law could be devised? Come around again and I'll show you if it couldn't. You don't think all this could be done? Young man, do you think that big stone building over there could be picked up and walked around these streets? Well, it has been. I don't suppose you sportsmen could do any such work as that, but I know the game dealers could if they wanted to. Do that, and you have done something. The game can be protected and preserved in that way. It cannot in any other way."

My straight-talking friend has sense in his head. He has said something to think about. So, I say, glory awaits the paper that heads a successful movement of the sort he suggests. The movement is not altogether new, but it has never been successful. We have most of us found our glory in talking about it, and saying it couldn't be done. That is far easier.

April 3.—Cedar Lake, just over the Indiana line on the Monon route, was reported full of swans and geese yesterday. One Monon conductor got a four days' lay-off to go after them. He took a rifle in preference to a shotgun. The geese sometimes drop into this lake so exhausted that they can hardly fly, and can then be successfully worked with a boat in the open water. One man last fall got nearly an entire flock there with a rifle.

Mr. Sam Booth, under secret advice from Alex T. Loyd, started yesterday for a certain cornfield in a sort of *terra incognita* about twelve miles below Grand Calumet Heights Club. Large numbers of geese were using on the cornfield. This is singular, when it is remembered that the spot is only about thirty-five miles from the city.

Mr. Jesse Cummings killed nineteen ducks at English Lake Monday; Mr. John Gillespie got thirty; another man, not of the club, got forty-one. Messrs. Edwards, Floyd, Cummings, Cox, Barrell, Sibley, McKay and Hayden are all still down at English Lake. Mr. Ab. Price has had about the best fun at that marsh. He bagged sixty-eight in a half-day shoot last Friday. Widgeons, pintails and spoonbills have constituted the majority of English Lake bags as yet, though Mr. Price says the mallards were in on the pucker-brush ponds last Monday in such numbers that they had fairly torn up the country in their feeding.

Mr. E. C. Cook says he never saw so much game at any time in his life as he did last Thursday on the marsh of the Kankakee Land and Cattle Company Club, near Roselawn. He got 50 ducks. Mr. Weddicomb on Wednesday got 107. All this lower Kankakee country has been alive with game. The Diana and Water Valley club have had good fun. George Kleinman has gone down to the Diana Club with Louis Hausler. The Cumberland

Club people have also been having great sport, although last fall they all thought their shooting was gone for good. Messrs. McFarland and Gammon in their week at the Cumberland bagged 520 ducks, besides their geese, cranes and snipe mentioned earlier. Mr. Henry Stevens got 39 ducks and 1 snipe on Cumberland Marsh last Saturday. Mr. C. D. Gammon has put up a gold medal for the Cumberland Club, the man killing the most ducks this season to win it.

The Illinois River does not compare with the Kankakee so far this spring. The redheads and bluebills are reported lower down on the Illinois. They have not got up in the country very well as yet, although there are a few in Lake Michigan. There were a good many bluebills shot from the Government pier, on the city lake front, yesterday. This is within one mile of Chicago. There are only few large cities which have good duck shooting right in town.

Two telegrams came down from Fox Lake yesterday, and in reference to them Messrs. Walter Hough and Sam Nash went up last night. The bluebills were said to be in thousands. No satisfactory bags are yet reported, however.

Grand Calumet Heights Club has shown some bags of a dozen or so. Mr. E. C. J. Cleaver got thirteen, mostly pintails, on the river last Thursday.

Mak-saw-ba hands in nothing startling yet. Snipe shooting will be good on that marsh soon. The birds are coming in.

Abe Kleinman says that the shooting in Missouri this spring did not amount to very much, as the birds did not stop. He has been back about two weeks. I asked him where the birds were and he led me to one side and said: "I'll tell you, if you want a private little shoot. I know where they are and would be there now if I could get off. You go to Shelby, Indiana, and take a wagon four miles to Fuller's farmhouse, on Hickory Island. There is an overflowed prairie there full of nut-grass and there is good acorn feed not far from there. The water is high there, and the shooting at Cumberland, Diana and Water Valley has driven the birds back there, where nobody is hunting them yet. I will give you a tip, that the man who gets in there soon is going to get some shooting." A tip from Abe Kleinman is valued more by Chicago shooters than information from any other source. I shall this evening run down to Shelby, and to-morrow try the virtue of Abe Kleinman's tip, if the cold change of this morning does not change duck matters seriously. Billy Mussey is gnashing his teeth over the fact that he can't go too, and Alex Loyd shed tears when I told him I had the Kleinman tip, and when he declared that business had him hard and fast for this week. Mr. Reub. Donnelly will probaby run down with me, and we are hoping the mallards haven't eaten all the nut-grass up yet.

Mr. J. E. Miller, late with the Peters Cartridge Co., and 10 years with Kittridge & Co., of Cincinnati, is now in charge of the gun department of the Western Arms and Cartridge Co. of this city. Mr. E. D. Davis, late of the gun department, goes into the tackle end.

The sum of the situation at this date seems to be that the duck shooting is unexpectedly and exceptionally good. It is not thought that the deep-water flight is fully up yet, so that the shooting is not yet over. Even if it should stop now, the boys have most of them been out, and nearly all have had as much shooting as they ought to have, whether they got as much as they wanted or not. There is great activity among the sportsmen of all lines this spring, and a better year was never known than 1889 will be. The fishing season will open early, and there seems quite as much interest in that as in the duck shooting. E. HOUGH.

SNARING RUFFED GROUSE.

Editor Forest and Stream:

I must thank your correspondent "Iron Ramrod" for his very hearty, although imaginary, greeting. I should be more than pleased to meet him. Not because he agrees with me on the grouse question, but because his racy letter awakes memories of my own boyhood days and country life in the Pine Tree State.

Since writing my last letter to FOREST AND STREAM I have been asked the question a great many times, "Why don't you enforce the law against snaring?" I will answer the question now because it interests the sporting world, and my answer is that of hundreds of sportsmen (true sportsmen) who live on Cape Ann, and would gladly see the game protected.

When I came here, four years ago last August, I found the game law a dead letter—I refer to fishing and shooting as well as snaring. I soon became acquainted with a great many people on the Cape, a liberal number being sportsmen. I recall a conversation with one of the last named that has a bearing on the subject. His only sport consisted in following the foxhounds, and one day he was saying hard things of the snarer while removing loops from his dog's feet, and I asked him why he did not enforce the law. "Oh, the law be d——d," said he, "the law is all wrong. What right has the State to depend upon enforcing the game law through bribing the individual? If the law is worthy a place on our statute then let game wardens be appointed to enforce it."

It is true that the American people do not take kindly to the idea of the individuals enforcing the law. As an instance take the liquor traffic; it has cost the world more misery than poverty, more tears than death, and yet the paid complainant is called an informer, a spotter, and is looked upon with contempt by all decent people.

As for myself, I do not choose to turn spotter to enforce any law. I want no blood money. Furthermore, I believe that a law for the protection of game that looks to the individual for enforcement, particularly if that individual is bribed by offer of half the fine, does not protect. I call the readers' attention to the State of Maine as a proof of this. Year after year the Legislature tinkered the game law, winding up each act with a bribe of half the fine, and what was the result? Why, game received no protection, and was fast being exterminated. Before it was too late the State awoke to the fact, and appointed enough wardens to insure fair protection, and since then game of all kinds has steadily increased.

Once more I want to call attention to my former statement that grouse and quail are in danger of being exterminated by bird dogs. I do not mean by dog and gun in the proper season. I mean that bird dogs are allowed to run at large in the breeding season of grouse and quail, and that these dogs take to the woods in pairs and hunt out and kill the chicks before they can fly. On Cape Ann, last year, the dogs killed nearly all the young grouse and quail. I have no selfish motives in making this statement. I simply desire to see the game protected. I live in the woods and know whereof I write, and no one should bar investigation, for the mischief may be widespread.

Essex county is one of the smallest counties in the State in territory, yet for the year 1888 the county paid to individuals, for domestic fowls killed by dogs, the sum of $1,641.30. The county also paid $951 for killing unlicensed dogs, and $2,087.93 for domestic animals killed or damaged by dogs, which goes to prove my statement that dogs are running at large on the Cape. HERMIT.

NOTES ON SNIPE.—A leading ornithologist, who has just returned from Florida, states that English snipe have been very abundant during the winter, but excessively poor. A party of three killed 91 of these birds in a day. Up to April 3 snipe were very scarce in the vicinity of Washington, D. C., and Laurel, Md. It is time for this species to make its appearance in large numbers. The few birds obtained are in fine condition. Dayton, O., April 8.—Snipe shooting continued good in the marshes and along the streams in this vicinity, until the cold snap Friday. Rolla O. Heikes and a party were out for a day's sport, and Heikes killed seven snipe straight with first barrel. He made a double shot with 12-gauge gun, 5½drs. of powder, 1½oz. No. 7 shot, killed both snipe, and found the distance to have been eighty-eight steps.—A. B.

GAME PROTECTION IN NEW YORK.—The Hoosick Valley (N. Y.) Game Protective Association has been organized with the following officers: Chas. H. Stockwell, Pres.; John Marshall, Treas.; F. G. Stewart, Sec'y, with a board of twelve directors from surrounding towns. This association is a new one, but has a membership of over 200, and includes some of our first citizens. Quail, white rabbits, bass and trout have already been deposited in good numbers.—C. A. JOHNSTON, Sec'y.

NARROWS ISLAND CLUB.—The annual meeting of the Narrows Island Club was held in this city Monday, April 8. The following officers were unanimously elected: President, D. G. Elliott; Vice-President, J. A. Hewlett; Secretary and Treasurer, Thos. W. Young. Other members of the Executive Committee, B. Dominick and J. B. Lawrence, Jr.

NOTES ON BIRDS.—A gentleman just returned from Quantico, Md., reports that he killed his first snipe there April 2. On the following day there were about two dozen on the marsh. The flight has not yet come. Most kinds of ducks are very scarce. The creeks are full of rook, or ruddy duck, *Erismatura rubida*.

BELLVILLE, Ont., April 4.—The annual meeting of the Belleville Gun and Rifle Club was held last evening. Last year the club employed an inspector to prevent shooting in the marshes, and this year they will add a fishery inspector to see that the laws are properly observed.

VERMONT GAME OUTLOOK.—We have had a very favorable winter for what little game we have here, and indications point to a good breeding season for the birds; so we may hope for an increased number next fall.—F. E. A. (Waterbury, Vt., April 1).

THE MICHIGAN LEGISLATURE has passed a bill to repeal the law prohibiting spring duck shooting.

Sea and River Fishing.

SAWDUST IN STREAMS.

Editor Forest and Stream:

"Piscator's" letter in your issue of Feb. 21 reads very well, but with all his dates and figures he does not prove to me that sawdust is as harmless as he would make it out to be. I would refer him to the opinions of men like Messrs. Jas. W. Milner, J. J. Brown, Arnold and Watson. They all state that sawdust is injurious to anadromous fish in one way or another.

"Piscator" asks that the name of some river be given where fish have been killed in numbers. I quote the name of Kouchibougnac. In the year 1885 thousands of dead trout were seen floating down the river. Now, what was the cause of this? Directly, sawdust. Great quantities of sawdust have accumulated in that river. At the time the trout were killed, for a few days the tides had been quite low. The sun had a powerful effect on the accumulation of sawdust exposed, causing it to heat and throw off gases. Then a big tide came in, stirring up the sawdust, spreading it all over the river, killing all fish that it reached.

This is not the only occurrence of the kind on this river. People who live in the immediate vicinity of the river informed me that on a similar occasion they watched the effect it had on the fish. When a big tide comes in after a dry spell of weather, and stirs up the sawdust, the water becomes the color of milk (or as if milk had been poured into it). The tide forces it along with it. Thousands of fish were seen swimming ahead of this milky substance, trying to keep clear of it; when they ascended the river as far as they could, to where a dam was erected across it, the deadly substance overtook them, and the result was as above stated.

I would state further, as a proof that fish would sooner live in a stream clear of sawdust than one infested with it, that in Tweedie's Brook, a branch of the Kouchibougnac, you can always get trout, and good ones, too, and the catch on that brook every year is very large, while on the Kouchibougnac the catch is small. Why is this? I offer as a reason—and a good one, too—that on the Tweedie Brook there is no mill, and consequently no sawdust.

Since "Piscator" has boasted of the magnitude of his Nova Scotia trout, I might state that I have known trout to have been taken out of one of our New Brunswick lakes weighing over 7lbs. and 8lbs. each. SPORTSMAN.

KINGSTON, N. B., March 30.

MASTIGOUCHE FISHING CLUB.—Montreal, April 2.—*Editor Forest and Stream:* The annual meeting of the Mastigouche Fishing Club, of this city, was held on the afternoon of the 1st inst., when the following members were elected office bearers for the ensuing year, viz.: Henry W. Atwater, President; E. H. Botterell, Vice-President; George Kemp, Treasurer, Herbert B. Ames, Secretary. Messrs. James Slessor, J. A. Cantlie, John Kennedy, I. H. Stearns and Robert W. Paterson, Directors. The report for the past year showed the club to be in prosperous condition, with a large, comfortably furnished club house, numerous boats and canoes, one of the most extensive and best fishing grounds in the Province, a substantial balance in the bank and no outside liabilities. The fishing (trout exclusively) has been exceptionally good the past season, and some fine catches have been recorded. The difficulty has not been in catching the trout, but in preventing visitors taking more than can be used advantageously. The Mastigouche house and lakes are open to the public with the exception of a small portion, which is reserved for the exclusive use of club members. The ice it is expected will be out of the lakes earlier this season than last, when the fishing season will probably open about the 24th of May. Several of the members expect to visit the club house about that time, and in a manner becoming the loyal subjects of Her Most Gracious Majesty Queen Victoria, celebrate the anniversary of her natal day.—H. W. A., President.

MUSKOKA TROUT.—The following notes are given in response to an inquiry: Salmon trout are abundant in the chain of lakes including Simcoe, Muskoka, Rosseau and Couchiching. They are fairly common in Gull Lake. Speckled trout are abundant in the south branch of the Muskoka, Moon River, Sharpe's Creek and the Maganetewan. Gull Lake, Trading Lake and numerous lakes adjacent to the Maganetewan abound in trout. The south branch of the Muskoka is broken by thirteen falls; the river is about ten miles wide and uniformly deep; its banks are heavily timbered. The Maganetewan is about 100 miles long, and its bed is thickly strewn with boulders, which make wading difficult in most places; its banks are densely timbered. The expenses of a round trip from the States have been estimated at about $100 a month. A gentleman starting from Toronto spent two weeks in the district at a cost of $20, including railroad fare both ways. Williamson & Co., Toronto, Ont., publish maps of Muskoka, and, doubtless, guide books also. Mercer Adams, of Toronto, has written a guide book to this district. Any of the general trout flies will be useful, bearing in mind that the Maganetewan has speckled trout of 5lbs. A gentleman who has fished extensively in the Northwest Territory finds a red-hackle more taking, two to one, than any other.

CAPE COD BROOK TROUT.—Wood's Holl, Mass.—On Dec. 8, 1885, I went to Waquoit and seined in the streams. Small trout from 2in. to 5in. long were plentiful and two large ones were found. On Feb. 8, 1886, I caught a trout in a fyke net in Great Harbor, Wood's Holl, above the guano factory. Jan. 12, 1887, I caught another large one in the same place. On March 21, 1887, I used a dip net to catch smelt at Waquoit in the evening after dark. In an hour or so I took about a hundred smelt and twelve trout, the latter full of eggs. The next morning I saw large numbers in the stream in the eddies. Trout are caught in these streams about Feb. 15, when fishing for smelt, none are found before. After July there are none to be seen until fall, when the small ones are caught. The small trout are not present every fall, but occur in the latter part of the winter with the large ones. Before we had a trout law the people began to fish for trout about the middle of February, or when the first thaw came. Some seasons they were plentiful; at other times not so many were seen. This season but few have come in.—VINAL N. EDWARDS.

MAINE FISH LAWS.—Sebago (Maine) waters received a little beneficial legislation the past winter. The advantage of one act, which prohibits all fishing in Roger's and other brooks for a term of six years, cannot be too highly estimated. These streams are natural spawning grounds for landlocked salmon and also plants of young fry have been made in them by the State; but their success has been handicapped by brook fishers who could not, or would, not distinguish between the silvery-sided young of the landlocks and redspot fingerlings. Another act prevents the throwing of sawdust, slabs and other refuse matter into the streams and waters tributary to Long and Sebago lakes. So general has been this practice that in certain parts of Long Lake are beds of sawdust, acres in extent and of a depth of several feet. Although the season is a month in advance of last year the ice still holds firm excepting at the mouths of brooks. BLACKSPOT.

GREAT CATCH OF RED SNAPPERS.—Capt. T. A. Cromwell, of the Gloucester schooner Mary Fernald, reported a great catch of red snappers, *Lutjanus blackfordi*, off Egmont Key, Dec. 29, 1888, while bound for Port Tampa, Fla. They first caught a few groupers for bait, and then threw out deep-sea lines; in a few moments the sport was immense. The crew of fifteen, each man fishing with two lines, caught 18,000lbs. of red snappers in a few hours. They shipped them from Port Tampa. Capt. Cromwell stated that the fish were very plentiful; the channel to Port Tampa is deep, there being nowhere less than 16½ft. of water at half-tide. The facilities for shipment from Tampa are good and improvements are now in progress. Port Tampa promises to become an important fishing center in the near future.

LAKE ERIE WHITEFISH STATION.—By an error of the types we were made to say, last week, that the capacity of the hatchery will be five million eggs instead of five hundred millions. The establishment will be located on Peach Point, in the immediate vicinity of natural spawning grounds of the whitefish. About one-half acre of ground will be given to the Government by Mr. Doller and other public-spirited citizens.

TROUT FOR WYOMING STREAMS.—Mr. D. R. Cassidy, Fish Commissioner of Carbon county, went to Laramie recently for his quota of trout fry. He will plant them in tributaries of the Upper Platte, Big Creek, Cow Creek and other suitable streams.

Explorations in Gulf of Mexico.—Advices from Capt. A. C. Adams, commanding the U. S. Fish Commission schooner Grampus, dated at Fort Tampa, Florida, March 29, contain the following interesting items about the collections: On March 10, in north latitude 25° 44′ 32″, west longitude 82° 26′ 15″ in fifteen fathoms of water, thirty-two snappers and two groupers were caught. The dredge brought up broken shells and coral and a liberal amount of black gravel. On March 23 a spotted porpoise was captured, of which the skin and skeleton were preserved in brine. Capt. Adams states that he has not seen a whale since the vessel has been at work in the Gulf. Porpoises have not appeared to be abundant, and all kinds of sea birds have been very scarce. He has seen no great number of small surface-swimming fishes toward the outer ends of the dredging lines in deep water, although in eight or ten fathoms mall herring-like fish have been seen in large schools.

Size of Bluefish.—*Editor Forest and Stream:* What is the weight of the largest bluefish ever caught in New York waters?—F. D. P. (New York). [The author of the Zoölogy of New York states that he has seen bluefish weighing 20lbs., and has been assured by reliable persons that they have been taken of the weight of 35lbs. The bluefish inhabits all the tropical and sub-tropical seas, and is said to reach a length of 5ft. A specimen of that size should weigh about 25lbs.]

On reference to our advertising columns, it will be seen that the well-known dry goods firm of R. H. Macy & Co. has added a complete line of fishing tackle to their stock in trade, apparently with the object of bringing more fish to their net.

Fishculture.

THE MENHADEN INDUSTRY.

Editor Forest and Stream:

I regret the necessity of asking your indulgence and the space in your valuable paper to answer an article in your issue of Feb. 28, dated at Washington, over the signature of Arthur Martin. This gentleman is unknown to me, and so far as I am able to learn, his whole aim seems to be to cast reflections upon any men who express their honest convictions as to the necessity of restrictive laws to govern ocean fisheries, and expresses his great surprise at the audacity of any man who takes occasion to express his opinion through the press in relation to the operations of the State of Maine's restrictive fish laws. He will no doubt be much more surprised when he reads the recent action of our Legislature where the House has voted four to one for the repeal of the lobster law as well as a change in the mackerel law. These changes were predicted some time ago and were met by the ridicule of the gentlemen who were instrumental in their enactment and amendment during the past ten years. It has also been prophesied some years ago that the Maine Legislature would in time wake up to the situation and realize what damage the restrictive laws relating to our sea fisheries had inflicted upon the inhabitants of the towns bordering on the coast. Instead of building up the many industries which are dependent upon the fisheries for their existence, it has deprived thousands of men of employment and rendered hundreds of thousands of dollars of property valueless, and prevented the development of our fisheries to an extent which is almost incalculable. The people of our State, and the Legislature as well, have come to the conclusion that they have been following a false policy, and have turned over a new leaf, which indicates that they mean to retrieve as far as possible the injuries they have done by a self-inflicted blow.

It is presumption in the highest degree for the State of Maine or any other State to attempt to regulate the sea fisheries by law. Let any man take a trip from the capes of Virginia to Eastport, Maine, and view the great pastures in which these migratory fish are free to roam, and when we consider that this is a very small part of two-thirds of the water surface of this globe, and that these fish are constantly going and coming and changing their course, influenced only by natural law, and when we remember their power of reproduction, figures fail to render any aid to compute the abundance of the finny tribe. Then, when we study the appearance and disappearance, the plentifulness and the scarcity of the different fish upon our own coast, we become fully convinced that the operations of man with all his appliances has not, cannot, and will not ever perceptibly diminish their numbers. That they are plenty and scarce in the present and in the past we do admit, but that it can be attributed to the efforts of man we do deny. In support of this assertion we have the testimony of the highest scientific authority of this and other countries. There should be a distinction drawn, however, between the coast fisheries and inland fisheries. Ponds and lakes no doubt would show a perceptible diminution in the numbers of their fish if allowed to be over-fished, and we have no objection to any law which may be enacted for their preservation, but when the Legislature attempts to compare the great ocean to some pond in the woods and make the same laws apply, we do not consider it at all consistent, but entirely unnecessary. I will not occupy more space at this time to further discuss this question, but pass to the criticism of the article written by Mr. Martin.

In the fourth paragraph he carries the impression that our sister States (he might add Nova Scotia as well) look with admiration and satisfaction on the course of the State of Maine in the enforcement of the fishery laws. No doubt it would be better for our sister States and Nova Scotia if every fishery on our 3,000 miles of coast line were entirely abolished. It would give them the monopoly of the fish market. Higher prices would prevail, and they would have the use of our experienced fishermen to develop their fisheries which has already proved to be one of the alarming effects of our ill-advised restrictive laws. More than once has the hand of neighboring States and Nova Scotia been seen at work on our Legislature helping to pass laws to cripple us and help themselves.

In the next paragraph he intimates that there is a three-mile law now in force, which carries the impression that fishing is prohibited within three miles of the shore; this is not the case. The present law only prohibited the taking of certain species in rivers and bays where the entrance to the same is less than three miles in width. That this law was enacted about ten years ago is a fact, although it has been tinkered and amended by about every Legislature since. Mr. Martin also informs us that about the same time menhaden from known causes ceased to visit our shores. It would be a great satisfaction to the scientists of our country, as well as to the practical fishermen, if he would explain to us why the menhaden left, and why they returned in such abundance the past season, and if he will cite us any instance where the menhaden men in our State have operated in defiance of the statutes. If he can do so it would be more than any other man has succeeded in doing yet, to my knowledge.

In the sixth paragraph his personal allusion to me is hardly worth referring to, as I authorized no such statement as he attributes to the Kennebec *Journal* or any other paper at that time, although I fully agree with the comments referred to, and the recent acts of the Legislature seem to justify such predictions, notwithstanding the old party who have always fought the coast fishermen at every opportunity have been at Augusta many times during the present session to defend their pet laws, which they claim have worked such wonderful benefits to our State, although the facts do not bear them out.

In the following paragraph they seem to be very much exercised because I was summoned to court as an expert to explain the difference between a gill-net and a haul shore seine, which I did to the satisfaction of the jury, and they acquitted my neighbor who was complained of.

Would it not be better to abolish the fish warden system and expend one-half of the money it now takes to pay them and restock our inland waters and let everybody fish and offset it, if necessary, by artificial propagation? Fishing has always been one of the greatest inducements our State has to offer the many thousand tourists who annually visit us, and no restriction should be cast in the way. Especially are these restrictive laws annoying when we consider the many amendments which place beyond the mind of the average fisherman the ability to correctly construe their meaning. As a matter of fact it perplexes the best legal minds, and no two, as a rule, construe the meaning of these laws the same. For the sake of argument I admit I was interested in the management of an oil factory last season after Aug. 15, which I believe I had an undoubted right to be, and I am not exempt from a summons to testify either in court, before Congress, or the Legislature. If Mr. Martin will investigate he will not feel so sure as to his position that his views have the entire indorsement of public sentiment.

Another delusion Mr. Martin is laboring under (which is common to many writers) is that menhaden as they swim are food for any food fish on our coast. Investigation has proved conclusively that few food fish have the ability to prey upon the menhaden or subsist upon it as a daily food; when food fish partake of menhaden it is generally after they have been taken by man and converted into bait. During the ten years' absence of the menhaden from the coast of Maine, it was proved beyond a doubt that the food fish are not dependent upon the menhaden as a food, and that their plentifulness or scarcity does not in any way influence cod, hake, haddock, or any other food fish, as during this ten years' absence of the menhaden, cod and other food fish have been as plenty as ever on our coast, and the markets in many instances have been glutted. Neither is menhaden the dependence of the coast fisherman as a bait supply. Herring, which are found most every month in the year at some point along our coast, are now considered a better bait and are used in preference to menhaden. In view of all the facts the unprejudiced mind must conclude that the only proper use for the menhaden is to be converted into oil and guano, and its capture as now carried on does not destroy or in any way affect the supply of food fish, and restriction by the Legislature is unnecessary and uncalled for.

L. Maddocks.

Boothbay Harbor, March 21.

RESULTS OF FISHCULTURE.

Editor Forest and Stream:

The following facts bearing on the beneficial effects of fishculture are nothing new, but I do not remember seeing them put together before. They speak for themselves. The average catch of food fish in the Great Lakes in 1886 and 1887 was 5,232,947lbs.; the catch in 1888 was 8,870,780lbs.; gain 3,637,833lbs. The catch of shad from Connecticut to North Carolina in 1880 was 4,140,986 fish; the catch in 1888 was 7,000,474 fish; gain 2,859,488 fish. The average cannery catch of salmon in the Sacramento River in California in 1875 and 1876 was 5,205,102lbs.; the average cannery catch in 1881, 1882 and 1883 was 9,596,984lbs.; gain 4,391,882lbs.

RECAPITULATION.

Gain in fish catch in Great Lakes	3,637,833lbs.
Gain in shad catch (rating shad at 3lbs. each)	8,578,464lbs.
Gain in Sacramento salmon	4,391,882lbs.
Total gain	16,608,179lbs.

The fact that all these species of fish were on the decrease when their artificial culture on a large scale began gives an added significance to the above figures.

Livingston Stone.

Baird, Shasta Co., Cal.

GOVERNMENT FISH HATCHERY IN COLORADO.—Work will soon begin on the new station at Leadville, Colorado, the site of which was selected in October last, by Col. John Gay, inspector of U. S. Fish Commission stations. The location of the hatchery is in the vicinity of the Evergreen Lakes and near the fishcultural establishment of Dr. John Laws. The appropriation for the buildings and appurtenances is $15,000, which will be available July 1. The permanent structures will be of red sandstone. There are numerous springs near the hatchery, but the main supply of water will be obtained from Rock Creek and, to insure the purity of the water, the Government obtains a reservation including the sources of the creek, measuring a half mile in width and extending from the hatchery site to the summit of Mount Massive, where the elevation exceeds 14,000 feet. Colonel Goodell has aided the project materially by relinuiqshing his right to certain placer claims situated upon the site chosen and by urging members of Congress to make the necessary appropriation. The Colorado hatchery will be sufficiently large to furnish trout fry for the whole Rocky Mountain region. The species which will receive attention principally are the Rio Grande trout, the Utah trout, and the red-throated trout. Doubtless brook trout, rainbow trout, lake trout and landlocked salmon will continue to be bred, as they have shown their ability to exist and thrive even at considerable elevations in this State.

SHAD REPORTED IN COLORADO RIVER.—The Commissioner of Fish and Fisheries, Col. McDonald, has been informed by Mr. J. J. Gosper, formerly commissioner of fisheries of Arizona, that reports have reached him of the capture of fine shad by Indians and others at and near Yuma, Arizona. These are supposed to be the result of the plantings several years ago by the U. S. Fish Commission. The Albatross will investigate this subject before leaving the Gulf of California.

Keokuk, Iowa, March 12, 1888.—*J. F. Breitenstein, Esq., Keokuk, Ia.:* Dear Sir: The box of U. S. C. Co. paper shells that I received from you last fall I tried, and found them to be all that you claimed, and better than any shell I ever used, not one of them missing fire. Yours truly, (Signed) T. J. Lowrie.—*Adv.*

Paulding, O., Nov. 4, 1888.—*United States Cartridge Co., Lowell, Mass.:* Dear Sirs: I recently used some of the U. S. cartridges which my father has had for about ten years, and they shot well at 50yds. (.22-cal.) and without keyholes. Yours truly (Signed), Loren Kirk.—*Adv.*

Names and Portraits of Birds, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by Forest and Stream.

The Kennel.

FIXTURES.

DOG SHOWS.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. George H. Hill, Superintendent, 34 Monroe street, Chicago, Ill.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Francis S. Brown, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary pro tem., Mill's Building, New York, N. Y.

BOSTON DOG SHOW.

The fifth annual dog show of the New England Kennel Club was held at Boston last week. Although the number of entries was not up to that of the two previous years, the quality of the animals shown was of a very high order, and we do not remember a show where it has been excelled. As we have before said the first shows of the season receive many entries that are never heard from again, and shows held later are at a disadvantage in this respect. The weather during the show was somewhat sour, and, in consequence, the attendance was not what it would have been with bright, sunny days. Nevertheless, the building was fairly well filled most of the time, and on Thursday it was uncomfortably crowded. John Read superintended the show, and, as usual, gave general satisfaction to all. The management throughout was excellent, except that in benching the dogs exhibitors were allowed to bench their exhibits together, even when they were shown in different classes. We have often pointed out the many serious defects in this system, and had strong hopes that the praiseworthy example of New York in this respect would be followed by every show. The vexatious delays and serious inconvenience of the system are not nearly counterbalanced by the very small amount of benefit derived, and it is to be hoped that, at large shows especially, we shall see no more of this indiscriminate huddling together of dogs of different classes.

It was mainly from this cause that the judging rings were so poorly served, and in consequence several classes and nearly all the specials were not judged until the second day. The managers as usual devoted their time to their duties and nothing was left undone to make the show a success. The annual dinner on Tuesday to visitors and members of the press, was a very enjoyable affair and added not a little to the reputation of the club for hospitality. Spratts Patent benched and fed the dogs in their usual good style. There was less kicking at the decisions than is usually the case, although some of the awards were not well received. There was no cussing of the judges, however, and the criticisms offered were couched in gentlemanly language. On Thursday there was a slight fire in one corner of the balcony over the hall. Some one struck a match and fire at once caught the lint on the hangings and quickly spread over the surface. A few of the bystanders kept cool and by asserting that there was no possible danger a panic was averted. Meantime Mr. Oldham sprang to the rescue and covered himself with dust and glory by whipping out the incipient conflagration with his nice new dog show cap, which was about the only thing that suffered any damage.

Judging began shortly after 11 o'clock and was not finished until after noon of the second day. Mr. F. Gresham of London, Eng. judged mastiffs, St. Bernards, collies, fox, Irish, Airedale, Skye, Scotch, Dandie Dinmont, Yorkshire and toy terriers, toy spaniels and the miscellaneous classes; Mr. H. W. Smith, Worcester, Mass., deerhounds and greyhounds; Mr. Chas. H. Mason, New York, Newfoundlands, English, Irish and Gordon setters, all spaniels except toys, poodles, pugs and Italian greyhounds; Mr. J. H. Winslow, Philadelphia, Pa., Chesapeake Bay dogs and pointers; Mr. A. C. Krueger, Wrightsville, Pa., beagles, basset hounds, dachshunde and foxhounds; and Mr. J. H. Newman, Boston, the remaining classes.

MASTIFFS—(MR. GRESHAM).

The quality of these classes was quite equal to last year's show. The challenge class for dogs brought out Minting and Ilford Caution; the last named was not in the best of condition, but this did not affect the result, as Minting's better quarters, stronger hindlegs, smaller ears and more massive body are always too much to counterbalance the points that Caution gains in muzzle. Minting was in superb condition. The challenge class for bitches contained no entries. In the open class for dogs Alonzo and Sears' Monarch again met with the same result as at New York. The decision was correct, as Alonzo is not only the better dog, but he wins with a number of points to spare, being better in muzzle, better in skull and wrinkle, and decidedly larger and stronger in bone. Ilford Caution II. was rightly placed third. He is too long before the eyes and would be improved by depth and width of muzzle. His other defects are rather large ears, eyes of lighter hue than is desirable, forelegs not straight, slightly weak in front and not just right in feet. The set of his forelegs is not correct, but he has good shoulders, chest, back, loin and hindquarters, and he moves fairly well. Benjamin Franklin, reserve, was vhc. last year. Defects: Muzzle too long and light; ears neither black nor perfect in carriage; hindlegs too straight. In addition to these defects he is light in bone and appears to have a bad temper. Wyoming Count, hc., was fully described in the Lynn report. Ashmont Major, unnoticed, should have had a card. We would have placed him vhc. The Lynn report gives his defects. Jumbo, unnoticed, is light in bone, leggy, shelly, light in eyes and long in face. Turk, unnoticed, is bad in head, light in eyes, long in coat and very throaty. Leo Victor, unnoticed, is plain in head, leggy, straight behind and shallow in middle. Mack, unnoticed, is houndy in head and ears, leggy and light in bone. Prince, unnoticed, is a big, leggy animal of wrong type. He is entered as having no pedigree, and his appearance does not belie the information. He was about the worst in the class. Buff of Killingly, unnoticed, is long in head, light in eyes leggy and straight behind. Linden King, unnoticed, is a better dog than Wyoming Count, and should, we think, have been vhc.

In bitches The Lady Coleus and The Lady Dorothy, both winners at New York, were rightly placed over Madge Minting, that was fully described in the Lynn report, which we here quote:

"Bitches brought out a new one in Madge Minting, the best of Minting's get that we have seen. While she is a fairly good puppy her enthusiastic owner must not allow his admiration for her to get away with his better judgment. The bitch fails just where a dog to be first-class must be fairly good—in muzzle; her ears are large and not well carried, she stands low in front in proportion to height at hindquarters and is crooked in front. Large and ugly dewclaws give to her hindparts a rather bad appearance, and she lacks in wrinkle and in character. She is a large and strongly built one, with good chest and loins, strong quar-

ters, a fairly good skull, average amount of bone, good color and coat, and she moves well. That she will win other prizes if shown is a moral certainty, but when she gets into select company she will, we think, be defeated." The bitch is but twelve months old, yet we think that she will never be better than she is now. The more cheek muscle she puts on, the worse she will seem to be in muzzle, which is already too small in proportion to the size of her skull. The Lady Beatrice, hc., was second at Troy. Empress III. and Princess Beatrice, reserve and vhc., respectively, are well-grown young bitches that lack in head, ears, eyes and shortness of limbs. Madge Minting was decidedly the best of the three puppies that were shown. Lady Pamelia is faulty in foreface, light in eyes and she is throaty. It is not at all probable that she will ever be a winner in the class for all ages. Taken altogether these classes were well judged.

ST. BERNARDS—(MR. GRESHAM).

The quality of these classes was about the same as at New York. Otho, looking fairly well, was the only exhibit in the challenge class for rough-coated dogs. Gemma I. and Miranda were the entries in the corresponding bitch class, and the Arlington representative was again a winner. It is a close thing between them, but in their present condition we prefer Miranda. The open class for dogs was a large and strong one for this country. Ben Lomond, in faultless condition, won easily enough from Monte Rosa and Plinlimmon, Jr. The description of him in the New York report is correct in one and every particular. Monte Rosa, second prize, was not in good condition, being light in flesh and showing indications of having recently shaken off the trouble from which he suffered in the winter. Notwithstanding that he was free from mange and in fifty per cent. better condition than a number of animals that were squeezed into the prize lists at Albany and Utica, a protest was lodged against him on the ground that he was mangy. This was overruled, and rightly so; but Monte Rosa should, we think, have been pegged back and the award given to Plinlimmon, Jr., that was third, or to Scotch Bonivard, that got the reserve. Our opinion of these winners has been expressed so often that we need only say that Plinlimmon's houndy head is beaten out of sight by Scotch Bonivard's fairly typical one; and that in body, legs and feet Scotch Bonivard loses to Plinlimmon in the same proportion that Bonivard gains in head. Kastlehorn II., vhc., is well known to the St. Bernard fancy, and need not again be described. Alpine Chief, vhc., is another old face. Gruss Bayard, hc., was described in the Lynn report. Huguenot, c., is fairly good in head but bad in eyes, narrow in front, light in loin and not well shown. Merchant Prince, c., is fairly good in front, but wrong behind. We thought him worth at least another letter. Count, c., is not good behind and is small in proportion to size of his skull. We would have given him hc. Tasso, hc., has been before described. Wallace II., unnoticed, is not a show dog in any particular, and the same may be said of Pedro, that was also unnoticed. Don Cæsar, another of the unnoticed division, is coarse in muzzle and was shown lame.

Saffron and Lady Wellington, first and second in the bitch class, held the same positions at New York, on which occasion we criticised them fully. Third was given to the Galaxy Kennels' Una. Head fairly good, but lacking somewhat in size and a bit full in cheeks; muzzle would be improved by a little more depth; eyes, ears and expression much above average; shoulders and position of forelegs not quite right; good, massive body; coat showing slight curliness; feather and brush not quite first-class; minus dew claws; a long, low and roomy specimen, of better than average size. Duchess of Heathfield, reserve, is rather coarse in head, wrong in markings, straight behind and not good in coat. Recluse, vhc., is well known. Florida, hc., was described in the Lynn report. Stella, hc., is not right in coat and is cheeky and defective below the hips. Chrysa, c., is plain in head and undersized, and is not right behind; she stands on good forelegs. Linda, c., is not first-class at either end, and her coat is wrong. Yum Yum, c., is pointed in muzzle, wrong in ears, slightly cow-hocked, not good in tail and out of coat; she is good in legs and feet, and fairly good in body. Juliet, unnoticed, is small and plain in head and short in ears. Alpine Maid is defective in head and was not in good condition. Puppies were not a good lot, and none of them will be heard of in the future.

Hector, that has recovered from the trouble that laid him low at New York, won the challenge prize for smooth-coated dogs without opposition, and later on in the day secured the special for best smooth-coated dog or bitch of all classes. Daphne held the same position in the bitch class, and took the cup for the best American-bred smooth-coated bitch. The open class for dogs found the New York winner, Beauchamp, an easy winner. The Earl got second prize. Defects: Forehead too prominent and the whole head too long and narrow, color of eyes too light, stop and below the eyes not nicely chiseled, would be improved by width of chest and massiveness of body, hocks a trifle in and second thighs rather light, coat rather too long, stands back a trifle at the pasterns; a large dog that stands on good feet and moves fairly well. Duke of Brunswick, third prize. Defects: Muzzle somewhat shallow, and lips not well hung, expression rather sour, slightly underhung, chest too narrow and legs not in good position, does not stand perfectly straight in front, the feet having a tendency to turn outward and pasterns not sufficiently erect, quarters light and hocks straight, is rather light in bone. Winchester, reserve, has not improved much on his puppy form. Albert Plinlimmon, unnoticed, is a well-bred one, bad at both ends. The balance of the class were not a good lot. All of the winners in the bitch class are well known. They were Burton Belle, Monastery Myrtle and Monastery Mercedes. Chequasset Chartreuse, vhc., is not good in head. She is also light in bone and neither first-class in legs nor feet. Puppies were as usual a weak class, and it looks now as if St. Bernard breeders in this country are unable to produce a good puppy, either rough or smooth. Earl and Duchess of Heathfield, the first and second prize winners in the novice class, have already been described. We like Kastlehorn II., third prize, about as well as either of them. Princess Gilda, hc., is wrong in foreface and slack behind the shoulder.

NEWFOUNDLANDS—(MR. MASON).

New York Lass was the only one in this class to put in an appearance, and she was given first. This was a streak of luck for her, as Prince George turned up afterward, but was too late for the judging.

DEERHOUNDS—(MR. SMITH).

There were seventeen entries in these classes, all but one owned by Mr. Thayer, and a grand lot they were. The order in the challenge classes was Chieftain, Highland Laddie and Bran in the dog, and Wanda and Ramona in the bitch class. In the latter award it was touch and go, as the judge hesitated some time before giving his decision, and had he reversed it but little fault could have been found, as Ramona is certainly a grand one. In the open dog class, the judge made a mistake in placing Clansman over Robber Chieftain. The latter is not first-class at all points, but he has that high-bred, aristocratic appearance so characteristic of the breed, without which the deerhound is simply a "big dog." Clansman lacks this essential quality, and, although large and well formed, he does not come up to our idea of what a first-class specimen should be. He is also coarse and plain in head, and does not move with that natural dignity we are accustomed to see in first-class representatives of the breed. The judge probably thought that there were but two prizes to be awarded in this class, which will account for the vhc. given to Duncan. Berga and Pride of the Heather were the winners in the bitch class. Theodora and Lorna Secunda were marked absent in the judge's book, and as Highland Lassie, also entered in this class, did not receive mention, we conclude that she was also absent. We failed to find her in her stall, as well as the other entry, Bones. We did not visit the deerhound ring until the judging was over, and the two puppies were about to be returned to their stalls. A short examination of them showed that the bitch, placed second, is away ahead of the dog in merit. The latter is a big fellow, but not a promising one; his mouth alone will prevent his winning in good company. The bitch looks small beside the dog, but she is well formed, full of quality and bids fair to turn out something that will do credit to the kennel she represents.

GREYHOUNDS—(MR. SMITH).

With the exception of Cassandra and Balkis there was nothing good in these classes. The winner in the open class for dogs is a well known third-rater that need not be described again. Second prize was withheld for want of merit, and we would also have withheld the third prize, as Ned is coarse in skull, weak in muzzle, large in ears, wrong in set of legs, crooked in front, weak in knees, straight in hocks, slab-sided, shallow in loin and light in bone. Eph, c., is wretchedly bad in shoulders, legs and feet and very light in bone. He should not have been noticed. Bess was alone in the bitch class. We do not know why she was given a c. card, as she was, leaving out of the question her numerous defects, wholly unfit for the show bench. The well known winners Douglas Fleming, Hazelhust and Harmony were entered, but not sent.

CHESAPEAKE BAY DOGS—(MR. WINSLOW).

This class was assigned to Mr. Mason, but he refused to judge them upon the ground that he was not familiar with the breed, and for some time it looked very doubtful if any one could be found to pass upon their merits. Finally, however, Mr. Winslow kindly consented to act, and after a careful examination placed Romp, Rum and Ripple in the order named, the other entries being absent. Our choice for first place was Rum, with Romp second and old Ripple third. There is no recognized standard for the breed, and there seems to be more of a difference of opinion among breeders than there should be. We have conversed with many fanciers of the breed, and, while they do not agree in many points, all appear to think alike in some respects, and we are pleased to note that the points insisted upon by all as most essential are those that are most important for him to possess, when we take into consideration the character of the work he is expected to perform. All with whom we have conversed upon the subject agree that the Chesapeake Bay dog must first of all possess a stout heart, or, as a recent writer puts it, "grit," and we are assured that it is very rarely that a well bred specimen is deficient in this respect. Added to this he must have the size and strength absolutely necessary to force his way through the mud and dense reeds and grass of the duck marsh and rough water often filled with broken ice. It is also all important that his coat be impervious to water. His legs must be heavily boned and his feet large and somewhat spreading. Taking this for a standard, and ignoring all the nice distinctions as to exact shade of color, curl of coat, etc., that are bones of contention among fanciers, we select Rum for first place, as his good size, heavily boned legs, good feet and fairly good coat are much better as a whole than the same points are in Romp. She may have a trifle the best of it in coat, but if so it is very slight, while in the other points he is far ahead. Indeed, Ripple has the advantage over Romp in size and substance, but she is getting old, her coat is not in good condition, and her mouth—never good—is now very bad. Romp is a very nice bitch of fair size, well formed, with a good coat and is well bred, being full sister to Ripple and four years younger.

POINTERS—(MR. WINSLOW).

In quality these classes were better than last year, and, taken as a whole, they were well judged. Nick of Naso was absent from the challenge class for heavy-weight dogs, and Graphic and Lad of Bow were thus left to fight out the battle. Lad of Bow has youth on his side, but Mr. Heath's dog is decidedly the better specimen, and the issue was never in doubt. The corresponding class for bitches contained two good ones in Mealy and Lass of Bow. Both are well known and have been fully described in these columns. Mealy does not stand as true in front as she once did, and she has gone a bit wrong in feet. We cannot agree with the judge that she has grown throaty and coarse in tail, for she has always had these defects. Lass of Bow has the best of it in head and neck, and also in feet and set of legs. In chest, back, loin, stifles, bone, strength, hocks, position and carriage of stern, action and true pointer character, Mealy is decidedly ahead, notwithstanding that she begins to show age. We would have placed her first on this occasion.

Duke of Vernon was absent from the open class for heavy-weight dogs, and the competition was quickly narrowed down to those old competitors, Brake and Pontiac. We have always insisted that Brake was the better dog, and we are glad to at last see him occupying the position to which he was fairly entitled at Troy, Albany and Lynn. Beaufort H., that was fully described in the Lynn report, was far below the first and second prize winners in point of character and quality. Jimmie, the Jersey brown dog, was absent, and Tory White was transferred to the light-weight class. Peter, vhc., is coarse in head, wrong in carriage of ears, leggy, throaty and coarse throughout. A c. card would have been a plenty for his good legs and feet. Prince, hc., is not a show dog, and the judge must have been in a generous turn of mind when he gave him the card. Ranger, unnoticed, is long and houndy in ears, coarse in head, bad in eyes, and lacking in quality throughout. First in the open class for bitches was won by the now well-known Belle Randolph, whose condition reflects the greatest credit on her owner. We have previously pointed out every defect there is in her. Devon Nell, placed second, is a better type of large-size pointer than Belle Randolph. We would have placed her first, notwithstanding that her condition was not of the best. Westminster Sal, third prize, is a very poor specimen. Defects: Brow too full; stop not well defined; gooseberry eyes; hang of ears not correct; muzzle below the eyes not clearly cut; throaty; not perfectly straight in front; feet defective, being too small and inclined to turn outward; a trifle slack in back and too round in barrel; loin flat; tail too long and not well carried; hindfeet close together when in action; position of forelegs not perfect; a coarse specimen that is beaten out of sight by a good one. Rosa Croxteth, vhc., is throaty, bad in eyes, not first-class in head, leggy, light in bone, and neither first-class in legs nor feet.

Naso of Kippen was alone in the light-weight challenge class, the only other entry, Bang Bang, being absent. It is a pity to see this grand little dog shown in such poor condition. Surely he is worth proper care and attention. Queen Fan, a champion in name, but not in looks, was fortunately unopposed in the corresponding bitch class. She is a terribly bad one that will be defeated the first time she meets a pointer. The open class for light-weight dogs showed some quality. Duke of Hessen, who was second to King of Kent at New York, came out in better condition than when last shown, and won. Behind the withers King of Kent is decidedly the better dog, but in front he loses to Duke of Hessen, who has a much better muzzle, straighter legs and cleaner shoulders. As stated in the New York report, there is lots of room for honest difference of opinion in regard to their merits. Third prize was given to Sir Anthony, that was fully described in the Lynn report, and the reserve card was given to Tory White, that was given first at Rochester. Here we cannot agree with the judge, as Tory White is much the better in head, ears, shoulders, back, loin, hindquarters and carriage of tail, and shows far more true pointer character than his more fortunate competitor. We feel quite sure that if the judge will give them a more careful examination next time he will coincide with our opinion and give his vote for the son of old Tammany. Sir Guy, hc., is coarse throughout and stands badly. Sir Bang, hc., is good in ears, but bad in head, and like nearly all of Bang Bang's get, is very throaty. Launcelot, vhc., is a better dog than Sir Anthony, that was third. A careful description of this dog was given in the Lynn report. In bitches, Bloomo, the New York and Troy winner, and Stella, that was third at New York, got a step higher and was second, while Sally Brass II., who was fourth at New York and second at Troy, was third. These bitches are well known, and all we need say is that Stella has improved considerably on her New York form. Naso's Belle, reserve, was, we think, wrongly placed over Daisy A. and Daisy. The last named is most decidedly a better bitch, and Naso's Belle is not at present in show condition.

Dare-Go, first in dog puppies, is the best we have seen shown by Mr. Parker. If all goes well with him he will be heard from again. Westminster Cato, second prize, is a bad one. Defects: High-set ears, bad eyes, throaty, long light loin, big feet, moderate stern. Will never be a show dog. May-Go is not so good in hindquarters as her kennel companion Dare-Go, and will not be his equal when developed. Westminster Ben and Daisy Goldwin were absent from these classes. Sir Hector, first in the novice class, is a coarse dog and was in bad condition. He was described in the Lynn report. Spot Dash should have been an easy winner, with Say second and Sir Hector third. Say is not quite a show bitch, but she is better than Sir Hector. All are in the same ownership, so that the placing of them did not matter in one sense. Westminster Cato, who was second in the puppy class, was outclassed. The special prize of $25 offered by the Westminster Kennel Club, donors not to compete, was won by Duke of Hessen, owned by Mr. F. R. Hitchcock! The kennel prize was awarded to the Westminster Kennel Club's team, consisting of Ladd and Lass of Bow, Naso of Kippen and Westminster Sal. Mr. Heath's team was made up of Graphic, Mealy, Bloomo and Sally Brass II. Graphic had had no trouble in beating Lad of Bow, and the judge must have considered it a very close thing between Lass of Bow and Mealy, because when these bitches met at Richmond he gave first to Mealy over Lass of Bow. We therefore cannot exactly see how Naso of Kippen, with his coat all stained with mange cure, and Westminster Sal, that is not a show bitch, could be considered better than Bloomo and Sally Brass II., that were shown in faultless condition. Mr. Winslow spent a lot of time over the class, and in our opinion he got wrong at the finish.

ENGLISH SETTERS—(MR. MASON).

There were forty-three entries in the English setter classes, and all were present with the exception of Roger, Katy Berwyn and the puppy Prince Victor. The quality in the aged class was very good, as a glance at the prize list will show. Mr. Mason, it is well known, is not disposed to be very liberal with recommendation cards, and as only six of the party escaped mention, he evidently thought well of them as a whole. In the challenge class for dogs, Rockingham, looking fairly well, had rather an easy win over Royal Prince II. Neither is good in shoulders, but Rock has the best of it in this respect, as he can gallop while Prince cannot. In the bitch class the order was, Cora of Wetheral and Daisy Foreman. Both were looking well. Count Howard fairly distanced his competitors in the open dog class. He was a trifle thinner in flesh than when we last saw him, and has improved in coat. Lindo, greatly improved, was placed second, with Gus Bondhu third. Gus was looking well, and is carrying his years bravely. He also secured the stud dog prize, and his daughter Belle won second in the bitch class. Reserve went to Royal Kent, that was commended here last year. It will be remembered that we had a good word to say for him then, and thought him badly treated. He has just returned from a winter's hunt in the South, and was not in show condition. His good head, chest, legs and feet won him the place, in spite of his ragged coat and lack of flesh. His kennel companion, Kent II., in even worse condition, was given vhc. This dog is not yet two years old, and if he comes out next year in good form he will undoubtedly be higher up. He should not have been shown in his present condition. Pride of Dixie II. and Bow Bondhu, both vhc., were respectively second and third at Lynn. Prince Gladstone, hc., was second at Philadelphia last year under the name of Blue Prince. Storm, also hc., has just a fair head with good legs and feet. He is weak in loin, straight behind, and was shown too thin. The remaining hc. card went to Foreman, Jr., a nice little dog with a fair-looking head, very well carried. We had no opportunity to examine this dog closely, as he was out of his stall when we called. Only one commended card was given. Jeff P., the winner of it, is a fairly well-made dog, short in bone and with a curly coat. In the bitch class Princess Beatrice II. had an easy win. Second went to Belle, a very nice bitch that will do to show again. She has a good head, nice shoulders, good chest, body, legs and feet. She is not cut out enough below the eyes, her eyes are too light, and she was also a little short in coat and feather. Third went to Eudora, an old favorite of ours; she was looking well. Zona secured the reserve. This bitch has greatly improved in condition, notwithstanding the knocking about she has had at the different shows, and her handler deserves great credit for bringing her out in such good shape. Chautauqua Bell, vhc., is well known. Queen F., also vhc., is just a fair bitch with good loin, legs and feet, she is not clean cut under the eye, and is too round in body. Lady William, hc., is not good in head and might be better in chest; she is good in body, loin and quarters, legs and feet, and is one of the best movers in the class; she would not have disgraced another letter. Royal Myrtle, also hc., we liked as well as Lady William. She is plain in head and short in coat, but in other respects she will do, and she looks every inch a worker. Next to these two we liked Princess Novel. She was shown too fat and soft. Lassie Bondhu also received the two letters. She is a catchy-looking bitch with rather a plain head, and is not quite straight in front. Silk was alone in the commended division. She is good in loin and feet and has fairly good legs. Her ears are wrong and she is too straight behind. In the unnoticed division Mollie is bad in color and worse in head. Quail is too small and her head is also against her, and Blue Bessie is all wrong in shoulders. The winning dog puppy was lucky, as he would hardly get into the money in a fair class. He has good legs and feet, but is not up to show form in other respects. He does not stand straight in front and is too straight behind. Glen Belton, second, has a wretched head and is leggy and lacking in substance. The bitch puppies we did not see, as they were taken home before we called at their stalls. Hector II., winner of first, we did not see, as he was taken out of the show sick, shortly after the judging. Second went to Royal Myrtle, already described. Ponto, winner of third, is a big, strong dog, and looks a workman. He is coarse in head and has a curly coat.

IRISH SETTERS—(MR. MASON).

There were fifty-eight entries in the Irish setter classes with nine absentees. Tim, looking fairly well, had no trouble in defeating Blarney in the challenge class for dogs, and Laura B. got away with Nellie in the corresponding bitch class. The open dog class brought together a better lot than has been seen this year, and the judge took considerable time before he got them placed to suit him. The winner turned up in Sunset, a new-comer and a good one, too. He is a nice upstanding dog of good size with a fair coat of good color. His head is about as good as any, and

with the exception that his eyes are a shade too light in color and his skull is a trifle flat, his head is about perfect; he has a fairly good neck, which would be improved with a trifle more length, shoulders excellent and well laid on, chest of good depth with ribs well sprung, good strong back and well arched loin, quarters nicely turned, but lacking in muscle. This fault will probably disappear when he is mature, especially if he is given a proper amount of exercise; front legs about perfect, straight as a terrier's, with plenty of bone and they are set into excellent feet. If he does not grow coarse with age he will make it warm for some of the cracks next season. Kenmore, placed second, got more than he deserved. He has gone wrong in front legs and should give way to sounder dogs. Desmond II. we thought just about good enough for second with a close race between Kenmore and Barker for third place. The latter was in good condition. There were four in the vhc. division. Dick Swiveller, Redstone and Patsy are well known, the latter is weak in head and has a short, thick neck, but in shoulders, chest, back, loin, quarters, legs and feet he is the equal of any in the class, and were it not for his small size he would undoubtedly have been higher up. The other vhc. dog we failed to find in his stall. He is down in the catalogue as Elcho, "a name to conjure by." We suggest to his owner that some other name be selected as the memory of the late grand old champion of that name is still green, and his many warm admirers will not perhaps take kindly to an interloper. There were five in the hc. division, all well known. In the bitch class first went to Lulu III., a very sweet bitch with a good head, excellent shoulders, nice body and good legs and feet. Cora B., not in first-class condition, was placed second with Winnie II. third. The latter won second at New York this year. Jada, reserve, made a good appearance in the ring, but we failed to find her in her stall. Bessie Glencho, vhc., we did not see, as she left the show shortly after the class was judged. Belle Ida, also vhc., received one more letter than she did at New York. There was nothing else in the class worthy of especial mention. Victor, the winning dog puppy, is rather promising, and if he does not get coarse with age he will do to show next year. Second went to the New York winner and third to the winner at Utica. In the corresponding bitch class three of the five entries were absent and the two that put in an appearance would have saved their reputation had they staid at home also, as they only received the two letters each, Belle Ida, vhc. in the bitch class, won first in the novice class, with an inferior specimen second.

GORDON SETTERS—(MR. MASON).

The Gordon setter classes were not well filled, and with the exception of a few well-known winners, they were a seedy looking lot. In the challenge class for dogs Beaumont easily disposed of Don, his only competitor, and in the bitch class Rose was alone. In the open dog class the winners of first and second occupied the same positions at Lynn. Grouse III., winner of third, is a big dog with a fair head, bad in coat, crooked in front and straight behind. The other entries were absent. In the bitch class first went to Vic, well known, and second and third to the winners of first and second at Lynn. New York Belle, hc., was not in good condition. Fannie and Vic II., unnoticed, deserved all they received. The winning dog puppy Nero is just a fair specimen, with good legs and feet. The others do not promise to turn out anything above ordinary. American Girl, winner of first in the novice class, is a big bitch with a head that would be fairly good if it were not spoiled by a Roman nose and light eyes. She is good in chest, legs, feet and color. She does not move well behind. Zango, placed second, occupied the same position in the puppy class at Richmond last fall. Ruby, winner of third, is weak in head, bad in ears and only passable in other points.

SPANIELS—(MR. MASON).

The spaniel classes were not well filled in number, but the quality throughout was superb. When the premium list appeared we heard considerable grumbling from members of the Spaniel Club who thought that so prominent a show as this should adopt the Spaniel Club's classification No. 1 instead of No. 2. There was also some dissatisfaction expressed at the selection of a judge of whose ability to handle the classes they were ignorant, and an appeal was made to the managers, which resulted in the substitution of Mr. Mason, who is one of the judges approved by the Spaniel Club. There were 45 entries with 11 absentees, which included the six entered by the Hornell-Harmony Kennel, Oldham & Willey's Beatrice IV. and Lady of Learning, Laidlaw's Giffee, Dr. Kitchel's My Lady Betty and the Clumber Tyne. All of the winners have been repeatedly described and the prize list will in most cases tell the story. As a rule the dogs were well shown and in most cases the decisions were well received. In the "any other color" class for field spaniel dogs the judge placed Newton Abbot Skipper over a better dog Newton Abbot Don. It is true the latter was in bad condition and his coat was harsh and staring, but we did not think him quite out of the race notwithstanding his bad form. We expected to see Kapiolani come out in grand shape, and make a clean sweep of the black cocker bitch class. It will be remembered that she won in the puppy class here last year and gave Chloe W. a rub for first in the aged class, she was very promising and we were disappointed to find that she has not improved. She has not let down as she should, is not so good in front as she was last year, and was not in first-class condition. The quality of the dogs all through was as good as we have ever seen. This was evidently the opinion of the judge, as every animal was noticed and only two but received more than the two letters.

BEAGLES—(MR. KRUEGER.)

These classes were comparatively well filled and of fair quality throughout. Yet observation for the last two years clearly shows a standstill in the improvement of the beagles, even a deterioration in the quality of this breed. The same old faces of dogs who have "had their day" greet our eyes and those who have made their debut in the last year or two are far from startling. Something must be wrong in the ranks of the beagle fraternity. Can it be true that the management of the Beagle Club is accountable for this? Fitzhugh Lee and Little Duke were the entries in the challenge dog class, the former winning. Both dogs are wrong in head, as has often been stated before. Little Duke was shown too soft and is failing both in front and behind. Twinkle was the only entry in the corresponding bitch class and received the award. She was shown too fat and soft, which assisted is magnifying her faults. Frank Forest was again first in the open dog class. This dog is seemingly going wrong. Rally, a good second, is quite a little dog, possessed of a better head than any in the class, and has an excellent chest. His ears are of good length and quality, but might be better carried. With more depth of muzzle his head would be a hard one to beat. He has too much length between couplings and is not as good in forelegs, feet and quarters as he might be. Racket II. and Racer Jr., respectively third and reserve, are both well-known. Dandy, c. in this class and vhc. in puppy class, will not mature into a show dog. He is wrong in head, ears badly carried and stands badly on poor legs and feet and shows throatiness. The remaining entry in this class, a coarse, good-bodied dog, was over-sized. The winner in the bitch class is not a first rater, lacking in ears, depth of muzzle, beagle expression, depth of chest and feet. The winner of second is a good bodied bitch, but is very poor it head, eyes small and close together, flat in skull, stop and muzzle deficient. Bannerqueen, described before, third. Flirt R., the remaining entry, is a plain-headed bitch, lacking depth of muzzle, is out at elbows, has bad feet and is poor in coat and brush. She showed traces of mange. The winners of first and second in the puppy class have been described in our report of the Lynn show. Rusty, third, is a plain-headed puppy with deficient ears that are badly carried, out at the elbows, a rather coarse, plain puppy throughout, lacking character and quality. Of the vhc. winners, Kathleen W. is well-known. General is apple-headed, with ears badly carried, eyes rather small, showing throatiness, long-cast, out at elbows and bad in feet. The Hornell-Harmony Kennels entries were absent. Two of the entries in the puppy class were oversized.

BASSET HOUNDS—(MR. KRUEGER).

There were only two entries, Maufrat, the winner, having already been described. Napo is decorated with a butterfly nose, coarse in body, deficient in legs and feet, and lacking in coat.

DACHSHUNDE—(MR. KRUEGER.)

First was withheld in the dog class, second going to Soli, a very good specimen, with one eye gone. Oto, winner of third, is of bad color, houndy head, ears short and not well carried. Could be improved in crook. Body and quarters good. Fritz is not a show dog. Lina L., well known, won in bitches, with Croquette a good second, third going to Toddles, not a typical specimen, being light in bone and not good in crook. Mr. Seiler's entries did not arrive until after the judging of these classes.

FOXHOUNDS—(MR. KRUEGER).

First went to a very good specimen of the English variety, not quite right in head, being somewhat full under the eyes, deficient in stop, and eyes rather small; slightly out at elbows, with not the best of feet; otherwise above the average. Second went to a beautiful-headed specimen of the American variety. With the exception of being somewhat long-cast and lacking in depth of chest and feet, he is the best dog of the American variety we have yet seen. Trailer II., winner of third, is a grand-bodied dog, but wrong in head, deficient in stop, full under eyes, and ears badly carried; muzzle lacking depth; thick through shoulder, feet bad, and does not move well behind. Dot lacks depth of muzzle, ears not well carried, deficient in bone; feet and quarters, coat and brush poor. Andy lacks in head, is deficient in stop, skull and muzzle, eyes light in color and too small, long-cast and lacking in quarters, feet bad, coat and brush excellent. Taylor's Dot is apple-headed, and lacks bone and substance throughout. The remaining entry was absent.

COLLIES—(MR. GRESHAM).

Dublin Scot and his more typical son, Scotilla, were the entries in the challenge class for dogs. Dublin Scot, although in grand form, had little chance of winning, as Scotilla beats him in nearly all the most essential points of the breed. In bitches Flurry II. had an equally easy win over the soft-coated Metchley Surprise. The Chestnut Hill Kennels scored a great victory in the open class for dogs, winning first with Maney Trefoil, second with Charleroi II., third with Roslyn Sensation and reserve with Strephon. The first two of these were clearly ahead of the class. Maney Trefoil, that has caused such commotion in the collie world, is a son of The Squire and Scotch Pearl; whelped July 25, 1887; breeder, Mr. H. C. While. The portrait which appeared in the *Stock-Keeper* of Feb. 22 is a most excellent likeness, except that it shows him to have plenty of bone and good feet, whereas it is here that Maney Trefoil fails. He has a good head, that is not quite equal to Scotilla's, well-set and well-carried ears, good neck, short, strong back, a loin that could only be improved by being a little more arched, and hindquarters that, while not perfect, are decidedly better than can be found in a majority of prominent winners. He has a profuse undercoat of best quality, and, with the exception that his bodycoat is somewhat soft across the flanks and sides of chest, it is almost perfection, and in mane and frill we have never seen any one that surpassed him. He swings a lengthy stern that is perfectly coated, stands over lots of ground and moves in good style. He is big enough for any kind of work, but, as we have already stated, he is light in bone and not first-class in feet. He also shows a disposition to stand over at the knees. While we do not think him the equal of old Charlemagne he is undoubtedly a beautiful specimen, and has no peer in this country. Charleroi II. is well known. While his head shows slight coarseness and he is heavy in shoulders and not just right in set of legs, he is a dog that takes a great deal of beating. We thought Roslyn Sensation over-rated on this occasion. His badly carried ears, coarse head and lippiness should, we think, have put him behind Strephon, Clipper and Scotson. This award gave him the Collie Club Trophy, value $500, for the best American-bred collie owned and exhibited by a member of the club. We congratulate Mr. Harrison upon winning so valuable a prize, which in this case was worth about ten times as much as the dog that won it. Ripon II., vhc., was lucky in being placed equal with Clipper. Defects: Brow too full; muzzle arched; eyes round; ears not sufficiently erect; hocks straight and too far from the ground; stern short; coat rather open and lacks in undercoat. Scotson carried his ears well all the time under judgment and should certainly have beaten his kennel companion Ripon II. Kilmarnock Chief was described in the Lynn report. This was the best class we have ever seen in America. In bitches the beautiful Flurry III., that was not in full coat, won, with her equally well-known kennel companion Jakyr Dean, second, and Kilmarnock Leila, third. The last named has these defects, viz.: Expression listless; carriage of ears not correct; heavy shoulders; forelegs not correct in set; stifles too much in; loin rather short; coat too soft at present, but may improve. Roslyn Torfrida is the best youngster by Scotilla that we have seen. Kilmarnock Edie is spoiled by bad ears. Collie, hc., is high and straight in hocks and not quite right in ears. Heather Belle, hc., is wrong in ears and feet and not first-class in coat. Ruby Royal, fourth prize, was sent home before we had a chance to examine her. Miss Meg, hc., is short in coat and not quite right in head. She was in bad condition, being much too fat. Hempstead Zulu, first in the puppy class, lacks in head. Kilmarnock Flock, second prize, is bad in ears, wrong in head and not quite right in set of legs. Buttercup II., first in the class for bitch puppies, is a promising youngster, whose head is marred by wrong set and carriage of ears. This bitch should be heard from again. Flossie, third prize, is round in eyes and bad in ears. She is very young, but her defects are of a kind that cannot be outgrown.

BULLDOGS—(MR. NEWMAN).

In the challenge class for dogs Robinson Crusoe, badly shown, was beaten by the less typical Hillside, that was looking as well as we have ever seen him. The decision was a just one. Rabagas was absent. Britomartis, winner in the corresponding bitch class, like her kennel companion, was in poor condition. She is going the wrong way and needs looking after. Portswood Tiger and Lion, first and second in the dog class, need not again be described. Lion is the better dog, but as he is in no condition to win over a fairly good specimen, that is well shown, he was defeated and rightly so. King, third prize, is long in foreface, wrong in lips and layback, small in skull, wrong in hang of body, not well sprung in ribs, leggy, not right in shoulders nor good in gait. Dr. Rush is long in foreface, narrow in head and long-cast. He was lucky in getting vhc. The competition between Soudan and Daffodil was close and interesting. Daffodil, shorter in foreface and decidedly better in up-turn, but not so good in body and hindquarters, was finally placed second. There is plenty of room for difference of opinion in regard to their merits. Columbine, the only puppy shown, was not on the bench when we called to make notes.

BULL-TERRIERS—(MR. NEWMAN).

The challenge class for dogs contained the well known winners Cairo, Jubilee and Silver. The New York decision in favor of Cairo was sustained. In the corresponding class for bitches Bonny Princess, winner in the challenge class at New York, was first again here. The open class for dogs showed a decided lack of quality. Trentham Baron, the winner, was rightly placed. He is growing very coarse in head and is decidedly lippy. Royal Tyrant, placed second, is good in body, but altogether too coarse in head for a show dog. We would have given the place to Benjo or Young Royal Diamond. Benjo is well known. Young Royal Diamond is coarse in tail, rather long in body, a trifle weak before the eyes, back at the knees, and he does not carry his ears well. We could not follow the judge in his decisions in the open class for bitches. My Queen, placed first, is wrong in eyelids, high in stern and very weak and light before the eyes. This last is a most serious defect and should always prevent her winning over good ones. Miss Nora, second prize, is too full and large in eyes, long and coarse in tail, light in bone and not first-class in feet. She was suckling a litter and was in no condition for the show bench, being entirely lacking in muscle, which is one of the most essential requisites of the breed. Enterprise, vhc., and Marguerite, reserve, were, on this occasion, the best bitches in the class, and enterprise should have won. Nanon, vhc., was at Lynn. She has no business in the same company with Enterprise, being beaten by her in head, eyes, body, legs and feet. Nell Bright, third prize, was second at New York. White Violet, bad in eyes, lippy, slack in back, coarse in tail and long-cast, was hc. She shows some quality through all her defects. Dauntless, second in the puppy class, is a much better specimen than Royal Tyrant, that was second in the open class for dogs. Frost, that was given third, is wrong in eyes and face, light in middle, defective in legs and high in stern.

ROUND-HEADED BULL-TERRIERS—(MR. NEWMAN).

We took exception last year to making a class for these dogs upon the ground that they were mongrels and of almost as many different types as there were exhibits. This year there was a great improvement, so far as type is concerned, and some approach was made to uniformity. If this variety is to be established permanently and recognized as a breed, we respectfully suggest a change of name. We have Birmingham, Airedale and Paisley terriers, why not Boston terriers? We are told that these dogs are well disposed and well-behaved as well as being very susceptible to culture, what more then is necessary? By all means let us have the Boston terrier.

WHITE ENGLISH TERRIERS—(MR. GRESHAM).

There were three entries in this class. The winner, White Prince, is a very fair specimen, with a head that could be greatly improved. The winner of second should have been shown in the "Boston terrier" division; he certainly was not entitled to mention in this class. Lenox Lassie, winner of third, is too toyish; she also should have been unnoticed.

FOX-TERRIERS—(MR. GRESHAM).

This was probably the best lot of terriers ever seen at an American show. A large number of dogs have been shown at New York, but never was the quality so good. Lucifer literally smothered Splauger in the challenge class for dogs, beating him everywhere except in color of eyes. Rachel, in bitches, was rightly placed over Richmond Olive. These are all well known. The open class for dogs was brim full of quality, and has never been equalled in this country. Dusky Trap, although a bit of a flat-catcher, being weak in muzzle, rather light in bone, leggy, not perfect in spring of ribs and defective in pasterns and feet, but gay, stylish, straight in front, good in shoulders, correct in skull, first-class in coat, was about as good as any. Raffle, that has already been very fully described, came second, with Blemton Trump third and Raby Mixer the reserve. Then followed Veronese and Reckoner with vhc. cards, Raby Jack hc., Luke and Tramp c. and Hillside Dandy unnoticed. Blemton Ravager, winner of the Apollo stakes at Albany, was left at home. We would like to see him, as well as the wonderful animal that did such a lot of winning at Saratoga last summer, shown again under other judges. Even if we allow that Dusky Trap and Raffle were the best two in the class, we cannot for the life of us see how Mr. Gresham managed to get Blemton Trump in third place. Hillside Dandy, that was unnoticed, and Raby Mixer, reserve, are most decidedly better specimens. Dusky Trap, while not so large a dog as Raby Mixer, is nearer his type than anything in the class. Raffle and Hillside Dandy are of another type. We think if Dusky Trap had been first, and Raby Mixer second, followed by Hillside Dandy and Raffle, the awards would have been received with better grace. Turning Hillside Dandy out of the ring without a card is one of those unfortunate oversights which too frequently occur; and the placing of Blemton Trump over this promising puppy and Raby Mixer will never, we think, be indorsed in this country. Then again the placing of Raby Jack over Luke seems to us to be wrong. The fact is the judge got a bit mixed. With the exception of Dusky Trap the winners in this class have all been recently described.

In bitches, Rosa Canina was placed over several far better specimens. She is round in skull, rather long-cast, is gone in front and was out of coat. We have regarded her as a hc. bitch in good company. Blemton Consequence, second prize, Richmond Dazzle, third prize, and Blemton Brilliant, reserve, are all of them better bitches. We would have placed Richmond Dazzle first, Blemton Consequence second and Blemton Brilliant third. Meersbrook Nan, winner of first prize at Newport under Mr. Redmond, while faulty in head and coat, was surely worth a card. Pluck and Princess, vhc. and hc., are a couple of well-known winners from Mr. Thayer's kennels. In puppies, Blemton Trump was very lucky in winning over Hillside Dandy. It seemed to us that the longer the judge examined Dandy the more he liked him. If he was not worth a c. card in the open class where Blemton third won third, we fail to see why he was worth a second in this class. First in the corresponding class for bitches was given to Hillside Freda, not nearly so good a specimen as Hillside Dandy, and from the same kennels. Defects: Forehead too prominent; muzzle coarse near nose; growing cheeky; coat rather soft, but plenty of it; shows some jowl; a good-bodied puppy, with nice ears, lots of bone and a straight front. Hillside Ruth and Hillside Jaunty deserved their cards. The class for wire-haired dogs and bitches contained two moderate specimens in Cotswold Jocko and Suffolk Settler. They are about the best in the country, and are hc. dogs in good company. Suffolk Settler, while not perfect in front, is better in set of legs than Jocko; but Mr. Dole's dog has decidedly the better of him in head and shows far more true character. In the novice class Blemton Trump again beat Hillside Dandy; the latter is much the better dog. The Home-Bred Puppy Stakes went to Hillside Freda. Hillside Dandy, in the same kennels, should have had it.

YORKSHIRE TERRIERS—(MR. GRESHAM).

First in the open class for dogs was awarded to Harry, but later on in the day the owners of this dog and Bradford Harry agreed to place the dogs equal, and Bradford Harry, placed second by the judge, was put on equal terms with a dog that only a short time before had beaten him. Harry, the actual winner of first, is neither a blue and tan nor a silver. He lacks in head, is too long-cast and low on the legs, light in head and leg color, uneven in body color. Sandy, reserve, is bad in color and short in coat. Bright,

bc., is wrong in head and body color and has no leg tan. Zip, c., is all off in color. Floss, first in the bitch class, is fairly good in head, but too long and slightly roached in back. Head coat should be longer and of deeper and brighter hue. Color of body coat decidedly better than average, but not first-class. Leg color should be darker. Coat of nice quality, but too short. Bravo is apple-headed and faulty in loin. Head and body coat too short, leg tan not first-class, body color uneven. He has uncut prick ears. This was the only entry in the class for Yorkshire dogs under 5lbs. weight. Bradford Leah, first in the class for bitches under 5lbs., is the best puppy that we have seen in America. She is built on fairly good lines, has a good puppy coat that looks as if it was turning the right color, and she is first-class in leg tan.

TOY TERRIERS OTHER THAN YORKSHIRE—(MR. GRESHAM).

Dot, apple-headed, weak in muzzle, full in eyes and bad in hindquarters, was as good as anything in the class, and was placed first. Kitty, second, is wide in skull, deep in stop, wrong in set of eyes, wide behind, wrong in forelegs and has no thumb marks. Bluebird, vhc., while not good in head, is a better specimen than Captain, that was placed third. The last named has large, uncut and badly carried ears, plain head, and is leggy and of wrong type.

OTHER TERRIERS—(MR GRESHAM).

There were ten entries in the Irish terrier classes. Breda Tiney was alone in the challenge class. In the open dog class the judge reversed the decision at New York by placing Dennis over Breda Jim. Third went to Roslyn Dennis, an uncropped one, with a sleepy expression that will ruin his chances to win in good company. His coat is of good texture, but there is too much of it. Rags, first in the bitch class, is fairly well formed, but her head is far from first-class, and she lacks character. Roslyn Norah, placed second, was third at New York. She also won second in the puppy class, first being withheld. Border Wang was the only one to show up in the class for Dandies. In the class for Bedlingtons Sir George was an easy winner. Badger, placed second, is not a good one. He lacks character, is all wrong in ears and body. There was nothing else in the class worthy notice, except a big Airedale-Scotch, that appeared to be greatly disappointed because the third prize was withheld. In the black and tan class the order was Buffalo General, Meersbrook Girl and Sheffield Lass. The latter beats Girl in muzzle and forelegs, and is the better bitch notwithstanding her rather coarse tail. She should have been second. Only two Syke terriers were shown, Claymore in the dog, and Kirkella in the bitch class. Loret and Coiler were absent. Fly, given second in the dog class, is not a Skye, but he was shown by a lady, and possibly the judge feared that his reputation for gallantry would suffer if he withheld the prize.

PUGS—(MR. MASON).

Budge, that was first at Lynn, scored a very easy win over Smutt, that is flat in head, leggy and large and not right in curl of tail. Dandy, unnoticed, is bad in head, leggy and smutty in color. Toodles, first in bitches, is a long way from being a good one. She has too much length in front of the eyes, is wrong in carriage of ears, stands back at the knees, carries her tail too high, does not move right behind and has not a well defined trace. Beauty, second prize, is too long and shallow in muzzle, large in ears, lacks in wrinkle, has white nails and carries her tail badly when under judgment. There were no entries in the challenge or puppy classes, and the quality of the dogs shown was not what we expected to find.

POODLES—(MR. MASON).

Jack, winner of first prize, fails in carriage of ears, loin, length of coat and in color. There are some white hairs intermixed with the black. The second prize, Pauline, is bad in eyes, wrong in expression, short in ears, slack behind the shoulders, weedy, undersized, and with coat not close in curl. Soudan, third prize, is open and woolly in coat, flat in loin, rather light in eyes, sour in expression, short in ears, flat in back and loin and round in body. Dora and Styx II. were absent.

TOY SPANIELS—(MR. GRESHAM).

Duke was absent from the challenge class for King Charles dogs, and Mr. Fay's well known Milwaukee Charlie was alone in his glory. The bitch class contained no entries. Royal Prince, first in the open class for dogs, is a big, coarse specimen, long and light in muzzle, with nose not well laid back, eyes rather large, poor legs and feet, light loin, leggy, indifferent color and curly coat. King, second prize, has a bad head and expression, has no leg tan, and is rather curly in coat. His strong, sound limbs are his best points. We would have felt inclined to withhold the prizes. Queenie, first in bitches, is low in skull, high in ears, wrong in lips, out at elbows, and is not nearly so good a specimen as Dolly, that was third. This bitch is well known, and, we think, should have been first. Nanki-Poo, a fairly good Japanese, rather shallow in face and light in loin, must have been hard pressed by Exeter Earl, a Blenheim whose defects have frequently been noted in our columns. Ruby, unnoticed, has a wretched bad head, and is much too leggy. In the corresponding class for bitches Exeter Beauty, Mr. Fay's well known Blenheim, was an easy winner over Rebie. The last named is not a Ruby spaniel, neither can she be fairly called a Blenheim; but leaving color entirely out of the question, her long, snipy face and lathy body should have caused the judge to have withheld the prize.

ITALIAN GREYHOUNDS—(MR. MASON).

Cupid, winner at New York, Troy, Albany, etc., was the only entry.

MISCELLANEOUS—(MR. GRESHAM).

In the heavy-weight class the Chestnut Hill Kennels' plain-headed, smooth-coated sheepdog Spot was placed first, with Agricola, the bobtail, that was first at Lynn, second, and Ferro, an under-sized, plain-headed, short-bodied and wide-fronted Great Dane, third. Sir Lucifer, all out of coat, was unnoticed. The light-weight class contained nothing but mongrels. If White Wings, placed first, is a good Mexican hairless, Me Too must have been a wretchedly bad one, for the only similarity between them is that they are hairless. Bijou, second prize, is a very ordinary Maltese, wrong in coat and not black in nose. Did and Dude are said to be truffle dogs. The longer we looked at the dogs the more we longed for the truffles.

Following is a list of corrections and additional awards: In small pointer dogs C. W. Kennison's Sir Guy was high com. In bitches C. Heath's Bloomo was first instead of Nun. In Irish setter dogs P. Cambios's Dick Swiveller was very high com. In collie dogs E. A. Ferguson's Guelph was com.

NEWFOUNDLANDS.—1st, E. H. Morris's New York Lass.

CHESAPEAKE BAY DOGS.—1st, E. Brooke's Romp; 2d, Dr. F. B. Greenough's Run; 3d, G. B. Inches's Ripple.

FIELD SPANIELS.—CHALLENGE—1st and 2d, Oldham & Willey's Newton Abbot Laddie and Miss Newton Obo.—OPEN—BLACK—*Dogs:* 1st and 2d, Oldham & Willey's Glencairn and Newton Abbot Lord; 3d, W. H. Moseley's Jerry. *Bitches:* 1st and 3d, Oldham & Willey's Newton Abbot Lady II. and Lady Abbot; 2d, A. Laidlaw's Bridford Gladys. Very high com., F. Bowers's Flirt. —ANY OTHER COLOR—*Dogs:* 1st, W. T. Payne's Newton Abbot Skipper; 2d, Oldham & Willey's Newton Abbot Don. *Bitches:* 1st, Bridford Kennels' Bridford Lady.

CLUMBER SPANIELS.—Absent.

IRISH WATER SPANIELS.—1st, J. P. Daniels's Patsy O'Connor; 2d, F. B. Tirrell's Blanche.

COCKER SPANIELS.—ANY COLOR—1st and 2d, Oldham & Willey's Miss Obo II. and Chloe W.—BLACK—*Dogs:* 1st, Oldham & Willey's Jersey; 2d, S. R. Hemingway's Rabbi; 3d, Fay & Baxter's Ned Obo. Very high com. W. H. Walton's Black Duck. *Bitches:* 1st, 3d and very high com., Oldham & Willey's Dolly Obo, Bessie W. and Fannie W.; 2d, Fay & Baxter's Kapiolani. Very high com., L. F. Whitman's Bene Silk. High com., A. Laidlaw's Woodstock Birdie and H. F. McLaughlin's Black Nan.—ANY OTHER COLOR—A. Laidlaw's Woodstock Clip; 2d, Oldham & Willey's Goldie; 3d, J. E. Hall's Sancho. *Puppies:* 1st, A. Laidlaw's Woodstock Birdie; 2d, O. B. Gilman's Prince.—NOVICE CLASS—1st, Fay & Baxter's Kapiolani; 2d, Oldham & Willey's Fannie W.

POODLES.—1st and 2d, F. E. Perkins's Jack and Pauline; 3d, Mrs. Wm. Appleton's Soudan.

AIREDALE TERRIERS.—1st, Miss A. L. Cushing's Tramp.

FOX-TERRIERS.—PUPPIES—*Dogs:* 1st, Blemton Kennels' Blemton Tramp; 2d, 3d and reserve, J. E. Thayer's Hillside Dandy, Hillside Volunteer and Hillside Reckless. Very high com., F. Hoey's Linguist. *Bitches:* 1st, 2d, 3d and high com., J. E. Thayer's Hillside Freda, Hillside Model, Hillside Linden and Hillside Ruth. High com., J. Grosvenor's Hillside Jaunty.—WIRE-HAIRED—1st, J. Mortimer's Suffolk Settler; 2d, F. F. Dole's Cotswold Jocko. NOVICE CLASS—1st, Blemton Kennels' Blemton Trump; 2d and 3d, J. E. Thayer's Hillside Dandy and Hillside Volunteer. Reserve, F. Hoey's Linguist. Fox-Terrier Club's Homebred Puppy Stake. —1st and reserve, J. E. Thayer's Hillside Freda and Hillside Dandy.

SCOTCH TERRIERS.—Absent.

IRISH TERRIERS.—CHALLENGE—1st, Chestnut Hill Kennels' Breda Tiney.—OPEN—*Dogs:* 1st, J. F. McFadden's Dennis; 2d and 3d, Chestnut Hill Kennels' Breda Jim and Roslyn Dennis. *Bitches:* 1st, Rags; 2d, Chestnut Hill Kennels' Roslyn Norah.—*Puppies:* 1st, withheld; 2d, Chestnut Hill Kennels' Roslyn Norah.

DANDIE DINMONT TERRIERS.—1st, F. R. Hitchcock's Border Wang.

BEDLINGTON TERRIERS.—1st, J. Mortimer's Sir George; 2d, W. A. Blodget's Badger; 3d, withheld.

SKYE TERRIERS.—*Dogs:* 1st, Oldham & Willey's Claymore; 2d, R. Russell's Fly. *Bitches:* 1st, Oldham & Willey's Kirkella.

YORKSHIRE TERRIERS.—*Dogs:* Equal 1st, P. H. Coombs's Bradford Harry and C. N. Symonds's Harry; 3d, C. N. Symonds's Toons Royal. Reserve and high com., P. Gough's Sandy and Bright. Com., Mrs. W. Borrowscale's Zip. *Bitches:* 1st, C. N. Symonds's Floss.—UNDER 5LBS.—*Dogs:* E. G. Carleton's Bravo. *Bitches:* 1st, P. H. Coombs's Bradford Leah. *Puppies:* 1st, P. H. Coombs's Bradford Leah; 2d, J. A. Ford's Nigger. Very high com., Belle A. Borrowscales's Top.

TOY TERRIERS.—1st, J. Woodward's Dot; 2d, C. Sullivan's Kitty; 3d, A. H. Lewis's Captain. Very high com., A. A. Johnson's Bluebird.

PUGS.—CHALLENGE—No entries.—OPEN—*Dogs:* 1st, Mrs. J. Smith's Budge; 2d, G. E. Macgowan's Smutt. *Bitches:* 1st, M. B. Brick's Toodles; 2d, T. C. Gram's Beauty; 3d, withheld.

KING CHARLES SPANIELS.—CHALLENGE—*Dogs:* 1st, F. B. Fay's Milwaukee Charlie. *Bitches:* No entry.—OPEN—*Dogs:* 1st, Miss Fay's Royal Prince; 2d, S. S. Green's King. *Bitches:* 1st, S. S. Green's Queenie; 2d, Mrs. M. C. Prescott's Society Girl; 3d, F. B. Fay's Dolly.

BLENHEIM, PRINCE CHARLES, RUBY OR JAPANESE SPANIELS.—*Dogs:* 1st, F. P. Comstock's Nanki Poo; F. B. Fay's Exeter Earl; 3d, withheld. *Bitches:* 1st, F. B. Fay's Exeter Beauty; 2d, E. R. Jones's Rebie.

ITALIAN GREYHOUNDS.—1st, Miss Edith Van Buren's Cupid.

MISCELLANEOUS.—LARGE—1st, Chestnut Hill Kennels' smooth-coated collie Spot; 2d, W. T. Tebbutt's bobtail sheepdog Agricola; 3d, C. Farnsworth's Great Dane Ferro.—SMALL—Equal 1st, H. T. Foote's Mexican hairless White Wings and W. C. Denny's truffle dog Did; equal 2d, Miss E. Warriner's Maltese terrier Bijou and W. C. Denny's truffle dog Dude.

SPECIAL PRIZES.

Kennel mastiffs, E. H. Moore. Mastiff that has never won first prize, Lady Pamelia. Kennel St. Bernards, E. H. Moore. St. Bernard Club cups: Smooth-coated Hector, brood bitch Monastery Mercedes, American-bred bitch Daphne, rough-coated Saffron, brood bitch Miranda. American-bred dog, Otho; bitch, Una. Best of either breed that has never won first prize, Earl. Smooth-coated dog in open class, Beauchamp; bitch, Burton Belle; bitch puppy, Lady Bernard. American-bred, under 18mos., Earl. Kennel deerhounds, J. E. Thayer; stud dog, Chieftain. Kennel pointers, Westminster Kennel Club. Large stud dog, Graphic; small, Naso of Kippen. That has never won first prize, Stella; in open or puppy classes, Duke of Hessen. Kennel English setters, F. Windholz. Stud dog, Gus Bondhu. Kennel Irish setters, W. C. Hudson. Best of either breed that has never won first prize, Sunset. Kennel spaniels, Oldham & Willey; second best, the same; that has never won first prize, Rabbi. Field spaniel, (American Spaniel Club special) Glencairn. Kennel collies, Chestnut Hill Kennels; stud dog, Dublin Scot; dog puppy sired by Scotson, Royal Scot; bitch, Ruby Royal. Collie Club specials: American bred Roslyn Sensation; whelped in 1887 or 1888, the same, bitch, Buttercup II.; puppy, Hempstead Zulu. Kennel fox-terriers, Blemton Kennels; stud dog, Baby Mixer; that has never won first prize, Blemton Trump. Fox-terrier Club challenge cup, Rachel. Kennel Irish terriers, Chestnut Hill Kennels. Yorkshire terrier stud dog, Bradford Harry.

THE CHICAGO DOG SHOW.

[*Special dispatch to Forest and Stream.*]

CHICAGO, Ill., April 9.—The Chicago dog show is a success. There are 566 entries, and but few absentees. The attendance so far has been large, especially to-night, and spectators take a great interest in the dogs. Most of the classes are well represented. Setter and pointer classes are quite full. Greyhounds are weak; spaniels fair; St. Bernards, mastiffs and Great Danes a good lot; other non-sporting dogs fair. The judging was not finished to-night. So far as announced, the following are the

AWARDS.

MASTIFFS.—CHALLENGE—*Dogs:* 1st, champion Minting; 2d, Moses. *Bitches:* 1st, Lady Coleus.—OPEN—*Dogs:* 1st, Melrose Prince; 2d, Grover Cleveland. *Bitches:* 1st, Gladys; 2d, Menglada.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—1st, Ben Lomond; 2d, Folko.—OPEN—1st, Burns; 2d, Valens.—SMOOTH-COATED—1st, Meadowthorpe Norah; 2d, Prince.

GREAT DANES.—*Dogs:* 1st, Cæsar; 2d, Siegfried. *Bitches:* 1st, Donna Minka; 2d, Nora.

GREYHOUNDS.—*Dogs:* 1st, Master Rich; 2d, Meadowthorpe Douglas. *Bitches:* 1st, Catchfly; 2d, Minnie.

POINTERS—CHALLENGE—1st, Lad of Bow.—OPEN—1st, Patterson; 2d, Luck of Idstone.—UNDER 55LBS.—1st, Duke of Hessen; 2d, Trinket's Coin.

ENGLISH SETTERS.—*Dogs:* 1st, Cincinnatus; 2d, Toledo Blade. *Bitches:* 1st, Bohemian Girl; 2d, Texas Daisy.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, Blarney. *Bitches:* 1st, Nellie; 2d, Lou.—OPEN—*Dogs:* 1st, Mack; 2d, Nelson. *Bitches:* 1st, Kitty O'Brien; 2d, Bessie.

GORDON SETTERS.—*Dogs:* 1st, Meadowthorpe Heather Roy; 2d, Heather Harold. *Bitches:* 1st, Vic; 2d, Meadowthorpe Belmont.

Spaniels, collies, toy dogs and other classes are now being judged. Some little dissatisfaction is expressed at the management, but things are going fairly smooth, and the success of the show is assured.

POINTER IMPORTATION.—Mr. E. B. Goldsmith, of 58 Wall street, forwarding agent, received April 5, by the steamer Gallia, the champion setter dog Sir Tatten, and a light weight pointer—a novice—whom all average men call a promising youngster, from Eden Mount Kennel, England. Mr. Charles Pharo, of Bethlehem, Pa., (to whose kennel the animals are consigned) is delighted with their condition. Mr. Pharo has them entered at Philadelphia, and they can be seen at the coming bench show which takes place on the 16th, 17th, 18th and 19th of this month. Sir Tatten has beaten Count Howard and Monk of Furness on different occasions in England and will make it warm for his class in Philadelphia this month.

WORCESTER DOG SHOW.

THE Worcester dog show began to-day. There are 320 entries of fair average quality. Judging began at 11 o'clock and 88 classes were finished. The weather is delightful and the attendance has been fairly good. The show appears to be well managed and exhibitors are warm in praise of the treatment they receive. Following is a list of the awards so far as the classes have been judged:

AWARDS.

MASTIFFS.—CHALLENGE—*Dog:* E. H. Moore's Ilford Caution. *Bitch:* Absent.—OPEN—*Dogs:* 1st, E. H. Moore's Alonzo; 2d, E. B. Sears's Sears' Monarch; 3d, E. A. Cowee's Pedro. *Bitches:* 1st and 3d, E. H. Moore's The Lady Phyllis and The Lady Beatrice; 2d, E. B. Sears's Countess of Dunsmore. Reserve and very high com., Millbrook Kennels' Empress and Princess Beatrice.—PUPPIES—*Dogs:* 1st, withheld; 2d, C. H. Morgan's Stowdy. *Bitches:* No entries.

ST. BERNARDS.—SMOOTH-COATED—CHALLENGE—*Dog:* Hospice Kennels' Hector. *Bitch:* Hospice Kennels' Daphne.—OPEN—*Dogs:* 1st, Teague & Tilton's Beauchamp; 2d, Hospice Kennels' Albert Plinlimmon. *Bitches:* 1st, Contocook Kennels' Burton Belle; 2d, Keystone Kennels' Lolo; 3d and high com., Chequasset Kennels' Marvel and Chequasset Chartreuse. Reserve, P. H. Hurley's Lady Bernard. Com., Hospice Kennels' Reka.—PUPPIES—*Dogs:* 1st, Quinsigamond Kennels' Alaric. *Bitches:* No entries. —ROUGH-COATED—CHAMPION—*Dog:* Hospice Kennels' Otho *Bitches:* 1st, E. H. Moore's Saffron; 2d, Hospice Kennels' Gemma I.—OPEN—*Dogs:* 1st, E. B. Sears's Plinlimmon, Jr.; 2d, Contocook Kennels' Kastlehorn II.; 3d, Quinsigamond Kennels' Vindex. Very high com., Lakeside Kennels' Count and Hospice Kennels' Alpine Chief. *Bitches:* 1st, E. B. Sears's Lady Wellington; equal 2d, Quinsigamond Kennels' Chrysa and Lakeside Kennels' Lady Teazle. *Puppies:* No entries.

NEWFOUNDLANDS.—1st, withheld; 2d, J. Conway's Sambo.

GREAT DANES.—1st, M. R. & F. W. Fonda, Jr.'s Lady Bess.

GREYHOUNDS.—CHAMPION—1st and 2d, H. W. Huntington's Balkis and Cassandra.—OPEN—*Dogs:* 1st, J. H. Watson's Captain; 2d, Miss Mildred Crompton's Sept. 20; 3d, F. P. Edwards's Flash. *Bitches:* No entries. *Puppies:* No entries.

DEERHOUNDS.—CHALLENGE—1st, 2d and 3d, J. E. Thayer's Ramona, Wanda and Bran.—OPEN—*Dogs:* 1st and 2d, J. H. Thayer's Robber Chieftain and Duncan. *Bitches:* 1st, 2d and very high com., J. E. Thayer's Pride of Heather, Heatherbelle, Highland Lassie and Brazen. *Puppies:* 1st and 2d, J. E. Thayer's Nora and Donallen.

POINTERS.—LARGE—CHAMPION—*Dogs:* 1st, C. Heath's Graphic. *Bitches:* 1st, C. Heath's Mealy.—OPEN—*Dogs:* 1st, S. Pentz's Brake; 2d, E. Dexter's Pontiac; 3d, Fleet View and Reading Pointer Kennels' Sir Hector. Reserve, G. W. Lovell's Beaufort H. Very high com., C. L. Hopkins's Telamon. High com., A. Berg's Snipe. *Bitches:* 1st, C. Heath's Sally Brass; 2d, Fleet View and Reading Pointer Kennels' Belle Randolph; 3d, G. T. Cannan's Rosa Croxteth. Reserve, Don Quixote Kennels' Nell.—SMALL—CHALLENGE—*Dogs:* 1st, E. Dexter's King of Kent. *Bitches:* 1st, C. Heath's Bloomo.—OPEN—*Dogs:* 1st, C. Heath's Launcelot; 2d, Don Quixote Kennels' Don Quixote; 3d, E. R. Bellman's Hickory Staunch. Reserve, Tell Kennels' Dare-Go. High com., C. H. Blakes's Trim and G. W. Lovell's Sir Anthony. *Bitches:* 1st, 2d and high com., E. K. Bellman's Stella, Devonshire Queen and Nella B.; 3d, G. W. Lovell's Daisy A.—PUPPIES—*Dogs:* 1st, Tell Kennels' Dare-Go; 2d, C. L. Hopkins's Telamon; 3d, J. B. Tougas's Dick B. *Bitches:* 1st, Tell Kennels' May-Go; 2d, H. E. Sibley's Belle Tell.

ENGLISH SETTERS.—CHALLENGE—*Dogs:* 1st, F. Windholz's Rockingham. *Bitches:* 1st, F. Windholz's Cora of Wetheral.—OPEN—*Dogs:* 1st, F. Windholz's Count Howard; 2d, E. N. Hubbard's Pride of Dixie II; 3d and very high com., Cohannet Kennels' Kent II. and Royal Kent. High com., J. C. Dougherty's Mack and D. P. Waters's Paul Dale. Com., E. S. Knowles's Ned, Mount Washington Kennels' Lindo and F. Scarlet's Nig. *Bitches:* 1st, F. Windholz's Princess Beatrice II.; 2d, Peet & Lyon's Chautauqua Belle; 3d, Cohannet Kennels' Lady William. Very high com., Cedar Kennels' Chiquita. Com., C. A. Ives's Mena II. and G. W. Lovell's Snowflake.—PUPPIES—*Dogs:* 1st, C. M. Farnum's Chester. *Bitches:* 1st, C. A. Ives's Mena III.; 2d, S. Parker's Jess II.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, Max Wenzel's Tim. *Bitches:* 1st, Kildare Kennels' Laura B.—OPEN—*Dogs:* 1st, W. C. Hudson's Kenmore. *Bitches:* 1st, J. J. Scanlan's Lulu III.; 2d, F. L. Cheney's Daisy; 3d, W. C. Hudson's Cora B. Reserve, F. A. Whilsou's Bijou. High com., Hudson River Kennels' Ruby Glencho.—PUPPIES—*Dogs:* 1st, M. Flynn, Jr.'s O'Donovan Rossa; 2d, W. C. Hudson's Parnell. *Bitches:* Absent.

GORDON SETTERS.—CHALLENGE—*Dogs:* Dr. J. H. Meyer's Beaumont. *Bitches:* No entries.—OPEN—*Dogs:* C. H. Leonard's Dash L.; 2d and 3d, N. Billing's Malcolm V. and Ranger B. Reserve, G. F. Bond's Dan. *Bitches:* 1st, W. Buchan's Nova; 2d, H. Smith's Merle; 3d, withheld. *Puppies:* 1st, W. Buchan's Nero; 2d, H. A. Estabrook's Meg; 3d, G. W. Langdon's Rab II.

COLLIES.—CHALLENGE—*Dogs:* 1st, Jas. Watson's Clipper. *Bitches:* No entries.—OPEN—*Dogs:* 1st, 2d and high com., Kilmarnock Kennels' Kilmarnock Chief, Kilmarnock Kenmore and Kilmarnock Duncan; 3d, H. F. Littlefield's Rutland Jock. *Bitches:* 1st, 3d, very high com. and high com., Kilmarnock Kennels' Kilmarnock Lelia, Kilmarnock Mailie, Kilmarnock Edie and Kilmarnock Jessie; 2d, A. R. Kyle's Cora Belle. *Puppies:* No entries.

BEAGLES.—CHALLENGE—*Dogs:* 1st, Clark & Rutter's Fitzhugh Lee. *Bitches:* No entries.—OPEN—*Dogs:* 1st, A. Parry's Forest; 2d, Lewis Bros.' Racket II.; 3d, Clark & Rutter's Dandy. High com., E. J. Kenneally's Kenneally's Lee. *Bitches:* 1st and 3d, Clark & Rutter's Norah and Cleopatra; 2d, Lewis Bros.' Banner Queen. *Puppies:* Withheld.

FIELD SPANIELS.—CHALLENGE—*Dogs:* 1st, Oldham & Willey's Glencairn.—OPEN—BLACK—*Dogs:* 1st, Oldham & Willey's Newton Abbot Lord; 2d, W. H. Moseley's Jerry; 3d, G. A. Woodman's Bo. High com., F. H. Henry's Ned Obo. *Bitches:* 1st, A. Laidlaw's Bridford Gladys; 2d, Oldham and Willey's Lady Abbot. —ANY OTHER COLOR—*Dogs:* 1st, Oldham & Willey's Newton Abbot Don; 2d, W. T. Payne's Newton Abbot Skipper; 3d, withheld. *Bitches:* 1st, Bridford Kennels' Bridford Lady.

CLUMBER SPANIELS.—1st, H. B. Knight's Jill.

IRISH WATER SPANIELS.—1st, J. P. Daniels's Patsy O'Connor.

COCKER SPANIELS.—CHALLENGE—1st, Oldham & Willey's Miss Obo.—OPEN—BLACK—*Dogs:* 1st, A. H. Jones's Pippo. *Bitches:* 1st and 3d, Oldham & Willey's Dolly Obo and Fanny W.; 2d, A. Laidlaw's Woodstock Birdie. Very high com., C. C. Browning's Spright.—ANY OTHER COLOR—1st, A. Laidlaw's Woodstock Clip; 2d, Oldham & Willey's Goldie. *Puppies:* No entries.

FOXHOUNDS.—ENGLISH—1st, J. J. Dwyer's Reseville Rover; 2d, withheld; 3d, J. M. White's Jerry.—AMERICAN—1st, R. D. Perry's Jack of Diamonds; 2d, A. M. Gerry's Drive; 3d and very high com., J. M. White's Abel. Loud, Ben, Billy and Major. Very high com., C. G. Elms's Spot, W. B. Dean's Bat, E. D. Whittaker's Tilden, and C. A. Knight's Captain and Trump. High com., J. Goshlaw's Jim. L. Heredun's Turk and W. R. Dean's Tramp. Com., E. T. Balcom's Sport. *Puppies:* 1st, J. M. White's Spunk.

DACHSHUNDE.—1st, J. E. Thayer's Croquette.

PUGS.—CHALLENGE—No entries.—OPEN—*Dogs:* 1st and 3d, withheld; 2d, L. M. Richards's Doctor. *Bitches:* 1st, Miss L. E. Bromhall's Polly. *Puppies:* 1st, withheld; 2d, Maud A. Parker's Rex R.

PHILADELPHIA DOG SHOW.

OVER seven hundred entries were received for the Philadelphia Kennel Club show, but we have been compelled to decline all over six hundred. We will not know definitely until to-morrow (Wednesday) how many Horticultural Hall will accommodate, as there are several rooms in addition to the main auditorium we have pressed into service. The last two hundred entries are being held in reserve, in the order of their arrival, until we know how many can be benched. We had no expectation of scoring a second to New York, but we got there and all hands are correspondingly elated. Exhibitors were so prompt in responding to the requests for early entries—we had five hundred on the night of closing—that I hope they will be equally so when we ask them to have their dogs benched early on Tuesday morning. The judging rings cannot be as many as we could wish, and to get through the judging on that day we must begin promptly at 10 o'clock. Owners of mangy dogs will please take notice that none such will be benched, and it will be wise to save express charges and keep them at home.

H. L. IRELAND, Superintendent.

CENTRAL FIELD TRIAL CLUB RULES.

RULE 1. *The Management of a Meeting.*—The management of the meetings for the annual field trials shall be intrusted to the board of management, who shall interpret all the rules governing the trials, and shall decide upon all matters pertaining to the trials not provided for in these rules.

RULE 2. *Selection of Judges.*—The judge, or judges, shall be selected by the board of management, and their names shall be publicly announced as soon as possible after their selection. When a judge is prevented from attending a meeting or finishing it, the board of management shall appoint a substitute.

RULE 3. *Description and Disqualification of Entry.*—For all stakes, the name, pedigree, age, color and distinguishing marks of each dog shall be detailed in writing to the secretary of the club, to be filed at the time of making the entry or entries. Any dog's age, markings or pedigree which shall be proved not to correspond with the entry shall be disqualified, and all such dog's stakes or winnings shall be forfeited. Dogs afflicted with any contagious disease, and bitches in season or unduly attracting the attention of the competing dog, will not be permitted on the grounds. In these rules the term "dog" is understood to mean both sexes.

RULE 4. *Payment of Entry and Forfeit.*—The forfeit money must accompany every nomination, and the balance of the entrance fee must be paid before the drawing. No entry shall be valid unless the amount due for it has been paid in full.

RULE 5. *Power to Refuse Entries.*—The board of management may refuse any entry they may think proper to exclude; and no person who has been proved to the board of management to have misconducted himself in any manner in connection with dogs, dog shows or dog trials, or who is a defaulter for either stakes or forfeits in connection with either thereof, or for money due under an arrangement for division of winnings, or for penalties for infraction of rules, or for any payment required by a decision of the club, shall be allowed to compete in any trials that may be held under the auspices of the Central Field Trial Club.

RULE 6. *Protests and Objections.*—Any objection to an entry must be made in writing addressed to the secretary of the club, and will be acted on by the board of management, whose decision shall be final. All protests, except as hereinafter provided, must be made and delivered to the secretary of the club, or in case of his absence, to the president of the club, or in case of his absence, to a member of the board of management at or before midnight of the date of the running of the final heat.

RULE 7. *Age of Puppies.*—A dog whelped before Jan. 1 of the year preceding the trials will not be eligible to the Derby.

RULE 8. *The Stakes.*—There will be a Setter Derby and a Pointer Derby, with first, second and third places in each. The winners will be known as the winners of first, second and third in the Setter Derby, and first, second and third in the Pointer Derby, respectively. The two first winners will be compelled to run a heat together and the winner of this heat shall be known as the absolute winner of the Derby.

There will be an All-Age Setter and an All-Age Pointer stake which will be run on the same plan as the Derby, and the winner shall be known as the absolute winner of the All-Age Stake.

RULE 9. *The Drawing.*—Dogs shall be drawn by lot, and numbered in the order drawn. The first two dogs so drawn shall run together in the first heat of the series, the next two shall run together in the next heat, and so on, in like manner, until all the dogs in the series have run in heats.

Immediately before the dogs are drawn at any meeting the time and place of putting down the first brace of dogs on the following morning shall be declared and posted in a conspicuous place.

All stakes shall be run in the order of the programme when possible. Should, however, competitors or their representatives in the various stakes agree otherwise, the order may be changed with the consent of the board of management.

RULE 10. *The Bye.*—In case there should be a bye in any series, the bye dog must, except as hereinafter provided, run a side heat under a judge appointed by the regular judges, for a length of time designated by them. The bye shall run in the first heat of the next series with the winner of the first heat in the series in which the former had a bye, except as hereinafter provided.

If a dog be withdrawn or fails to appear, the dog drawn to run against such dog shall run with the bye, if there is one, at the end of the series in which the bye occurs, or if there should be more than one withdrawal, the dogs drawn to run against such withdrawn dogs shall run together in the order of precedence in which they are drawn.

RULE 11. *Guarding.*—If two dogs owned or handled by the same person should come together in the first or any succeeding series, the second dog so owned or handled shall change places with the first dog not so owned or handled. This change shall be effected in the order of running if possible; if not so possible then in the reverse order of running. If such separation is found to be impracticable, the running together of two such dogs may be permitted.

RULE 12. *The Running.*—No heat shall be less than one hour's duration; and the judges may prolong a heat to such further length as may be necessary to satisfy themselves of the relative merits of the competing dogs. After all the dogs have been run through the first round of heats, the judges shall announce those they have selected to run in the subsequent heats, and the names will be drawn to see which will run together, and the usual order of running will be continued through the future heats. The beaten dogs shall be retired and the winners shall run together in the next series of heats.

The last dog beaten by the winner of the first prize shall compete for the second prize with the best of those dogs previously beaten by the winner of the first prize. The winner of this heat shall be declared the winner of the second prize. The discretion is given to the judges of deciding which is the best of those beaten dogs in the competition for second by selection, or by running extra heats between them. After the first and second winners have been ascertained, the judges may select the winners of any other prize from any of the dogs in the stake without further running.

The first and second prizes in any stake cannot be divided. The judges may, however, at their discretion divide the third prize, but in no case shall more than two dogs have part in the division, and they may be selected from any of the beaten dogs.

The dog last beaten by the winner of the first prize shall not be obliged to run more than two heats on the same day, except by desire of his handler, but shall run the final heat for second place on the following day.

When necessary to alter the general course of handlers, they shall be duly notified and allowed a reasonable time to change the course of their dogs, so that each may start over the new course upon equal conditions. One or both dogs may be ordered up to enforce this rule; but in no case shall the course be altered when either dog is on a point or working a hot scent.

A dog's merit shall be considered in his performance in each heat throughout the stake.

RULE 13. *Retrieving.*—When a dog is ordered to retrieve, he shall find the bird with only such assistance from his handler as may be given by commands, verbal or otherwise, from the position occupied when shooting. In case the nature of the ground obstructs a fair view of the location of the dead bird, the handler may move to a more favorable position. Retrieving shall not be required, or considered as a point of merit, in the Derby.

RULE 14. *Handling Dogs in Trials.*—Each dog must be brought up in its proper turn without delay; if absent more than twenty minutes, its opponent shall be entitled to the heat, provided such delay was not caused by following the instructions of the judges. A handler shall not be permitted to "rush," or assume a gait faster than the walk customary in ordinary field shooting; but if a handler, either from physical inability cannot, or for any reason will not, walk as fast as in ordinary shooting, the judges shall not restrain the competing handler, who shall be permitted to handle his dog, while walking as fast as in ordinary field shooting. No one shall be allowed to talk to a handler while his dog is under judgment, unless what is said is spoken openly in the presence of the judges, and nothing shall be said at such time that may prove advantageous to the handler in working his dog. If the judges know that any information has been given to a handler, while his dog is under judgment, that may help him to locate birds, the judges shall require the handler to draw off his dog from the birds so located and decline to give any credit for the work of the dog upon birds so located.

In case a dog is lost while on point or has gone astray, the judges shall appoint those they may see fit to assist in finding the dog so lost. No person other than those appointed shall be permitted to take part in any search. In case any unauthorized persons take part in the search, any credit which might otherwise come to the dog so lost shall, on account of their interference, not be credited to it, if the judges so decide; and any demerit due to the competing dog, on account of the interference of such persons, shall not be scored against it.

An owner, his handler or his deputy may hunt a dog, but it must be one or the other; and when dogs are down an owner must not interfere with his dog if he has deputed another person to handle and hunt it, as two persons are prohibited from working one dog. If from any cause the handler of a running dog is disabled to such an extent that he cannot shoot, upon his request to the judge or judges, they may select some person to shoot for him, and the judges may in any case require handlers running dogs to go through minutely the evolution of shooting either a blank or shotted cartridge over any or every established point, upon being ordered to flush a bird. The handlers of the two dogs shall walk within a reasonable distance of each other, and hunt said brace or braces in the trials as in ordinary shooting, so that the dogs shall be on an equality as to ground, opportunity for finding, etc.

The privilege is granted handlers to ask the judges for information or explanation that has a direct bearing upon any point at issue. Pending such questions the dogs shall not be under judgment.

The person handling and hunting a dog may speak, whistle to and work him by hand as he may deem proper, but he shall be called to order by the judges for making any unnecessary noise, or for any disorderly conduct; and if after being cautioned he persists in such noise or disorderly conduct, the judges shall order the dog to be taken up and declare it out of the stake. An opponent's dog must not be interfered with or excited. In such case an appeal shall be made to the judges. The judges have the discretion to prevent a handler from whistling or giving orders to his dog if the competing dog is making game or pointing.

When a dog points game, the competing dog must not be drawn across him to take the point, but if not backing of his own accord must be brought around out of the way of and behind the pointing dog.

The judge or judges shall assess a fine upon any handler who, while handling a dog under their judgment, may be guilty of misconduct or disobedience toward them. The fine so assessed for each offense shall not be less than $5 nor more than $25. The handler so fined shall immediately pay the fine or give satisfactory security for such payment. Upon his failure to do so, the judges shall declare the heat finished and the dog run by said handler out of the stake.

Handlers shall not load their guns until a point has been established.

RULE 15. *For the Government of Spectators, etc.*—No person other than the judges, judges' guide, stewards and reporters will be permitted to accompany the handlers of dogs competing in any heat, except the owners of the competing dogs, who shall be permitted to accompany the stewards until the finish of the heat.

Spectators shall not be allowed nearer the handlers of dogs running than 75yds. at the rear.

If any person openly impugns the actions or decisions of the judge or judges, or otherwise annoys them during the progress of a trial, he may be debarred from future participation in the trials and ordered off the grounds.

No person shall make any remarks about the judges, handlers or dogs within hearing of the judges or handlers, concerning location of birds, or give any information whatever calculated to affect the action of handlers or the result of the heat. Any person so offending shall be expelled from the grounds, and points of merit will not be allowed any dog whose handler acts upon information imparted by such person, or acquires it by any unfair means whatever. A protest on this point must be made to the judges before the close of a heat, and their decision shall be final.

RULE 16. *Training.*—To relieve the judges of the responsibility of deciding heats between dogs possessing superior natural qualities, imperfectly broken, and those of inferior qualities, well broken, the Central Field Trial Club insists that all dogs entered for competition shall be thoroughly broken, not that the training of the dog will be recognized as having any great value in the scale of points, but because his qualities cannot be exhibited properly without it.

RULE 17. *Withdrawals.*—A dog cannot be withdrawn from a stake at any time after the fee to start it has been paid, without the consent of the judges; and any owner or handler withdrawing a dog or dogs, without the consent of the judges, shall be debarred from any future trials held by the Central Field Trial Club, or be penalized, at the discretion of the club.

When a winner of one or more heats has been withdrawn, the dog or dogs previously beaten by it, shall be deprived of competing, if, in the opinion of the judges, said dog or dogs have a chance to win.

Should the owner of a dog or his representative induce the owner or representative of another dog to withdraw such dog for consideration or bribe of any nature whatsoever, the dog in whose interest the withdrawal was induced, shall forfeit all rights in the stake.

INSTRUCTIONS TO JUDGES.

Pointing.—Pointing fur, feather, reptile, or scent of game birds shall not be considered a false point.

The judges shall give a dog ample opportunity to discover whether he is on a true or false point.

No assistance shall be given by the handler to enable a dog to discover whether he is on a true or a false point.

Judges shall avoid as far as possible holding a dog so long on point, for the purpose of securing a back or otherwise, as to enable the birds to run; and if the pointing dog be held on point by order of the judges for a competing dog to secure a back, the pointing dog shall not incur any penalty for results. Dogs shall be brought up to back only when the opportunity offers, without interfering with the pointing dog, and a dog drawing on or pointing game which he has found independently, shall be afforded ample opportunity to locate the game without competition, and the handler shall have ample time to flush the bird.

The number of times a dog points, backs, etc., shall not necessarily give it the preference, but the judges shall consider the quality of the performance rather than the frequency of the occurrence.

When a handler calls a point, it shall be considered only as calling the attention of the judge to the dog.

Backing.—The judges are requested to give no credit for backing unless it appears to be voluntary. Any assistance from the handler shall deprive the dog of credit for the performance.

Ranging.—The judges are requested to give greater credit to the dog that maintains the fastest and most killing range throughout, wide or close, as the necessity of the case requires; that works his ground with judgment; that observes his handler's course and position as a base of operations, and that hunts to the gun.

Obedience and Disposition.—The judges are requested to give much greater credit to the dog that works promptly, without noise or severity, and is obedient, prompt, cheerful and handled easily.

SCALE OF POINTS.

The following scale of points is the scale adopted by the Central Field Trial Club, and judges of the club's trials are requested to use them:

Merit.

Pointing (including nose, style and promptness in locating)	30
Staunchness	10
Bird sense	10
Pace	15
Range	10
Obedience and disposition	10
Backing	10
Retrieving	5

Demerit.

False pointing, breaking in, breaking shot, chasing.

These faults shall be gauged by the judges in their discretion. The third chase, however, loses the heat.

DEFINITIONS.

Breaking In.—Breaking in is where a dog, through imperfect breaking or from excitement, leaves his position when the birds rise, whether the gun is fired or not, and starts to chase, but stops within a few feet from where he started, of his own accord or by command.

Breaking Shot.—Breaking shot is where a dog runs in when a shot is fired, with the intention of getting the bird, but does not stop promptly at command.

Chasing.—Chasing is where a dog follows the birds, either when a gun is fired or not, to an extent beyond the control of his handler for the time being.

Pointing.—The judges will rate a dog's merit under this head by display of nose and judgment in finding and pointing birds, and accuracy and quickness in locating birds after he has caught the scent of them. False-pointing, flushing or uncertainty will detract from a dog's score under this head.

ANNUAL MEETING OF THE COLLIE CLUB.—The third annual meeting of the Collie Club will be held at the Philadelphia Kennel Club bench show, on Tuesday afternoon, April 16, at 5 o'clock. The president's cup for the best collie exhibited by a member of the club, the collie sweepstakes, the stud dog stakes, and the silver club medal for the best American-bred collie exhibited by a member will be competed for at this show.—J. D. SHOTWELL, Sec'y.

THE SEITNER CASE.

THE committee of the American Pointer Club assembled at the rooms of the American Kennel Club, at 44 Broadway, at noon on Tuesday, April 9, to consider the charge against B. T. Seitner, preferred by FOREST AND STREAM in its issue of March 7. It will be remembered that a letter of instructions had been written by Seitner to his agent Lewis, a fac simile of which was published in our issue of March 7. In this letter Seitner instructed Lewis confidentially to look over class 36, the open class for bitches, and if Carrie, entered in puppy class (38), had a show to win in class 36, to have her transferred to it, she being over age. Lewis apparently thought she had not a chance, for he left her in class 38, in which she received vhc.

The only construction which the language of the letter will bear, and that put upon it by Lewis was, that the bitch was to remain in the puppy class, unless she stood a show to win in the open class.

Being called on for his explanation by the committee of the American Pointer Club, who had recently elected him a vice-president of their body, Seitner replies in substance, that the letter is, he believes, a fac simile of one written by him to Lewis; that the meaning which he intended to convey was, "that the bitch being over age she was to be withdrawn from the puppy class absolutely, and transferred to the open class only if she had any chance of winning there," and that he did not repudiate the vhc. awarded; firstly, because he did not know of the award until months later, and secondly, because having written to the secretary of the Philadelphia dog show about the moneys won by his other two dogs, exhibited at same time, that officer declined to recognize him as an exhibitor at the show.

The Pointer Club committee admit the obviously natural construction of the language of Seitner's instruction to Lewis, but express themselves as fully satisfied with Seitner's explanation, that he wrote what he did not intend to, simply because his ideas outstripped his pen; and the motion that said B. F. Seitner had completely exonerated himself in their estimation from the charge of fraudulent intent was unanimously carried.

After pondering Mr. Seitner's letter in the light of his attempted explanation, we cannot agree with the Pointer Club's very charitable verdict. A man confronted with his own letter affording *prima facie* evidence of an intent to defraud, and unable to dispute the authenticity of the letter, has no other alternative than to admit his guilt, or declare that he meant something other than he wrote. A man's evidence in his own favor is valueless, unless it is very plausible and the defendant's record is a very clean one.

In all his correspondence on the subject Seitner has shown that he possesses a very ready command of English; that, in fact, he is a writer capable of expressing himself very clearly; and it is hardly probable that a man with this qualification would if innocent be left with no other defense against an imputation of fraud based on his own letter, than that he meant something other than what he wrote.

It may be fairly urged that Mr. Seitner is entitled to any doubt in his favor which he may have succeeded in creating by his defense, and his confreres of the Pointer Club, not contented with doubting his guilt, have expressed themselves convinced of his innocence. The attempted vindication has not altered our estimate of the situation in any degree. We hold it our duty to contribute to the elevation of the standard of rectitude of dog men; and the best men of the fraternity, the men to whom we appeal, may be left to form their own judgment as to the worth of the explanation to vindicate the writer from the intent implied in the only possible construction which the language of the letter admits of.

DOG TALK.

WE understand that Mr. F. C. Phebus, manager of the Somerset Kennel, Bernardsville, N. J., has joined the ranks of St. Bernard breeders, having purchased from the Erminie Kennels, Mount Vernon, N. Y., their imported smooth-coated stud dog Barry (by Mönch out of Bella). Mr. Phebus has also purchased a very handsome rough-coated St. Bernard bitch which will no doubt make her first public appearance at Philadelphia.

Mr. Carlyle writes us from Washington: "I am striving to introduce a better class of dogs into Washington than we have had heretofore. I now own in connection with my kennel of Scotch collies, a fine pair of St. Bernards that I bought from H. R. S. Coffin, of Glens Falls, N. Y. Their names being Cato (A.K.R. 5265) and Belle Meade (A.K.R 4918), both smooth in coat. I now want a rough-coated St. Bernard bitch.

George Wilson, one of the oldest dog men in England and one of the most successful handlers of prize winners, is here on a visit to his son, who lives in Chicago. Few men in the dog fancy have received from judges as many blue ribbons as George. It is possible he will remain in America.

"Sports Afield" lately wrote of Mr. Wade's *auto*biography in the London *Stock-Keeper*, and now Mr. Wade is "rearing round" with the light of battle in his eyes and talks about an "auto"-*da fe*. He has not yet decided whom he will kill or when he will begin, but there is blood on the face of the moon.

Beaufort, champion mastiff of England, has been sold by his owner to come to this country.

Mr. E. O. Damon, of Northampton, Mass., is importing the Irish setter Darby II.

METCHLEY SURPRISE—JAKYR DEAN.—Rochester, April 1.—*Editor Forest and Stream:* Having read Mr. Watson's letter in regard to the Metchley Surprise—Jakyr Dean wins at Rochester, I feel it only just to all parties concerned to make a plain statement of facts. Jakyr Dean was whelped March 8, 1888, and was properly entered under her full name at Buffalo. Whoever had charge of the catalogue put her in as a dog and changed her name to Dean. She was also entered at Syracuse, but in their catalogue she still figures as a dog. The Stud Book got her wrong both in name, sex, and date of birth. Some time ago I copied all my old records into a new book, and put her down as being whelped March 18, instead of the 8th, and from this I made my New York entry. At Albany through some mistake she was catalogued as being whelped the 19th. So Mr. Harrison entered her at Rochester in good faith, and as soon as the mistake was discovered, withdrew her entry. The entries of the Rochester Kennel Club were advertised to close March 6, but at a meeting of the club they resolved to change the date to March 13, and it was so announced to the local papers. The Chestnut Hill Kennel entries were received March 13, and therefore Metchley Surprise was allowed in the challenge class, having won four firsts—J. P. GRAY, Pres. Rochester Kennel Club.

THE ST. BERNARD CLUB OF AMERICA has published a circular embodying the proceedings of its annual and special meetings of February 19, and the regular meeting of the Board of Governors on March 11, last, with the treasurer's statement embracing the interval from Feb. 23 to March 11. At the annual meeting it was decided on the motion of Mr. Hopf to change the wording of the standard in respect to color and markings, making white muzzle, blaze, chest, feet, and tip of tail indispensable, and declaring a white collar or white spot on the nape as very desirable.

STRAYS.—*Editor Forest and Stream:* I have had the very worst luck lately with my dogs in having them stolen or strayed. On the 22d of January the well-known Irish terrier Greymont, which I had just had a few days from Mr. Wheeler, disappeared and not a trace of him has been heard of since. On Tuesday, the 26th of March, my little black spaniel bitch Topsey (Doc—Bene) was let out for exercise as usual, and has never been seen since. She was not a show bitch, but she was a very handsome little thing about 18lbs. weight, but rather fat, all black with a snipy nose. Greymont was as fine an Irish terrier as has ever been imported; red, with good head and splendid coat. If any of your readers should run across either of these dogs I should be so much obliged if they would write me.—J. S. NIVEN.

SALE OF PATSY.—Northampton, Mass., April 8.—*Editor Forest and Stream:* I have sold to Mr. F. H. Perry, of Des Moines, Iowa, the Irish setter Patsy, imported by Mr. C. H. Mason and brought into prominence by this gentleman's pen, in your issue of Dec. 13 last. In writing to me of this dog's quality Mr. Mason says: "Size is his drawback. If you will look at him carefully, you will see he has great bone, decidedly more substance, stronger loins, deeper chest, better feet than Tim, and that he is of much better color. Elcho, Jr., would beat him under most judges, but his better size would be the strong point in his favor." Mr. Mason says he is a "hot one," it must be so.—E. O. DAMON.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Cotton-Tail Jack, Contralto and Hunter's Pet. By Rural Kennels, Wakefield, Mass., for black, white and tan beagles, one dog and two bitches, whelped March 3, 1889, by Little Duke, Jr. (Little Duke—Rose) out of Rural Dot (Flute M.—Belle).

Belle Comedy and Bess Comedy. By Dr. Geo. B. Ayres, Omaha, Neb., for fawn, brown points, mastiff bitches, whelped March 24, 1889, by Edwy (champion Orlando—Countess of Woodlands) out of Ilford Comedy (champion Orlando—Idalia).

King Edwy, Prince Edwy, Kittie Comedy, Bonnie Comedy, Mollie Comedy and Lady Comedy. By Dr. Geo. B. Ayres, Omaha, Neb., for fawn, black points, mastiffs, two dogs and four bitches, whelped March 24, 1889, by Edwy (champion Orlando—Countess of Woodlands) out of Ilford Comedy (champion Orlando—Idalia).

Dupont. By F. G. Taylor, Philadelphia, Pa., for lemon and white pointer dog, whelped Aug. 10, 1888, by champion Bang Bang (Price's Bang—Princess Kate) out of Telie Doe (Fritz—Virginia).

Winnie Rake. By Dr. L. M. Thompson, Mahanoy City, Pa., for lemon and white English setter bitch, whelped June 3, 1888, by Count Rake (Bergundthal's Rake—Phyllis) out of Winnie Davis (Diomed—Bessie San Roy).

Rosa Mark. By M. M. MacMillan, Mahanoy City, Pa., for lemon and white English setter bitch, whelped Aug. 12, 1888, by Gath's Mark (Gath—Gem) out of Rosa (Dashing Monarch—Leila).

Stanfield. By F. G. Taylor, Philadelphia, Pa., for black, white and tan English setter dog, whelped Jan 17, 1889, by Gath's Joy (Gath—Gem) out of Rodroka (Roderigo—Gem).

Rosstrevor, Redskin and Teddy. By F. G. Taylor, Philadelphia, Pa., for red Irish setter dogs, whelped Jan. 12, 1889, by champion Tim (Biz—Hazel) out of Curror Bell III. (Sarsfield—Maud II.).

Captain Kidd. By Warner & Hamilton, Canaan Four Corners, N. Y., for red Irish setter dog, whelped Jan. 21, 1889, by champion Kenmore (champion Glencho—Red Lassie) out of Fluff.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Delaware—Potomac. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Delaware (My Maryland—Gill) to their Potomac (Lee—Countess), March 16.

Ferrol—Bounce. Mrs. F. C. Phebus's (Bernardsville, N. J.) beagle bitch Ferrol (Fleetwood—Cloud) to Somerset Kennels' Bounce (Rambler—Honeymoon), Feb. 17.

Lady Romp—Jupiter. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Lady Romp (Cæsar—Lulu) to their Jupiter (Lee—Saad), March 27.

Hope—Bounce. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Hope (Fleetwood—Countess) to their Bounce (Rambler—Honeymoon), March 28.

Vesta—Goodwood Rattler. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Vesta (Lee—Dorsey's Venus) to their Goodwood Rattler (King Pat—Sis), March 27.

Colina—Scot's Jack. Theo. J. Hook's (Rome, N. Y.) collie bitch Colina (Kilmarnock Bruce—Lady of the Lake) to Dr. H. S. Quin's Scot's Jack (champion Dublin Scot—Effie Dean), March 31.

Elm Place Dolly—Wacouta Nap. L. D. Ely's (Rochester, N. Y.) mastiff bitch Elm Place Dolly to St. Joe Kennels' champion Wacouta Nap (A.K.R. 5435), March 22.

Daisy A.—Beaufort H. Geo. W. Lovell's (Middleboro, Mass.) pointer bitch Daisy A. to his Beaufort H., March 22.

Nell Gwynne—Gath's Joy. F. G. Taylor and G. G. Davis's (Philadelphia, Pa.) English setter bitch Nell Gwynne (Racket—Moxie) to F. G. Taylor's Gath's Joy (Gath—Gem), March 9.

Psyche—Beaumont. C. L. Griffith's (New York) Gordon setter bitch Psyche (Roy—Dott) to J. H. Meyer's Beaumont (Ronald III.—champion Floss), April 8.

Blondie G.—Sancho G. C. E. Gilchrist's (Somerville, Mass.) cocker spaniel bitch Blondie G. (Pete Obo—Bijou) to Mt. Waite Kennels' Sancho G. (A.K.R. 6503), March 28.

Vic—Sancho G. T. C. Barden's (South Boston, Mass.) cocker spaniel bitch Vic to Mt. Waite Kennels' Sancho G. (A.K.R. 6505), April 5.

Renah W.—Little Red Rover. John E. Weston's (Utica, N. Y.) cocker spaniel bitch Renah W. (Black Pete, Jr.—Gilt) to Theo. J. Hook's champion Little Red Rover (champion Obo II., A.K.R. 432—Woodstock Dinah), April 3.

Brownie—Obo-crit. N. V. Ketchum's (Savannah, Ga.) cocker spaniel bitch Brownie (A.K.R. 3072) to his Obo-crit (A.K.R. 4100), Feb. 22.

Queen Victoria—Somerset Mike. Somerset Kennels' (Bernardsville, N. J.) fox-terrier bitch Queen Victoria (Rip—Jewel) to their Somerset Mike (Belgrave Primrose—Smuggler), March 17.

Toody—Bradford Harry. Dr. G. W. Dixon's (Worcester, Mass.) Yorkshire terrier bitch Toody to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), March 31.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Flight. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Flight (Lee—Nightshade), Feb. 26, three (two dogs), by their Storm (Lee—Countess).

Portland Lilly. Geo. W. Lovell's (Middleboro, Masss.) pointer bitch Portland Lilly, March 29, eight (four dogs), by his Beaufort H.

Nellie. H. C. Bronsdon's (Boston, Mass.) cocker spaniel bitch Nellie (Newton Abbot Laddie—Roxie), April 8, seven (four dogs), by Mt. Waite Kennels' Sancho G. (A.K.R. 6506).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Pat—Helen whelp. Beagles, whelped Jan. 19, 1889, by C. H. Starks, Chatham, N. Y., a white, black and tan dog to George Laick, Tarrytown, N. Y., and a white, black, tan and blue ticked dog to Isaac Whitbeck, Mt. Washington, Mass.

Dupont. Lemon and white pointer dog, whelped Aug. 10, 1888, by Bang Bang out of Telie Doe), by F. G. Taylor, Philadelphia, Pa., to N. B. Thomas, same place.

Rebel Rose. Orange and white English setter bitch, whelped July 6, 1888, by Buckellew out of Rodreka, by F. G. Taylor, Philadelphia, Pa., D. A. Goodwin, Jr., Newburyport, Mass.

Ted Belthus. Liver, white and tan English setter dog, whelped Feb. 14, 1889, by Leigh Belton out of Rural May, by Rural Kennels, Wakefield, Mass., to Herbert Philbrook, same place.

Lark Belton. Lemon and white English setter dog, whelped Feb. 14, 1889, by Leigh Belton out of Rural May, by Rural Kennels, Wakefield, Mass., to F. A. Patch, West Acton, Mass.

Captain Kidd. Red Irish setter dog, whelped Jan. 21, 1889, by champion Kenmore out of Fluff, by Warner & Hamilton, Canaan Four Corners, N. Y., to Harry Bates, East Albany, N. Y.

Bonnie Obo. Black cocker spaniel bitch, whelped Feb. 16, 1889, by Pete Obo out of Floss B., by Rural Kennels, Wakefield, Mass., to Harris L. Gibson, same place.

Pete Obo, Jr. Black cocker spaniel dog, whelped Feb. 16, 1889, by Pete Obo out of Floss B., by Rural Kennels, Wakefield, Mass., to E. M. Bassett, Lowell, Mass.

Black Nan. Black cocker spaniel bitch, whelped April 19, 1887, by Black Pete out of Althea, by H. F. McLaughlin, Boston, Mass., to Mt. Waite Kennels, South Framingham, Mass.

Prince. Black cocker spaniel dog, whelped May, 1888, pedigree not given, by Mt. Waite Kennels, South Framingham, Mass., to C. E. Hodges, Boston, Mass.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

R. D. W., St. John, N. B.—A pointer bitch shows signs of mange on breast and top of head. Her mother was afflicted with same disease. Kindly inform me if mange is hereditary and also give me a remedy for it. Ans. Mange is not hereditary, but the same conditions and surroundings may have produced it in both dogs. Wash the parts with carbolic soap, dry and apply a little zinc oxide ointment night and morning. Keep the bowels clear and give 4 drops of Fowler's solution of arsenic night and morning in the food.

AM. A. TEUR.—My setter bitch, six months old, when let loose from the kennel, commences sneezing and keeps it up, off and on, four or five minutes. Any unusual exertion makes her act as though she was going to vomit; she will stand drawing her breath in with a wheezing noise, with her head down and mouth nearly closed, and looks like she had an attack of asthma and vomiting at the same time; she throws up nothing; her nose is dry. A friend told me she had the snuffles. Ans. It is hard to say what is the trouble without seeing the animal. Give a full dose of castor oil and follow this with a 4gr. pill of quinine and give one pill each day. Look for worms.

B. A. E., West Fairlee, Vt.—I have a foxhound, three years old, that has a trouble with his ears or head; he is continually shaking his head or digging his ears with his feet. On examining the ears I find them somewhat inflamed, otherwise they appear well. What can I do to help him? I have written you, knowing no other place where I could get reliable information. Ans. Wash ears carefully and drop a little of the following into them night and morning:

℞ Tr. opii	ʒi
Bromo chloral	ʒi
Aq	ʒii

Mix. External.

H. C. N., Ashburnham, Mass.—Please tell me what to do for the worst case of canker in ear I ever had. I tried weak solution of carbolic acid, also bromo chloralum and laudanum, and it kept growing worse. The bitch (a foxhound) has just weaned a litter of pups; has been loose, and as she is a great forager, has got fat. I have had her in chain for two weeks and fed her light on soup of lean meat with plenty of vegetables boiled in it and thickened with Indian meal. The canker is very deep-seated, and when I wash out her ears they will be full of yellow matter, and almost the whole of the flat of the ear inside is raw. I never had a case before that was not easily cured by using chloralum and laudanum, but it seems to irritate and make it worse. Ans. Alternate the bromo chloral and laudanum with solution of sulphocholate of zinc, 2grs. to the oz. Dust powdered calomel over the raw surface after washing and drying. Keep the bowels loose. Exercise. While the bitch is so fat it will be hard to get rid of the trouble.

Rifle and Trap Shooting.

RANGE AND GALLERY.

ST. LOUIS, Mo., April 6.—Below will be found the scores of the St. Louis Pistol Club, made at its last regular shoot, with Stevens 22cal. pistol at 22yds., standard American target:

L V D Perret	7	7	8	10	7	9	9	9	9	8—84
M Billmeyer	9	7	9	7	5	7	8	10	10	9—81
W J Lord	7	10	7	9	10	8	7	7	9	7—80
F A Fodde	10	9	7	9	8	6	8	10	5	7—79
M Summerfield	6	6	7	10	7	9	10	6	10	7—78

W C Mackwitz	5	7	8	6	5	5	9	6	8	5—64

UNSER FRITZ.

WORCESTER, Mass., April 5.—Yesterday was Fast Day and many sportsmen improved the pleasant weather by a visit to the ranges in and about the city. At Peat Meadow range, the one used by the militia, was a number of the members of the Worcester City Guards, Co. A, 2d Regiment, M. V. M. They had a strong cross breeze. The shooting was off-hand, distance 200yds. The best scores were:

Lieut M H Tisdale	4543445435—41	Corp C W Leonard	4444345544—41
Sergt D Jefferson	4444555445—44	J D McIntosh	5445544544—44
Corp W E Wilkins	4454454543—41	W H Farnsworth	4344434455—40

Members of the Worcester Rifle Association went out to Broad Meadow Range, where there was off-hand shooting with both sporting and military rifles, 200yds.:

Sporting Rifles.

E R Shumway	4545434155—43		

WILMINGTON, Del., April 2.—On account of the rain of Monday afternoon the regular weekly shooting at Healdmoor Rifle Range was postponed until this afternoon. Hardly had the shooting got fairly under way when down came two or three April showers to torment the already overtaxed riflemen, but the shooting was continued in spite of all annoyances, and resulted in a good full afternoon's work, which embraced some of the best scores ever made at the range. Several individual records went up with a boom. Harry Darlington, in raising his revolver record to 90, also recorded a clean score of bullseyes, the first made in this State. A trial was made of the Stevens Gould model .22-cal. pistol, and, although all were pleased with the beautiful little weapon, favor was about equally with the Smith & Wesson revolver as a target weapon. Following are the scores in detail, standard American target: Revolver match, 50yds., Smith & Wesson 32-44 target revolver:

H Darlington	8	10	10	10	10	8	8	8	10	8—90
E J Darlington	6	8	9	7	5	6	10	10	10	9—80
D Henry	4	4	7	8	10	6	10	9	7	8—73
J Evans	5	8	10	9	5	6	3	8	7	8—69
H Simpson	4	6	7	7	3	7	6	7	5	8—61
H Johnson	5	5	6	6	6	5	3	9	4	7—56

Pistol match, 50yds., Stevens Gould model .22-cal. pistol:

H Darlington	4	7	10	9	9	10	8	9	9	9—84
E J Darlington	8	7	6	10	10	8	7	6	7	10—79
J W Geyer	8	9	6	9	6	10	10	4	9	6—77
E Darlington	8	10	8	7	8	8	8	4	7	6—74
I P Taylor	9	6	10	4	5	7	10	6	9	7—73
H Simpson	7	9	5	7	6	8	9	7	4	9—71
W S Darlington	10	4	6	8	7	4	5	4	8	10—66
G Darlington	6	7	3	7	6	7	4	5	5	8—58

Rifle match, off-hand, 200yds.:

H Simpson	4	4	5	8	7	5	7	7	9	9—65
H Johnson	8	9	7	5	5	7	6	6	3	5—61
J W Geyer (mil)	6	3	10	6	5	8	4	7	4	10—63
W Rice	5	6	0	2	6	7	8	4	8	8—54
W James	3	5	5	5	7	6	6	4	6	5—52
G James	9	4	6	5	1	4	6	9	4	3—51

Military badge match, 200yds., Creedmoor target:

Sergeant Williams	4534454443—40	Corporal Adams	3444433554—39
Private Jackson	5444244532—39		

At 100yds., beginners' badge match:

J R Montgomery	7	8	7	9	7	6	4	10	10	8—76
W Siegrist	6	6	9	7	10	6	10	5	6	6—71
R James	6	7	5	6	5	8	6	8	2	4—57

A short time ago a 50-shot telegraph revolver match was arranged between E. J. Darlington of this city and W. T. Whiteford of Barnard, Mo. The scores have just been received, 369 to 355, and show Mr. Darlington the winner by 14 points.

BOSTON, April 6.—The regular shoot of the Massachusetts Rifle Association was held at their range at Walnut Hill to-day, with a large attendance of shooters, and some good scores were made. The weather conditions were very good, with a light 3 o'clock wind. Mr. Munroe won the gold medal in the 20-shot rest match, and Mr. Lee won the gold champion medal. Following are the best scores finished to-day:

20-Shot Rest Match.

J R Munroe	10	11	12	10	10	8	11	12	11	11	
	12	11	11	9	10	12	11	11	9	11—214

J W Bean	6	10	5	9	8	9	9	8	6	7—77

PHILADELPHIA, April 4.—The Hartranft Rifle Club indulged in their usual weekly practice to-day and found the weather as nice a day for rifle shooting as could be desired. It is expected by next Thursday to be able to hold the meetings in the "open," and not shoot from the house as heretofore:

Record Practice, S. A. Target, 30 shots.

E Travis	230	E Bispham	181
L E Tobodt	224	W Wurfflein	179
E Stees, Jr	223	J T Oliver	147
J J Mountjoy	217	H Steinbeisser	154
J H Buehler	189		

MINNEAPOLIS, April 3.—The Minneapolis Rifle Club held its weekly practice and badge shoot to-day. The wind was strong and gusty and light too bright. Following is the score:

Weeks	6	9	10	9	7	9	8	10	5	8—81
Marshall	7	9	9	8	10	8	6	10	10	8—86
Maudlin	7	8	10	7	9	6	9	7	5	10—79
Bell	9	7	4	8	7	7	7	7	5	9—70

Badge Shoot.

Weeks	7	7	8	10	8	4	5	8	8	8—73
Marshall	6	8	7	8	9	10	5	8	10	6—77
Maudlin	7	8	10	7	9	6	9	7	5	10—79
Bell	6	7	6	6	6	8	5	9	7	6—66

Total of five scores: Weeks 368, Marshall 404, Maudlin (mil.) 384, Bell (4) 261.

GARDNER, Mass., April 5.—At the Fast Day meet at Hackmatack Range of the members of the Gardner Rifle Club, the Standard target was used. The shooting off-hand and the distance 200yds. The totals follow:

G C Goodale	85	85—170	J E Nichols	80	75—155
C N Edgell	85	84—169	A Mathews	76	74—150
F B Edgell	80	87—167	C J Crabtree	70	72—142
W C Loveland	82	82—164	W C Adams	69	72—141
J H Jenkins	81	81—162	E B Taylor	72	

A. E. Knowles with the standard made totals of 79 and 83, and with the military 72 and 76. The club has elected officers as follows: President, H. C. Knowlton; Vice-President, F. E. Nichols; Clerk and Treasurer, C. N. Edgell; Executive Committee, W. C. Loveland and G. C. Goodale.

PHILO REMINGTON.—The death is announced from Silver Springs, Fla., of Mr. Philo Remington on the morning of April 4. He was born in 1816, and was the oldest son of Eliphalet Remington, the founder of the great armory at Ilion that bears his name. Early in life the son was placed in his father's shops, and thoroughly learned all the details of the mechanical work, and later he was made superintendent of the armory. On his father's death, in 1861, Mr. Remington became senior member of the firm of E. Remington & Sons. In the perfecting of the various inventions of the machines and weapons made by the firm, Philo Remington did a great deal to make them successful. Mr. Remington was for twenty years president of the village of Ilion, where he lived nearly all his life. Mr. Remington and his brothers, Samuel and Eliphalet, were generous in their gifts to the Syracuse University, which has received about $250,000 from them. Mr. Remington's wife and two daughters—Mrs. W. C. Squire, of Washington Territory, and Mrs. H. C. Furman, of New York—survive him.

BROOKLYN, N. Y.—Colonel Austen of the Thirteenth Regiment has succeeded in obtaining the services of Colonel J. E. Bloom as rifle inspector for his regiment. Mr. Bloom is a graduate of West Point, and served six years with the Fourth United States Artillery, participating in the Nez Perces and Sioux campaigns. He was a member of the first California rifle team sent to Creedmoor in 1879. Colonel Austen is now making arrangements to take the regiment to Minneapolis in August, and it is proposed that the regiment shall forthwith go into active rifle practice training under his guidance, with the view of having Colonel Austen challenge the State troops of Minnesota and neighboring States, as also the United States regulars in the military division of the Missouri, to two military matches; first, a regimental team match, and secondly, a company match, to be shot at a one day's tournament at Minneapolis. A similar day's work may be arranged for Chicago, either going or coming. Challenges will be sent at once to the Aojutant-Generals of Minnesota and Illinois.

NEWARK, N. J., April 4.—The regular shooting season of the Newark Shooting Society was inaugurated to-day, and considering the early date the attendance was fair. The main attraction was the expert record match, in which six contestants shot seventy tickets. The honor of winning the first bronze medal on 10 scores of 57 or over fell to Bernard Walther, of the Zettler Rifle Club, of New York. Mr. Walther won his bronze medal with 63, 57, 62, 57, 61, 70, 57, 68, 61, 65, and his silver medal with 67, 62, 62, 65, 63, 64, 62, 67, 63, 66. H. Williams, of the home club, won a bronze medal with 62, 64, 62, 70, 59, 66, 68, 67, 68, 65. Williams and Walther divided first and second money; Watts and Bergerow third and fourth; Weigman took fifth. Considerable practice shooting was also done on the ring targets. Military men were present and succeeded in doing fair work with Springfields.

NEW JERSEY.—Brigadier-General Bird W. Spencer, Inspector General of Rifle Practice for the State of New Jersey, has issued a circular giving the terms and general regulations of an interstate and United States Army military rifle shooting match, to be held at the New Jersey State rifle range, at Sea Girt, N. J., about Sept. 1 next. The match will be open to one team from each State or Territory of the United States and one team from each of the three military divisions of the United States Army. The shooting will be at 200yds. standing, and at 500yds. prone. A trophy and a medal to each member of the winning team will be presented by the Governor of New Jersey.

INDIANAPOLIS, April 5.—The managers of the American National Shooting Tournament have fixed this city, June 19 to 21, as the place and date for the annual shoot, and $10,000 in prizes will be offered. Thirteen clubs, with a membership of 1,000, have already entered. The Indianapolis Schuetzen Verein will have charge of details.

NEWARK, N. J., April 8.—The tournament closed to-night with the match of the Oakland and Annie Oakley Clubs. The victory of the former put them in first place.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

April 11 and 12.—Elm Grove Gun Club Tournament, Albany, N. Y.

CORRY, Pa., April 4.—The Gun Club has been doing good work on Keystone targets, and the enthusiasm is at a high point. It looks as if our Union Gun Club would be a grand success. Bad weather has kept us from getting on to our new grounds, but if weather permits will be there in about two week. The average of the season (April to October) will be taken. Keystone targets, traps and rules were used. The scores for the shoot of March 28 and to-day ran as follows; 25 targets to a man: F. E. Mallory 12, J. E. Mallory 16, S. C. Mallory 12, Reynolds 16, Jones 15, Penrose 21, Laurie 18, Wilson 19, Berliner 11, Swift 12, Edwards 12, Newman 14, Barker 20, Ward 5, Waggoner 14, Griffith 6, Nichols 16, McGinnis 8, Lewis 21, Arnold 17, Austin 11, Oliver 15, Bentley 4, W. Howard 7, Swan 15, Smith 3, Van Wert 2, Brown 10, Gartner 11, Bliss 2, Blydenburg 20, Mead 10, Jacobson 7, Blair 13, Cogswell 17, Keleher 9. Lewis gold medal, Barker silver medal, Van Wert leather medal.

Team race, 50 cents entrance:

Lewis Team.		Laurie Team.	
Lewis	22	Laurie	19
Jones	12	Penrose	23
Mallory, F E	19	Mallory	9
Cogswell	12	Reynolds	18
Mallory, G F	14	Griffith	8
Swan	9	Mead	12
Brown	10	Swift	12
Edwards	9	Oliver	15
Porter	6—107	McKenzie	8—124

Money divided among Laurie's side.

April 4, 25 targets: Penrose 22, Laurie 21, M. Arnold 20, Wilson 19, H. Arnold 18, Brown 18, Blydenburg 18, Oliver 17, Waggoner 16, Swan 15, Edwards 15, Green 15, Swift 15, Lewis 15, Mead 13, Nichols 12, Howard 11, Gartner 11, Austin 10, Blair 10, Blydenburg, Jr., 10, Jacobson 9, Berliner 9, Newman 8, Smith 6, Van Wert 5, Duffy 4, Blakeslee 4, Starbird 1. Laurie wins gold medal, M. Arnold silver medal, Starbird leather medal.

After club shoot Mr. Clover, of Erie, and Mr. Penrose shot a 50-bird race, which resulted as follows:

Clover	1100111111111101111111111111111111011111011101—43
Penrose	0111111110111111111111111011111111111111111111111—47

WILLIMANTIC, Conn., April 2.—Willimantic Rod and Gun Club, first merchandise shoot of the season, 15 bluerocks from 5 traps, 16 and 18 and 10 Ligowskies from 3 traps, National rules. Score: J. S. Macfarlane 23, A. W. Dunham 21, J. W. Webb 21, J. B. Baldwin 18, C. W. Smith 17, J. A. Ross 16, C. Jordan 16, F. Larrabee 16, I. Calverhouse 15, W. S. Crane 14, S. L. Johnson 14, G. Taft 14, C. M. Thompson 13, C. J. Apaugh 11, A. Kinney 9, H. Alford 9, F. Clark 9.—A. W. DUNHAM.

ELM CITY GUN CLUB.—New Haven, Conn., April 5.—The Elm City Gun Club held a very successful shoot to-day, it being the last on their old grounds, as they expect to open their new grounds with an all-day shoot, open to all comers, on East Day, on which occasion their new club house will be also thrown open for the first time. This club, which was started a short time ago with thirteen members, has nearly trebled its membership so far, and is bound to "get there." The weather was very fine and the shooting good, as the following scores will show. Ties divided:

No. 1, 6 birds, 3 traps, 25c. entrance, 3 moneys:

Ortsiefer	111111—6	Gould	111111—6
Dean	011011—4	Tyler	100111—4

Tyler	011001101—5	Rossiter	100111011—6
Potter	111011011—7	Carney	1011010w

Smith first, second div. Ties on 7, 3 birds each, won by Gould.
ELM CITY.

MINNEAPOLIS, April 5.—Yesterday the Minneapolis Gun Club held its regular weekly shoot for the different badges, besides shooting several sweepstakes. The day was fine, but very windy, and being out of Peorias, standards were used in old bluerock traps, and worked very badly, no two going in the same direction in succession. Peorias will be used exclusively after this as they give much the best satisfaction. A meeting was called during the afternoon of the gun club to take final action in regard to removal of grounds to Hamline, between the cities, but there was almost a unanimous vote to stay on our present grounds so our tournament will be held there. Our president and Mr. Babcock, a member, shot a match, 25 live birds, new American Association rules, the loser to pay expenses. The match was won by Babcock with a score of 19, to Harrison's 17.

Sweep at 10 standards, 5 traps, 18yds. rise, 50 cents entrance:

Skinner	1111111111—10	Kennedy	0010010100— 3
Marshall	0111011111— 8	Chantler	1010111100— 6

Ties on 15 divide first money, but shoot off for badge on 3 singles at 21yds., and is won by Lawrence. All ties divided.

CLEVELAND, O., April 4.—The East End Gun Club held their regular badge shoot this afternoon, using 25 bluerocks, from 3 traps, 18yds. Messrs. Hogen and Held tied for first place, but in the shoot-off Hogen won. After this Hogen and King chose sides for a team shoot, which the latter won. The scores were as follows:

McGinnis	15	Brown	13
Held	20	Smith	12
Hogen	20	Nicholas	15
Johnson	14	Jones	14
L Lebenthal	15	Harper	17
B King	16	Reeve	10
Sweetman	15	Brockway	16

Ties, Hogen 7, Held 5.

Team Shoot, 10 Birds Each.

B King	9	Hogen	6
Dennis	4	Held	7
Sweetman	7	Brockway	5
Harper	7	McGinnis	3
Brown	3—30	Reeve	3—24

LAKEWOOD, O., March 30.—The members of the Locksley Gun Club held their regular shoot for the badge to-day. Although having several close competitors. Albert Hall won the badge with a score of 21. Albert has won the badge three successive times. The conditions were 25 standards at 16yds. rise. The score: A. Hall 21, J. Tegardine 19, J. H. Byer 20, E. Pease 16, A. Jinks 19, Jay Andrews 20, A. M. Hall 18, E. Honley 19.

PINE BROOK, N. J., April 5.—There was an unusually large gathering of lovers of the gun here to-day to witness the match of Miss Annie Oakley and Mr. Frank Closs against Messrs. Castles and C. M. Hedden. They shot at 25 birds each, Hurlingham rules for $50 a side. Miss Oakley and Mr. Closs won easily by the score of 41 to 27. Before and after the match sweepstake shooting was shot until the birds gave out. The birds were only an average lot, and none of the contestants shot up to their usual standard, with the exception of Miss Oakley, who gave a very pretty exhibition, using a 6lb. 12-gauge gun. There was an unusually large number of birds dead out of bounds, which is partially accounted for by the short boundary. The scores ran:

Castel (28)	1101212101111121111120002—20
Hedden (31)	2020102200001112211222102—17—37
Oakley (25)	1111112211202112211022011—22
Closs (21)	2211222112210210101220200—19—41

Sweepstake, at 7 live birds, $6 entrance, 3 moneys:

J Erb	0211102—5	Forrest	1021101—5
Lindsley	2101211—6	O Smith	1210111—6
Stone	2101222—6	Capt Jones	1121111—7
Hedden	0221121—6	Welsh	1122110—6
Castles	2102121—6	Irwin	2121110—6
Leddy	110100w—3	Riggott	1102211—6
McGhering	00001w—1	Burkwalter	0202211—5

Capt. Jones first, second and third div.

Sweepstake, at 4 birds, $8 entrance, 3 moneys, ties div.:

Lindsley	1020—2	C Smith	1002—2
Leddy	1122—4	Forrest	1211—4
Hedden	0110—2	Erb	1111—4
Castles	1101—3	Jones	1101—3
Riggott	2011—3		

TEE KAY.

WORCESTER, Mass., April 5.—The Fast Day meet of the Worcester Sportsmen's Club at Coal Mine Brook range yesterday was one of the best the present season. There was a large number of visitors. During the day nearly 5,000 targets were thrown. One of the interesting contests was for the State Association glass ball badge. Each team of 5 had a possible 50. The work in detail follows:

M. R. A. Team.		Worcester Team No. 2.	
O R Dickey	1111111111—10	E F Swan	0110111111— 8
H Swift	1100111111— 8	W R Dean	0110111111— 8
H W Eager	0111101111— 8	A R Bowdish	1101111001— 7
H G Wheeler	1111011011— 8	C R Claflin	1011011110— 7
T Stanton	1110100011— 6—40	G J Rugg	0110101100— 5—35
Worcester Team No. 1.		Worcester Team No. 3.	
M D Gilman	0110111111— 8	E S Knowles	0110110111— 7
E G Burbank	1001011111— 7	W D Jourdan	0111011100— 6
Geo Sampson	1110101011— 7	A W Cole	1010001011— 5
G W Russell	0111110011— 7	L H Houghton	1100100011— 6
Dr Bowers	0000111111— 6—35	W E Johnson	0111001000— 4—27

A very amusing contest was the bluerock walking match. There were 28 entries. Each shooter took his position 21 rods from the open traps, and when the word was given to go he was to start for the center of the circle until the bird was in the air. Gilman, Bryden, Burbank, Dickey and Bowdish were first, Swan, Dean, Jourdan and Wheeler second, Hayden and Patterson third, Russel and Eager fourth.

In the other events the winners of first were: Six bluerocks, 13 entries, Burbank and Yerrington; 6 clay-pigeons, 12 entries, Yerrington; 7 bluerocks, 23 entries, Burbank, Dickey and Yerrington; 7 clay-pigeons, for a purse of $50, 24 entries, Wheeler and Yerrington; 25 clay-pigeons, 25 entries, Wheeler. In the two men team match Stanton and Dickey were first.

CLEVELAND, O., April 3.—There was a fair attendance and everybody had a good time at the Kirtland Club shoot this afternoon. The wind was blowing strong across the range, making it almost impossible to secure a good score. In the club shoot 20 bluerocks at 18yds., from 5 traps, were used. After that Paul North and J. A. Prechtel chose sides for a team shoot at 10 birds per man. After an exciting contest North's team succeeded in winning by a majority of four birds. The scores follow:

Kain	18	Smith	4
Bennett	11	Berger	10
Holt	10	North	13
Ward	13	Cogswell	13
Sharp	12	Foster	15
Elworthy	9	Pratt	8
Clark	12	Case	4

Team Shoot.

North	6	Prechtel	8
Cogswell	6	Bennett	8
Foster	8	Ward	3
Berger	6	Clark	6
Bell	7	Sharp	8
Holt	3	Elworthy	4
Pratt	2—38	Case	1—34

The Kirtland Club will give a grand shoot at their range on April 11. The shoot will be followed by a banquet.

CLEVELAND, O., April 4.—There was a large attendance of both shooters and spectators at the county shoot for the diamond badge on the Cleveland Gun Club range this afternoon. The conditions were 50 single standards per man at 18yds., thrown from 5 traps. The entrance fee was $2, and the purse was divided into 3 moneys, the winner of the badge at the previous shoot to take first. Mr. R. E. Sheldon, who has been shooting in great form of late was looked upon as a sure winner, and, as he was victorious at the last two shoots, would thereby be entitled to the badge, but to-day seemed to be an off day with him, and Mr. D. A. Upson was the winner, with a score of 45. Mr. Upson shot a 7½lbs. Parker hammerless gun, using Chamber-in Cartridge Company's shells, 3¼drs. Laflin & Rand powder, and 1¼oz. No. 8 shot. There were 22 entries, making the moneys $22, $13.20 and $8.80. Sheldon took first, Auld second, and Roof and Prechtel divided third. The score follows:

Sheldon	42	Clark	37
Auld	44	Roof	33
Coryell	36	Andrews	39
North	41	Cogswell	41
Byrns	36	Phare	42
Upson	45	A Williams	40
Forrester	35	Holt	37
Bennett	33	Clue	33
Prechtel	43	Calhoon	42
Roberts	39		

BROOKLYN, April 3.—The regular monthly shoot of the Fountain Gun Club was held to-day at Woodlawn Park, Gravesend. There was a large gathering of members and friends, but only seven competed for the gold badge and extra prizes. J. E. Lake, 27yds., killed 7 birds straight and won the medal and first prize. H. Thorpe, 25yds., killed 6 and won the second money, C. W. Jones taking the third with 8 killed out of 10 shot at. Several sweepstakes were shot off with varied results. The full score as follows:

Dr Shields (30)	1111001—5	J E Lake (27)	1111111—7
A Purdy (30)	0011010—3	H Thorpe (25)	1011111—6
C W Jones (30)	1110101—5	H Blattmacher (25)	1101110—5
W A Stuart (30)	0101100—3		

Ties for third prize: Shields 2, Jones 3, Blattmacher 1.

First sweepstakes: H. Bulger first, Dr. Shields second. Second sweepstakes: J. E. Lake first, A. Purdy second. Third sweepstakes: Dr. Shields and A. Purdy divide first. Referee, Mr. Hugh Goodwin; scorer, Mr. C. A. Dellar.

BROOKLYN, April 5.—The Rutan Rod and Gun Club had a shoot at Dexter's Park this afternoon. Fifteen birds were shot at, the rise being 25yds. One barrel was used. A. Rutan 13, H. Long 8, J. F. Van Wicklen 11, C. L. Madison 12, W. Rutan 9, C. Dennington 13, E. Rutan 9, C. De Camp 10.

BROOKLYN, April 5.—The Old Mill Gun Club held their monthly shoot at the old mill this afternoon. The birds were lively and the shooters had to do their best to bring them down. Lee Helgans was the winner of the club medal, killing his 7 birds straight. L. Helgans 7, H. Moeller 6, G. Schellein 5, R. Phisler, Jr. 6, L. Schellinger 5, J. Feusch 5, L. Fisher 5, B. Rausch 4, P. Miller 5, L. Moeller 5, C. L. Madison 5.

GRAND CROSSING, Ill., March 28.—The Gun Club of Chicago, 10 live pigeons, 5 ground traps, 30yds. rise, 80yds. bound. Ill. State rules, medal:

H R Foss	1102011121—8	Wm Kent	0010001021—4
C E Felton	0011111011—7	P E Stanley	0100110100—4
H Smith	0100111100—5	T H Miller	0320000001—2
S E Young	0100000010—2	C S Burton	0001001 112—5
C E Willard	2122012211—9	L Hamline	1000000131—4
W L Shepard	1100210111—7	F Thompson	0010110000—3
J E Price	2121000101—6	H Euch	1112012001—7
Wadsworth	2121020111—8		

Willard wins medal.—RAVELRIGG.

HOOSICK FALLS, N. Y.—The Independent Gun Club of this place organized April 4, with the following officers: Charles H. Palmer, Pres.; C. A. Johnson, Sec'y; Chas. H. Stockwell, Treas.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

CARVER-BUDD.—At the match won by Dr. Carver at Des Moines, on March 30, the day was very unpleasant, dark and gloomy, with a cutting cold wind blowing across the traps. Dr. Carver shot a Greener 12-gauge hammerless gun, weighing 7lbs. 4oz., using 3¼drs. of American wood powder in the first barrel, and the same quantity of Curtiss & Harvey No. 5 in the second, and 1¼oz. No. 7 shot. Budd used a Smith hammerless 12-gauge gun, weighing 7lbs. 7oz., and shot 3¼drs. of 12-bore trap American wood powder, and 1¼oz. of No. 7 chilled shot in both barrels:

Carver—		Budd—

Referee, J. G. Smith, president of the Iowa State Association for the Protection of Game and Fish. J. E. Hastings, of Carlisle, Ia., pulled traps.

WELLINGTON, Mass., April 6.—There was a good attendance at the grounds of the Wellington Club to-day. Besides the usual sweepstake matches, there was another contest for a silver pitcher, which must be won three consecutive times, the first at 18yds. and the second and third times at 21yds., to become any one's property. Several shooters have won it once, but no one has yet won it twice in succession. To-day it was won by Schaefer with a score of 14 out of 15. The scores in the pitcher match, at 7 bluerocks and 8 clay-pigeons, were as follows:

Perry	1010111 11111111—13	Stanton	1111101 01111110—12
Bond	1010010 11111111—11	Melcher	1101101 11111111—13
Schaefer	1111111 11111101—14	Chase	0001111 11011110—10
Bradstreet	1101001 11101111—11	Sanborn	0111011 11111111—13
Fay	1110011 01111111—12	Short	0110111 11101111—12
Baxter	0111010 11000011— 8	North	1011110 10101111—11
Bert	0111111 11111010—12	Conant	1101011 00111110—10

The winners in the several sweepstake matches were: Six bluerocks: Baxter 5. Five clay-pigeons: Stanton and Chase 4. Six bluerocks: Baxter 5. Five clay-pigeons: Bond, Wheeler and Schaefer 5. Six bluerocks: Baxter, Bond and Chase 6. Six bluerocks: Bond 6. Five clay-pigeons: Schaefer 5. Six bluerocks: Fay 6. Five clay-pigeons: Schaefer, Stanton, Bert and North 5. Six bluerocks: Sanborn 6. Six clay-pigeons, straightaway: Perry 6. Six bluerocks: North 6. Five clay-pigeons: Bradstreet and Melcher 5. Six bluerocks: Bradstreet and Bond 6. Six clay-pigeons, straightaway: Stanton and Perry 6. Six clay-pigeons, straightaway: Perry, North, Wheeler and Stanton 5. Six bluerocks: Schaefer 7. Eight clay-pigeons: Perry, Bond, Melcher and Sanborn 8. Six bluerocks: Sanborn and North. Three pairs bluerocks: Schaefer, Chase and Wheeler. Six clay-pigeons, straightaway: Perry, Stanton and Short 6. Six bluerocks: Bradstreet and Stanton 6. Five clay-pigeons: Bradstreet, Warren, Stanton and Schaefer 5. Six clay-pigeons, straightaway: Warren 6. Six bluerocks: Richards and Fay 6. Six clay-pigeons, Hurlingham rules: North 6.

BOSTON, April 3.—There was a slim attendance of shotgun men at the range to-day. The principal event was the eleventh competition for the Climax diamond badge, which was held by H. G. Wheeler, of Marlboro, and was won to-day by O. R. Dickey, of Boston. There were nine competitors for the badge and the contest between the leading contestants was close; 20 clay-pigeons from 5 traps and 20 standard targets from 3 traps:

	Clays.	Standards.
Dickey	10111111111111110111—18	11011111101111111111—18—36
Wheeler	11111111111111111111—20	11110111111010110l—16—35
White	11110111110101111011—16	11111011111111111110—18—34
Strong	11111111110.01011—17	01110011111111101101—15—32
Bowker	11111111111110011110—17	11111101010111111001—15—32
Bennet	11110111001111111101—16	0001110 11101101111—14—30
Stanton	101110010 0011110011—12	11101111111010111111—17—29
Jones	11110110011111101101—15	00101110101011111101—13—28
Thomas	01110110111011101101—14	10110011101110111010—13—27
Nichols	01110101111110010110—14	01101001110 Withdrawn.

The following is a summary of the winners in the 21 sweepstake events: Five clays, Bowker, 4; 10 standards, Stanton 9; 5 clays, Strong and Curtis, 4; 6 standards, Wheeler and Bennett, 6; 5 pairs clays, Bennett 9; 5 clays, Wheeler, Bowker and Strong, 4; 6 standards, Curtis and Nichols, 6; 5 clays, Stanton 5; 6 standards, Stanton and Dickey, 6; 5 clays, Wheeler, Bowker and Stanton, 5; 6 standards, Bowker 6; 20 clays, Wheeler 19; 20 standards, Dickey and White, 10; 6 standards, Wheeler 5; 3 pairs clays, Dickey 6; 10 standards, Dickey 10; 10 clays, Stanton and Bowker, 9; 3 pair standards, Wheeler 6; 15 clays, Wheeler 13; 10 clays, one money, Wheeler 10; 15 clays, one money, Wheeler 11. The next competition for the Climax badge will be held on May 15, followed by the usual sweepstake shooting.

RED BANK, N. J., March 28.—The Riverside Gun and Rifle Club, of Red Bank, have discontinued clay-pigeon shooting until further notice. The contests will be confined to live bird shooting during the spring and summer months, and the matches will take place on the third Thursday of the month. At the last shoot of the club there was an interesting team match, one team being captained by Edmund W. Throckmorton and the other by Edward M. Cooper. The following scores were made:

Throckmorton's Team.			Cooper's Team.	
	Singles.	Doubles.	Singles.	Doubles.
Throckmorton	14	5	E M Cooper	17	8
John Cooper	15	8	W T Conover	11	6
W H Little	11	8	Asa Whymer	8	8
Jas Cooper, Jr.	15	9	C Grosseager	14	8
Geo Cooley	12	4	Teubrook Davis	6	7
Mil Cornwell	11	5	Dr Ed Field	5	5
John B Bergen	14	6—137	Chas Robbins	15	5—121

SAN FRANCISCO, March 30.—The Blue Rock Club held their first shoot of the season at Adams Point this afternoon with the following result: Handicap for members of the club, International rules, 20 single bluerocks each: Slade 16, Harris 11, Coffin 17, Putzman 13, Noyes 11, Beck 12, Adams 15, Mayhew 12, C. Kellogg 15, Cadman 11, Fox 15, Stone 10, S. Kellogg 18, Dewing 6, French 14. Members' handicap at 5 pairs, double rise, same rules and conditions: Slade 9, Coffin 7, Putzman 3, Noyes 3, Beck 7, Harris 6, Adams 8, Mayhew 6, C. W. Kellogg 3, Cadman 7, Fox 3, Stone 5, S. T. Kellogg 7, Dewing 2, French 6. The fourth match for the Selby medal, presented by the Selby Smelting and Lead Company for Central California, will be held next Saturday at Adams Point, under the auspices of the Blue Rock Club.

GREENFIELD, Iowa, April 4.—Match at 10 singles and 5 double bluerocks, 18 and 15yds. rise. Shot under National rules, for club badge:

W E Chamberlain	1111001111 11 01 00 11 00—13
Wm Scholes	0110111001 10 01 10 10 10—11
G T Porter	0101000010 10 10 01 01 00— 7
E H Bickford	1011011011 00 11 00 00 00— 9
C S Burrell	1100101101 00 10 10 10 00— 9

The result gives Mr. Chamberlain gun club badge for another thirty days. Mr. Chamberlain shoots a 12lb. 10-bore Parker gun. Scholes, Bickford and Burrell using L. C. Smith hammerless guns. The day was windly and made the shooting bad.—E. N. BICKFORD, Secretary.

FAST DAY SHOOTING.—Thursday April 4 was the regular Massachusetts Fast Day, and the State seemed to blaze with shotgun and rifle matches. Wellington range had 42 events, with 6,000 targets thrown. Walnut Hill was crowded, and at Salem, New Bedford, Lowell, Cambridge, Lynn, Milton, Reading, Stoughton and Medway there were contests.

RENOVO, Pa., April 6.—The Renovo Gun Club held a shooting match at their new grounds to-day, glass balls, rotating trap, 26 balls each:

Peter Anthony	1111111111111111111111011—25
Dr Beck	1111110111111111011101111—23
R T Power	1111111111001111101111111—23
John Neylon	1110101101111111110110111—21
J J Wentzel	1101110101011111101011111—20

DAYTON, O., April 6—A friendly match was shot here by Adolph Sander and Wm. Pratchett, 25 standard targets, $25 a side:

Sander	0110111111111101111111111—22
Pratchett	0011100101111101010101111—17

RIDGETOWN, Ont., April 5.—Chatham and Ridgetown Gun Clubs shot a match here to-day in a blinding snow storm and high wind, 10 men a side, 20 birds each. Chatham won by 4 birds. Score: Ridgetown 134, Chatham 143. The Chathamites shot with their guns held ready at the shoulder, while the home men held theirs according to rules, below the elbow and at hip, thus conceding Chatham quite an advantage. The return match will be shot at Chatham Good Friday.

ELIZABETH, N. J.—A match at live pigeons has been arranged between William Dackerman, of the Elizabeth Gun Club, and Frank Lamotte. Both men are crack shots, and the terms of the match are 25 birds at 30yds. rise, Hurlingham rules, for a purse of $100. The shoot will take place April 29.

NEWARK, N. J.—The newly-organized Newark Gun Club held their first shoot at Erb's grounds, Newark, N. J., Thursday, April 11.

ST. PAUL, Minn., April 6.—The St. Paul Gun Club opened the season to-day by shooting for the beautiful challenge badge which was won by Boyd, a prominent St. Paul business man, with the splendid score of 24 out of 15 singles and 5 pair Peorias in a strong wind, amounting almost to a gale. The holder of the badge is subject to a challenge each week, both entering $5, until some person has won it ten times, when it becomes his personal property. Boyd used wood powder. There was a large attendance and weather fine, except strong wind, that made the Peorias dodge in a most provoking manner. Among the visiting sportsmen were Hon. R. M. Anderson and Mr. Manwaring, of Stillwater, Min.; J. H. Balsom, Hudson, Wis.; Harrison Knapp-Marshall, and Shuler, of Minneapolis, and Stone, of Larimore, Dak. Following are the scores:

First sweepstakes, 10 single Peorias, 5 traps, Keystone rules (which originated here five years ago and have been in constant use since), $1 entrance, four moneys:

Boyd	8	Fish	7
Bennett	9	Stone	6
Hill	4	Max	7
Shott	7	Pfister	9
Cummings	6	Forbes	8
Kennedy	8	Chantler	7

Bennett and Pfister divide first, Kennedy second, Max third, Stone fourth.

Second sweep, 10 single Peorias, 18yds., entrance $1, four moneys, 5 screened traps:

Boyd	10	Pfister	8
Bennett	5	Forbes	8
Shott	7	Chantler	10
Cummings	6	Burke	10
Kennedy	5	Fish	9
Skinner	9	Parker	8
Stone	8	Fox	7
Max	8		

Burke first, Skinner and Fish second, Max third, Shott and Fox fourth.

Third event, challenge badge, 15 singles and 5 pairs peorias, 18 and 15yds., 5 screen traps. Entrance $3; four moneys:

"Boyd"	111111111111111	11 11 11 11 01—24
"Bennett"	100111111101111	11 11 01 10 11—20
"Hill"	101110010010011	00 10 00 10 01—13
"Shott"	110010001101111	10 00 01 00 10—12
Cummings	100001110100111	11 10 00 10 00—12
Kennedy	111111111111111	10 11 10 11 11—23
Skinner	111111111011111	10 11 10 10 10—20
"Stone"	011011111110110	11 11 11 11 00—19
"Max"	111001111111011	10 01 10 10 10—17
Pfister	01101111110111	10 11 11 11 11—21
"Forbes"	010011011011011	10 10 10 10 11—15

Marshall	100110010101111	00 11 11 01 00—16
Killen	111101011111111	11 01 11 11 11—22
Mussetter	010010100010100	10 10 10 01 10—10
Smith	101001110111000	10 00 10 00 11—12

"Boyd" badge and first money, Kennedy second money, Pfister and Fish third. Ties on 20 at 3 singles and 1 pair for fourth: Bennett 4, Skinner 5, Chantler 1.

CLARENDON HILLS, Mass., April 3.—The Jamaica Plains Gun Club held their annual meeting to-day, and celebrated with an all-day shoot at the traps at Clarendon Hills. The following officers were elected: Pres, H. W. Rounds; Treas., C. H. Olmstead; Sec., J. R. Hamner; Ex. Com., George McCausland, C. H. Cilley and the secretary; Team Capt., Dr. H. A. Baker. The club unanimously voted to erect a new and commodious building on the site of the present one. The feature of the day was a match for a cup donated by Mr. A. W. Rounds. It was shot for at 10 clay-pigeons and 10 bluerocks and was won by Mr. Charles by a score of 18. Sweepstake matches were shot during the remainder of the day.

YOUNGSTOWN, O., April 3.—The Girard Gun Club was organized at Girard to-day, with a membership of twenty-five, and elected the following officers: Pres., W. W. Wilson; Vice-Pres., George M. Morgan; Sec. Elmer Monser; Treas., Charles Wallis; Directors, Thomas Hotchkiss, D. M. Jones, Ab Rush. The club will shoot every Saturday.

OLEAN, N. Y.—The eighth annual tournament of the Olean Sportsman's Club will be held at their grounds, on the Coast Driving Park, Olean, N. Y., May 16 and 17. Guaranteed purses.

LONG ISLAND, April 6.—Mr. Chauncey Floyd-Jones, of New York, and Mr. F. D. B. Randolph, of Philadelphia, shot a pigeon match for $500 a side on the grounds of the Westminster Kennel Club this afternoon. Each was to have shot at 100 birds, but when 89 had been reached Mr. Jones withdrew. Mr. Randolph killed 63 and Mr. Jones 51.

SHOT MEASURE.—Major Taylor, General Manager of the American Shooting Association, has been asked hundreds of times already where the shot measure mentioned in the new rules may be had. It is now in course of manufacture and will be ready for the trade by April 15.

BELLEVILLE, Ont.—The Belleville Gun and Rifle Club has elected the following officers: H. Corby, M. P., President; W. H. Biggar, First Vice; H. K. Smith, Second Vice; E. G. Porter, Sec.-Treas.; Committee of Management—R. S. Bell, R. Day, Geo. Twining, John Taylor, Jas. D. Clarke.

CROWN POINT, Ind.—The Crown Point Gun Club will give a specially attractive tournament, free for all, on April 18 and 19. Keystone targets will be used. These tournaments have always been very largely attended, and an average of forty or fifty contestants can be assured. The new Loyd system for division of prizes, as described in FOREST AND STREAM of April 4, will be tried.

Fourth event; 10 singles and 5 pairs Peorias, entrance $2, 4 moneys: Boyd 14, Bennett 16, Hill 15, Cummings 8, Kennedy 14, Skinner 13, Stone 16, Max 15, Pfister 16, Forbes 15, Chantler 14, Burke 14, Fish 12, Parker 6, Richardson 9, Fox 15, Barnes 15, Murphy 16, Balsom 17, Marshall 12, Killen 11, Mussetter 5, Smith 9. Mean 17. Balsom and Mann first. Ties for second: Bennett 11110, Stone 10, Pfister 11100, Murphy 10. Ties for third: Max 01100 11100 11110, Forbes 10, Fox 0, Barnes 11100 11100 11000. Ties for fourth: Boyd 101, Kennedy 110, Burke 11100.

Fifth event, sweep at 10 single Peorias, entrance $1, 4 moneys: Boyd 8, Bennett 9, Hill 9, Balsom 9, Chantler 7, Murphy 7, Fox 5, Marshall 6, Forbes 6, Fish 7, Skinner 8, Pfister 9, Burke 8, Cummings 8, Kennedy 8, Richardson 7, Barnes 7, Mann 6. Ties divided.

MONTREAL, April 6.—The Montreal Gun Club had a handicap shoot to-day for a handsome fishing rod presented by N. P. Leach. The birds were thrown from one Keystone trap adjusted to throw in different directions, and the new trap knocked the old shooters out. The birds were very fast and very low, and out of 24 birds the winning score only showed 10 broken. Alexander (18yds.), broke 10; W. L. Cameron (25yds.), 9; J. Brainerd (18yds.), 9; E. Cowley (25yds.), 8; J. Paton (21yds.), 6. Much satisfaction is expressed at the new trap.

CINCINNATI, April 8.—Major J. M. Taylor, the Secretary of the American Shooting Association, met the local Committee of Arrangements here to-day, and selected the old ball park on Spring Grove avenue as shooting grounds for the first tournament of the association, set for June 11-14 inclusive. It has been arranged to have one set of traps for live birds and three sets for inanimate targets, of which there will be several kinds.

TORONTO, April 6.—The members of the Toronto Gun Club participated in a number of sweepstake shoots at the Woodbine this afternoon. The last sweep was at five crows, and they were found hard birds to kill, getting away lively from the traps. If they were easily to be got they would be in demand for trap-shooting. These are the scores: First sweep, 10 birds, 18yds. rise: B. Pearsall 10, A. Purse 9, V. Black 8, J. Townson 8, J. Foreman 8, T. Smith 7, G. Crow 7, G. McLaren 7, J. Bell 5. Second sweep, 10 birds, 18yds. rise: B. Pearsall 10. V. Bales 8, J. Townson 7, G. Pearsall 7, J. Foreman 7, G. Bell 7, G. Smith 7, A. Purse 6, W. Pearson 6, A. Elliott 6, V. Black 6, G. Crow 6. Third sweep, 5 birds, 18yds. rise: G. Smith 4, V. Black 3, A. Purse 3, F. Andrews 2. Fourth sweep, 5 crows, 30yds. rise: G. Crow 5, G. Bell 5, V. Black 4.

TORONTO, April 6.—The Stanley Gun Club's second shoot for the president's handsome gold watch took place at McDowall & Co.'s grounds this afternoon. The day was a beautiful field day, and the large number of trigger sports who assembled enjoyed themselves hugely. These are the scores, at 20 birds: J. Rice 20, F. Mallett 19, Sawden, Jr. 19, Emond 19, Winchell 19, Sawden, Sr. 18, White 16, Charles 16, W. Heatherington 15, C. Harrison 15, W. McDowall 14, S. McClure 14, Mitchell 14, Carruthers 13, T. S. Bayles 12, T. Bennet 12, W. Felstead 12.

TORONTO, April 5.—The Stanley and West Toronto Junction Gun Clubs shot a friendly team match on D. Blen's grounds this afternoon. The weather was cold and windy, with rain and snow at intervals, and the back ground very bad. These unfavorable conditions doubtless account for the low scores made by some of the best shots. A return match will be shot at McDowall & Co.'s grounds next Friday. The scores are as follows, 20 birds per man: Stanley—W. Felstead 20, Emond 19, C. Kemp 15, T. Sawden, Sr., 14, W. Heatherington 13, G. Morley 13, W. McDowall 12, C. Winchell 10, J. Rice 9, J. Mitchell 9; total 134. West Toronto Junction—W. Clark 17, E. Dollery 15, W. Smith 12, G. Briggs 12, D. Black 12, D. Walton 11, W. Bugg 11, D. Blea 10, P. Wakefield 9, Hinton 9 total 118.

Canoeing.

CHANGES IN THE A. C. A. RULES.

Editor Forest and Stream:

In accordance with the intimation contained in my letter published a month ago, the regatta committee have reported to the executive committee recommending the abolition of the sliding seat and fixed sail, and the proposed amendment is about to be submitted to a vote, the mails being used for the purpose. The correspondence elicited by my communication, including some letters sent to me directly, does not show any strong opposition to the change. It will be, however, for the executive to decide. We have not asked for an amendment in the direction of the "one rig" idea or other matters that have come up, which can be discussed and decided upon at the meet, but are not now so pressing.

We hope to have the programme ready for publication in a few days. In the meantime those who are talking of building or rigging canoes may take it for granted that, so far as the regatta committee are concerned, it is not proposed to make any other substantial changes than those indicated. Any formal changes in the programme will not affect them, except perhaps the introduction of the cruising race as suggested by the Atlantic Division and a race for club fours.

The report of the regatta committee is as follows:

PETERBOROUGH, March 19, 1889.—*To the Commodore of the American Canoe Association:* Sir—The regatta committee of 1889 having been directed by the executive committee to consider and report upon the question of sliding seats and fixed sails, beg to report that in their view it is not in the interests of the Association that these should be retained as appliances to be allowed and authorized in the general programme, and they, therefore, respectfully submit to the executive committee the advisability of introducing in the sailing regulations such amendments as may be necessary to remove all doubt on the subject.

The following amendments are suggested:

Rule I. Under the heading "measurement," in the last paragraph add after the first sentence the words, "sliding seats or other like appliances beyond the gunwale in the sailing classes shall be added to and measured in the beam."

Rule XIV. Add the words "all sails shall be capable of being effectively and readily raised and lowered when afloat."

E. B. EDWARDS, Chairman Reg. Com.

TANNING SAILS.—We have received the following answer to "Retaw's" inquiry in the FOREST AND STREAM of March 21, from a correspondent on the Indian River, Fla.: "To tan (or rather dye) sails and tents, have the material well cleaned from any possible grease, and boil (or at least soak if the goods are too bulky) in the following mixture for about two hours: For every pound of goods take four ounces of catechu, dissolved by boiling in two gallons of soft water, and add one-half ounce of blue vitriol. Further dissolve three-quarter ounce of bychromate of potash in about the same amount of water in a brass or stone vessel (an iron kettle will give a darker shade). Take the goods out of the first dye, do not wring them, but let them partly dry in the open air, and immerse them for about thirty minutes in the bichromate of potash solution, when they should be dried without wringing. Always be careful to have plenty of water, so the goods will not get streaky or spotted. A final rinsing in salt water or soapsuds will darken the color a little more.—MAX."

CARSMEN AND CANOEISTS.—The regatta committee of the New England Amateur Rowing Association recently announced that in connection with the annual regatta of the Association, to be held on Lake Quinsigamond, June 17, there would be canoe races; but the oarsmen do not seem to take kindly to the idea, as will be observed from the following, taken from the Worcester *Spy* of April 3: "There is considerable unfavorable comment among the oarsmen over the action of the regatta committee of the N. E. A. R. A. in inviting canoe clubs to participate in the coming annual regatta of the Association. It is claimed by the scullers that such a thing as an invitation to a sculler to take part in a canoe meet cannot be found on record. And as long as the canoeists show a disposition to hold themselves above the oarsmen the latter are justified in extending a cold shoulder to all canoe sailors."—CAROLA.

IMPROVEMENT IN CANOES.—The discussion of the centerboard question has brought about a certain amount of good already: two canoeists in different localities are now at work on the same idea of a narrow board, not projecting above deck, which at the same time will fill when lowered all the space allowed for 18in. drop, leaving no triangle between the keel and top of board. Another canoeist on the Passaic River has invented a very ingenious form of board which falls aft as it it is lowered, thus allowing the trunk to be well forward.

CRUISING ON MAINE RIVERS.—A correspondent asks for information concerning a cruise from Mattawaumkeag, on the Penobscot River, to Twin Lakes, Chesuncook Lake, thence to Lakes Chamberlain, Heron, Churchill, etc., to the St. John's River, what difficulties are apt to be met, and how far on this route is canoeing practicable in an open or light canvas canoe?

CORINTHIAN MOSQUITO FLEET.—Proposals for membership to Corinthian Mosquito Fleet: By Vice-Com. Clapham; Percy Hicks, G. L. Baker, F. R. Baker, Sands Point, L. I. By Treasurer F. B. Jones: W. S. Gilmore, 556 Broadway, New York.

A. C. A. MEMBERSHIP.—Eastern Division: A. H. Lange, Worcester, Mass.; Max M. Kallman, Jas. Weld Cartwright, Boston, Mass.; Jos. H. Rowland, Bridgeport, Conn.

RAMONA.—The fast racing canoe Ramona, 16×30, is advertised for sale in another column.

Yachting.

A DUTY THAT IS A PLEASURE.

IT has been claimed by Gen. Paine, as well as by other leading yachtsmen, that the New York Y. C. has no choice in the selection of an opponent for Valkyrie, but that in its position as trustee of the America's Cup it is in duty bound to select the fastest yacht available to defend the cup. According to this view the first duty of the trustees is to keep the Cup in their possession, but we read the words of the five original donors in a different way. The object of the Cup was to encourage friendly competition between different countries, and the trustees are to keep it open according to certain general terms. These terms were openly violated in the last revision of the deed, and it will be a still further violation of the wishes of the donors to put the Cup up for a prize in a race which all admit can only result in one way. If the New York Y. C. decides to keep the Cup by such doubtful practices, the least it can do is to father manfully its own acts, and not try to dodge under a plea of duty.

WHY NOT CONSTELLATION?

IF, as now seems only too likely, the question of fair play is thrown aside, and no consideration is regarded save keeping the Cup, there is no reason why the new Morgan schooner might not prove even a safer opponent for little Valkyrie than Volunteer. She represents Mr. Burgess's latest work, is two years newer than Volunteer, built for speed, and certainly will have all the wings she wants. The main point, however, is that under the racing rules of the New York Y. C. she can claim an allowance of 15 per cent. for rig, so that actually, though her measurement would be about 103ft. corrected length, she would race at 85 per cent. of this, or 92ft. compared with Volunteer's 89.35ft. In good breezes and over a triangular course it is easy to imagine how she would leave a 70ft. boat. As to the question of difference of rig, it would be absurd to stick at a trifle like this after consenting to any such outrageous violation of the accepted principles of yacht-racing as the matching of a small yacht by a large one.

WHAT SOME PEOPLE DO NOT KNOW ABOUT THE DEED OF GIFT.

ALTHOUGH the brief, manly and comprehensive document in which the Messrs. Stevens and their colleagues set forth their intentions concerning the future of the America's Cup has been doubly repudiated by the New York Y. C. and has even been crowded out of the club book to make way for a mixture of verbiage and nonsense designed to keep the Cup in New York, there is much that is valuable in the original words of the donors, and many well known yachtsmen might spend a little time to advantage in studying both the original deed and also the first revision of 1882, which is practically in force for the coming race.

If they would read carefully the original deed they would find in every word and line a desire for a fair, sportsmanlike and equal contest, to be determined on the merits of the yachts, the main feature being the mutual agreement on all terms at an early date, failing which, *and not before*, a race over the club course can be claimed.

If Com. Gerry had read carefully the second deed of gift he would not have made the blunder which he did on Thursday last, when he called attention to the fact that the challenge of the Y. R. S. did not give a full seven months notice. The actual wording of the deed is: "The challenging party shall give *six* months notice in writing, naming a day for the proposed race, which day shall not be *later* than *seven* months from the date of the notice. This condition the challenger has complied with to the letter.

If some others had read either deed carefully they would not have fallen into the mistake of saying that to recognize a challenge in the 70ft. class would be to permit a challenge from a 40 or 50ft. yacht. In the original and also the second deed the minimum size of challengers is distinctly defined thus: "The yacht or vessel to be of not less than 30 nor more than 300 tons, measured by the Custom House rule in use by the country of the challenging party." Valkyrie's tonnage is 56.76, Genesta's is 75, Marjorie's 59, Tara's 40, Clara 20, Annasona 32, Norman 30.11; thus the latter, 58.55ft. l.w.l., and 12.7ft. beam, is as small a craft as could challenge. Either Thistle, 100 tons, or Valkyrie, 56.76 tons, would if reduced to 30 tons be about 58ft. l.w.l., a size in which excellence of model may be just as thoroughly tested as in Volunteer's class.

THE CRUISE OF THE ORINDA.

BY W. H. WINSLOW, M.D.

[*Continued from Page 228.*]

THE next day opened with rain; Noir and Olie left for home, and Jerry and I settled down into a determination to go to Eastport or drown. The wind was southeast, the sea began to beat in hard, the barometer fell fast and our position soon became dangerous. We must go back north of the bar or seek another harbor. A gale was coming on undoubtedly. We got under way and stood up the bay, skirting the eastern and northern shores and studying the chart. The wind and sea increased steadily, it began to rain, and I did not like to run into places that I had never visited for fear of striking a shoal spot and smashing things. North of the island there was calmer water and safe shelter, and we hauled to off Sorrento, ran across to Eden and let go the large anchor in Salisbury Cove. The wind was blowing off the mountains in fearful gusts, and, in the intervals, it was heavy enough. We furled everything snugly, lowered the spinaker boom to the bowsprit, housed the topmast and went below for dry clothing, as we were now wet to the skin. Then Meringue took the boat and went ashore for needed supplies. I discovered soon that the yacht was dragging and let go the other anchor, veering cables to thirty and twenty fathoms. We had dragged into deeper water and the cables seemed almost up and down then, and she still dragged. I was wet again; it was getting dark; Meringue and the boat were not in sight, and it made me mad to see that I was in for another scrape, and to see how the cutter lay broadside to the wind, even stuck her quarter toward it and jerked and nagged away at the cables, pulling the anchors right along at every blast. It was not comfortable to think of pulling those heavy cables and anchors aboard and making sail myself in the rough gale and pouring rain, with only the help of a land lubber. But it had to be done, because we had lost the lay of the land, were out in deep water where cables stood up and down, keeping the anchors moving, and just half a mile to leeward were the red buoys that marked an ugly, spiteful reef of rocks upon which we were surely drifting. I explained the necessity and danger to Jerry, and we discussed the situation. A tug lay at the wharf in the cove with steam up and lights aboard, and we thought we might attract attention and get help. So we got out two fog horns and blew as much as we ever did before, but the wind threw back the sound in our faces and no one took any notice of us. Still we were drifting and could see the red buoy, though it was almost night. Oh! if Meringue would only come to help us! He must soon or he will not be able to in the small boat, as we must cut and run somewhere or go to pieces upon the rocks. At last my sailor man came out of the darkness and I helped him aboard and explained our predicament.

"We must get in the anchors, make sail and beat up under the land, and that quickly," said he.

"Yes, but those anchors and cables will break our backs, and we have no room to reef."

"Well, we'll get her in shore somehow." This supreme confidence in himself and the yacht made a tingling response run through my sea-strained body—wet subsequences are good conductors of electricity—and I pulled down my sou'wester, routed Jerry out and began to haul in the stiff, heavy, water-soaked cables. The little anchor was duly stowed, then the large one was attacked, and it took the hardest kind of work to get it aboard, but we had it at last, though my heart was thumping in my throat, and my back felt broken. Then we lashed the throat of the gaff down and hoisted the peak of the mainsail. I took the tiller and trimmed the sheet, and Meringue gave her the staysail and trimmed its sheet, and we were under way. That red buoy and reef were not more than a hundred feet away when we filled. It was surprising, it was exciting, it was glorious to see how Orinda stuck her bowsprit up to the wind, became steady and manageable, and walked right away to windward against the choppy sea and fierce blasts off the mountains. She went in stays as easily as with all sail on a summer sea, and, with the small area of sail set, made excellent legs and took us rapidly to windward. My anxiety about her ability vanished. She had never been tried before, and I was delighted to find that I could depend upon her in such an ugly gale.

We were getting under the land, it was dark, yet Meringue could see boulders looking like boats inside of us. We had anchored first on a rocky bottom and wished no more such. We ran east along shore and spied a sloop we had seen as we came in. There must be good holding ground. We ran as near her as we dared in the darkness, came to, downed sail, and let go both anchors. They held and we were in a comfortable place considering the weather. We tied up the sails, but not very yacht like, hung up a lantern, swung in and started the stove and supper. You may imagine how fine ham and eggs, tomatoes, biscuit, jam, claret and coffee tasted then, and we lingered long over the table, congratulating ourselves over our luck and pluck, as the furious blast swept through the rigging and the rain dashed upon the companionway and skylight. This 8th of September gale was very severe along the northern coast, and wrecked a great many vessels at sea and even in such harbors as Boston. We smoked and watched the yacht awhile, then Jerry mixed a hot sou'wester for all and we turned in, feeling the need of sleep greatly and knowing that, if we drifted, it would be a long time before we reached the shore north of us.

There was no further need for able seamen that night, and the next morning at 9 o'clock when we awoke the sun was shining brightly, the water was smooth and it was dead calm. I've heard much talk about Mount Desert blows and know what they are like now. They are simply devilish. The mountains split the winds and the gorges concentrate their currents until the velocity must be nearly a hundred miles an hour. One must be very careful when he gets caught in a blow around Mount Desert. I'm not so anxious for that cruising water as I was once.

We lay still over Sunday, dried clothes and sails, strolled over the hills, picked blueberries and flowers and talked with the natives. Next day there was a little wind and we worked the catspaws down to Bar Harbor, anchored awhile for mail, then started east at 2 P. M.

The wind was southeast, and grew stronger and stronger as we proceeded; we had to take in the gafftopsail and then the staysail, and had just as much as we could stagger under in beating out a very rough sea soon arose and made lively work for us off Schoodic. But we rounded Turtle Island at last, passed Winter Harbor Light and Grindstone Point and ran toward Winter Harbor, not knowing exactly where to anchor. Some large schooners were at the head of the bay in Henry's Cove, but it was too open for small craft and we kept on until we opened a little estuary behind a high wooded point upon the left, and steered into as snug and pretty a harbor as I've seen this many a day. A long, narrow, forest-covered peninsula lay seaward, the town covered the hills opposite and the harbor was between, about 200yds. wide and 700 or 800yds. long, until it grew shallower and ended in the mouth of a mere brooklet above. The wind was heavy outside, the surf was pounding upon the outer shore of the neck and a heavy fog rolled in and hid the adjacent land on the Schoodic side, but here it was as calm as a mill pond and the muddy bottom was only 20ft. below us. Several pleasure boats, the yacht Gwendolen and three schooners were near.

We anchored abreast of the steamboat wharf at 5 P. M., and soon had supper. Then we walked over the peninsula, dug spruce gum, explored the headwaters and took a stroll about the streets. Two summer hotels had closed after a lasting business; a few cottagers still lingered, and the half-dozen stores were economizing in lamp oil. It was the same here as elsewhere along the coast east of Portland, the season had been so cold and rainy that all the hotels had lost money, and some at Bar Harbor were heavy losers. I believe Campo Bello was the only place east that did a paying business in 1888, and this was mostly with hay fever patients, who did not dare to go home. Winter Harbor is a charming spot for persons who like nature undressed; visitors get away from fashions, railroads and noise; and enjoy real rest in its quiet homes and streets, unvexed by traffic. In Henry's Cove, to the eastward, I found my little Pilgrim hauled out upon a rough, rocky shore, cradleless and braced by poles beneath the bilge. She was used at Bar Harbor and raced some during the summer of '87, but was not put afloat in '88. The upper works were alone covered, and the hull was exposed to wind and weather. It was sad to see her thus abused, and I felt sorry that she could not grace the ocean now as oft before.

We were off early next morning, the wind was southwest and helped us around the great rude barren walls of Schoodic in great shape. This is an important and easily recognized landmark for coasters, and can be seen far out to sea. If a mariner can get hold of Schoodic—and he can except in a fog and darkness—he feels safe in taking a departure across the Great Gulf of Maine. We soon made out Petit Menan Lighthouse and steered for it and passed it, and then across to Nash Island Light, passing between Sheep Island and Mistham Island into Moos-a-bec Reach, and flew before a fresh S.W. wind down the Reach to Jonesport. I had no large chart of the harbor, and guided by Meringue, who had been there years before, we narrowly escaped running upon a ledge at the mouth of Sawyer's Cove, east of the town. We must have been going ten knots; I was hugging the shore so as to make a sweep and get a berth without forging too far ahead, when M. shouted "Luff!" I luffed a little, and he shouted again, "For God's sake luff! Hard down! We are right on top of a ledge!" I luffed then, and we just skirted an ugly pile of rocks that I could have almost touched with a pole, and then I noticed a crowd of excited sardine packers gesticulating with all their might to warn us off. The ledge was an ugly mass of boulders covered with kelp and out of water 10ft. at low tide, and it made me feel queer when I saw it and how near we had passed to it. "A miss is as good as a mile," but that miss taught me caution a while, but I soon forget.

We remained here several days owing to fog and head winds. We had the squeezed out putty scraped off, the seams of hull and deck sandpapered smooth, painted the hull to copper line, oiled the deck and bulwarks, painted the boat, did a little carpenter work in cabin and made everything ship shape.

Jonesport, named for the great Jones family, is far off the railroad, has a steamer twice a week only, and gets but one mail a day by stage. It has several excellent stores, two large sardine establishments and good shops for repairs. Many vessels are repaired here annually, many supplies are furnished to fishermen and coasters, and the people are kind, hospitable and intelligent. The sardine factories give employment to whole families, and add much to the prosperity of the place, but they make the stores filthy, and emit a stench at times worse than that famous cheese, Moos-a-bec Reach is wild and rough looking, the off-lying islands are surrounded by reefs, and a glance at the chart will show danger everywhere, but the eastern entrance of the reach has been made easy sailing by recent government work and no one need fear it as I have. The holding ground is good all through the Reach, and, as a consequence, vessels bound east and west make a regular procession through it daily, and seek Jonesport to get out of gales and fogs.

We saw many vessels during our stay and were much pleased with our visit. It seemed as if the wind was always going to remain to the eastward and the fog to hover around, and I determined to run to Machias Bay once more. As we went out of the reach we met a schooner that had preceded us from Jonesport, and I asked what was the matter. The captain said the wind was too much to the eastward outside. This was ominous, but we kept on close hauled. Mark Island, just in the eastern mouth of the reach, is one of the loveliest on the coast. It rises a hundred feet above the water, has a bold, rocky shore, and is covered with a heavy growth of large trees, mostly spruce, hemlock and pine. There is a cove in the northwest side where a boat can be hauled out, and a little slope of grass above it upon which sheep were feeding, but there was no evidence of a building anywhere, and we saw all sides of it. West of the island, inside an ugly chain of reefs, is Kelly's Point, upon which there is a very handsome modern seashore villa, belonging to a Bostonian, who spends his summers there. He has a steam launch, a sloop and several rowboats, and evidently communes with nature and dallies with the sea unvexed by thoughts of business at home.

From Mark Island we ran for Pulpit Rock, clearing Eastern Ledges to the south'ard, then sailed along by the Three Brothers Islands and inside Libby Islands up into Machias Bay. This is a broad, beautiful sheet of water with picturesque rocky shores sparsely settled by fishermen. We made several tacks into the bay, the wind changed to the northward a little, and let us lay close-hauled upon the port tack to the eastward, and we barely got by Dog Rocks upon the north side of Cross Island at dark; then we fanned, drifted and towed down into the Narrows, barely missing an outlying ledge, and anchored in the mouth of a cove just west of Scotch Island, in the middle of the Narrows. We decided to stay here because it was such a long run up to Machiasport, and darkness had caught us, and we would be ready for an early start next day. The tide was running in four or five miles an hour, though it was all ebb; the yacht sheered and cut and pulled at her cable like a chained dog, and we had to keep an eye upon her for fear of drifting; but the ground was muddy and we did not drag. A gale from the S.E. set in at midnight with strong puffs and a cold drizzle, which routed us out to look after things, but we were shielded by the little island from the sea and wind and rode it out safely. While Jerry was getting supper Meringue took the boat and went ashore in the cove to a dimly seen house to get some information not on the chart, and some supplies as well. He came back and reported the house vacant, the windows and doors open, and uncanny goings in possession. We heard next day that a murder had been committed there and it was considered haunted. He had not reported any ghosts, but I thought he was a little scared. We supped heartily, and were well pleased with the progress we had made against the wind.

Jerry and Meringue took the boat early next morning and landed in the cove after partridges, and returned soon in hot haste for buckshot cartridges, as they had seen a fine buck close at hand upon the shore. I told them it was close season and they must not kill it. They scoffed at that and went away, and returned decidedly damp in an hour, not having seen the deer or any partridges. A fishing schooner, 35ft. over all, beat down and anchored near us after breakfast, and gave us the information we wanted. The captain said Cross Island was owned by two Boston gentlemen, who had bought it on speculation for a game preserve. There were many partridges and deer upon it; they crossed and recrossed the channel, and it was not unusual for fishermen to meet a deer and kill him as he was swimming across. The island had only two buildings upon it, occupied by the life-saving station men, and they acted as game keepers for the owners. As they were just across the point outside of our anchorage, if a gun had been fired they would soon have been around to catch the poacher. Jerry and Meringue concluded not to poach any more, as the laws of Maine were very stringent, and besides, it was raining and dismal in the bush.

The captain of the fisherman owned the vessel, worth about $1,000. Her hull and gear were in a dilapidated condition. I could not understand how men could trust their lives to such a hull and the rotting ropes and sails. The captain paid all expenses out of each catch, paid his boy $10 a month and found, and divided the remainder with his principal man. In fair seasons they make about $100 a month clear, but the summer had been wet and cold, and the business had been unprofitable.

There were two abandoned and tumble-down houses upon the mainland of the channel, and the whole region, while exceedingly picturesque, was lonely and dismal. The absence of human beings along the coast, the wild rocky shores, the treacherous reefs of the channel, the great distance from any settlement, and the rough weather, gave us the blues, and we determined to face the sea and milder breeze of the afternoon and try to beat on to Little River, where we could get needed supplies and have a snug harbor.

We got up anchor and left the little schooner to the mercy of the spook of the haunted house, and went around the island and the long reef of the southwestern side, because the strong tide in the Narrows was difficult to stem, as the wind drew directly in and I considered it unsafe to beat out. The sea was very heavy outside, but in long, lazy rolls that were easily ridden, and we carried the lower sails boldly in the dead beat up the coast. I'm sure some fishermen bound in looked upon as foolhardy, going to sea at 3 P. M. in a drizzle, with the wind ahead; but I knew we could retrace our course rapidly and get in by Libby Light, in case the fog did not shut down, and so risked it, though it was evident we should not get up to Little River till some time after dark. The tide rips were very noisy and rapid along shore, but the current was eastward and helped us on by Old Man Island; we kept the main shore beyond in sight until we passed Little River Head and opened out the light and ran for it. The light is on an island in the middle of the entrance, and I trusted to Meringue to pilot us, as he had been in several times. He got on the bow and conned, while I steered. The wind hauled off the land as we drew in and the yacht barely lay her course. When very near the island, much nearer than Jerry thought advisable, we lost the wind altogether, the sea hove us round broadside, and out of the darkness beneath the light appeared, not fifty feet away, a long ledge, upon which every sea was rolling us. Meringue and Jerry shouted, and I took a look under the boom and was horrified to see how close we were to it and how inevitable shipwreck seemed.

"Get into the boat quick for God's sake!" I shouted, as I untied the painter and pulled her alongside. "Here Jerry, take the helm!" Meringue jumped into the boat, which we hauled to the bow, I threw the end of the painter aboard, Meringue took a turn around the seat and fell over it backward, the yacht came down with her bobstay across the boat and nearly capsized her, as M. grabbed the oars- then, while I shouted, "Quick! Pull Meringue, or we will be upon the rocks!" he got a few strokes, turned the bow off shore, the helm was put hard to port and Orinda began to go ahead. Meringue pulled fearfully, we moved faster, there was great need, for when we cleared the point of the ledge it was but 20ft. away. It was a dreadful suspense for a few minutes and, after the danger had passed, there was a lump in my throat. Jerry was swearing and explaining how he had told us we were too near, and Meringue was lying on his oars for breath. I do not like these hairbreadth escapes. I don't care to record all that experience, because it may seem to some persons that I exaggerate or invent them, but I do not. I've about concluded there must be a Jonah aboard my boat, and he is myself. It gave me real comfort to read about that yacht in Nova Scotia and the terrible time the amateurs and old yachtsmen had. That was something in my line and they must have had a Jonah too.

[TO BE CONTINUED.]

LORD DUNRAVEN'S SUGGESTIONS.

IN the letter in another column Lord Dunraven has made certain suggestions concerning the conduct of the races, which the holders of the Cup will be called on to consider. The first one is in regard to the number of races, it being suggested in place of the usual three. The same request was made when Thistle raced, and was not then granted, nor is it likely to be in the present case. There are few cases in which the merits of two boats cannot be fairly well settled in three races with a time limit, and while five might be more conclusive at times, it is asking too much of the holders to go to the trouble and expense of so many. Our yachtsmen as a rule are business men, and cannot spare the time for so many races in a busy month like September, as even three races may cover a couple of weeks of waiting and postponement. In none of the previous races would the results have been different if two more races had been sailed, and if Valkyrie is good enough to win three out of five she need not fear.

The request for outside courses is a perfectly fair one, and is apt to be granted, but the suggestions as to how the courses shall be laid out and the starts made are hardly necessary for the guidance of the New York Y. C. regatta committee. They are evidently due to some wild newspaper talk by one of the Scotch visitors, who was not able to bear defeat manfully, but wanted many-sided courses. As far as the actual management of the last three contests is concerned, there is no fault to be found with the work of the regatta committee. Its task is not always an easy one, and it is often a matter of judgment whether to start a race at a certain time or to wait for wind when there is none, but we recall no instance in all the races started or postponed in 1885-86 and '87 where any injustice was done to the challenger by the action of the committee. The start was made 30 miles from New York and from any good harbor, and it is a serious matter to start a race at 11 A. M. in a flat calm, with almost a certainty that for two or three hours the yachts will not drift a mile, leaving but 4 hours to sail 40 miles; when by waiting for the afternoon breeze a race may be had within the time limit.

In a matter which depends on such variable quantities as wind and weather it is hard to set certain inviolable rules, and besides the former races here proved that the interests of the challenger in this respect are perfectly safe in the hands of a good regatta committee. In stipulating for a 40-mile course it is to be supposed that nautical miles are meant, though it is not so stated, and on the other hand the letter mentions a time limit of six hours instead of seven; certainly a very short time to sail 40 knots in September, especially if the challenger be 70ft. and the defender 86ft. As to making out the courses two weeks in advance, it is unnecessary, and would be a difficult matter; the triangular courses are always arranged so as to secure one windward leg if possible, which can only be done on the morning of the race.

The suggestion as to a mean of the allowances of the New York Y. C. and the Y. R. A. is a fair one; but the case of Genesta shows that it is not likely to be conceded, unless possibly Volunteer should be selected. The stipulation in regard to repairs is only in accordance with usage in the previous races, and is hardly necessary now. On the whole, there is little that Lord Dunraven asks which is apt to be granted, and it would perhaps have been better if he had not made requests which are most would not alter the probable result in any case, and which the experience of former challenges has proved that the holders of the Cup will not accede to.

SECRECY IN CLUB MATTERS.

THE New York *Tribune* discourses as follows on the secrecy which is often affected in regard to matters of public interest. The writer, however, overlooks the fact that in some cases there are very good reasons for the utmost secrecy; as in that of the last revision of the deed of gift, in which the proposed change would have been voted down by a large majority of the club had its nature been known in advance, and which was only passed by being sprung suddenly on the club without notice or preparation. The *Tribune* says:

"The receipt of a challenge for the America's Cup has thrown all prominent yachtsmen, pre-eminently the members of the New York Y. C., into a great flurry. The discussion of the Dunraven offer has been general and broad among those who follow the sport for the love of it and not for the glory which an office among yachtsmen might bestow upon them. There are many club men who consider it a part of their 'fad' to belong to a yacht club, and whose 'popularity,' based purely upon what might be termed 'club qualities,' has caused their colleagues to boom and in some way or other to elect them to positions of prominence in the interior of the respective yacht clubs, although of no importance on the outside. It is by the self-esteemed of such persons that the general yachting public, the sportsmen indeed, are gotten off free and open consideration of sporting occurrences of real national importance. The secrecy which has marked the operations of foreign yachtsmen in preparing a challenger has been frequently decried by American yachtsmen and yachting writers. Yet that secrecy has at least the promise of a beneficial result for those who indulge in it, while, on the other hand, when one of the social club yachting officials bides important news he can only experience the one selfish satisfaction of having kept to himself and his fellows news upon which others were more able to formulate valuable views."

WHO WILL SAIL VOLUNTEER?

OF course the whole foundation for the argument in favor of a large boat against a small one is based on the assumption that Volunter can hold the cup beyond any chance of failure, but at the same time no one seems to have considered the question of who will sail Volunteer. Gen. Paine has announced most positively that he will take no part in the season's races, and there is no reason to suppose that he will change his mind. Volunteer is, of course, at the disposal of the New York Y. C. by purchase, if not by loan, but it is hardly to be supposed that the brains and energy that have made all of Gen. Paine's boats win are on sale with her. On the other hand, the brief but inglorious career of Mayflower since she changed hands shows what may be expected of Volunteer.

GRAYLING AND VALKYRIE.

IN looking about for a fast yacht to defend the Cup, it will not do to omit Grayling. She has proved herself able to beat the 70ft. class by a safe margin on even time, and if matched against Valkyrie she could race at 85 per cent. of her measurement, being a schooner, which would make her about 73ft. corrected length; so that she would receive time from Valkyrie instead of giving it

SUPPOSE VOLUNTEER DOES NOT WIN.

IN view of the fact that the fastest of the 70ft. class fail to save their time off of Puritan, much less Volunteer, it is safe to say that Valkyrie has absolutely no chance to win from the largest boat; but it can do no harm to consider the result should she do so by any possible chance. Not only would the Cup be lost, but in place of having been beaten in a fair fight the New York Y. C. would be in the worst possible position, not only having to comply with the onerous conditions of the last deed of gift, under which the Cup must henceforth be raced for, but having given a precedent for pretty much anything in the way of juggling with the terms and unfairness in interpreting them, which the future holders may chose to indulge in. Small as the chances are of a loss of the Cup, the penalties attaching to it make the risk a very dangerous one.

THE ISSUES OF THE COMING MATCHES.

THE great question at the present moment is the size of yacht with which the Cup will again be defended, and, in discussing this, yachtsmen have lost sight of some important matters connected with International racing. The condition to which these great contests have been brought by the action of the New York Y. C. is one by no means flattering to the pride of American yachtsmen, and, though it attracts little attention now, it may become of great importance before the impending races are done with.

Two years ago the club, with a challenge from a 70ft. yacht before it, hurried through a so-called revision of the deed of gift, under cover of the "surviving donor" farce, designed to shut out 70ft. yachts and limit the races to Volunteer's class. The reception which this deed met with from fair-minded yachtsmen in all countries as well as at home, and the certainty that no challenges would be received under it, caused the club last season to lay it aside, and to throw out a tempting bid for a challenge. This it did by offering to accept one challenge under the same conditions that governed the Genesta, Galatea and Thistle races (the second deed), with the proviso that the Cup, if won by a foreign yacht, should be held under the last deed of gift; and also that if challenged for and not won, it should be held by the New York Y. C. under the last deed of gift, the third.

In making such a proposal all questions as to the justice and fairness of the last deed were ignored, and it was sought to sustain it by an appeal to chance only. If a foreigner challenged and won the Cup he could hold it under such terms as would make its recovery a very difficult matter; but if on the other hand he challenged and lost, the Cup remained in the possession of the New York Y. C. under conditions which would prevent any approach to a fair race for it. Of course the chances were, and still are, overwhelmingly in favor of the club holding the Cup, against another British challenge, and the offer was a tolerably safe one; but at the same time it has degraded the contests for this great trophy to a simple question of pitch and toss as to which side shall win it and hold it in safety.

As we pointed out at the time, the only dignified course for British yachtsmen was to ignore this bait, and to stand firmly on the ground they had taken that the last deed was unfair and unsportsmanlike. In such an event the result would have been that in order to secure a challenge for the Cup the club must have withdrawn the obnoxious deed and have offered reasonably fair terms.

Unfortunately Lord Dunraven has not taken this view of the matter, but has taken the bait set by the club last year, and in doing this and entering into the implied bargain, he has effectually barred all objection from British yachtsmen in the future. If he should chance to win he can take the Cup and keep it for a long time, but if, as is most likely, he should lose, the third deed of gift stands in force, a perpetual bar to international racing.

Should the Cup be lost as the result of such a deal, to be held under such terms as the last deed of gift, the New York Y. C. will have a very heavy responsibility to shoulder for its action as a trustee of the original donors, and the realization of this fact offers an extra inducement to keep the Cup by force rather than risk it by fair play.

THE AMERICA'S CUP.

A SPECIAL meeting of the New York Y. C. was held on April 5 at the club house with Com. Gerry in the chair, at which the following communication from Captain Grant, secretary of the Royal Yacht Squadron, was read by Secretary Oddie:

ROYAL YACHT SQUADRON CASTLE, }
COWES, March 19, 1889. }

To the Secretary of the New York Y. C., New York:

DEAR SIR—In accordance with your cable of Dec. 12, 1888, to Mr. W. York, secretary of the Royal Clyde Y. C., and your letter confirming the same, stating that in the event of a challenge for the America's Cup the same terms would be accepted as in the Volunteer and Thistle matches, I have now on behalf of the Royal Yacht Squadron and in the name of the Earl of Dunraven, a member of the squadron, to claim the right for sailing a match for the America's Cup with the yacht Valkyrie against any one yacht or vessel constructed in the United States of America, and I accordingly give you formal notice of challenge, and name Monday, Sept. 30, 1889, for the commencement of the matches.

The Valkyrie has been constructed at Southampton. She is cutter rigged and her measurement per the inclosed certified official transcript from the Custom House register, is as follows, viz.: Length, per register, 85ft.; breadth, per register, 15^9_{10}ft.; depth, per register, 11^3_{10}ft.

I send also a statement of her dimensions by Mr. G. L. Watson, her designer, giving, although not required by the formalities of the deed of gift, the approximate length on load waterline.

I shall feel obliged by your cabling me a receipt of this challenge, and by letting me have a reply by letter as soon as the matter has been laid before your club.

I beg also to inclose a copy of a letter I have received from the Earl of Dunraven, authorizing me to forward you this challenge.

I have the honor to be, sir, your obedient servant,

RICHARD GRANT, Sec'y Royal Yacht Squadron.

The transcript of register is as follows: Official number of ship, 94,513; name of ship, Valkyrie; No. 6; date, March 18, 1889; port, Southampton; British built, sailing ship, built at Southampton, 1888; name and address of builders, J. G. Fay & Co., Southampton; number of decks, 1; number of masts, 1; rigged, cutter; stern, semi-elliptic; build, carvel; galleries, none; head, scroll; framework, composite (steel frames, wood skin); length from fore part of stem under the bowsprit to the aft side of the head of the stern post, 85ft.; main breadth to outside of plank, 15^9_{10}ft.; depth in hold from tonnage deck to ceiling at midships, 11^9_{10}ft. Gross tonnage, under tonnage deck, 56.76; cubic metres, 160.63; registered tonnage, 56.76, 160.63. Names, residence and description of the owners and number of sixty-fourth shares held by each—Windham Thoms Wyndham-Quin, Earl of Dunraven, of Dunraven Castle, Bridgend, in the county of Glamorgan (sixty-four), 64.

I hereby certify that the above is a true copy of the particulars of registry of the vessel Valkyrie.

Registrar, R. HENDERSON.

CUSTOM HOUSE, SOUTHAMPTON, dated 13th March, 1889.

Mr. Oddie then read the following letters:

No. 108 WEST REGENT STREET, }
GLASGOW, March 13, 1889. }

I beg to state that the cutter yacht Valkyrie, building by J. G. Fay & Co. at Southampton for the Earl of Dunraven, and designed by me, is intended to be 89ft. 8in. in length on the load water line, and her actual sailing length will be within a few inches, more or less, of that length, but in no event will exceed 70ft.

G. L. WATSON, M. I. N. A.

No. 111 PICCADILLY, W., March 17, 1889.

Dear Captain Grant:

I have requested Messrs. Fay to obtain from the Customs and forward to you a properly attested copy of the registry and certificate of ownership of Valkyrie, and I shall be obliged if you will send forward the challenge for America Cup to the New York Yacht Club in due form and according to the terms of my former communication. Yours very truly, DUNRAVEN.

No. 20 ST. JAMES SQUARE, London, W.

To the Secretary New York Yacht Club, New York:

DEAR SIR—I have requested Captain Grant, the secretary of the Royal Yacht Squadron, to claim the right of sailing a match or series of matches with my yacht, the Valkyrie, for the America Cup.

The Valkyrie, though intended for racing here, is designed to come within your 70ft. class.

Captain Grant has, I understand, sent a formal challenge by this mail, but I am writing myself to make some suggestions as to condition of sailing, and shall be obliged if in reply you will communicate directly with me.

To eliminate, as far as possible, the element of chance, I think the contest should be decided by the best out of five instead of the best out of three races, and I strongly urge this point for the consideration of your committee.

The dates to be, if three races, Sept. 30 and Oct. 2 and 4. If five races I propose Sept. 30 and Oct. 1, 3, 4 and 5, but as regards the four later dates I should be glad to consider any suggestions you may make.

With regard to courses and length of courses. As a very general conclusion was arrived at on both sides of the Atlantic in respect to the last three matches that the inside course is unsuitable for a fair test of the vessels racing, I propose—and in this proposition I understand I am supported by the opinion of the officers and many members of your club—that all the races be held outside, starting from the Scotland or the Sandy Hook Lightship.

The length of the course to be 40 miles.

With the exception of the twenty miles to windward, or leeward, and return race, the courses to be determined and the position of the stakeboats marked off on the chart and the compass bearings given to each competitor a fortnight before each race. The stakeboats to be put out and anchored in position an hour before the start. The courses to be triangular, square or in any such varied directions as will try the vessels' all around qualities. If five races are fixed I am quite willing that one of the extra two should be to windward and return.

The time of starting the races to be such as to meet the convenience of the members of the New York Yacht Club. The start to be made at the precise time fixed, and under whatever conditions of weather may prevail at the moment—a dense fog excepted. The time for the completion of the matches will be the same as in the other international matches, viz., six hours.

I suggest that a mean of the allowances, as found in your rule and ours, would be a fair method of calculating time allowance in the international contest, but I am ready to accept the New York Yacht Club rule.

In addition I should urge that, as in the Volunteer-Thistle races, it be agreed that, in the event of an accident happening to either of the competitors previous to the start, she is to have sufficient time given her to effect repairs. Further, that should a serious accident happen during a race (that race not being the deciding one) fair and reasonable time shall be given to either yacht to effect repairs before she is called upon to race again.

I shall be glad to hear from you as to these points, and also any others which may occur to you as bearing on the matter. I remain, yours faithfully, DUNRAVEN.

The following resolution was offered:

"Resolved, That a special committee consisting of seven, with the addition of the flag officers, *ex officio*, be appointed by the Commodore, to whom shall be referred the whole subject of the communication just received from the Earl of Dunraven, to report without delay whether the same is in proper form and in accordance with the action heretofore taken by the club, and also whether it be the sentiment of the club to accept the same or what action shall be taken thereto."

This resolution was carried and the following committee was appointed by the Commodore:

James D. Smith (chairman), Rutherford Stuyvesant, William Krebs, Joseph R. Busk, Ogden Goelet, J. Frederic Tams and Gouverneur Kortright.

The meeting was adjourned until April 11, at half-past eight P. M.

NEW JERSEY Y. C.

THE annual meeting of the New Jersey Y. C. was held at their club house (foot of 10th street, Hoboken, on March 28. The reports of the various officers were read, the most important being that of the treasurer. Ex-Com. E. W. Ketcham, the club's present efficient treasurer, had prepared an exhaustive report, in which he set forth at length the condition of the club, past and present, and made many valuable recommendations, which it would be well for the club to adopt. The trustees, on whom the management of the club devolves, reported through their chairman the many improvements made in and about the club house the past year, not the least of which was the re-decorating of the club meeting room, and painting club house inside and out. They contemplate improving the present facilities for hauling out boats on the present two sets of ways, and suggested a scheme which they thought advisable to adopt. They also recommend building a fence around the club house. The anchorage facilities for yachts of almost any draft will be greatly enlarged and improved. A dock has been built on the north, running well out, which is a protection against a northeaster, while on the south are the Hoboken Baths, which are to be moved a little further south this season, and will in consequence give more room, so that an artificial basin will be created, second only to that of the Atlantic Yacht Club.

Among the new additions to the fleet the coming season will be a 55ft. sloop, of good draft, recently purchased by Mr. Wm. Letts and John Keller, formerly the owners of the Emma. Another is a modern craft with outside lead of 38ft. l.w.l., the property of Mr. John Curtin. Estimates have been obtained for building a sloop for 30ft. class, and an open 25ft. race boat, and work will shortly be begun on both.

The date of the annual regatta has been fixed for Monday, June 10, and it will be sailed over the club courses in the Upper and Lower Bay, starting from Liberty Island. It is also contemplated to sail pennant regattas every other Saturday over a 10-mile course, starting in the afternoon as the tide suits. This, we think, is a good plan, and will create more interest in the club.

The club starts in this season with very bright prospects, as the election of the following officers will show: Com., Edwin A. Stevens, cutter Isis; Vice-Com., Jas. B. Scott, sloop Eagle Wing; Cor. Sec., Geo. E. Garland; Rec. Sec., Wm. E. Kinzey; Fin. Sec., John D. Goetschius; Treas., Edward W. Ketcham; Meas., John Ortlieb; Regatta Committee—Edward W. Ketcham, Theodore H. Rogers and Wm. T. Salter; Trustees—Theophilus Butts, Jas. B. Scott, Jas. Bell, Edward W. Ketcham and Henry F. Ogden.

After the meeting the members and newly elected officers sat down to a sumptuous repast, and toasted each other to their heart's content.

C. P. KUNHARDT.

Editor Forest and Stream:

In accordance with the action of our club, at a meeting held last evening, I inclose herewith a copy of the resolutions ad pted, re Mr. C. P. Kunhardt's probable fate.

We will long mourn the loss of such a true friend to yachting, and many will doubly regret the loss of so warm an advocate of cutters and cutter principles. Yours very truly,

H. L. CHISHOLM, Sec'y Buffalo Y. C.

BUFFALO, N. Y., April 5.

"The man who has saved a human life ought to be more highly honored than he who has slain thousands, and the man who has saved many lives should be recognized by all succeeding generations as a benefactor to the human race."

These words, quoted from an old author, in substance, if not *verbatim*, admirably serve to describe one honored by us all, and who contributed not a little to the welfare of the Buffalo Y. C., both by kindly thought and word and by at least three examples of his professional skill. No man ever lived who better understood the dangers that delight the yachtsman's heart, or was better able to defy them. Fortunately his good works live after him, and his book on "Small Yachts" will long be the guide of Corinthian sailors. Therefore, it is hereby

Resolved, That in the untimely death of Mr. C. P. Kunhardt this club feels it has lost a true and valued friend, whose worth was appreciated by every member of this organization, and whose efforts on behalf of the sport we represent will serve to keep his memory green in our hearts until we all anchor in the harbor of eternal rest.

Resolved, That our secretary be requested to incorporate these resolutions in the minutes of this meeting and send a copy of the same to the FOREST AND STREAM, to which Mr. Kunhardt was a contributor. THE BUFFALO Y. C.

BUFFALO, N. Y., April 4.

THE DATE OF THE CHALLENGE.

A GOOD deal has been said about Lord Dunraven's action in withholding his challenge until the last of March and of springing it upon the club at the last moment, and some are even using this as an argument for outmatching him at the start. Under the letter and spirit of the second deed of gift, which the New York Y. C. has reverted to for the time, a challenger has no option as to the length of notice, but is bound rigidly to a period of not *more than seven* nor less than six months from the days of the races. Had Lord Dunraven challenged in December instead of March for a race in September, the New York Y. C. would have thrown out his challenge as not in accord with the terms of the deed of gift. As for his choice of the second rather than the last deed, it is hardly to be expected that he would choose a deed which has practically been abandoned by its framers owing to the general condemnation it aroused.

WHO WON?—Mr. J. C. Summers has sent to the Paris Exhibition a case containing several handsomely-bound volumes of his useful little hand-book "Who Won?"

CLASSIFICATION BY CORRECTED LENGTH.

Editor Forest and Stream:

In your article on racing classification and measurement for time allowance, published in your issue of March 21, you seem to suggest that the proper scope of a good plan would be to have it so framed that it would penalize a certain class of boats that some people deem an undesirable type to such an extent as to force the building of other and different models of proportions more favored by these same persons.

This may be an extreme view of your position, but it seems to me that any rule not as fair to one type as another is manifestly an unjust rule.

There certainly should be a reasonable limit to which length could be increased at a slight decrease in the sail area.

The whole difficulty with the present rule of length and sail area must be apparent to any impartial observer.

In the suggestion you make that the classification and the time allowance should be both based upon the racing measurement can be found the perfect remedy for the entire difficulty.

It has always been urged by me in the past that classification should be fixed by the same figures as time allowance. Classification by waterline length, when adopted by the larger clubs, was agreed to only as a measure thought advisable to effect the establishment of a common classification, and as a step toward the final adoption of a common measurement. It was wrong in principle where other measurements were in force for time allowance, and should be set aside now that its objectionable features are apparent.

While all you publish upon this branch of the subject must be agreed to by most thinking persons, it seems to me very unwise to advocate the penalizing of sail to the extent you do, which might force a return to boats of great length in proportion to beam, or to those of shoal draft, and unfairly discriminate against the new boats of this year and last, which should not be done under any just rule, which to be a good and equitable one should give to every type an equal chance.

It seems to me that the rule of $L.W.L.+\sqrt{\frac{\text{Sail Area}}{2}}$, if adopted for classification as well as time allowance, when figured out in the way you do the English rule, will be found to afford the limit of tax on sail area that would be fair. It would certainly admit of varying proportions of length to sail area within reasonable limits. Any rule under which the waterline length of a boat in what is now the 40ft. class could be increased 5ft., in the 35ft. class 4ft., in the 30ft. class 3ft., and yet admit of proper canvassing of such boats for racing purposes without increasing the racing measurement over the boats now up to the limits of those classes, seems to be as liberal to the longer boats as could be fairly asked for.

If the figures of these classes are changed from 40, 35, 30 L.W.L. to 48, 41 and 35 racing measurement under the rule above referred to, we would find that the L.W.L. and sail area might be varied within the following reasonable limitations:

48ft. class, racing measurement—
40ft. L.W.L. with 3,136 sq. ft. sail area.
45ft. L.W.L. with 2,601 sq. ft. sail area.

41ft. class, racing measurement—
35ft. L.W.L. with 2,209 sq. ft. sail area.
39ft. L.W.L. with 1,849 sq. ft. sail area.

35ft. class, racing measurement—
30ft. L.W.L. with 1,600 sq. ft. sail area.
33ft. L.W.L. with 1,369 sq. ft. sail area.

The same plan for rating could be extended to the larger classes of sloops, fixing the limits at 60 and 75 and over 75 racing measurement, or at other figures that might be determined upon. A plan to make the measurement for classification and for time allowance the same upon the basis of measurements now in force could be carried where, if an extreme tax on sail were advocated as a part of the scheme, the present vested interests would without a question defeat the whole project.

Let the change in the classification alone be adopted and the present measurements in use retained and it will be easy enough by degrees for the clubs to arrive at a proper and just estimate of the relative advantages of length and sail area and modify their rules in accordance therewith. FORTY-FOOTER.

[Our position in regard to the rights and duties of the yacht clubs may be briefly stated as follows:

First—The good and bad qualities of yachts are dependent on the racing rules, modified to a certain extent by conditions of weather, waters and climate.

Second—No rule can be devised which will be absolutely fair to all types; some will be favored at the expense of others.

Third—It is the duty of the clubs to watch the rules carefully (amending them at times, if necessary, to meet changes in design and building), and to so use them as to encourage the medium types of yachts rather than any extreme type.

To apply these general principles: The old Y. R. A. rules encouraged a very undesirable type, long, narrow and deep; the rules and conditions prevalent in America encouraged a still worse type, broad and shallow; and in the opinion of many the present rules encourage also an undesirable type, wide, deep, heavily sparred, costly and fitted only for racing. Just how far this is true cannot now be decided with certainty; the yachts of last year's are by no means bad boats, though not the best possible; but the probability is that they are already outclassed. This season it is not likely that the most extreme will be the successful boats, but if they should, and it is proved that a man must take 10ft. 6in. draft on 40ft. l.w.l. to win races, then the time will have come for prompt and summary action by the clubs.

When the time does come we believe that the remedy will be found not in an excessive tax on sail with the present methods, but in the direction pointed out by "Forty-footer," of a sliding scale, by which extra length may be taken by giving up something in sail. The important point now is the principle involved, whether it is best to class by length and measure by length and sail area, or whether to class yachts by length and sail area, allowing the designer to select the proportion of each which he prefers? With this question settled in the affirmative, it is an easy matter to frame a rule similar to the one mentioned above, which will prescribe the proper allowance of sail for each length of hull. If this be done, it will still allow a man to build a 40-footer to carry 50ft. of main boom, but at the same time it will not compel the man who builds to beat him to take a 51ft. boom, but will allow him to choose from several sizes of hull, say 42ft. l.w.l., but with 48ft. boom. "Vested interests" as they now stand need not be interfered with, but at the same time a wider field for experiment will be thrown open than our designers have ever enjoyed.]

ACCEPTING OR REJECTING THE CHALLENGE.

IN view of the fact that the club has no option in the matter it is amusing to hear the discussion as to whether it will accept or reject Lord Dunraven's challenge; in fact the committee appointed is to report on this same matter. Lord Dunraven has notified the New York Y. C. that he is coming to sail for the America's Cup, and the club has nothing to do but accept this notice. It can decide on what terms, fair or unfair, it will meet him, but it can in no way accept or decline his challenge.

CLEVELAND Y. C.—Officers 1889: Board of Directors, Henry Richter, J. G. White, Philip Wright, C. W. Kelly, G. W. Leutkemeyer, R. E. Mix, Percy W. Rice; Sec'y, Ernest Radder; Treas., William Kolbe; Meas., Ed Overback; Ass't. Meas., Ed Saxe; Surveyor, C. Krauss; Fleet Surgeon, Dr. C. Arms; Director Interlake Yachting Association, Chas. W. Kelly; House Committee, P. A. Mettling, Thos. Macbeth, J. N. Richardson, Chas. DeMccy, Geo. Wells; Regatta Committee, C. C. Gooding, Geo. W. Cleveland and Will Sly; Committee on Admission of Members, C. G. White, Philip Wright, W. P. Francis.

CHANGES OF OWNERSHIP.—Crusader, schr., G. L. Haight, has been sold to Chas. A. Cheever. Bonito, cutter, Judge C. F. Brown, has been sold to W. A. Abbe, of New Bedford. Judge Brown will build another yacht from Mr. Burgess's designs. Cavalier, schr., George Duryea, has been sold to Com. Hogan, Atlantic Y. C. Glimpse, schr., has been sold by Benoni Lockwood to C. Platt.

HAMILTON Y. C.—At the annual meeting of above club on April 1 it was shown that the club was in a flourishing condition, with a membership of 232, 38 yachts and 5 steam yachts, and $350 surplus funds. The following officers were elected: Com., J. F. Monck, Cyprus; Vice-Com., Jno. Stewart; Capt., E. Jarvis, Whitewings; Sec'y, J. F. Fearnside; Treas., G. F. Birrly, Stella; Meas., H. Lee. Committee, Messrs. Greening, Psyche; Judd, Wave; Scott. Messrs. Monck, Jarvis and Lee delegates to Lake Y. R. A.

SULTANA.—Mr. J. Beavor-Webb has designed an auxiliary steam yacht 187ft. 6in. over all, for Mr. Trenor L. Park, owner of the Meteor, schr. The new yacht will be 155ft. l.w.l., 27ft. 6in. beam, 14ft. 6in. draft, with engines of 500 I. H. P. and a Bevis patent feathering screw. She will be built of steel by Handren & Robins, at the Erie Basin, and will be rigged as a three-masted topsail yard schooner.

SEAWANHAKA CORINTHIAN Y. C.

ON April 6 a musical entertainment was given at the club house under the direction of Mr. J. Dunbar Wright, a large company being present.

A special meeting will be held on April 13, at 8:30, at which action will be taken on the annexed report of the special committee on revision of Rules IX. and XII. of the racing rules.

RULE IX.—*Crews.*—Sec. 1. In all classes and without exception, sailing masters, if carried, shall remain below, and shall not direct or assist in any way the management or working of the yacht. The term "crew" in the following section shall be considered as covering all other professionals on board.

Sec. 2. There shall be no restrictions whatever as to the number or nature of crew in Class I. and the 90ft. class of schooners, and the 80ft. and 70ft. classes of sloops, cutters and yawls.

Sec. 3. In the 75ft. and 63ft. classes of schooners, and the 61ft. class of sloops, cutters and yawls, there shall be no restriction as to total number of crew, one of which, for each 9ft. or fraction thereof of load waterline length, may be a professional.

Sec. 4. In the 53ft., 46ft., 40ft., 35ft. and 30ft. classes of sloops, cutters and yawls, crews shall be limited to one man for every 4ft. of loadwaterline length or fraction thereof. The helmsman shall not be included in this number. Two of the crew in the 53ft. class, and one in the 46ft. and 40ft. classes, may be professionals.

Sec. 5. Professionals in excess of the limit allowed, if carried, shall remain below, and shall not direct or assist in any way in the management or working of the yacht.

Sec. 6. Stewards and cooks, if they take no part in handling the yacht, will not be counted as members of the crew.

Sec. 7. In any race, except the annual race, the race committee shall have power to permit professional crews to be carried in all classes, subject, however, to the provisions of section 1.

RULE XIII.—*Sails.*—Sec. 1. There shall be no restrictions as to sails, except that in 75ft. and 63ft. classes of schooners, and in the 61ft., 53ft., 46ft. and 40ft. classes of sloops, cutters and yawls, topsails which extend above the truck or beyond the gaff end shall not be carried.

Sec. 2. No club or head yard on spinnakers shall exceed in length one thirtieth of the load water line length of the yacht, and no foot yard or club shall be carried.

The following amendments to Article IX. of the Constitution, entitled "race committee," will be offered:

Sec. 1. Strike out the words "not having sailing yachts in commission." Add a new Sec. 2 as follows: "Any member of the committee having an interest in any yacht entered for a rac shall cease to be a member of the committee during such race, and the committee shall have the power to fill such temporary vacancy." Make the present Sec. 2, Sec. 3.

The following amendment to Chapter VII. of the By-Laws, entitled "Meetings," will be offered: "The regular meetings shall be held as follows: First, the annual meeting, to be held on the second Saturday in January; the second, on the last Saturday in February; the third, on the first Saturday in April, the fourth, on the second Saturday in May, and the fifth, on the second Saturday in November." The appointment of a special committee will be asked for to confer with other clubs on the subject of a revision of the present "Yacht Routine" and "Club Signal Code."

MOSQUITO FLEET Y. C., APRIL 4.—The usual Fast Day race of the Mcsquito Fleet served to open the season at Boston. The race was notable from the presence of several boats of a new type, keel craft with a "wineglass" section; the old boats being wider and with centerboards. The wind was light from N. E. and did not give a good test of the boats. The coarse was: From starting line to red spar buoy No. 2, off Thompson's Island, thence to middle shaft, then to buoy off K street, thence to judge's boat, leaving everything on starboard, 5 miles. Prior to the start Nellie capsized. The times were:

FIRST CLASS.

	Start.	Finish.	Elapsed.
Skipper, Russell Tufts	10 35	11 36 45	1 01 45
Minnie, Berrram & Jackson	10 35	11 38 47	1 03 47
Lucy, W. H. Ransom	10 35	11 38 10	1 03 10
Pink, George Corbett	10 35	11 42 00	1 03 00
Sprite, H. M. Wells	10 35	11 37 10	1 07 00
Lizzie, H. McDonough	10 35	Did dot finish.	

SECOND CLASS.

Baby, J. W. Braggdon	10 40	11 48 05	1 08 05
Bessie, W. C. Cherrington	10 40	11 58 18	1 18 18
Bunty, J. Vincent	10 40	11 55 40	1 15 40
Sadie, F. W. Green	10 40	11 57 12	1 17 12
Eva, W. B. Miller	10 40	Did not finish.	
Mascot, W. J. Condon	10 40	Did not finish.	
Snag, Capt. Richardson	10 40	11 54 10	1 14 10
Lottie, E. Rich	10 40	11 55 20	1 15 20

Skipper wins $10, Sprite $5 and Lucy third prize, an oilskin suit. In second class the prizes were: Baby $10, Snag $5 and Lottie pair of oars. Pink, the new keel boat, parted her halliards early in the race, but sailed the course.

NEW LAUNCHES.—Mr. R. W. Inman has ordered a 40ft. launch from Thos. Fearon, of Yonkers, to have a Herreshoff engine....At Newburg, N. Y., Marvel & Co. are building a 60ft. launch for Mr. Bartlett, of the Newburg C. and B. Association.

SAVIN HILL Y. C., APRIL 4.—A second race for mosquito boats was sailed by the Savin Hill Y. C. in the afternoon, resulting as follows:

FIRST CLASS.

	Length.	Elapsed.
Minnie, Jackson	14.11	0 49 15
Sprite, Wells	15.00	0 52 30
Skipper, J. R. Tufts	14.11	0 53 00
Hoodoo, E. Robinson	14.06	0 56 30
Nellie, O'Learv	14.11	0 56 50
Lucy, Ranson	14.11	0 57 00
Pink, Corbett	14.10	Withdrew.

SECOND CLASS.

Baby, Blagdon	12.11	1 01 30
Bessie, Cherrington	12.00	1 01 34
Lottie, R. Rich	12.06	1 07 30

CRUISING.—Gitana, schr., W. F. Weld, arrived at Fayal from Boston on Feb. 24, sailing for Gibraltar on Feb. 27.... Brunhilde, schr., J. J. Phelps, was last reported at Montevideo, about to start around Cape Horn.... Republic, schr., T. H. Hall, was at Barbadoes on March 13, having left St. Croix on March 8.

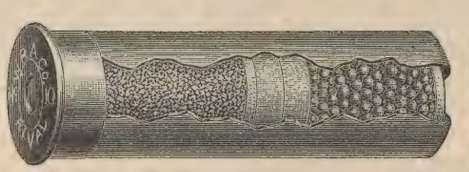
Answers to Correspondents.

S. B. W., Sandy Spring, Md.—We are not advised as to the rifle for sale.

F. N. S., College Hill, Mass.—Write to E. M. Stilwell, Fish and Game Commissioner, Bangor, Me.

YOUNG ENGLISHMAN.—Go to Lane's Good Ground, Long Island, but season will not open until July.

W. M. S., New York.—Can you furnish me with the names of a few good places in or around Sullivan county, where there is good fishing in May and where board is moderate? Ans. Eldred, Monticello and Ellenville.



W. C. D.—1. You can get them at the bird stores. 2. The rifle is adapted to small game, squirrels, hares, etc. 3. We cannot give specific information about the streams in that town.

S. M. Y., New York.—Will you kindly advise me if a cocker spaniel will answer the purpose of a duck dog, and how they compare with a water spaniel for this work? Ans. Do not recommend their use in duck retrieving. They are too small and light for such heavy work as this often is. A water spaniel or Chesapeake Bay dog would be better.

Yachts and Canoes Wanted.

WANTED.—STEAM YACHT, 20 TO 25FT. long, oil burner preferred; all nearly good as new. Give full particulars, lowest price.
1t M., Box 197, DeKalb, N. Y.

Yachts and Canoes For Sale.

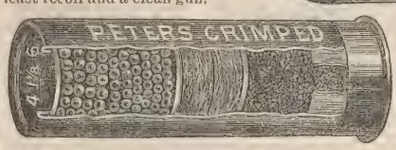
Cruising Yacht For Sale or Charter.
The owner of a well-known yacht, 47ft. long, 14ft. beam, 6ft. draft, perfectly fitted out for the comfort and accommodation of four to six persons in the cabin, and three men in forecastle, patent w. c. and all modern improvements, will sell or charter her at a reasonable price on account of important business engagements preventing his leaving the port during the summer months. The yacht is built upon a beautiful model, has two rigs, can be sailed as a sloop, when she is very fast, or as a yawl for cruising. She was built during the winter of 1886, of best of material, under the personal supervision of the owner, and is a staunch and excellent sea boat, well suited for cruising in the gulf of St. Lawrence, and has been so employed, where capital sea trout and other fishing can be enjoyed, and salmon may be included, seal and white porpoise hunting, duck and shore bird shooting. This is an opportunity seldom offered. Address P. O. Box 1081, Quebec City, Can. Satisfactory references in New York or elsewhere given and required.

FOR SALE.—EVESON'S COMFORT MODEL canoe, 15×31½, 6ft. cockpit; just built; never used; fittings if wanted. COMFORT, this office.

NEW STEAM LAUNCH, 21×4½, 1 H. P. SHIPman improved engine, at one-half cost. Address Box B., Schuylerville, N. Y.

FOR SALE CHEAP.—RAMONA, WON TWO of the sailing races at '88 meet.
FORD JONES, Box 324, Brockville, Can.

FOR SALE.—FIRST-CLASS ABLE AND fast compromise cutter **MERLIN**, 30' 4" over all, 7ft. beam, three berths in cabin, ample head room, outside lead, warranted sound and everything in good condition; four years old; cost to build $3,400; offered at $1100. Only sold because owner has built a larger boat. For description address WM. WHITLOCK, 87 W. 22d st., N. Y.



A FULL LINE OF CARTRIDGES.
10-Ga., 12-Ga., 14-Ga., 16-Ga., 20-Ga.
INDENTED – CRIMPED – BLANKS.

The Peters Cartridge Co. is induced by the success achieved the past season to greatly increase its line of manufacture. It now offers the above most complete list of Shotgun Ammunition.

THE
"Indented" Cartridges

Are the most successful ever produced for Trap and fine Wing Shooting. They give wonderful pattern and penetration, with the least recoil and a clean gun.

Peters Crimped Cartridges
Are loaded by the same machinery and with the same materials (including the lubricated elastic felt wads) as the "Indented." The crimp is the best produced by machinery and diminishes the recoil. They shoot strong and leave the gun clean. Price same as for "Indented."

Peters Blank Shotgun Cartridges
(Trade Mark and Patents applied for) are especially appreciated by the "far off" trade, the hunter, farmer, etc. They save freight and the danger of handling bulk ammunition. By their use cartridges for all varieties of game may be quickly produced without the necessity of carrying a full and expensive line of the goods.
ASK YOUR DEALER FOR THEM. LIBERAL DISCOUNTS TO THE TRADE.

The PETERS CARTRIDGE CO.
CINCINNATI, O.

J. Stevens Arms and Tool Co.
P. O. Box 4100, Chicopee Falls, Mass.
Send for our large 52-page Illustrated Catalogue.

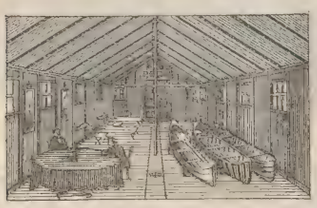
FOREST AND STREAM PUBLISHING COMPANY,
318 Broadway, New York.

CANOE HANDLING.
By C. B. VAUX ("DOT.")



A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners, and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

ANSWERS TO CORRESPONDENTS.

FISHING IN NEW YORK.

LOCAL anglers will be interested in a series of articles begun in the FOREST AND STREAM of this week on "Fishing Around New York." These are from the pen of that keen observer "Seneca," and will be of interest to many an angler who can sometimes get off for a single day, but can seldom afford the time or the money for more extended trips. In these articles the best places for angling about New York and the easiest methods of reaching them are given. Where to get bait and boats, fares on the railroads and many other matters are discussed, the series being full of interest for every one who lives near New York.

Anglers who live in the country know about the fishing in their own neighborhood far more than any one can tell them, but this is by no means true of the dwellers in the city. These have a general notion that there must be fishing in the stretch of waters that surround New York, but of definite specific information about this fishing there is very little, and this little is very difficult to obtain. It is just this information that the present series of articles supplies, and every salt-water angler who reads them will learn something from these papers; something that will be useful.

It is a curious fact that salt-water anglers should be much less given to narrating their adventures than those who ply their gentle craft on the inland brooks, rivers and lakes. Why should this be so? The question has been discussed in these columns in past years, but no satisfactory conclusion was reached. The fact still exists and still remains unexplained that salt-water anglers are not given to narrating their exploits or discussing their tackle. They write but little about their sport. There are among our correspondents some notable exceptions to this rule, but they are few.

It is difficult to believe that the sea fishermen have really nothing to say about their favorite sport. If there is nothing more to record, the stage of the tide at which their fish are caught, the bait they use, the season at which the different species are most readily taken should certainly furnish texts on which many an entertaining sermon might be preached.

SNAP SHOTS.

THE Connecticut Association of Farmers and Sportsmen seems determined to keep things moving in the Nutmeg State. The officers of the society are certainly boiling over with energy and lose no opportunity to prod the violators of the game and fish laws. Recently, Detective Fielding, in the employ of this Association, went to Glastonbury, where he found persons fishing illegally. He presented a warrant for the arrest of these persons to Grand Juror Risley, of that town, who refused to sign it. Now the president of the Association, Mr. A. C. Collins, has written Mr. Risley a letter, advising him that if he does not sign the warrant, a writ of mandamus will be issued to compel him to do his duty according to his oath of office. The Connecticut Association has found difficulty in a number of instances recently in persuading local officers to enforce the laws. It is doing good educational work.

After the thousand and one delays and interruptions which mark the preparations of an enterprise where the utmost accuracy is aimed at, the FOREST AND STREAM shotgun tests have been opened, and now it will be possible, with the least amount of annoyance or delay, to get at an exact knowledge of just what each and any gun may do under all and every condition of loading. The idea is to supplant in some measure the hazy and erroneous notions which many shotgun owners have of loading their weapons with something like definite scientific knowledge.

Mr. James M. Brown, who was recently elected President of the New York S. P. C. A. in place of Mr. Henry Bergh, has resigned, and Mr. John P. Haines, of Toms River, New Jersey, well known as a breeder of smooth-coated St. Bernards, has been elected in his place.

Deer were killed by dogs in Sullivan county, this State, last month. It is one of the evils of dogs in a deer country that they hunt deer the year around.

THEIR RIGHT TO ROAM.

IN our last issue we presented a mass of evidence proving that great injury is done to the game and forests of the Yellowstone Park by bands of Indians, which come up to, if they do not encroach on, its borders. We pointed out that these Indians ought not to be permitted to leave their reservations except in charge of a responsible white man, who can be held accountable for their actions while absent from their homes, and that under no circumstances should they be permitted to approach the borders of the National Park.

The question may fairly enough be asked, Why should the rights of these Indians be abridged? Their treaties with the Government provide that they shall be permitted to hunt near the Park; why have they not the same right to kill game there that the white hunter has?

We answer that they have precisely the same rights as the white hunters and no others. White men and Indians alike have the right to take game legally. The Indians have the right to every head of game which they can kill and use or carry away with them at the proper season outside the limits of the Park, but they have no right to kill game out of season, nor to fire the forests.

Forest fires almost invariably attend the advent of an Indian hunting party in any region.

The theory on which the U. S. Government has treated the Indians—whether it is a wise one or not we need not here discuss—is that they are wards. They are treated like children, given no special voice, even in matters which most nearly concern them, controlled and ordered about. Generally they are directed to remain on their reservations. White men who intrude on these reservations may be summarily expelled, ardent spirits are forbidden, and in a hundred ways it is shown that the Government does not consider the Indians capable of self-command.

Now, the Revised Statutes of Idaho, Wyoming and Montana provide for the enforcement of severe penalties against all persons who may fire the forests. If a party of white men go to the southern border of the Park and set fire to the forest, whether to help them in their hunting or for any other purpose, they stand in danger of being captured by the officers of the law, and held to a strict account in the courts. When Indians fire the forest for whatever purpose, they should theoretically be held to the same accountability as the white men.

There is, however, this difference, that the white man's education and presumed knowledge of the statutes have taught him that by firing this timber he commits a crime, while the education and traditions of the Indian lead him to believe that he is performing a natural and praiseworthy act when he starts a fire to drive or hold the game which he pursues. While, legally, there is, perhaps, no distinction between the criminality of the two acts, it is quite evident that in morals there is a wide difference. Though committed in ignorance, the Indian's offense is still a criminal one; and yet, considering his past, no one with any proper feeling would advocate his prosecution under the statute, if that can be avoided. It is a wiser public policy to restrain the Indian and keep him where there is no temptation to offend against the law. To do this we must abridge his freedom by confining him on the reservation, and so must deprive him of the pleasure of a summer hunt, and of the resulting meat and hides. So far we injure him. On the other hand we protect him from danger of a criminal prosecution, which might result in years of imprisonment, and at the same time we guard against the danger of having our only forest preserve swept away.

We hold that the inherent rights of an Indian are precisely those of a white man. When his action is against the general good his liberty must be curtailed just as in the case of a white man. A city park is open to the public. All persons have an equal right to enter and enjoy it; but if an individual who enters it breaks down the shrubbery, he may be punished, and after repeated offenses may even be prevented by the officers in charge from again entering it. The public must be protected from injury done by one individual to that which is the property of all.

If the Indians were not prone to start forest fires, there would be no excuse for ordering them away from the neighborhood of the Park. The mere killing of game, so long as it is done within the law, is something that no one has the right to interfere with. But the forests of the Yellowstone Park must be protected from danger. It is to be remembered that on either side of the Rocky Mountains there is an immense territory which depends for its water on streams which head in the National Park. Should these streams be dried up, or their volume materially lessened—as might readily result from extensive forest fires in the Park—the interests which would suffer are enormous. This danger to a large and growing agricultural population in the West will be ever present so long as the Indians are permitted to start fires in the neighborhood of the Park.

If there were, in the territory adjacent to that in which these Indians hunt and in which they start their fires, some hundreds of settlers, whose cabins and crops might be destroyed by fires carried to them from the Indians' hunting grounds—if the horrors and the deaths which have accompanied forest fires in Michigan were likely to be repeated in these forests of the National Park—no one would question the necessity of restraining these hunting parties. Yet any extensive destruction of the Park forests may work to thousands of settlers on the plains a ruin just as certain and just as real as if their houses and their grain had been devoured by actual flames.

When the Indian has been taught to comply with the law, he will have as much right to hunt on the borders of the Park as any one has. Until he has learned this lesson he should be restrained.

Editor Forest and Stream:

I am very glad to see the stand you have taken with regard to the National Park and its surrounding territory, and the interest it excites with all sportsmen, and I beg to add my testimony to that you have already printed.

In September, 1887, while hunting on Pacific Creek, I was daily in contact with Indian hunting parties, whose lodges were within a few miles of my camp, and the amount of elk they killed must have been large, as their rifles could be heard in every direction, and I often counted six and seven shots in quick succession. Indeed such a nuisance did this shooting become that my companion—Col. James H. Jones—and myself pulled out in disgust. About twenty-five miles further up, we came across another large and permanent camp of Indians, and so completely had all game been killed or driven out that we did not start a single elk. In camp at Two-Ocean Pass, and near Bridge Lake, I met Indians with their traps coming from the direction of the Park, the southern line of which was not over a mile or two distant.

In 1888 I passed down the west side of the Park and

along its southern border, coming into the Teton Range. On the western slope for twenty miles we could see a vast fire raging to the northward of Mount Moran, and it showed no diminution during the several days I hunted in this range. It undoubtedly worked immense destruction, as no rain had fallen for weeks, nor did any come while I was in this vicinity. Crossing from here I struck the west bank of Snake River, about fifteen miles north of Jackson's Lake, and here met a large Indian camp, and heard such shooting that I decided to pull out at once. On the morning when we broke camp a fire, which, judging from the smoke, must have been large, was making strong headway in the mountains two or three miles distant. On pushing up Pacific Creek, over last year's tracks, we found little game, but evidence of there having recently been a considerable body of Indians camped here. We made a break from here to try to strike the head of Great Bull Creek by a due east course over the Shoshone Mountains, but meeting impassable cañons we were forced off to the southward, and I hunted all along the southern parts of the Shoshone and Owl Creek Mountains. All through this section of the country I met large Indian camps, all of which had been very successful. In one case, the morning after a six-inch fall of snow, three of the bucks of one camp killed five elk, and two more of them secured three. As these Indians were not going to return to the agency till driven in by the weather, they undoubtedly killed a large number more. Coming through Prior's Gap in November, I think there must have been from twenty-five to thirty lodges of Crows in the two camps I visited. They told me their success with blacktail was very great.

I am not one of those who think the Indians should be deprived of their hunting privileges. On the contrary, these should be liberal; but these roving bands should be held in check as to the grounds they should hunt over, as to the number of heads of the various fur-bearing animals they should kill, and, above all, the greatest watchfulness should be exercised as to the state in which they leave their fires. This is one of the prolific causes of the forest destruction in this timbered country. If these fires are left without being extinguished by water or dug round and covered with sod to prevent their eating their way into the surrounding dead leaves and brush, great and frequent damage must and does ensue. On this same question, not only the Indians, but every person, hunter, tourist, prospector or other should be urged to use the greatest care. I think a severe fine should be visited on any one caught neglecting this precaution.

I have no suggestion to make as to the means by which the Indian shall be governed and directed in his annual hunt. The person who enforces such regulations as may be made in the future should be one who has the honesty and also the nerve to carry them out in the strictest manner. I have been favorably impressed by the Indians I have so far met. They were a civil, obliging and happy-go-lucky set, and as in one instance I was some three weeks with the Shoshones, I had good opportunities to observe them. One or two spoke very good English; they were fair in their dealings. We purchased several horses of them, and I am free to say I parted with my interpreter and daily visitor "Indian Jim" and his associates with regret. They urged me to come again this fall, and said would post me on the bear ranges they might come across.

The Sportsman Tourist.

CAMPS ON THE MENOMINEE AND BRULE

BY JOHN DEAN CATON.

IN the fall of 1878 I tired of the conventionalities of civilization, and longed for the quiet solitude of the deep forests, so I invited a couple of young friends to join me in an excursion to the wilderness of Wisconsin, where they might get a taste of camp life. These young gentlemen would now be called, a little west of here, "tenderfeet," but were enthusiastic for the new experience which my invitation held out to them.

We took the train on the Northwestern road in the evening, our objective point being the Brule River, in Wisconsin. At Marinette the next morning we were joined by Jones, who was quite at home in the tent and in the forest, and two Indian guides, who had been previously engaged, and by noon reached Quinnesec, which was then a terminal point of a branch on the Northwestern road, leading into the mineral region of the State. This town was then only just begun, and was situated only four miles from the Brule River.

We engaged a team to take us to the river, and immediately after dinner set out. The road was horrible, as new roads through a dense forest are generally found to be. In two hours we reached the river, where we found our canoes had arrived a short time before, according to previous appointment, and two guides, who had been dispatched from Marinette the day before to bring them up from a point below, where they had been engaged.

I will say now, for our guides, that they were the highest priced and the best that I ever had. The two eldest, who joined us at Marinette, were middle-aged men. They not only understood all the arts of woodcraft thoroughly, but both were excellent cooks, indeed, among the best I ever had in camp. The biscuits they made were equal to any I have ever seen, either on a private or public table. The two which we met at the canoes were young, stalwart fellows, willing and industrious, and understood their business thoroughly. They never had to be told a thing which needed to be done, but with a thoughtful foresight anticipated every want which could be felt in camp. They, too, were good woodsmen, good canoemen, and good hunters, and all spoke English fairly well.

About two weeks before a party of nine friends had left Chicago for the same region of country on a hunting and fishing excursion. This was called the Mayor's party, because it was headed by the then Mayor of Chicago, with his wife and daughter. They, with two other married couples and a young gentleman and a young lady, constituted the party. As I had been previously informed this party was camped four miles below where we struck the main river, at the mouth of Pine River, where it joins the Brule from the west. We determined to accept their invitation to pay them a visit at their camp, and as soon as our canoes were loaded we shot out into the rapid current of the Menominee, which aided the powerful strokes of our Indians to an extent which seemed to make the pine trees on the shore fly past us. As we turned a point above our friends' camp we opened a fusillade, which awakened the echoes of the forest as they have not often been awakened in that unsettled solitude. In a very short time our salute was answered with a welcoming salvo from the shore, and we were very soon welcomed with outstretched hands and warm hearts. We found the entire party present in camp, except John and Robert and their wives, who had gone out early in the day on a match hunt between the ladies. All had gone up the Pine in canoes with a grim determination on the part of each man not to return without a deer killed by his wife. Knowing the determined characters of both men and their ladies, I expressed fears that we might not see them before we should be obliged to leave in execution of our purposes up the river.

I found our friends' camp perfect in all its appointments, with one large dining tent, one cook's tent, one large store tent, one large sleeping tent for the Indians, and four sleeping tents for the party. They had ten Indians for their service, two of whom were now absent with the hunters.

Our guides had pitched our tents a little to one side of their encampment, having carefully cleared the ground for the purpose, had improvised a table and seats around it, and fixed everything in such complete order as seemed to say that they intended to teach those other fellows how to make a camp tidy and comfortable.

We spent the balance of the afternoon in visiting with our friends, receiving accounts of their experiences, and found the ladies especially enthusiastic in their love for camp life. We accepted their invitation to supper that evening, and found their table groaning with luxuries brought from the city, besides the trout and venison taken from the Pine River and the pine forest. There was no ambition to boast of the great number of the slain, as they only desired to kill what the camp required: but to supply the nineteen mouths which had to be fed gave the few hunters of the party about as much sport as they desired.

About 9 o'clock in the evening John and his wife came sweeping around the point, and into the little cove where the landing was, with a loud whoop from their Indian, which told us of their coming, and that they were not empty handed. This brought the whole camp down to the landing with a rush; the Indians on shore holding aloft blazing torches, which lit up the scene. John sprang ashore with the agility of an acrobat, and gracefully helped his wife to land, and then we saw in the bottom of the boat a fine buck, which we all knew had fallen to her rifle. The chorus of whoops and yells which went up from the throats of those twelve Indians was truly astonishing. Her kindness to the natives of their party no less than her genial bearing toward her own associates had endeared her to them all, and they perhaps were the most gratified of any at her success. Each of them seemed eager to have a hand in landing that deer, and when he was laid out on the ground before us, a chorus of whoops and yells again rent the air. It was a fine two year old buck, not over large, but large enough to mark a great success. She had shot it from the canoe, where the water was still, while the deer was standing in the grass at the edge of the bank about 100yds. distant. She had shot it through the heart, and with one high bound it fell all in a heap, never to rise again. The buck was hung up in a conspicuous place, so that Robert could see it when he came in. We sat up late that night awaiting his arrival, but he did not come, and when we turned out the next morning he was still absent. About 9 o'clock he swept round the point, and a whoop from his Indian called all hands to the bank of the river, where he was just landing, and in the bottom of his canoe lay another buck, when the whooping and yelling of the night before was repeated, with a hand shaking and congratulations of us all, as soon as we could get near enough to the brave huntress to permit of that gratifying ceremony. Her deer was larger and with finer antlers than the other, so it was admitted by all that she was entitled to the prize. Not having succeeded in getting a shot the day before, Robert went on shore, and with the help of his Indian, had improvised a comfortable lodge of boughs, where they had slept very well during the night, but were astir at the break of day the next morning, and while the morning was still gray the long-looked-for chance came, and her shot, not less fatal than the other, laid at her feet her first trophy, of which she might justly be proud, and with it they returned to camp as before stated. Both of these ladies had had good trainers, and were naturally cool and deliberate, and if either had been affected by the buck fever she was restrained until it had passed away.

The day was pleasantly spent in camp visiting and talking over the events of the three weeks during which our friends had been in the wilderness. The ladies of the party especially, enthusiastic about camp, manifested no disposition to return to civilized life and surroundings. That evening the mayor, his wife and daughter dined with us. Our cooks had exerted themselves to make their best spread, and the madam could not restrain her compliments on their skill. After supper Robert and John joined us, and as we sat round our camp fire, talking over sporting scenes, both past and present, Robert remarked that six years before, when camped on nearly the same ground we then occupied, he was with his guide a few miles back sitting on a log to rest on the edge of a small prairie when a fawn came trotting along, and laid down in the grass not more than thirty yards away. He very soon gave signs of uneasiness and pricked up his ears to a vertical position. They were exactly in line with each other, and, as he did not wish to kill the fawn, he thought he would try and mark him, so if he ever met him again he might claim him as his own. He took deliberate aim at the ears, one of which covered the other a little above the head, and fired, when the fawn jumped up, shook his head, and acted in a manner which showed he was somewhat dazed, and then ran off.

"Now," said Robert, "I would give a little to know whether I actually marked that fawn as I intended!"

Jones immediately spoke up and said, "You did," and went on to relate that four years before he had been hunting with a party about forty miles distant from where we then were. One of the party, a doctor, whose name he gave, had shot and brought into camp a two-year-old buck with a hole through each ear, about an inch above the head, which had caused great speculation in their camp as to how those holes could have been produced, as they were as nearly alike in position as possible.

When we arrived at this camp the mayor's daughter had shown me a red squirrel, which the Indians had caught alive, and placed in a small cage which they improvised, and presented it to her. She was feeding and petting it with great assiduity, and it was already becoming somewhat tame and losing its fear, especially of her. I suggested to her that she now had leisure and opportunity of making observations of the habits of the sprightly little animal, and especially suggested that it would be interesting to know in what mode it drank its water. The next day she told me that she had solved that question, and that it drank by lapping like a dog, and not by sucking the water into the mouth after the manner of other large quadrupeds. She took me to her tent, that I might observe the process. She was right, but the lapping was so very rapid that it required the closest observation to distinguish it. The young lady had certainly succeeded in establishing one interesting point in natural history, which was wholly new to me. It might be interesting to study this subject in other small quadrupeds.

The next morning after breakfast we bade our friends good-by and left for the Brule, slowly stemming the strong current of the Menominee. On the way up we had to pass a very strong rapid, which was finally overcome, and we landed at the east shore at Bad Water Crossing, and went into camp for a late dinner. When we unloaded our baggage we found a nice saddle of venison stowed away in one of our canoes. After dinner two of the party with their guides crossed the river, and went out on the trail leading to Bad Water Lake, which was a mile and a half away, after meat for the camp. They returned in the evening with a two-year-old doe, which was hung up to ripen a little until the venison in camp should be consumed. It is not advisable, especially for those whose stomachs are not accustomed to it, to eat the flesh of a common deer immediately after it has been killed, for it is very likely to produce a diarhœa, while, if allowed to ripen for a day or two, no such result need be anticipated.

This was a very pleasant camp close to the bank of the river, and about five hundred yards from the large log cabin of a Frenchman and his wife, who entertained travelers and attended the ferry at that crossing. They seemed to do a thriving business, for while we occupied that camp many passed on their way to the lumbering camps from ten to twenty miles above.

While here it was arranged that two of our party should take all the guides and go over to Bad Water Lake with both canoes for an evening hunt, and if unsuccessful in that they should try a night hunt on the lake, leaving only Norman and myself to keep camp. A large supply of wood had been brought in, and an abundance of cooked provisions provided for our suppers and the refreshment of the party when they should return. After the party had left we spent our time pleasantly, visiting the couple at the cabin, making purchases of moccasins and arctic socks of the vivacious little French lady, and reading and lounging in camp. When the sun had descended pretty near the horizon I observed Norman go over to the fire in front of the Indians' camp, where the cooking was done.

He pushed the brands together, put on new fuel, got out some potatoes, peeled them, and sliced them into thin flakes as he had seen the Indians do, which he put in a frying pan with a little water and some fat. He then went to the deer, which was hanging up near by, cut out some choice bits, which he placed in another pan. Then he seemed to hesitate a moment and finally hollowed out to me:

"Judge, do they make tea with cold water or hot water?"

I answered him that I thought they usually used hot water for making tea, whereupon he measured out about two and a half cupfuls of water, which he put in the tea kettle and set it on the fire. He then brought out the tea chest, and when his water was boiling he dipped his hand into the chest and grasped as much as he could hold with one hand and called out to me if I thought that was enough, and at the same time threw the whole into the kettle. I told him I thought that would do. In the meantime his other culinary operations had been going on, and after he had set the table in the most artistic way he called out to me that supper was ready—to come and eat. The potatoes were cooked to a turn, and were on the table; the frying-pan of venison was passed (I always prefer to have the venison passed directly from the frying-pan to the table), when he inquired if I thought that tea was done. I told him I thought it was.

A few minutes before this Jerome, an Indian guide, who spoke English well, who was camped with his family a mile or two above us, and who had visited our camp several times, came down in his canoe, which he tied up and walked up to camp. He said he was going down the river to try to get a deer. I asked him to sit down and take supper with us, but he excused himself, saying he had had his supper.

About this time Norman took off the tea kettle, and filled a pint cup full of his tea, which he set before me, with a can of condensed milk, saying, "Here, Judge, try my tea." Of course it was as black as soot and not less bitter. I put in a liberal supply of condensed milk, took a sip of the fluid, which fairly bit my tongue, when I turned to Jerome, who was sitting a little way off, and said, "Here, Jerome, if you won't eat with us you will surely take a cup of tea. This boy has made more than we can drink, and it is pretty strong, too, and will help to keep you awake in your hunt." He took the tea gladly and tackled it earnestly, and disposed of it fairly by the time Norman had got seated at the table, and giving his tea a slight sip, which was evidently enough for him, Jerome having emptied his cup, Norman suggested he had better take another as there was plenty of it, at the same time handing it over to Jerome, who took it without reluctance, and swallowed it all, and, with his quart of tea well stored within, he jumped into his canoe and started on his hunt.

The next morning about nine o'clock he returned without any meat. When I asked him if he had seen no deer he replied, "Oh, yes, I have seen about a thousand of them, but they kept dancing about so that I could not get a shot at one of them." Still he was not afraid to take a cup of coffee with us, which, if he did not enjoy as much as the tea, he seemed to take with a relish.

[TO BE CONCLUDED.]

Natural History.

BIRD NOTES.

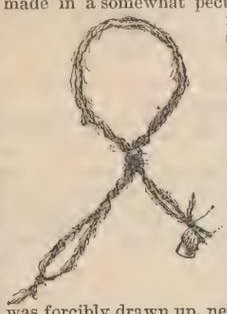
GLOUCESTER, April 2.—I give below the arrival of birds, migrant and resident, for 1888 and 1889, to date:

	Arrived 1889.	Arrived 1888.
Robins	March 2.	March 9.
Song sparrows	March 16.	March 9.
Bluebirds	March 19.	March 14.
Blackbirds	March 23.	March 20.
Fox sparrows	March 29.	April 3.
Wild geese	March 23.	March 27
Frogs commenced to sing	March 29.	April 9.
Bluejays	March 17.	March 28.
Hermit thrushes	April 1.	April 3.
Yellowhammers	March 21.	April 2.

This last bird (*Colaptes auratus*) is also a winter resident. Last spring I put a bird box in the top of a tall oak, and a yellowhammer used it all summer for a signal station. He returned from the south March 21, in the night. About daylight he flew to the box and sent a telegram to another bird on the hill beyond the swamp. The answer was rapped on the dry limb of a dead oak, and for half an hour these birds sent messages to and fro. This tapping to each other is quite common with the yellowhammer. I used to hear them in the logging swamps of Maine, tapping on deserted log camps. Among the memories of my boyhood days is one of being regularly awakened at daylight by the birds' reveille, beat upon the loose boards of an old sawmill. HERMIT.

BUFFALO CATTLE.

THE experiments in buffalo breeding now being undertaken, and the attempt to engraft on our domestic cattle the strong blood of this wild stock, has excited a widespread interest not only in this country, but in Europe as well; not only among scientific men, but among farmers and stock raisers. Although a good deal has been printed and a good deal of theorizing done on this subject in the press of this and other countries, the subject has been intelligently discussed, as far we have observed, only in FOREST AND STREAM. And this, because it has been considered not in any one-sided way. We have looked upon it from the standpoint of the old buffalo hunter, who was familiar with this animal when its countless hordes blackened the prairies from the Rio Grande to the Saskatchewan, and from the Missouri River to beyond the Mountains; and to this experience we have added that of the cattle man, whose memory goes back to the early days of cow-punching in the West, and who can recall the times when 30 to 40 per cent. was the annual profit actually made on capital invested.



FOREST AND STREAM appreciates the scientific interest which attaches to these experiments. It comprehends as well the possible economic value of a new breed of domestic cattle which, at no greater cost of production, shall be beef producers superior to those we now have on our ranges, which shall be exempt from the dangers of cold and snow, to which our existing breeds of cattle are exposed, and which, besides their beef, shall yield a hide whose value alone shall be more than the price now brought by a fat steer in the beef market. Having in view these points, the FOREST AND STREAM recently dispatched a competent staff correspondent who is an old buffalo hunter and cattleman, to inspect the only herd of buffalo and cross-bred cattle now in existence—that of Hon. C. J. Jones, of Garden City, Kansas. Of this herd we have often written, and portraits of individuals contained in it have been reproduced in these columns for the benefit of our readers—yet after all nothing can give so satisfactory an idea of the animals as an actual view of them. This view has been had, and we are free to say that none of all the good things which we have heard of these cattle has done justice to their superb appearance.

It will be remembered that Mr. Jones's herd started with a few calves which he captured in Texas and the Indian Territory.

The method of capturing the buffalo calves was practically the same as that implied in the operations of cutting out and roping for branding, as seen at a round-up on the range; with this exception, that the pace set by the buffalo was much hotter, so that usually the rope could be thrown only at the close of a long and break-neck race, into which neither man nor horse could enter with any surety of success or safety. It was always an even chance for the buffalo calf, especially if it happened that the calf was with its mother detached from the main bunch. The little curly red fellows, not more than three or four weeks old, would get over the hot plains in a course so fast and long that even the best of the horses were tried to the utmost. The pause necessitated in dismounting and in hobbling the captured calf was usually sufficient to allow the remainder of the herd to sweep on so far as to make it nearly impossible for the rider to get among them again on that run. It was a good horse that could take two calves on the same run. The bay Kentucky mare Jennie once got into the herd three times on one run, and three calves were roped from her. She was a wonderfully game animal. She came into camp one night apparently quite blind and barely able to stand, after crossing probably one hundred miles of hot and waterless desert. Every boy in the camp got out and worked with her, and by dint of a pint of whisky, which the mare drank out of a pail, and by long and patient rubbings, she got through safely. Jennie was subsequently given by Mr. Jones to the range hunter, Lee Howard, for services in the calf hunt of 1887. The other horses used were of the best range stock, and for the most part were speedy, plucky and fearless. One black cow pony proved himself very good. Another, a gray brute, was always afraid of the buffalo, and could hardly be crowded in closer than 20 or 30yds. Mr. Jones himself roped probably more than his proportion of the calves in the earlier hunts. He had no aid in the calf hunt of 1885. In 1886 he was assisted by Ez. Carter, a very handy young cowboy. In 1887 Lee Howard, the Panhandle hunter, was enlisted, and was found wonderfully skillful. In 1888 Howard and young De Cordova were on the hunt, and these two repeatedly did what it had been claimed no one could do; they roped, threw, tied and hobbled full-grown buffalo cows. No stronger commentary on the effectiveness of the cowboy's rope and his skill in using it could be made.

When the herd was sighted—although the "herd" meant usually only a few scattered individuals—the riders at once left the light wagon, where they usually rode while on the search, and with all possible speed loosed and mounted the saddled horses, which were led behind the wagon. There might be pause enough to draw a cinch a little tighter, but beyond that there was no waiting. Usually the herd would sight the hunters as soon as the latter did them, and then away they would go. There was only one pace for the riders, and that the very best the horses could do. Of course the light wagon could not keep up with the herd or with the riders, and these were very soon lost to sight. The driver of the wagon, however, lashed his horses into the best speed they could make, and sent them on full jump after the lessening cloud of dust. The wagon would sway and bound over the rough hillocks, but so long as its inmates could cling to it there was no thought of any danger. There is an excitement to every feature of this kind of buffalo hunting which is not paralleled in any other sport of the field.

Each rider had on his saddle a number of rope hobbles, made in a somewhat peculiar way. This rope was unraveled, so that the strands stood loose. It was tied in the middle in a large loop, just large enough to slip over the calf's head. A knot was tied in the end of each free leg of the hobble, so that the loose strands were confined at the ends and at the tight neck knot. When a calf was roped the rider sprang from his horse—which stood without further precaution than the usual plains custom of throwing the bridle reins down over his head—and at once put the hobble on the calf's neck; then one hindfoot was forcibly drawn up, nearly to the calf's jaw. A slip-knot was quickly run into the loose leg of the hobble, and the running strands were thus drawn tightly just above the calf's foot. A round rope would slip, but the ingenious expedient of loosening the strands formed a hobble which did not slip in a single instance. The second hindleg was in the next instant treated in the same way. It was determined beforehand just how long the legs of the hobble should be, namely, just long enough to pull the calf's feet close up to its neck. If left too long the calf could run away. As really applied the calf was left trussed up like a fowl and lay bobbing around on the grass, a pretty fair object for discovery by the ambulance corps in the light wagon. A short period of vicious butting and tumbling, and the buffalo was taking its first buggy ride, and the wagon was swaying on down the trail after more calves in the midst of a struggle to keep the calf somewhere on the bottom of the vehicle.

The light wagon followed on down the trail until it met the riders coming back, when information was exchanged as to the number of calves collected or to be collected. After all the captives had been found the return to camp was begun, with men and animals very nearly exhausted. It might be fifty miles to water, and night settling down over a country trackless in the daytime. Now came the time for perfect knowledge of the plains; a time, too, if grumblers could have found a place on such a hunt, to reflect that buffalo calf hunting was arduous business. There were no complaints, however, and the only concern was lest the calves should not live until water was reached. The men denied themselves, and the scanty water of the canteens was given to the calves, or used to moisten the mouths of the horses which had run so well.

At camp the calves were tied on short ropes, fastened trot-line fashion to a long rope staked securely in the ground at each end. This assured a certain give and swing, so that the little fellows could not injure themselves in their rushes and tumbles. At first they were exceedingly belligerent and showed ability to butt with wonderful strength and accuracy, but they grew tame very rapidly, and at the end of a week or so could be approached and handled by their feeders. They were fed upon the milk of domestic cows, the cows having been driven down across the range to the home camp at the expense of a great deal of toil and trouble. Condensed milk was found to be unwholesome, and the calves sickened and died upon it. With the best of care, some of them were lost, as the heat and exhaustion of the chase were too great for them.

After a week or so of rest at the home camp, the long and tedious march to the settlements was begun. This was made by slow and easy stages. The buffalo calves were driven on foot. They stayed well with the domestic cows, and the younger calves were suckled by the domestic cows with mutual amity. A beer bottle covered with a rag was a favorite way of conveying milk to some of the calves, and one or two learned at once to drink milk from a pail. One cow suckled three buffalo calves. The little fellows took well to their foster mothers. Often their own mothers had fought savagely against their captors.

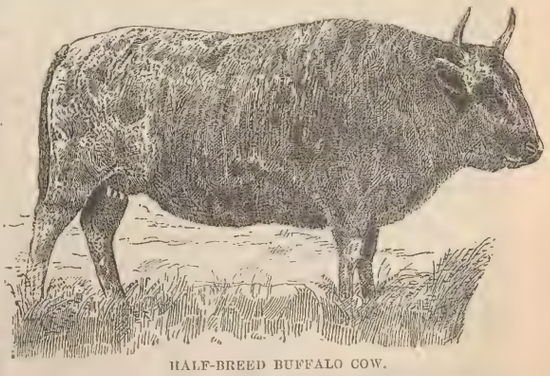
It may be well seen that the herd was accumulated only as the result of skill and tireless energy and at the expense of many hardships undergone.

To these calves Mr. Jones has added by purchase a few single buffalo, and last year he bought the Bedson herd of over eighty head, so that he is now by far the largest owner of buffalo in the country.

Besides the pure buffalo, of which he has nearly 120, he has a number of the crossbred stock, and it is these which to the breeder of cattle are by far the most interesting. Among these last are four half-breed cows, of one of which a portrait was given in FOREST AND STREAM of Dec. 20, 1888, and is to-day again printed.

To the experienced eye it will at once be clear that this animal is built on just the lines of a beef maker, and yet the picture conveys only a faint idea of the excellence of this superb creature. She is very tall, more so than an old work ox, very thick through, with a gigantic frame and short legs. It has been supposed, and the opinion was advanced by old stockmen who have seen the picture, that it was taken after the cow had been fed on corn, and in this way "forced," *i. e.*, made as fat as possible. This we are assured by Mr. Jones is not the case. This cow has never had any corn. The photograph from which this drawing was made was taken in the fall when the cow had been for six months suckling a three-quarter-blood calf, a calf, by the way, which at six months old weighed six hundred and ten pounds. The cow was in fair order but by no means fat.

When the FOREST AND STREAM correspondent examined this cow in March last he was struck by the excellence of the portrait of her which had appeared in the paper some months before. The likeness was at once recognizable. Points which will strike the stock raiser are the general appearance of thickness and sturdiness of this animal, the heavy shoulders, the almost entire absence of hump, and thus the hindquarters nearly as high as the fore, the great depth from above downward. The animal is massive throughout. A front view would show great thickness from side to side. These cows are all alike in size, and convey the impression of more bulk than large work oxen. When seen in March they were rather thin in flesh and were shedding their coats, so that they did not appear to advantage. They were estimated to weigh about 1,400lbs. Mr. Jones expressed the opinion that he could fatten one of them in the autumn so as to weigh 1,800lbs. live weight. They are sired by buffalo bulls and are out of common Indian cows.



A half-breed steer was castrated as a calf by Mr. Bedson, and killed when he was past three years old. He dressed 1,280lbs. clear meat, or nearly twice as much as a fat four-year-old range steer.

As might be expected, the three-quarter bloods more nearly resemble the buffalo. The hump is much more pronounced, the head and horns more buffalo-like, while the coat is much longer than that of the half-breeds and more wavy. Animals of this breed attain a great size, as indicated by the weight of the six months' calf already mentioned. A young three-quarter bred bull, past three years old, pulled down the scales at 2,400lbs. when grass fat in the autumn. Owing, however, to the lack of symmetry, due to the hump, they do not so much impress the cattle man. They produce a robe, however, which in beauty and evenness is superior to that of the buffalo. The buffalo's coat in winter on the hump, upper sides and back is curly and matted, and soon bleaches out to a faded tan color, while the coat of these three-quarter bloods is even throughout, having little or no curl anywhere, and is but little lighter on the back than on the belly. It is everywhere a beautiful rich brown, and is as heavy as any buffalo robe.

The robe of the half-breed is even in length on all parts of the body and is without curl, more like a heavy bear skin than anything else.

Mr. Jones hopes to have this spring about thirty buffalo calves and from thirty to thirty-five half-breeds. Some of these are expected from ordinary domestic cows and some from thoroughbred Galloway cows, of which he has about fifty head on his place. These Galloway cattle have themselves heavy long coats and a woolly under coat, and this cross can hardly fail to produce an animal which will yield a fine robe, besides being admirable beef cattle. None of these animals had calved at the date of our representative's visit to the farm, but a full account of this year's calf crop is promised us.

Besides the beef and robe-producing qualities derived from the crossing of the buffalo on our domestic cattle, a great advantage is the increased hardiness of this hybrid stock. That cattle in severe storms turn tail to the wind and drift before it is well known. The habits of the buffalo are just the reverse of this. They face the storm and either stand or work up against it. This characteristic they transmit to their descendants. The cattle and the buffalo may range together during the summer, but in autumn or when the winter storms come on they separate, the cattle drifting and the buffalo remaining stationary. The offspring of domestic cows by buffalo bulls wean themselves at this time, and remain with the buffalo herd. Often during a storm the buffalo and the hybrid stock will lie down, turning their broad shoulders to the wind and throwing their head around behind the body so that it will be out of the wind. In such a position they may lie for hours, even until quite covered up and concealed from view by the snow which has drifted over them. Mr. Bedson is reported to have said that often after a heavy storm he has looked out over the prairie where these animals ranged and been unable to see anything of them, the whole plain being an unbroken expanse of glittering white, here and there interrupted by little mounds of snow. One by one these mounds would be broken up by the movement of the buffalo, which would get up, shake themselves and then begin to paw away the snow and go to feeding.

HALF-BREED BUFFALO COW.

The keen powers of scent possessed by the buffalo stand it in good stead when the ground is covered with snow, for by this means it discovers the best grass which is concealed from view. It is said—we do not know how truly—that when Mr. Bedson had his herd in Manitoba, they frequently in this way discovered the potato caches of the farmers and pawed their way into them.

An interesting characteristic of the domesticated buffalo and of the hybrids between them and the ordinary cattle with which they associate is their gentleness. In this they appear to differ in no respect from the domestic stock. Our correspondent drove and walked within arm's length of them, and sometimes, when one was lying down, it was necessary to touch it with the whip to make it rise

to its feet. The meadow in which these animals fed was surrounded by a light, three-wire fence which could readily have been pushed down or walked through, but it was not learned that any of the animals ever showed the slightest disposition to go beyond the inclosure.

If a race of cattle having the characters of the Jones half-breed cows can be established, there is no question as to its great value. That such a race can be made permanent we have little doubt. Further experiments are, of course, needed to determine just what cross will be the most desirable. It is possible that the three-eighths bred animal may prove even more valuable than the half-breed, and it will be interesting to see examples sired by domestic bulls out of buffalo cows. Two or three such exist to-day, we believe. When it shall have been determined what the best cross is, it will take some little time to make it permanent. For a few generations there will no doubt be a tendency to revert to one or the other of the two ancestral stocks. This can be overcome by the introduction of fresh blood from one side or the other, and ultimately, as we firmly believe, there will result a race of the buffalo cattle of which Mr. Jones will have been the originator, and of which he may well feel proud.

SPRING IN THE ALLEGHENIES.—*Editor Forest and Stream:* When I awoke from sleep this morning I was somewhat surprised at the absence of the usual carol of the bluebird and robin, which we have heard for some time past. And no wonder, for when I arose I found we had the heaviest snowstorm of the season; and had it not been for the protection afforded by the evergreens surrounding the house many of the birds must have perished. When I went out a few moments later to shovel the snow off the walks I took out my rule and measured eleven inches of snow on the level. I picked up a robin which seemed to be dead, but when I took him into the warm room he soon recovered, and took a good feed of crumbs. The evergreens were literally alive with robins, bluebirds and blackbirds. I do not remember the time when we have had so many birds so early in the season. The woodcock and jacksnipe are among the late arrivals; the common meadowlark and the yellowhammer have been here for two weeks, while the robin, bluebird and blackbird have been here since Feb. 23. Some of the robins were building when this last storm caught us. Have seen quite a number of ducks on our little creek, and a few have been killed on the town reservoir. The quail wintered well, as we have had but little cold weather, and many of my neighbors had corn standing in the fields all winter.—E. C. C. (Mt. Pleasant, Pa., April 6).

H. H. BOWLES, who wrote us as to silver foxes, failed to date his letter or to give his address.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One aoudad ♂ (Ovis tragelaphus), one yellow-winged sugar bird (Cœreba cyanea), five pairs mandarin ducks (Aix galericulata), one black-faced ibis (Theristicus caudatus), two undulated grass parakeets (Melopsittacus undulatus), two common boas (Boa constrictor), two stump-tailed lizards (Trachysaurus rugosa), and one spotted monitor (Varanus varius). Presented—One gray ichneumon (Herpestes griseus), one mink (Putorius vison), six raccoons (Procyon lotor), one green monkey (Cercopithecus callitrichus), one kinkajou (Cercoleptes caudivolvulus), one bald eagle (Haliaëtus leucocephalus), two undulated grass parakeets (Melopsittacus undulatus), one red-tailed buzzard (Buteo borealis), one common quail (Ortyx virginianus), one great-horned owl (Bubo virginianus), four alligators (Alligator mississippiensis), one pine snake (Pityophis melanoleucus), one bullfrog (Rana catesbiana), and five sirens (Siren lacertina). Born—One zebu (Bos indicus).

Game Bag and Gun.

.22 CARTRIDGES.

"J. L. K." asks experience with .22 long and .22 extra long pistol cartridges for rifle shooting. In answer I would say that for several years I fired thousands of shots from .22 rifles, especially two Ballards, and many Stevens rifles, and could never do accurate shooting with the long and extra long .22 cartridges in any of them at short range, say within 150yds. I never worried over any problem in rifle shooting more than I did this one. I had one of the rifles very carefully chambered for the extra long .22, but it seemed to make no difference the bullets would not "get there."

Some one away back asked me through FOREST AND STREAM why "I could do nothing with the .22cal. rifle on wild geese and turkeys." I answer simply for the reason that if the bullet did not break neck, back or wings, the feathers carried off my anticipated meat. The little bullets are by no means immediately fatal. Shooting for turkeys at 150yds., though we knew that our bullets were getting there all right, we afterward learned that we were not getting near all the meat that belonged to us. The day was very cold and the turkeys very fat. They were placed on a board or bench in front of a tree, if the bullets struck the tree near the birds they would splash the bark against the turkey and make him jump and flutter just as if hit by the bullet. My partner shot for an immense gobbler put up with his breast facing him. The bird jumped off the bench and made a great fluttering; he went up to claim his bird. After a most careful overlooking he could find no wound. While putting the bird on the bench again it died. They looked again but could find no shot mark. He, while carrying it in by the head looked down its breast and saw a cut feather. Looking beneath he found the bullet hole, which passed directly through the bird, coming out over the base of the tail. The bird was very fat, and the wounds did not bleed a drop externally. A neighbor who got quite a bunch of turkeys at that match, on cleaning found one of them with three, another with two, and a third with one of our .22-cal. bullet holes in them, showing plainly that Frank and I, if we could have claimed our just dues, would have taken about all them turkeys, for we knew that we could get there "every time sometimes." Therefore I conclude that the .22 is not a success on game larger than ducks. I have many times, I am sure, sent the little slugs through the bodies of the great blue heron, and then had them fly great distances and die. Ducks when hit, as a rule, keel right over, and quit living. One very cold day, as an exception, I put three bullets through a large cotton tail rabbit before he laid down. BYRNE.

SAN FRANCISCO, Cal.

THE MIGRATION OF THE DUCKS.

THE four rivers of Nebraska, the Republican, Platte, Loup and Niobrara are division stations in the migrations of the Anatidæ. The line of flight of the ducks is much more variable than that of geese or swans, but certain rules may be considered reliable in the observation of their autumnal and spring journeys. When ducks in their southern flight strike a stream they drift but little, either up or down, and when they make their final flight to the next river they leave the spot where they first arrived. In spring this is changed. Their general direction is northwest. After reaching a river they sail up stream a few miles each day, and thus while resting accomplish a portion of their western flight. Thus ducks will be found on the Platte opposite Grand Island or Alda a day or two before they are noticed at Kearney. This is especially to be observed in the late arriving species. The first grand duck wave of the season was on March 16. At this time geese and brant were here in full force, and many of the Canada geese had left for the north. Robins and meadowlarks were abundant, and one pair of woodpeckers had been seen. The latter were, I believe, rushing the season. Up to March 14, our only ducks were pintails, with a few mallards.

March 15.—Redheads come from the south in great numbers, also a few green-winged teal.

March 16.—Redheads, green-winged teal, more teal than redheads, some widgeon. The majority of teal did not stop at the Platte, but went six miles further to Wood River, a sluggish stream about ten yards wide, with banks heavily covered with brush of wild plums and willows. Here they have since remained undisturbed, as gunners confine their attentions to the Platte and to the overflowed marshes in its immediate vicinity. This freak of the teal in taking to Wood River instead of to the Platte is a mystery to me. All the morning the pintails were very uneasy. They would ascend to a great height, fly a mile or two away from the river, as though uncertain what to do. In the afternoon most of them set out at a rapid rate for the Loup. *Vale*, thou erratic *Dafila acuta!* each flight now takes thee further from the haunts of men. Sharp of sight and swift of motion must he be who will now lay thee low; so, farewell until September. The same day brought the bluebirds, I also saw a few widgeons.

March 17.—A warm and rainy day, the first of the season. Ducks did not leave the river and very few geese went to the cornfields. What a disappointment this was to the scores of would-be hunters who had hired their guns and laid in their ammunition on Saturday afternoon. I should pity them did I not feel it to be a just retribution. How many of us, snugly hidden in our blinds, have had a day's pleasure spoiled by these black-coated, black-hatted fiends, who deliberately seat themselves in full view not more than fifty yards from the blind, who fire at a flock 300yds. away and then jump up and ram another charge into the old muzzleloader? These are the gun-shop fiends, who, when they go to the store, protest that they know nothing about goose shooting and want the same kind of shot and the same quantity of powder that the dealer uses in his own gun. He genially smiles and shows them No. 4 shot, which is just the size for a strong and close-shooting gun. In spite of their professed willingness to take the seller's advice, they ask to see something a "leetle bigger," and finally, having gone down the scale, they end the interview by purchasing 00s. They would have taken bullets had they not been informed that bullets are apt to get stuck in a chokebore. Nature is just, and when she gives us a rainy Sunday, and that the 17th of March, she knows what kind of sportsmen she is punishing.

March 18.—Weather clearing and clear, very warm, no frost on the ground. The buds of maples are much swollen, and our song birds gave us the first matin concert of the season. Bluebirds and sparrows are abundant in the shrubbery. Many mallards arrived, and the flocks of redhead and teal were augmented. Pintails seem to have deserted the river, though a few may still be found at the lakes, four miles west of Kearney. This was the first day of good shooting at the upper lake, as both redhead and mallard were to be found there. Teal are not wasting much time on the Platte, but after resting a few hours seek the solitude of Wood River. One gadwall (*A. strepera*) and a shoveler (here called "spoonbill") were shot on the Platte. Sportsmen say that the shoveler indicates settled spring weather, as well as the height of the vernal shooting season. In spite of overflowed marshes, wet roads and muddy cornfields, this was the red-letter day. Redhead and mallard on the Platte, teal on Wood River, with geese and brant by the thousand feeding in the upland cornfields that lie between the two streams. The later ducks are beginning to appear. There are a few blue-winged teal and several butterballs. Redheads are coming down well to the mallard decoys. They are doing better than usual in this respect, as most of our local sportsmen claim that they do not decoy "worth a cent."

Sportsmen who went out the latter part of last week returned to-day. One party had forty ducks and seven geese, another thirty-seven ducks. From data furnished by them I add to the report of March 16 the following species, this being the date of their first appearance: Blue-winged teal—one specimen shot on Wood River; a pair of bluebills—female shot on the Platte—and a very few cinnamon teal. The latter are a rare visitant in this section. Comparing this date with the best of the spring shooting season in 1888, I find that ducks are more abundant, and sportsman are, as a rule, getting larger bags. On the other hand, sport with geese and brant has deteriorated, though there are enough of these, and more than enough to satisfy any rational hunter.

March 19.—Very warm and clear in the morning with indications of a storm in the afternoon. Many geese, mallards and redheads go northward, though black-winged brant have not yet begun to move. A letter just received from "Sibylline" reports duck shooting in Colorado as "below the average" this year. This may account for the better than average sport which we are enjoying.

From this time until grass starts and the birds can get green picking along the streams and ponds, there will be little new to record. The arrivals and departures of mallards, redheads and pintails will offset each other. Teal will not fly much and there will be a sprinkling of butterballs, widgeon and bluebills. It will be a month before we can tell how many or what kind of ducks will stay or, perhaps, summer in the lagoons along the Platte.

The ignorance of ducks displayed by some hunters is marvelous. From one of to-day's Omaha papers I quote: "Mr. —, a most successful sportsman, has spent two days on the Platte. He returned last evening with an immense bag of canvasbacks." I would like the names, addresses and description of the shooting grounds of any one who has obtained three canvasbacks this season in Nebraska. There might, of course, have been an errant specimen or a pair that had lost their longitude, but even this is doubtful.

Shooting over decoys is not in high favor with most of our sportsmen, although those who resort to the artifice are uniformly successful. I think that failures must, in many instances, be attributed to the use of pintails instead of mallards or redheads. It is true that the swift waters of the Platte are not so well adapted for the use of decoys as are those of a landlocked lake.

Neither are retrievers employed to any extent. We have some excellent ones in this section, but most of our good dogs are pointers, and as they lie on the damp ground in a blind they suffer more from cold than do their masters. Setters on coming from the icy water do not dry thoroughly, and soon become stiffened from the exposure. The secret of the non-use of dogs in ducking is due to the fact that men who cannot have a dog especially for this purpose prefer to keep their four-footed friends in first-rate condition for quail and chicken shooting. SHOSHONE.

KEARNEY, Neb., March 20.

KEARNEY, Neb., March 25.—I find that I am in error in the above statement concerning canvasbacks, although, before writing the article, I consulted all of our local sportsmen, and none of them had killed the bird west of the Missouri River. Prof. Smith, of the State Industrial School, has a blind on Second Lake, three miles west of town. He uses canvasbacks as decoys and with good success. On Friday last (March 22) a small flock of canvasbacks dropped among his "floaters" and he secured eight. They are the genuine article, and I believe them to be the first canvasbacks shot here in several years. Duck shooting is improving every day. SHOSHONE.

NEW ARKANSAS GAME LAW.

Editor Forest and Stream:

I send you new law that has passed both houses of the Legislature in regard to exporting fish and game. It is a decided victory for us as it will stop pot-hunting for the Memphis and St. Louis markets.

The game law was amended so as to make it unlawful to kill deer between Feb. 1 and Aug. 1, with an outrageous proviso that they can be killed at any time on one's own premises while destroying crops. The trouble will be in proving that it was not killed on the prisoner's premises. There are some other measures pending and I will advise you if the law is changed. The provisions of the law are as follows:

SECTION 1. That all game and fish, except fish in private ponds, round in the limits of this State, be and the same is hereby declared to be the property of the State, and the hunting, killing and catching of same is declared to be a privilege.

SEC. 2. It shall be unlawful for any person to export fish or game from this State for the space of six years next after the passage of this act, and any person violating the provisions of this act shall be guilty of a misdemeanor and shall be fined on conviction to any sum not less than $25 nor more than $50.

SEC. 3. It shall be unlawful for any railroad company, steamboat, express company or any other common carrier to take for carriage any fish or game consigned to points beyond the limits of this State.

SEC. 4. Any such common carrier may refuse to receive any package which it may suppose contains fish or game designed for export, or may cause said package to be opened or may satisfy themselves in any other way that said package does not contain game or fish.

SEC. 5. Any common carrier violating the provisions of this act shall be guilty of a misdemeanor, and upon conviction shall be fined in any sum not less than $50 nor more than $200.

SEC. 6. Any violation of this act shall be prosecuted in the name of the State of Arkansas, and one half of the fine shall be paid into the county treasury, as other fines are required to be paid, and the other half shall go to the informer.

SEC. 7. Justices of the Peace shall have jurisdiction of prosecution under this act.

SEC. 8. All laws and parts of laws in conflict therewith are hereby repealed, and this act shall be in force from and after its passage.

Some other measures are pending, of which I will keep you advised. Since this law was passed the railroad and express companies have been busy sending out instructions to their agents regarding the bill. Col. J. A. Woodson, assistant general freight and passenger agent of the Missouri Pacific lines, recently sent a copy of the bill to each agent with instructions to see that it was complied with. [J. M. R.

LITTLE ROCK, Ark., April 9.

BUTCHERY IN MICHIGAN.

THE following account, taken from the *Menominee Range*, a newspaper published in Iron Mountain, Michigan, is very suggestive:

"It will be remembered that Deputy Game Warden Moriarity, of this city, made a great haul of contraband deer which some miscreant had killed at Sawyer Lake, about forty miles up the line, in criminal contravention of the State law against killing game out of season. He brought down with him no fewer than twenty-six dead deer, many of them tender little fawns from one to two months old, showing what heartless ruffians must have done the butchery. The deer were piled in Mr. Moriarity's back room, where for a week the great heap of venison formed one of the sights of the city, hundreds of people visiting the tumbled mass of bucks, does, and fawns. Not knowing what to do with his important capture, Mr. Moriarity, we understand, wrote to Game Warden Smith, of Menominee for instructions. He knew he could not sell the venison because it would be much the same as selling property knowing it to have been illegally come by, and of course all he could do under the circumstances was to await the orders of his superior officer. Mr. Smith promised that he would come up to Iron Mountain and settle the matter. Five weeks, however, have passed since the deer were seized by Deputy Game Warden Moriarity, and yet Mr. Smith, for some unaccountable reason, has not arrived in Iron Mountain. Not until ten days ago, when the deer were putrid, did Mr. Moriarity receive definite instructions from his chief as to their disposal. As the immense mass of rotten venison, weighing over 2,400 pounds, was threatening to drive out Mr. Moriarity by its stench, he had no alternative but to order it to be removed and dumped as offal. It seems to be a downright shame, with so many poor people living from hand to mouth in the city, that this great

amount of good food should be allowed to lie until it was unfit to be eaten by anybody, and then thrown out on the dung heaps. Doubtless Mr. Smith has some good reason for his non-appearance in Iron Mountain before the destruction of the venison was imminent, but we think that, in the absence of a game warden, deputies should be officially supplied beforehand with instructions as to what they should do in such emergencies as the one which has just cost Mr. Moriarity the loss of time, money, and the opportunity of doing a great good to the poor of Iron Mountain."

SUGGESTIONS FOR TERRITORIAL LEGISLATION.—*Editor Forest and Stream:* As bearing on the subject of the destruction of large game on the borders of the Yellowstone Park, permit me to suggest that among the regulations required should be some to forbid indiscriminate slaughter irrespective of sex and age. The number of cow and calf elk that are annually destroyed is outrageous. In the season of the Indian hunting the cows and their young congregate in bands of six to twelve and more. When once the herd is located it is surrounded and few, if any, escape. I think also that the sportsman when he has secured the number of trophies he desires, and has meat enough for the "pot," should "let up." It is each year more apparent to me that the influences now at work, joined with the asylum the Park affords, are increasing the game (elk and deer), and as I pass from three to four months in my wanderings in the Rockies, I am in position to see this. I do not exaggerate when I say that last year, had I felt so inclined, I could have killed between September 1 and October 15, 50 to 100 head of game instead of three head. We were at certain points surrounded by elk. I have seen them fighting within 200ft. of the outfit while packing. On one occasion a big bull walked to within 10yds. of us while at breakfast, and appeared rather to enjoy it. Woody and myself frequently got within 20yds. of their family circle. In camp of an evening I have seen three bulls in plain sight feeding on the bluffs, and during the day band on band of elk cows and blacktail deer, and have watched their habits and actions with the greatest interest. I sincerely trust your praiseworthy efforts will be crowned with the success they deserve.—E. PENDLETON ROGERS (Hyde Park-on-Hudson). [The limitations suggested by Mr. Rogers, desirable as they are, would necessarily take the form of statutes enacted by the Territorial Legislatures.]

NEWFOUNDLAND GAME LICENSE.—*Editor Forest and Stream:* It may be of interest to your readers, particularly to those who anticipate visiting Newfoundland in the near future in quest of our lordly caribou, which presents such world renowned attraction to sportsmen from almost every quarter of the globe, to understand that a change has been made in the game laws during the present session of the Legislature of this country, and that in future alien sportsmen or any person not domiciled in Newfoundland will be prohibited from shooting caribou on the island without a license, which costs $100 for a season. The number of caribou to be shot is not to exceed five, under a penalty of $500 for each and every breach of the act. Hitherto Newfoundland has been most liberal with regard to her game laws. In fact she has been shamefully neglectful. Consequently Canadian and English pleasure seekers, particularly the latter, disguised in the garb of sportsmen and equipped with all the latest improvements for the preservation of hides and heads, have on numerous occasions been guilty of the most brutal acts in the way of caribou slaughter, killing hundreds of these noble animals in the most cowardly manner possible, and leaving their carcases to rot on the best hunting grounds of the interior. Hence the present action of the Newfoundland Government in establishing a law to protect this valuable food animal from extermination. It is to be hoped that the abundance of small game, such as ducks, ptarmigan, etc., etc., will be sufficient inducement for sportsmen from the United States, where small game is not usually found easy of access, to visit Newfoundland annually and enjoy good healthy sport without procuring a license to shoot caribou for the enormous sum of $100.—W. (Little Bay Mine, Newfoundland).

ST. LOUIS, Mo., April 13.—*Editor Forest and Stream:* The past week has not been a satisfactory one for the sportsmen of this city, because snipe have been very scarce. Rain is wanted very much. The marshes are drying up very fast, and the birds are giving this section of the country the go-by. From reports gathered from the game dealers there is every reason to believe that there is still a large body of birds south. One dealer on Broadway was in receipt of a large consignment of birds from near Galveston, Texas, in the early part of the week. The same dealer also received several dozen bluewing duck from the New Madrid country in the southeast portion of this State. In this immediate vicinity bluewing shooting has been fairly good and several very respectable bags were made by parties who were out in quest of them during the past week. But bluewing is not what the sportsmen are hankering after just now. They have had their fill of the duck shooting, and now want snipe. Kidd Lake, which is located about 25 miles south of this city, in Illinois, sent in a report yesterday that a fair body of birds had made their appearance on the marshes in the vicinity, and in consequence of this report, Mr. Fred Huginin and Charles Budd packed up and last evening left by steamer Emma C. Elliott for the ground. They propose to remain several days. The gentlemen have taken with them their fishing tackle, and should the shooting prove slow, they will cast their hooks for croppie and bass.—UNSER FRITZ.

GAME IN GUATEMALA.—Tumbador.—There are many animals in this country, besides birds, which I am sure are not known to science; any naturalist could make a fine collection. I am a great hunter myself, and keep a fine pack of hounds and kill a great many deer, and wild hogs, of which we have two kinds. I use a Daly 3-barrel gun, which is just the thing for this country, as one never knows what kind of game is going to turn up. This gun I sent for through seeing the advertisement in FOREST AND STREAM. Should any taxidermist care to come down here, you can give him my address, and I would be happy to see him here on my ranch, and will do all in my power to help him.—GUATEMALA.

MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION.—The regular monthly meeting and dinner of the Association was held on Thursday evening, April 11, 1889, at "The Thorndike," ninety members being present and President E. A. Samuels presiding. The following gentlemen were elected members: His Excellency Gov. Oliver Ames, Lieut. Gov. J. Q. A. Brackett, Hon. Alexander H. Rice, Hon. William Gaston, Hon. John F. Andrew, Hon. H. J. Boardman, Hon. James F. Dwindell, Mr. Frederick L. Brown, Mr. M. R. Leonard, Mr. Charles A. Read, Dr. Calvin B. Platt, Mr. Charles R. Crane, Mr. D. W. Butler, Mr. John S. Bartlett, Mr. John E. Hall, Mr. Frank H. Mudge, Mr. Benjamin D. Sweet. There were five applications for membership presented. It was voted to offer a gold fish hook (in shape of a badge) as a prize for the member obtaining the largest number of new members.—A. W. R., Sec'y.

NEW YORK.—Leonardsville, Madison County, April 13.—There is not much duck shooting at this point this spring. A few small flocks alighted on the Unadilla River from which a limited number of specimens were secured. One enthusiastic local sportsman lost his rifle overboard and did not recover it. Partridges are shy and cling to the gloomiest forest recesses. During the open season for these birds there is some fair partridge shooting here. Minks seem to be on the increase along the small creeks, and, owing to the low price of their fur, have been trapped but little the past winter.—BOXER.

BUFFALO, April 8.—The first English snipe of the season in this locality was shot March 19 at West Seneca. Several have been taken since then. The season here is getting a good start. Red and white maples and spring beauty were found in bloom at the local park yesterday. —EBEN P. DORR.

PROPOSED NON-SAILING LAW.—In the New York State Assembly Mr. De Peyster has introduced a bill amending the game law, by providing that no person shall sail for any wildfowl or shoot at any wild goose, brant or duck from any vessel propelled by steam or sails.

FLORIDA GAME NOTE.—There are plenty of quail here, but the deer are scarce in this neighborhood. Still we have plenty of venison to eat.—F. G. (Clearwater Harbor, Fla.).

Sea and River Fishing.

FISHING NEAR NEW YORK.

THERE are several hundred places within easy distance of New York city to which the New York fisherman may go with rod, reel, line and fish basket of a pleasant morning, and return the same night with his basket comfortably filled with fish. And the New York fisherman may even fill a moderate-sized basket without leaving the city at all if he wishes. To give an accurate and comprehensive directory of the several hundred places where fish may be caught by the man who can only get one day off at a time, with a correct estimate of what a day's fishing at each place will cost, is the object of this and the papers to follow under this heading. The first article furnishes a fishing directory of the territory included within the boundary lines of New York city, and the articles to follow will in the same way cover Staten Island, the New Jersey shore, the north and south shores of Long Island, the north shore of the Sound, the Hudson River, the Fishing Banks, and fresh-water fishing near New York.

I.—NEW YORK CITY.

The only fish of importance that may be caught with hook and line in the waters which surround New York city is the striped bass. Weakfish, bluefish and kingfish have been and are even now occasionally caught in the Bay and in the North and East rivers, but so are sharks and sturgeons, for that matter. Possibly other fish are taken by mere chance, but of the best known salt-water fish the bass is the only one which may be depended upon. Salt-water eels are very plenty in the North, the East and the Harlem rivers nearly all the year around, and just about now half the piers between Canal street and General Grant's tomb in one river, and between Roosevelt Ferry and 125th street in the other river, are occupied by boys and men engaged in catching the little tomcods, or "tommies," as they are called. Flounders will begin running in the East River after the first straight week of warm sunshine, and in the North River a few will then be caught. Up the Sound as far as City Island and Pelham Bridge flounders are already reported, and William Buehl, a skilled fisherman who keeps a German beer saloon at 1680 Avenue A, made some fair catches of flounders in the East River beyond Hell Gate on March 29 and April 5.

"Tommies" are the most accommodating little fish in the world. They may be caught off any pier in the city, and they are not very particular as to bait, although they prefer sandworms. Use small hooks, two or three on a line, and a light sinker. "Tommies" rarely weigh over three-quarters of a pound.

Flounders do not run much heavier in weight than the "tommies." They are caught from docks and from boats in the East River in 15 or 20ft. of water, the flood tide being the most favorable one. Use sandworms or soft clams for bait, small hooks and light tackle. They are never plenty in the North River.

The first bass fishing occurs in the North River in the spring about a fortnight or three weeks after the shad season opens. These are the "spring bass," and are not so plenty as in the fall, which is the proper bass season. A few spring bass go through into the Harlem River near Randall's and Ward's Islands, and they are caught occasionally about Hell Gate and at the Sunken Meadows or Middle Ground, between Ward's Island and Port Morris. From spring until the fall bass season opens bass are occasionally caught, but their rarity makes it hardly worth while to go after them until the fall run begins in August or early September. Sandworms, which may be bought at most tackle stores and fishing resorts at ten cents a dozen, are the favorite and almost the only bass bait. The white sandworm is the best, the plain red worm of large size following next in value as bait. Shrimp, shedder crabs and shedder lobsters are sometimes used, but never with much success. The spring bass are generally taken in the North River by casting from the rocks which line the shore from 108th street up. There is seldom a bass caught in the North River below 108th street. The best tide for fishing is the slack water, the last of the ebb and first of the flood. The largest fish are caught in shallow water, and the depth at which catches are made varies from 2 to 15ft. Boats may be used if desired, instead of casting from shore.

For fishing in the North River a handy place to obtain bait is New's fishing tackle and cigar store, 337 Tenth avenue, near Twenty-ninth street, where much useful information may be picked up, too, from the proprietor. Another good place is Dirke's, 403 West Fiftieth street, near Ninth avenue. Mr. A. H. Dirke is himself an expert bass fisherman, and is never out of bait, as a score of worm-diggers on Staten Island keep him always supplied. The rig which Mr. Dirke uses for bass fishing is that most affected by North River fishermen. His leader is 4½ to 5½ft. long, two small snell hooks being attached, one at the end, the other about twenty inches above, and an ounce sinker is looped on above the upper hook in such a way that it can be made to slide up or down the leader, as desired. The lower hook is allowed to fall nearly to the bottom of the river.

At the foot of 108th street, North River, is McDonaldson's fishing resort. Take Sixth or Ninth avenue Elevated to 104th street, from which station it is six or seven blocks. McDonaldson has sixteen boats to rent to fishing parties at one dollar a day. There are several favorite fishing spots near. Malley's Rock, five blocks above, is a famous place, where, on May 21, 1888, a bass weighing 4¾lbs. was caught by a deaf-mute who is one of McDonaldson's regular patrons and an enthusiastic fisherman. Another favorite place is Kerrigan's Rock, at 118th street, named in honor of Col. Kerrigan, who once caught a 70-pound bass there, according to the traditional history of the 'longshore residents. McDonaldson does not always keep bait, so the fisherman had best bring his own.

At the foot of 126th street, North River, is J. A. Tiemann's place. "Tony" Tiemann is a well-known bass fisherman. Take west side Elevated to 125th street, thence cable car to foot of 125th street, from which it is a short walk. Or, take the Thirtieth street branch of the N. Y. C. & H. R. R. R. from Thirtieth street and Tenth avenue to Manhattan Station, close by Tiemann's. Fare, either way, ten cents. Tiemann has six or seven boats (bateaux and round-bottom) to rent for a dollar a day. He furnishes no bait. "Old Split Rock," about 150yds. above here, is a famous place for bass. It is about 50ft. from shore, and bass bite there on the first of the ebb tide, but seldom between that time and the last of the ebb and first of the flood, when they bite best. "Tony" says there is a sort of slack water here at about half flood, when bass bite well. Anchor in 10 or 12ft. of water and fish near the bottom. Tiemann's is also near Kerrigan's Rock, mentioned above. Tony advises the use of but one hook for large bass, and a leader only 2 or 3ft. long, with an ounce sinker, tied on either above or below the hook. The bass, especially in the fall, run in schools, except the largest fish, the "tide-runners," which voyage in pairs. Among the regular patrons of Tony's place are George Trowbridge, of 689 Madison avenue; M. M. Backus, of 61 East Fifty-second street; A. Ornstein, of the Cunard Steamship Company, Thomas Grant, of 530 Hudson street, and Alfred N. Lawrence.

At the foot of 152d street, North River, is Uncle Billy Cameron's place, next to the house of the Knickerbocker Canoe Club. Uncle Billy is now dead, but his widow and son run the place and keep half a dozen rowboats to let. Two blocks above, at the foot of 154th street, is Peter Hunt's, where a dozen or more boats are kept for rent. At both places prices for boats range from seventy-five cents to a dollar a day, according to the style of craft. To reach these resorts take N. Y. C. & H. R. R. R. trains from Thirtieth street and Tenth avenue at 6:20, 7:15, 8:00, 9:35 A. M.; 12:50, 4:00, 5:00 P. M., to 152d street station, fare twelve cents. Returning trains leave 152d street at 9:01, 10:21 A. M.; 1:46, 5:11, 6:11, 7:11, 9:56 P. M. Or go by way of west side Elevated to 125th street, thence Tenth avenue cable road to 152d street, and walk down a steep hill three blocks to the river. The climb back again at night is equivalent to about ten blocks' walk for a tired fisherman. At the point of rocks above the railroad cut at Fort Washington, about two miles above 152d street, is one of the best spots anywhere in the North River near New York for bass fishing. Two springs ago, according to the local fishermen, a man sat on the rocks between the eleventh and twelfth telegraph pole above the mouth of the railroad cut, and caught 40lbs. of bass before he changed his position.

At Spuyten Duyvil, reached either from Thirtieth street or the Grand Central Station by trains of the N. Y. C. & H. R. R. R., there is good fishing on the seed oyster beds. Fare from Thirtieth street twenty cents; from Forty-second street twenty-two cents. More fish are caught here than at the resorts further down stream, but those caught at Spuyten Duyvil are smaller. Bass are occasionally caught in Spuyten Duyvil Creek. At Riverdale, two miles above, is good bass fishing, perhaps the best on the river from that place down to 108th street. The draw tender at the railroad bridge crossing the creek keeps fourteen boats for hire at from fifty cents to a dollar a day, according to demand.

There is no fishing except for eels in the Harlem River between Kingsbridge and Randall's Island. The bass have abandoned it, although at one time there was no better place for bassing than Kingsbridge and the vicinity of McComb's Dam Bridge.

The Hell Gate fishing for bass is almost all trolling. A rod, with reel holding plenty of line, a small hook and small sinker tied 18in. above it, constitute the outfit, the bait (sandworms) being allowed to trail from 50 to 75ft. behind the boat near the surface of the water. Some fishermen troll with squid, but white sandworms are the favorite. Still-fishing is also done with the same sort of rig in 10 to 12ft. of water. And here, contrary to the conditions in the North River, fishing is most successful on the flood tide. Favorite places for trolling are Mill Rock Reef, below Ward's Island; Hallet's Cove on the

Astoria shore; Little Hell Gate, between Ward's and Randall's islands; Big Hell Gate, the Harlem Kills north of Randall's Island, and about Coffin Rock in the Sunken Meadows or Middle Ground, near Randall's Island. There is very little use fishing here for spring bass, I believe. Some of the boatmen told me they would be very plenty in the latter part of May and early June, but others said that spring bass are rare; and the latter informants seemed honest as well as experienced. All summer long bass are occasionally caught, but the "season" opens in late August or early September.

P. Fitzgerald, at the foot of East Eighty-ninth street, is a reliable man, who keeps 24 good boats for hire at $1 a day. If a man goes along to row the price will be a dollar or so more. Fitzgerald's place is reached from the Third avenue Elevated station at Eighty-ninth street or the Second avenue Elevated station at Eighty-sixth street. Bass have been caught by his patrons, Fitzgerald says, weighing as high as 8lbs. Mill Rock Reef and Hallet's Cove are only a short pull from Fitzgerald's. Bait cannot always be obtained here, but a supply is constantly kept for sale a block away, at George Bellert's, 1688 Avenue A.

At the foot of East Ninety-second street, close by the Astoria ferry house, is the "Mill Rock Cottage," kept by Varian & O'Brien. John Byrnes, who has fished in these waters for thirty years, has charge of the fishing department. The place is reached by a "jigger" horse car from the Second avenue Elevated station at Eighty-sixth street. Twelve new boats will be for hire this season at fifty cents week days and one dollar on Sundays, boatmen extra. Bait of all kinds can always be obtained, and famous clam roasts, Hell Gate lobsters and all sorts of lunches are served. All the best resorts are near by, and fishermen would do well to try the places recommended by Byrnes. The latter tells some rare old fish stories about the fishing years ago when he and Sandy Gibson, a character now dead, used to haul in the big ones. Byrnes says moonlight nights are the best times for catching bass and other fish. On Oct. 4, 1887, Byrnes says he caught a bass weighing nineteen pounds, an account of which was published in the *Sun*. I haven't been able to locate the article yet, although I have hunted through a file of the *Sun* for the entire month of October, 1887. I wanted very much to find this article, as Byrnes said it was the best article on the Hell Gate fishing that was ever printed. Lockers are constructed at Mill Rock Cottage for the convenience of patrons.

"Captain Bill's place," at the foot of East 110th street, is just opposite Ward's Island and convenient to all the best places. It is reached by the Second avenue Elevated to 111th street station. "Captain Bill," or rather his widow, has about fifty boats to rent at fifty cents on week days and one dollar on Sundays, boatmen extra. Little Hell Gate and Big Hell Gate are about a quarter of a mile distant, both good places. Bait can always be procured here, and so can something to refresh the inner man. Last season one of the patrons of this place, Mr. James Murray, of Third avenue and 112th street, caught a bass weighing over nine pounds.

Edward Monaghan, at the foot of East 121st street, keeps twenty-seven good boats at the same price as at Captain Bill's place. Reached from 120th street station, Second avenue Elevated. Little Hell Gate is a few hundred yards distant, and the Harlem Kills and Sunken Meadows, famous places for bass, are less than a mile away. Monaghan referred me to a man who could tell "all about Hell Gate fishing," recommending him as "a good liar," but modestly declining to say much himself.

J. H. Golding, a builder of handsome Whitehall skiffs and other boats, is at the foot of East 124th street. Take Third avenue Elevated to 125th street station, thence cable car to foot of East 125th street. Golding has twenty-five rowboats for hire at the prevailing price, and he also has a sloop yacht to charter to parties who wish to take a fishing cruise up the Sound. Golding's place is the most convenient of any to the Harlem Kills fishing ground, and it is also within easy distance of the Middle Ground or Sunken Meadows. The proprietor himself is an expert fisherman, and his advice is worth following. Golding cannot always supply bait.

At the Third avenue bridge across the Harlem River boats may be hired at any of the three or four resorts on both sides and either end of the bridge. The same prices prevail as at other resorts. The Harlem Kills and Sunken Meadows are less than a mile away, but for visiting Hell Gate proper I would not recommend fishermen to hire boats here, as it means a three mile row, and the tides are stiff. The last (129th street) station of the Third avenue Elevated is a block from the bridge. No bait.

Phillips & Cannon have twenty-four nice boats to let at the foot of East 138th street (Port Morris), at the same prices as those mentioned above. Take Third avenue Elevated to 129th street, thence the Port Morris "jigger" car direct to Phillips & Cannon's place. Their house is situated where the East River broadens out into a wide bay. North Brother, South Brother and Riker's Islands are opposite. The good fishing spots in the Middle Ground are within a short distance, and some famous bass resorts like Ferry Point (mouth of Westchester Creek) and the mouth of the Bronx River, are within rowing distance. There is also a hole near Riker's Island, close by, where the fishing is good. Bring your own bait.

There is no fresh-water fishing within the city limits. A tradition exists that a man once caught a five-pound black bass in the reservoir at Central Park, but it is only tradition. The Bronx River is fresh above West Farms, but no fish except suckers and chubs swim in its shallows.

SENECA.

NEW YORK.—Leonardsville, Madison County, April 13.—The pickerel are being slowly but surely thinned out from the upper Unadilla and its tributaries, and more stringent enforcement of law is necessary to assure and protect their increase. Summit Lake, a small land-locked body of water among the hills southeast of here, is the lurking place of some very large gamy pickerel. They can only be secured with a troll, and are very difficult to allure even with the fascinating spoon.—BOXER.

THE ICE IN MAINE.—N. Bridgton, Me., April 10.—The ice is out of Sebago Lake and the landlocked salmon fishing is reported as unusually good. We hear of fourteen being recently taken in one day, eight by one man. While the best run of salmon fishing seems to occur soon after the breaking up of the ice it remains fairly good up to July.—BLACKSPOT.

NORTH CAROLINA SPORTS.

AT Avoca there will be sounds of eloquence and sweet singing, scenes of feasting and revelry on the occasion of the opening of the season of field sports, April 23-26. The address of welcome will be delivered by Hon. W. D. Pruden, the response by the Governor, Hon. D. G. Fowle, and the formal opening speech by Col. R. B. Creecy. Other distinguished speakers whose names appear on the programme are: Col. Marshall McDonald, Gov. T. J. Jarvis, Col. Harry Skinner, Col. L. L. Polk, Senator Vance, Auditor Sanderlin, Henry W. Grady, Senator Ransom, Capt. S. A. Ashe, Col. Julian Allen, Josephus Daniels, S. B. Alexander, and Gen. W. P. Roberts. Trials of speed, skill and endurance will be afforded by the boat racing and sailing, horse racing and trotting matches, fox chases, and by bag races for boys. The pangs of hunger are to be assuaged by means of clam bakes, oyster roasts, fish suppers and stately banquets. The pleasures of the imagination will be intensified by means of illuminations, moonlight sailing, the impromptu dance, the formal ball and music's charms. Steamboats will carry excursionists to the Lighthouse, and there will be expeditions to the various hunting and fishing grounds.

One of the most striking of Avoca's attractions is the great fishery of the Capeharts with its three miles of netting and eight steam engines to handle it, besides a small army of men, women, boys and horses to pull and haul and dispose of the catch. The great sturgeon will flop, the shining myriads of shad and herring will shiver and sparkle, the aldermanic rock, the wriggling eel, the mailed gar, the flabby sucker and the pachydermatous catfish will thump and squirm and stare the astonished visitor out of countenance if they can. If the monstrous but famous devil fish of the older "Carolina Sports" be within hailing distance and not enervated by the refinements of a modern diet, he may present his broad disk as a mark for the swift javelin and tow its accompanying boat at perilous speed, to exercise his muscles and round up the measure of excitement for the pleasure seeker. For the advantage and encouragement of visitors all the railroads and steamboat lines offer reduced rates to Avoca from every section of the North and South.

THE INGLEWOOD CLUB DINNER.

THE Inglewood Fish and Game Corporation had their first annual dinner at Young's Hotel, Boston, on Wednesday evening, April 10. There were about sixty members present, and a number of guests, among whom were Mr. W. H. H. Murray, of Adirondack fame, Hon. L. G. Downs, of Calais, Me., Mr. Walter M. Brackett, Mr. Myron P. Whitney, Mr. W. H. Fessenden and others. The members and their guests sat down at half past six to a most varied and bountiful supply of the good things for which Young's is so famous, and for two hours all were interested in gastronomic efforts. When hunger had been appeased and the effervescent "Private Club" began to warm the "cockles" and loosen the tongues, a series of toasts were proposed by the President Mr. John D. Chipman, and appropriately responded to. Among them were "The President of the United States" and "The Queen," in drinking which the entire company rose. There were speeches by W. H. H. Murray, Walter M. Brackett, E. B. Hodge, Fish Commissioner of New Hampshire, J. T. Whitlock, Col. J. W. Greene and others. Many good points were made, droll stories of interest to sportsmen were told, long yarns about the "big fish I lost" were spun and general jollity prevailed. Messrs. Myron P. Whitney and W. H. Fessendon favored the company with several songs, artistically rendered, which were received with great applause. At the conclusion of the entertainment, "Auld Lang Syne" was sung in chorus, with joined hands, and the company separated with the hope of meeting under like conditions next year.

As the Inglewood is practically a new organization, having been formed but a little more than a year ago, a few words about its plan, and what has already been accomplished, will not be amiss. It is incorporated under the laws of New Brunswick, with a capital stock of $20,000 in 400 shares of $50 each. This will be the limit of membership, and as the club now has 118 members on the roll, it bids fair soon to rival any similar organization. There is reason for this prognostication when the extent of the club's domains, the abundance of trout and landlocked salmon which their streams contain and the ease and facility with which they are reached, are known. The property leased is on the Musquash River, in the counties of St. John and Kings, New Brunswick, and contains 32,000 acres, in which are twenty lakes and connecting streams; lakes from one-half to nine miles in length, abounding in landlocked salmon and brook trout of good size. The preserve is reached by the Boston & Maine and New Brunswick railways, and the journey from Boston direct to the club house can be made in sixteen hours. The property has been leased on very advantageous terms for ten years, with a privilege of renewal for another ten, and chances that it can be continued indefinitely. A commodious two-story club house, 26×30ft., has been erected, fitted with excellent beds and bedding and every requisite for comfort. In addition to this a cook house, 12×16ft., guide's house, 16×22ft., ice house and store room, 16×22ft., and some other outbuildings are now completed. There are also five lumber camps located at desirable points, which the owners of the property kindly allow parties to use when desired. There are boats in plenty and guides enough for all. Good wide lumber roads exist and there are no trails to cut. As an instance of the abundance of fish, it is said that during the past season, from May 25 to Sept. 30, forty members killed 1,067 salmon and brook trout. In addition to this there are quantities of ducks and partridges, with deer, bear and small game. It is proposed to build a hatchery, and still further stock the waters of the lakes and tributary streams with both salmon and trout.

Visitors, non-members as well as members, who have traversed the section of country controlled by the club, are loud in their praise of its value as a preserve and its beautiful location and scenery. Col. J. W. Green, a prominent railroad builder, now engaged in the construction of a road in that locality, whose experience is wide, spoke at the dinner in the most glowing terms of the natural beauties of the place, and every member present mentally decided he had done well and wisely in purchasing a share in the club. Its officers are: Pres., John D. Chipman, St. Stephen, N.B.; Vice-Pres., Andrew S. Marsh, Boston; Sec.-Treas., J.T. Whitlock, St. Stephen, N. B.; Assist. Sec.-Treas., H. C. Litchfield, Boston; Directors, John D. Chipman, G. W. Ganong, St. Stephen; Hon. J. E. Lynott, St. George, N.B.; Samuel Shaw, Andrew S. Marsh, Henry P. Brigham and B. F. Nichols, Boston; Col. A. E. Neill, Calais, Me., and J. T. Whitlock, Supt., Benj. D. Wyatt, 302 Washington street, Boston.

A PARTY FOR PENNSLYVANIA.

"IN the spring a young man's fancy lightly turns to thoughts of love"—and *fontinalis*. The tow-headed farmer boy, with pole cut from the strongest ash he can find, goes to the creek and makes a big string of trout that no grown man could equal. He knows but too well where they are to be found. And older hands, the city banker and broker, the merchant and professional man, have been for days awaiting the opening of the season. Rods have been carefully looked over, flies assorted and leaders tested; this locality and that debated for the first onslaught.

Some have had their first tramps on Long Island among the semi-domestic article. Others will soon be off for further and wilder localities, Maine, the Adirondacks, and that vast, uninhabited region, the wilds of Pennsylvania. Toward the latter a large number of your friends are turning their fishy eyes. The opening day was the 15th, and on the 20th a big party propose to start with all the paraphernalia of war for Spruce Cabin, the home of the Price boys, Canadensis, Pa. The following is a partial list:

There are Charles Bradford Blake, of the City News Bureau and author of "Nimrod and the Gentle Art;" Kit Clarke, of "Where the Trout Hides;" Geo. W. Lyon, clerk of the Supreme Court; E. M. Rockwell, of the *Sun*, Grandon of the *Times*. J. Charles Davis (Miner's manager), Geo. W. Blake, C. J. Fitzgerald, Edward Riggs, Arthur Brisbane, Dock Cummins, and Dr. P. W. Levering, clerk of the District Court of Jersey City, both of the Jersey City Heights Gun Club.

Our affable clerk has had phenomenal success on the streams in that locality. He has lately been very much exercised laying in a complete new outfit of fine machinery, rods, creels, reels, lines, leaders, grizzly-kings, coachmans, professors, abbies, duns, millers, ibis, etc. He expects to supply the court house restaurant for the next fortnight amply above what he uses himself and gives to Judges Lippincott, Douglas and Wanser, besides other court officials.

He ought to be able to accomplish this and more. Ogilvie through Hogkins furnished the split bamboo; Counsellor Seguine, of the J. C. Bar, selected the reel; Fred Quimby the rubber boots and fishing jacket, and Jacobstaff picked out the flies and leaders and hooks for bait—in case, you know—not to forget the creel. Do you remember a pack-basket, the invention of friend Cheney, of Glens Falls? Holds about a bushel or a bushel and a half. That is the creel the Doctor proposes to use and fill repeatedly. He knows intimately seventeen of the twenty-three trout streams and the Buckhills and the Bushkills of that neighborhood, and to know when to go and where to go gives a large percentage toward a big bag.

Later in the season we propose to take a trip up there ourself. We had a grand time and good scores there last season. JACOBSTAFF, of N. J.

LOCH LEVEN AND BROWN TROUT.

Editor Forest and Stream:

This week's splendid number of your paper contains an illustration of the Loch Leven trout, and I desire to ask if the fish introduced in this country displays the square tail as seen in the engraving in FOREST AND STREAM? I have had some experience with this trout, having taken them in Loch Scone, Loch Lomond, Loch Leven and the River Forth. In each of these waters, two years ago, I took *Salmo fario* and the Loch Leven, and in the latter invariably I found a forked tail, much like that in your illustration of Gairdner's trout. The back of the Loch Leven is an olive green, and the lateral line is bordered with large dark, almost black, spots, some round, some shaped like an X and some like a XX. These spots are very irregular and quite pronounced. They have no red spots, and the adipose fin has a few light brown spots. In *Salmo fario* this fin is always tipped with vermilion. Your illustration gives the fish a clumsy "hind part." I took nine of them, and all had a tapering, narrow extremity. In comparing the Loch Leven with *fario* I found the maxillary in the latter almost twice as broad as in the former. As a skirmisher the Loch Leven is a splendid fish. Recently a gentleman in New Hampshire asked of me the resemblance between the Loch Leven trout and the winninnish of Lake St. John. In outline there is a close resemblance, as also in spots. The winninnish has a dark brown back, the Loch Leven an olive green; the former fights under the water, while the winninnish is out of the water shaking himself like a tiger half of the time he is hooked. The flesh of both is a rich dark pink, and real good to eat. KIT CLARKE.

NEW YORK, April 5.

[The illustration of the Loch Leven trout was made from a fresh specimen belonging to the U. S. Fish Commission, which had recently been forwarded from the Northville station. The tail was spread slightly more than that of the brown trout of Fig. 9, which was drawn from a somewhat younger French example. We confess to a good deal of difficulty in distinguishing the two forms. Dr. Day considers the Loch Leven a variety of the brown, and his illustration of the former agrees with ours, the tail being truncate. The differences in the strength of the maxilla and the teeth of the vomer used by some authors in separating the two species are declared to be not constant by Dr. Day. We are of the opinion that the shape of the tail and the backward position of the ventral fins will best serve to distinguish the winninnish from the Loch Leven trout. The most important character is, of course, in the dentition; the winninnish having a very small patch of teeth in the middle of the roof of the mouth (vomerines) similar to those of the brook trout, while the Loch Leven has both the head and the shaft of the vomer toothed in a long series.]

SEINES, NETS of every description. American Net & Twine Co., Mfrs., 34 Commercial st., Boston, or 199 Fulton st., N. Y.—*Adv.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

TROUT COLORS IN THE ALLEGHENIES.—Calling the other day on a friend in town, I found him repairing his fishing rod and tackle, when he reminded me that the trout season was at hand. We have on the Laurelhill and the Allegheny Mountains, within a few hours ride of this place, some very good trout streams. The streams, as also the fish, are for the most part small. I have taken great numbers of trout, but never caught one better than 16in. long, although I saw one taken that measured 22in. I have been much interested in your salmon and trout supplement, and see by your description of the brook trout that "the color variations in the brook trout are astonishing." This seems to be especially true of the trout of the Allegheny Mountains. On the very top of these mountains, at Deider's Gap, in Somerset county, where are two springs that give rise to two small streams flowing in exactly opposite directions; the one Deider's Run and the other Ware's Run. I have cast a stone from one spring to the other, and have caught large numbers of trout in both streams and know that there is quite a difference in the color of the fish of the two streams; so much so that any one who was conversant with the matter could tell from which stream the particular fish had been taken. In Sandy Run in the Laurelhill Mountains, in the same county, we have the lightest-colored trout I have ever seen—almost a golden color. My trout fishing has all been done with a worm. I know nothing about casting a fly, and do not know whether it would be practicable here, as the streams are so narrow and the sides so grown with bush and laurel.—E. E. C. (Mt. Pleasant, Pa., April 6).

FISH PROTECTION IN MINNESOTA.—We are indebted to Colonel John Gay, Inspector of United States Fish Commission stations, for permission to publish the following letter received by him from Mr. W. D. Tomlin, of Duluth: "If you ever go fishing again up to Baptism River club house no more nets will be found across the rivers like the one we found at Split Rock. In a bill which I drew up during the winter for the protection of fish fry deposited by the United States fish hatchery at Lester Park, I introduced a clause making it a misdemeanor punishable by fines and imprisonment for any one to set or locate any nets, seines, trap or device for catching fish in the mouth of, or in any stream, or within 300ft. of any stream on the north shores of Lake Superior. This passed both House and Senate. Another bill has passed the House providing for the protection of young whitefish for four years at points where the fry are being deposited. Col. Graves is Speaker of the House, and fishing interests all over the State are being well provided for. All net fishing in interior lakes is made a misdemeanor and the nets are confiscated. The only fishing allowed is with hook and line. The net fishermen have supported me in both these bills and have promised to seize every net they find set for brook trout." We congratulate Mr. Tomlin and his supporters on their signal victory over the agents and emissaries of destructive fishing.

ADDRESS TO PENNSYLVANIA ANGLERS.—With a view of correcting a very general misconception of what is really the aim and work of the Anglers' Association of Eastern Pennsylvania, President Mr. A. M. Spangler, of that association, will, by special request, deliver an address on "The Inception, Growth and Work of the Anglers' Association of Eastern Pennsylvania," at the association rooms, No. 1020 Arch street, on Saturday evening, April 13, at 8 o'clock. The attendance of all members, with any friends they may be disposed to bring with them, is earnestly desired. The American Fisheries Society, composed mainly of gentlemen prominent as scientists in the interests of pisciculture, will hold its annual convention in Philadelphia during the month of May, and will be the guests of the association. A feature of the convention will be a trip on the United States Steamer Fish Hawk, (which has been placed at our service for the occasion) affording an opportunity for observing the process of artificial propagation of shad, to be followed by a planked shad entertainment to our guests and members, at Gloucester.

TROUT IN GUATEMALA.—*Editor Forest and Stream:* I am surprised to hear that there are no trout in Guatemala. I have seen too many trout in the mountains of North Carolina and California to be mistaken. I will send on one in a week or so for you to identify.—GUATEMALA. [We will await "Guatemala's" trout with much interest, and in the meantime suspend judgment as to its identification. The most southerly species of the salmon family in North America known at present is found in Chihuahua, Mexico, near the boundaries of Durango and Cinaloa. It is said by Prof. Cope to resemble the red-throated trout shown in figure 12 of the FOREST AND STREAM supplement of April 4. We should be glad to have some information about a mountain mullet which is found in Guatemala—a species resembling the marine mullet of North Carolina, but usually banded on the sides. The spawning habits and the modes of catching it will be particularly interesting.]

BLACK BASS CAUGHT THROUGH THE ICE.—Rockland, R. I.—We had an unusual catch of black bass through the ice on March 2 at the Barden Reservoir, at Ponaganset. Several parties were fishing for pickerel through the ice. One party of two persons from 10 A. M. to 5 P. M. caught forty-eight bass that weighed 70lbs. Another party caught twenty weighing 30lbs., and several parties got none. The 2d of March was the most spring-like day of the season. The wind was southerly and the first party got the right place. I have never known of more than two or three being taken through the ice at any one time before. We have had a very warm winter, and this may account for the bass taking the bait so well. The water was from 28 to 30ft. deep.—JOHN H. BARDEN.

NORTH SEA TRAWL FISHING.—Capt. J. W. Collins has received from Mr. Edward Jex, a prominent dealer in Billingsgate market, and owner of a fleet of smacks sailing from Yarmouth, a letter dated London, England, March 29, 1889, in which is made the following allusion to the British beam trawl fishery: "The trawl fishing in the North Sea is and has been bad. I have just sent six of my trawlers round to the Bristol Channel. They have been getting some large catches of soles there; some of the largest fish I ever saw have been taken from the Land's End to Milford in about forty fathoms of water, one of them weighing 8lbs. per pair."

TROUT NEAR NOANK, CONNECTICUT.—A correspondent writes to ask whether or not trout can be caught around Groton, or in the vicinity of Noank, Conn. Trout streams yielding fair creels are reported within ten or twelve miles of Norwich, and a few localities are mentioned in New Haven county, but the northern tier of counties—Windham, Tolland, Hartford and Litchfield—contain numerous trout streams, as would naturally be expected from the hilly and mountainous nature of their surface. A correspondent living in Noank has just written us that the trout fishing in that vicinity amounts to very little. A few trout are caught, besides pickerel and other fish. The sea fishing is good; last June, July, August and September bluefish were abundant in the Race.

SLAUGHTER OF MAINE TROUT.—"An Auburn (Me.) delegation of fishermen recently returned from a pilgrimage to the lakes above Katahdin Iron Works, loaded down with trout. The party had rare sport, getting more fish than they wanted. In one day fourteen of them caught 700 fine lake trout, and it was about that way all through the trip." How is this for trout preservation in Maine? How long can this last? It looks like pot fishing and leaves not much of a chance for the summer visitors. What a fat thing it would be for such fellows if they could drain off the lakes and pick the fish up from the bottom! Neither nature nor fish commissioners can furnish the supply for Auburn fishermen at this rate.—TROUT.

TROUT SEASON AT BETHEL, CONNECTICUT.—The opening of the trout season here was nearly a failure. I know of only one trout caught on the first day; it was 10½in. long and weighed over ¼lb. For two weeks the weather had been fine and the brooks were running low and free from snow water; then the storms of March 29 and 31 and April 1 roiled the water so that the fishing has not been first-class, and only a few trout, averaging four and five to the pound, have been taken.—E. T. J.

FLY-FISHING FOR WHITEFISH.—Mr. Otto Gramm, Laramie, Wyoming, is authority for the statement that Williamson's whitefish (*Coregonus williamsoni*) rises to a fly in the Snake River of Wyoming and Colorado. He says it rises nicely during the evening, but not through the day. The residents know this species under the name of grayling. Mr. Geo. Bird Grinnell has frequently taken this whitefish on a fly in northern Montana. In three successive casts he has caught trout, grayling and whitefish.

PROPOSED NEW YORK LEGISLATION.

THE Senate has passed Senator Collins's bill appropriating $2,000 for the fish dam at Lackawaxen.

The supply bill contains appropriations of $5,000 for the Commissioners of Fisheries to map shell fish tracts and $2,000 for the Forest Commission to develop the Catskill deer park.

In the Assembly Mr. Cronin has introduced a bill making it unlawful to catch menhaden or other fish by any means except with hook and line in the waters of Jamaica Bay. Any offender against the act shall be liable to $100 fine or thirty days' imprisonment, or both.

The Assembly has killed Mr. Little's bill restricting the fishing in Niagara River and Lake Ontario along the boundaries of Niagara county to the hook and line. It seems that certain parties have arrangements for fishing which do very well for themselves, but they are enabled to muddy the stream in case any body else fishes near them. The bill was in the interests of fair play and it should have passed, but for some personal reasons the members banded together and defeated it.

Fisheculture.

RHODE ISLAND FISH COMMISSION.

THE annual report of the Commissioners of Inland Fisheries of Rhode Island for 1888 shows a very creditable amount of work done for the trifling sum of $114.98, appropriated by the General Assembly of the State. Fifty thousand salmon eggs received from the U. S. Fish Commission were hatched with the loss of two per cent., and the fry, with a small additional loss in transportation, were placed in the headwaters of the Pawcatuck River and Warwick Brook in Warwick.

Ten thousand landlocked salmon eggs obtained from the U. S. Fish Commission in 1887 were hatched at Carolina by Mr. C. A. Hoxie.

"The experiment of raising the fry artificially until they were more than a year old proved decidedly successful. All previous efforts to stock our ponds with this valuable fish proving failures, we believe that our experience with this lot justifies us in the belief that we can succeed in stocking our largest and deepest ponds. They were put in Long and White Ponds in South Kingston, and Carr's Pond in West Greenwich, these waters being, in the opinion of the Commissioners, best adapted to their habits."

Thirty-seven thousand trout fry, purchased from Mr. Hoxie, were distributed by the Commissioners and by parties who applied for them in streams at Westerly, Wickford, Newport, Pascoag and North, South and West Kingston. Black bass have been very successfully introduced into ponds, and are gradually growing in favor. "The many objections advanced against the bass as a food fish and as being destructive to our ordinary pond fish are being fast dissipated."

Increased catches of shad are reported, and application has been made to the U. S. Fish Commission for another consignment of shad fry for distribution in Rhode Island waters.

Salt-water fishing was very fair during a portion of the season. "Small bluefish and squeteague weighing from 1 to 4lbs. have been taken in the rivers between the Wilksbarre Pier and Field's Point, as well as below these points, showing that it is not the sewage that drives fish out of the bay."

The Commissioners modestly, and with eminent reason, suggest that a more liberal appropriation would increase their usefulness.

THE MENHADEN QUESTION.

Editor Forest and Stream:

Practical fishermen believe that man is not an agency to be taken into account in explaining the great fluctuation in the supply of sea fish, which is constantly coming to the notice of all who are familiar with the subject. The menhaden during 1888 came into line, and proved that Mr. Martin and others of his way of thinking were wrong when they argued that we were destroying them by over-fishing. How could we catch during 1888 more than twice as many menhaden as we did the year before by fishing one-half the time with one-half as many men if Mr. Martin and the rest of our adversaries were right? We are prepared to prove that one of the largest bodies of menhaden even known was present on our coast last season. Since 1880 the striped bass, sea bass, porgies and menhaden have given direct testimony that they can look out for themselves by coming back in great numbers after long periods of scarcity.

D. T. CHURCH.

LANDLOCKED SMELT.—From Cape Cod, Mass., we have received some specimens of a fish known there as a fresh-water smelt. The examples are about 5in. long, and represent the average size of the adult fish. The species is found in two or three large, perfectly landlocked ponds, which have no visible outlet and are remote from salt water. We are informed that no stream ever has connected these ponds with the ocean. The fish are never seen except for a few nights during the first week in April, when they come to the shore to spawn. They can then readily be taken with dip nets or landing nets. Under proper conditions bushels of them can be taken in a single night. Few persons know of their existence; unless the ponds are visited at just the right time and with a light the fish cannot be seen. This smelt is a very delicate and toothsome little species having the flavor of a salt-water fish. The ponds contain perch and pickerel. What a paradise these waters would be for the black bass. Landlocked smelt are now pretty widely distributed, being recorded from numerous lakes and ponds in Maine and New Hampshire, and forming one of the best of the natural foods introduced by fishculturists into waters stocked with the larger *Salmonidæ*. The only changes that we can observe as the result of landlocking are a reduction in size and in the strength of the teeth. The specimens obtained were caught on the night of April 3, and appeared to be spent females. Sea smelt spawn in March and April.

RESTOCKING VERMONT TROUT STREAMS.—*Editor Forest and Stream:* It remains to be seen how our new game law will work; but our present Commissioners seem to mean business, and we hope to see some old-time trout fishing in Vermont yet. Restocking the streams and making the close season one month earlier, together with the 6in. law, are certainly moves in the right direction.—F. E. ATKINS (Waterbury, Vt.). [The Fish Commissioners will distribute 300,000 trout this year, consisting of lake trout from Plymouth, N. H., and brook trout from the Fairhaven hatcheries. Commissioner Brainerd has delivered a large consignment to the Rutland Fish and Game Club. Commissioner Frank Atherton took 60,000 brook trout from Fairhaven to stock streams in Windham county. The small tributaries of the Battenkill River at Manchester are soon to receive 25,000 trout furnished by the State and 5,000 by C. F. Orvis. Thirty ponds in Rutland county were stocked with bass last year, and twenty more will be stocked this year.]

HATCHING EGGS OF SHEEPSHEAD.—Reference was made in FOREST AND STREAM, April 4, to the successful hatching of sheepshead by Capt. Robert Platt, commanding the U. S. Fish Commission steamer Fish Hawk. Capt. Platt made every effort until March 19 to procure eggs of mullet and other fish that could be found, but failed to find any in proper condition. On the 19th of March he found sheepshead in the height of their spawning season. We have already related the fact of his having planted several millions of fry from the first hatching. Up to April 1 he collected 19,500,000 eggs and deposited 9,775,000 young fish, besides 4,000,000 good eggs that could not be accommodated in the jars.

OYSTERS IN ALASKA.—Col. Marshall McDonald, U.S. Commissioner of Fisheries, has received the following communication from Mr. W. H. Woodcock, of Fort Wrangel, Alaska: "Last summer a party fishing off the wharf at this place hauled up a piece of bark on which were several small oysters. There are no oysters in this portion of Alaska; they were undoubtedly propagated here. The California and Oregon steamers must have thrown overboard the shells and a few small oysters. The bark to which they were attached was from a pile, and had been abraded by some steamer."

The Kennel.

FIXTURES.

DOG SHOWS.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Francis S. Brown, Secretary.
May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.
Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.
Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.
Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary pro tem., Mill's Building, New York, N. Y.

INDIANA FIELD TRIALS.

Editor Forest and Stream:

The Indiana Kennel Club will hold its third annual field trials at Bicknell, Ind., beginning Monday, Nov. 4, when the following programme will be carried out:

1. A Derby for setters.
2. A Derby for pointers.
3. An All-Aged Stake for setters.
4. An All-Aged Stake for pointers.
5. A Champion Stake for setters and pointers.

The grounds at Bicknell are the finest in America for field trial purposes. There are birds in abundance—twenty-five coveys were found in one day while running our Derby last year. The accommodations at Bicknell this year will be ample, the citizens promising a cordial welcome to all. These trials are conducted on the sweepstakes plan, only the actual expenses being deducted from the stakes. As the officers and judges work gratuitously, the expenses will be merely nominal. Our Derby netted $538 last year, and we expect it will be more than double that amount this year.

The judges selected are Mr. D. C. Bergundthal, Mr. Royal Robinson and Col. A. G. Sloo. The mere mention of these names is a sufficient guarantee to the patrons of the trials that they will receive fair and honorable treatment.

This club is the first in the circuit to hold its trials, and it is hoped that all the leading kennels of the country will make entries, and thereby assist us in maintaining a first-class field trial club in the West. The revised running rules are now ready and should be read by every dog man in the country. I will be pleased to send running rules and entry blanks to all who desire them. The entries for the Derbies close June 1.

P. T. MADISON, Sec'y.

INDIANAPOLIS, Ind.

WHY DOGS TURN AROUND.—Brooklyn, N. Y., March 18.—*Editor Forest and Stream:* Some time since there was a discussion as to the cause of a dog's turning around before lying down to sleep. I do not remember having read a true explanation of the fact. The following will, I think, explain it in a physiological way: The dog turns around to discover the direction of the wind, and lies down with his back toward it. His feet are doubled up over his abdomen, keeping it warm and so drawing the blood from his brain, which, becoming anæmic, loses control over the body and the dog sleeps, and sleeps soundly, with the coldest and strongest wind blowing on his back.—B. L. L.

WORCESTER DOG SHOW.

THE inaugural dog show of the Worcester Kennel Club was held at Worcester, Mass., last week. The club was unfortunate in having to compete with Chicago, which held its show on the same dates. Many prominent kennels divided their strings, and were represented at both places, consequently both shows suffered. Nevertheless Worcester had a very good show, and the club is to be congratulated upon the success of its first attempt. The members of the committee worked like heroes, and for a first show everything ran quite smoothly. The club appears to be a live one, and next year they will endeavor to secure a week to themselves, and we have no doubt that they will give us a rousing good show. The exhibitors this year will give the club their hearty support at future shows, as one and all were enthusiastic in praise of the treatment they received and the open-handed hospitality that was literally showered upon them by members of the club. The skating rink in which the show was held is a large and well ventilated building, but it is not well-lighted, and it was a difficult matter to make a proper examination of the dogs on this account. Judging began in good time, and would have been finished on the first day, but it had to be adjourned long before night, as it was so dark in the ring that it was impossible to go on. The next day judging was done out of doors, which was a decided improvement, and much better for the dogs, as they showed up much better on the ground than on the sawdust.

There were 320 entries, of which number some 25 were absent. The quality in many of the classes was very good, as a glance at the list of awards will show. The management throughout was excellent, and with the exception that some indiscriminate benching was allowed, not much fault could be found. It is but fair to the superintendent to state that the numbers were mixed against his protest and the fault must be laid to the desire of the management to please the exhibitors, who, of course, like to have their kennel together for the purpose of display and to save steps while caring for their dogs. Much of the mixing, however, was not done until after the judging, but still there was enough of it to seriously hinder getting the dogs into the ring on time. The weather during the show was simply perfect. The attendance during a portion of the time was very good, and it is to be hoped that the club will come out ahead. Madam Nelson entertained the visitors afternoon and evening with her trained dogs and pigeons, and on Thursday the spectators were treated to a bit of a fight between the mastiff Alonzo and the St. Bernard Count. The round was a short one, as they were soon parted, but it was quite interesting while it lasted, as both evidently meant business, although neither received much damage. Spratts Patent benched and fed, and Wm. Tallman was superintendent, performing his duties to the satisfaction of all. Mr. N. Elmore judged the beagles, foxhounds and dachshunde. Mr. S. R. Hemingway, spaniels, except toys, and Mr. F. Gresham the remaining classes.

MASTIFFS—(MR. GRESHAM).

Ilford Caution was alone in the challenge class for mastiff dogs, and there was no entry in the bitch class. In the open dog class, Alonzo and Sears' Monarch were placed in the order named. Third went to Pedro, weak in head, long in muzzle, light in eye and lacking in bone and substance. He was outclassed in this company. In the bitch class, The Lady Phyllis was placed over Countess of Dunsmore, reversing the New York decision. For reasons given, we preferred Countess for first notwithstanding her condition. The Lady Beatrice, third, was awarded hc by the same judge at Boston the previous week, while Empress and Princess Beatrice at both shows were respectively reserve and vhc. We indorse the decision at Boston. The remaining specimen, Fannie, was unnoticed. She is very weak in head and light in bone; a bad one. First was withheld in the dog puppy class, and second was given to Sturdy. We failed to find him in his stall, but if he is not decidedly better than the other entry, he received more than he deserved. There were no entries in the corresponding bitch class.

ST. BERNARDS—(MR. GRESHAM).

In St. Bernards the smooth-coated division was given the pride of place in the catalogue. Hector and Daphne were alone in their respective challenge classes. In the open dog class Beauchamp, placed first, and Albert Plinlimmon second, comprised the lot. In the bitch class first went to Burton Belle, the New York winner; second to Lolo, winner at Albany, and third to Marvel, with Lady Bernard reserve and Chequasset Chartreuse hc. Rica, second at New York last year, was in bad condition and only secured a single letter. One puppy only was shown, an indifferent specimen, with bad head and ears, and wrong in coat. Otho, looking well, was alone in the challenge class for rough-coated dogs. In the bitch class Saffron scored her first win, beating Gemma I., the only other entry. The open dog class was not remarkable for numbers or quality. Plinlimmon, Jr., had no trouble in defeating his competitors. Kastlehorn II. secured second place, with Vindex third and Count and Alpine Chief both vhc. The latter is a better dog than Vindex, but was not in good condition. Monte Rosa was disqualified by the veterinarian, Mr. Walton, who decided that he had mange. We believe that Mr. Walton is not a "recognized veterinary surgeon," and as the rules state that only such shall be appointed, we must decline to accept his decision in view of the fact that at Boston, the previous week, Dr. Lee, after a very careful examination, pronounced the dog free from this disease. Show committees cannot be too careful in the selection of the person who has charge of the health of the animals exhibited, and no one should be appointed to so responsible a position unless he is thoroughly competent. Lady Wellington had an easy win in the bitch class. Chrysa and Lady Teazel were given equal second. The ugly disposition of the latter should have placed her behind Chrysa, although both are far below the form usually requisite to win second prize. Alpine Maid, the only other entry present, was in wretched condition, and did not secure notice. No puppies were entered.

NEWFOUNDLANDS—(MR. GRESHAM).

Only one Newfoundland was shown; a big dog not good in head, sway-backed and all off in coat. He was given second, all he deserved.

GREAT DANES—(MR. GRESHAM).

Lady Bess was the only entry in this class. She was in beautiful condition and deserved her first.

GREYHOUNDS—(MR. GRESHAM).

The judge made a serious blunder in placing Balkis over Cassandra, undoubtedly the best greyhound in this country. There was nothing in the open class approaching these two in form, and there were no entries in the bitch or puppy classes.

DEERHOUNDS—MR. GRESHAM).

There were fourteen entries in the deerhound classes, all owned by Mr. Thayer. Chieftain was not entered, which left the honors of the challenge class to be contested by Wanda and Ramona. After a careful examination the judge decided in favor of Ramona. These two are so nearly together that but little fault can be found no matter how they are placed. Highland Laddie and Clansman had a little dispute a few days previous to the show, and in consequence both were obliged to stay at home. The two puppies shown at Boston occupied the same relative positions here. A careful examination confirmed us in the opinion that the bitch is much the better, and she should have been placed first.

POINTERS—(MR. GRESHAM).

Graphic and Mealy were alone in the two challenge classes for heavy weights. In the open dog class the order was Brake, Pontiac and Sir Hector, with Beaufort H. reserve and Telamon vhc. Both of the last-named are much better than Sir Hector. Telamon is fair in muzzle and ear, with good chest, loin, legs and feet. He is too wide in skull, stands badly in front, and is coarse in tail. In the bitch class, Sally Brass II., transferred from the light-weight class, was placed first, with Belle Randolph second and Rosa Croxteth third, with Nell reserve. All are well known. In the challenge classes for light weights, King of Kent and Bloomo were unopposed. In the open dog class, Launcelot was placed at the head of affairs, with Don Quixote second, Hickory Staunch third and Dare-Go reserve. The latter was about as good as any in the class, and is certainly better than any outside the winner, and beats him in muzzle and front legs. Trim, hc., is good in chest, loin, legs and feet. He is a trifle wide in skull, his ears set too high, and he is straight behind. Two or three others in the class showed breeding, but there was nothing worthy of mention. Stella was about the best of a poor lot in the bitch class, with Devonshire Queen second and Daisy A. third. All are well known. Nellie B., hc., is rather pretty, but undersized. She is weak in head, and was badly shown. In the puppy classes, the Boston winners came to the front. Telamon, second in the dog class, was reserve in the open dog class. Dick B., third, is a bad one, and the prize should have been withheld. He is sway-backed, shallow in chest, long and weak in loin, and stands badly in front. Belle Tell, second in the bitch class, is good in loin, quarters, legs and feet. She is too heavy in skull and wide in front.

ENGLISH SETTERS—(MR. GRESHAM).

In the challenge class for dogs Royal Prince II. was absent and Foreman was not for competition. Rockingham therefore had a walkover. He will now retire from competition except for specials, and give some of the others a chance. Cora of Wetheral was the only entry in the corresponding bitch class. In the open dog class the judge made no mistake in placing Count Howard at the head of affairs, but he did err in judgment in ignoring Lindo, the next in order of merit, and giving him only a commended card. It was also a mistake to place Pride of Dixie II. over Kent II. and Royal Kent, although neither of the latter was in good condition. There were several in this class, workmanlike fellows, well put together, with good legs and feet, but as a rule they were lacking in quality and not in bench show condition. The judge guessed right in placing Princess Beatrice II. first, but he handled the remainder of the class almost as badly as he did the dogs. Zona, unnoticed, should have had second place. She has greatly improved, and is now in fairly good condition. Blue Nell did not arrive until after the judging was over. Only one dog puppy was shown. He has good legs and feet, but is plain in head and lacks in substance. The winning bitch puppy won third at New York. Her only competitor is a heavily marked one that may develop into just a fair specimen if she is lucky.

IRISH SETTERS—(MR. GRESHAM).

Only thirteen Irish setters were entered, and two of these were absent. Tim and Laura B. were alone in the challenge class, and Kenmore was also without a competitor in the open dog class. In the bitch class the Boston winner was again to the front. Second went to Daisy, not so good a bitch as the third prize winner, Cora B., but the latter was not in good condition. The winning dog puppy is rather promising, and has a good head, but is not yet furnished. The only bitch puppy entered was absent.

GORDON SETTERS—(MR. GRESHAM).

There were eighteen entries in the Gordon setter classes, with one absentee. Beaumont had no trouble in beating his only rival in the challenge class for dogs. The corresponding bitch class had no entries. In the open dog class first went to Dash L., winner of second at Lynn. Malcolm V., placed second, is a very poor specimen, with but little to recommend him, except good front legs and feet; weak characterless head, with light eyes and ears set high, shallow chest, ribs not well sprung, not well ribbed, long in loin, weak in quarters, straight in stifle, a bad tail badly carried and a bad mover. He had on a fair collar, but the chain was not first-class. Ranger B., placed third, is not so bad a dog as Malcolm, as, in addition to good feet, he has fair shoulders and chest, but he is a long way removed from a good one. He is weak in head, over at the knees and not good behind. Dan, reserve, is just a fair dog. He is well made, his most serious faults are a weak head, small eyes and straight stifles. His tan markings are also poor. Duke, vhc., was the best in the class except the winner. He should have been second, with those behind him nowhere. His head is a trifle short and not clean cut below the eyes, he is too cobby in build, but has fair shoulders, good back, loin and quarters, capital legs and feet, is good in color and markings, and the best mover in the class; his curly coat detracts much from his appearance. In the bitch class first went to Neva, rather a nice bitch with a fair head, good chest with well-sprung ribs and good legs and feet. Her ears are set too high and her tan is not well-defined. Merle, placed second, has good legs and feet, her head is not good and she is bad in expression. The winning puppy was first at Boston. Taken as a whole the Gordons were a very poor lot.

COLLIES—(MR. GRESHAM).

Only thirteen collies faced the judge, and of these nine were entered by the Kilmarnock Collie Kennels. Clipper was the only entry in the challenge classes. In the open dog class Kilmarnock Chief was placed first, with Kilmarnock Kenmore second. They were respectively second and third at Lynn. Rutland Jock, placed third, was about as good as any in the class, notwithstanding his bad head and lack of undercoat. He stands much better on his legs than Chief, and moves much better than either. All that received mention in the bitch class were at Lynn, with the exception of Cora Belle, placed second. She is wide and heavy in skull, and not good in coat. She has good legs and feet. No puppies were shown. As a whole the collies were a very poor lot.

BEAGLES—(MR. ELMORE).

Only nine beagles were shown. The well known Fitzhugh Lee was alone in the challenge dog class. The corresponding bitch class was not represented. The open dog class contained the three winners at Lynn, and they occupied the same relative positions here. In the bitch class Norah, the winner at Lynn, was again to the front, while her kennel companion Cleopatra, that was second at Lynn, was placed third, with the well known Banner Queen second. Only one puppy was shown, a big fellow considerably over the standard.

SPANIELS—(MR. HEMINGWAY).

All of the winning spaniels are well known. Glencairn scored his first win in the challenge class. In the open class for black field spaniel dogs, Newton Abbot Lord and Jersey occupied the same relative positions as at Boston. The other two entries were both at Lynn, the first prize winner at that place received an hc. card here, while Bo, second at Lynn, was placed third. In the bitch class Bridford Gladys and Lady Abbot were placed in the order named. In the "any other color" class for dogs the order at Boston was reversed and Newton Abbot Don was placed over Newton Abbot Skipper. Don was in much better condition than when shown at Boston, and his coat showed that he had been faithfully groomed. The winner at Lynn was the only one to show up in the Clumber class, and the well known Patsey O'Connor was the only Irish water spaniel. Miss Obo again scored in the cocker challenge class. She had no competitors. In the open black dog class Pippo was the only one to show up, Giffee and Little Lad being absent. In the bitch class Dolly Obo scored the first win which qualifies her for the challenge class. In the other than black the Boston winners, Woodstock Clip and Goldie occupied the same relative positions. No puppies were entered.

FOXHOUNDS—(MR. ELMORE).

Only two were shown in the English division. The well-known Roseville Rover scored an easy win. His only competitor should have been transferred to the class for American dogs, as he is not of the English type. The American division was the best display of the kind that we have seen, except perhaps at Philadelphia, and the average quality was better even than there. There were eighteen in these classes, and a workmanlike looking lot they were. If the dogs shown are a fair sample of the pack followed by the Worcester Fur Company, it is not to be wondered at that they brag of the fun they have. The judge had no little difficulty in selecting the winners, and he informed us that he had almost as soon be a fox with the whole pack after him as to judge them. He finally selected for first place Jack of Diamonds, a beautiful dog, very good in front, with capital back, loin and quarters, and the best of running gear. Drive, placed second, is also a very nice hound, and with as good a loin as Jack would press him closely for first place. Abel, third, is of heavier build than the two placed over him, but every inch a hound. The remainder of the class received mention, and all were deserving.

Croquette, winner of second at Boston, was the only dachshund shown.

PUGS—(MR. GRESHAM).

The pugs were a wretched lot, with only one decent one in the four classes. The dogs were all too large, and the first prize was withheld. We failed to find any plausible excuse for not withholding all the prizes in the class. Polly, given first in the bitch class, is a moderate specimen that cannot win in good company.

BULLDOGS—(MR. GRESHAM).

Britomartis and Robinson Crusoe in the challenge and Portswood Tiger in the open dog class comprised the entire company in the bulldog classes.

BULL-TERRIERS—(MR. GRESHAM).

In the challenge class Jubilee was rightly placed over Cairo. In the open class for large dogs, The Earl was alone. In the bitch class, Enterprise was placed at the head of affairs. We thought her a very good second to Starlight, that was vhc. and should have been first. My Queen, placed second, was first at Boston. Third was her proper place in this company. We were disappointed in Kettering Maggie, the winner of third. She has been a noted winner in England, but she must have grown cheeky, throaty and wide in front since those days, as at present she is too faulty in these respects to repeat her wins even in ordinary company. She should make a valuable brood bitch. In the light-weight dog class the well-known Benjo was the only representative. In the bitch class, Marguerite had an easy win over Gretchen, a pretty little bitch, off color in nose and a bit wide in front. She won first in puppies, second being withheld, as the only other entry is a "Boston terrier." In the "roundhead" division the judge was apparently staggered for a moment, but he soon recovered his equanimity, and in the dog class blandly gave the only bulldog tail first, some terrier legs second and third to the remaining entry, presumably to encourage the breed.

FOX-TERRIERS—(MR. GRESHAM).

The fox-terriers, although not strong in number, were of capital quality. Lucifer had no trouble in disposing of Belgrave Primrose in the challenge class for dogs, and Rachel beat Richmond Olive in the corresponding bitch class. In the open dog class the judge rightly reversed his decision at Boston by placing Raby Mixer over Blemton Trump. Had he followed this by placing Hillside Dandy second, instead of reserve, he would have been about on the mark. The Boston decision was also reversed in the bitch class and Rosa Canina, the Boston winner, was placed third to Richmond Dazzle and Princess. Undoubtedly the judge had more light at Worcester, as here the classes were judged outdoors in the bright sunshine. In the dog puppy class the judge repeated the mistake at Boston in placing Blemton Trump over Hillside Dandy. Cotswold Jocko was the only wire-hair shown. He was not considered to be good enough for first and had to be content with second.

OTHER TERRIERS—(MR. GRESHAM).

Bedlingtons and Dandies were not represented, and Sheffield Lass was the only black and tan to show up, while Claymore and Kirkella did battle for the Skyes. The only Scotch terrier did not receive a card, as he evidently was in doubt as to his parentage, as the place for the name of his sire was adorned with a long blank. Yorkshires were represented by Harry and Toons Royal, that were equal first and third at Boston, and Dot II., rather a pretty little bitch, short in coat. Cupid was the only Italian greyhound shown.

TOY SPANIELS—(MR. GRESHAM).

All of the entries in these classes are well known, and need no description.

MISCELLANEOUS—(MR. GRESHAM).

In the heavy-weight division Nobetch, the best Esquimaux we have ever seen, won hands down. He is a big dog with lots of character, and no doubt has a remarkbly good disposition. His coat is a bit soft, which is about his worst fault. The only other entry was the bobtail sheepdog Agricola. In the light-weights first went to a very nice little Irish terrier puppy, that will make some of the oldsters take a back seat if nothing befalls him. The only other entry in the class was the terrier White Prince.

Following are the corrections and additional awards:

In deerhound puppies Donallen was first and Nora second. In Gordon setter dogs E. W. Dodge's Duke was very high com. In American foxhound bitches E. J. Bates's Beauty was first.

BULLDOGS.—CHALLENGE—J. E. Thayer's Britomartis.—OPEN—*Dogs:* 1st, River View Kennels' Portswood Tiger. *Bitches:* No entries.

BULL-TERRIERS.—CHALLENGE—1st, H. A. Harris's Jubilee.—OPEN—LARGE—*Dogs:* 1st, F. F. Dole's The Earl. *Bitches:* 1st, W. F. Hobbie's Enterprise; 2d, 3d and high com., H. A. Harris's My Queen, Kettering Maggie and Queen Bess. Very high com., F. F. Dole's Starlight.—SMALL—*Dogs:* 1st, H. G. Vinal's Benjo. *Bitches:* 1st, H. A. Harris's Marguerite; 2d, H. P. Hopkins's Gretchen; 3d, H. G. Vinal's Nanno. *Puppies:* 1st, H. P. Hopkins's Gretchen; 2d, withheld.—ROUND-HEADED—*Dogs:* 1st, H. G. Vinal's Dan; 2d, E. L. Brigham, Jr.'s Jake; 3d, J. E. Fuller's Flip. *Bitches:* 1st, W. F. Gould's Fly.

FOX-TERRIERS.—CHALLENGE—*Dog:* Blemton Kennels' Lucifer. *Bitch:* Blemton Kennels' Rachel.—OPEN—*Dogs:* 1st, reserve, and very high com., J. E. Thayer's Raby Mixer, Hillside Dandy and Reckoner; 2d and 3d, Blemton Kennels' Blemton Trump and Blemton Coronet. *Bitches:* 1st, 2d and 3d, J. E. Thayer's Richmond Dazzle, Princess, and Rosa Canina.—PUPPIES—*Dogs:* 1st, Blemton Kennels' Blemton Trump; 2d and reserve, J. E. Thayer's Hillside Dandy and Hillside Volunteer. *Bitches:* 1st, 2d and 3d, J. E. Thayer's Hillside Freda, Hillside Model and Hillside Linden.—WIRE-HAIRED.—1st, withheld; 2d, F. F. Dole's Cotswold Jocko.

BLACK AND TAN TERRIERS.—1st, F. F. Dole's Sheffield Lass.

SKYE TERRIERS.—*Dogs:* 1st, Oldham & Willey's Claymore. *Bitches:* 1st, Oldham & Willey's Kirkella.

SCOTCH TERRIERS.—Withheld.

YORKSHIRE TERRIERS.—1st and 2d, C. N. Symonds's Harry and Toons Royal. Reserve, M. J. Quarry's Dot II.

ITALIAN GREYHOUNDS.—1st, Miss Edith Van Buren's Cupid.

KING CHARLES SPANIELS.—1st and 2d, F. B. Fay's Milwaukee Charley and Dolly.

BLENHEIM SPANIELS.—1st and 2d, F. B. Fay's Exeter Beauty and Exeter Earl.

JAPANESE SPANIELS.—1st, F. P. Comstock's Nanki Poo; 2d, Mrs. M. L. Mitchell's Jap.

MISCELLANEOUS.—LARGE—1st, J. E. Bradley's Esquimaux Nobetch; 2d, W. T. Tebbutt's bobtail sheepdog Agricola.—SMALL—1st, Winslow & Lewis's Irish terrier Burnside; 2d, What Cheer Kennels' white English terrier White Prince.

SPECIAL PRIZES.

Kennel mastiffs, E. H. Moore; best, The Lady Phyllis; owned in Worcester county, Sturdy; second best, E. A. Cowee's Fannie; puppy, Sturdy. Kennel smooth-coated St. Bernards, Hospice Kennel; rough-coated, the same; best, Saffron; American-bred, Daphne; dog in Worcester county, Vindex; bitch, Chrysa; stud dog, Otho; puppy, Alaric. Kennel deerhounds, J. E. Thayer; stud dog, Bran. Kennel pointers, Charles Heath; large stud dog, Wm. Tell; in New England, the same; small, Don Quixote; in Worcester, the same; dog in county, the same; best, Graphic; bitch, Stella; litter puppies, Rosa Croxteth; brace puppies, Dare-go and May-go; sired by Wm. Tell, Telamon. Kennel English setters (2), F. Windolz; stud dog, Count Howard; puppy, Chester; setter bred in county, E. W. Dodge's Duke. Kennel Irish setters, W. C. Hudson; in county, Bijou; puppy, O'Donovan Rossa. Gordon setter dog that has never won a prize, Malcolm V.; bitch, Neva; in county, Tom II.; stud dog, the same. Kennel collies (2), Kilmarnock Collie Kennel; best, Clipper; bitch, Kilmarnock Lelia. Kennel beagles, Clark & Rutter; best, Frank Forest; bitch, Norah; that has never won first, Dandy. Kennel field spaniels, Oldham & Willey; cocker, the same; best, Miss Obo. Pack foxhounds, J. M. White; pair, Jerry and Spunk; best, Jack of Diamonds. Pug, Polly; bitch (2), the same; stud dog, Doctor. Kennel bull-terriers, H. A. Harris; best (2), Jubilee; in county, Gretchen. Kennel fox-terriers, Blemton Kennel; best, Rachel; stud dog, Reckoner; wire-haired, Cotswold Jocko. Best in miscellaneous classes, Nobetch; Skye terrier, Kirkella; Italian greyhound, Cupid; King Charles spaniel, Milwaukee Charlie; Yorkshire terrier, Harry; mastiff that has not won first prize, Countess of Dunsmore; St. Bernard, Kastlehorn II.; greyhound, Captain; deerhound, Nora; pointer, Beaufort H.; English setter, Kent II.; Irish setter, Daisy; Gordon setter, Dash L.; collie, Kilmarnock Kenmure; beagle, Dandy; coker spaniel, Pippo; pug, Polly; bull-terrier, Enterprise; fox-terrier, Hillside Model; black and tan terrier, Sheffield Lass; Newfoundland, Sambo; in miscellaneous classes, Burnside.

CHICAGO DOG SHOW.

IT has been said that Chicago was not able to give a good dog show, and a number of reasons have been given to show why this was the case. Many argued that people were not sufficiently interested in "man's best friend" to give substantial support to a dog show. Others stated that the cause of failure in the first was due to the undesirable features connected with the management. Men whose names and crooked dealings had become distasteful to exhibitors were paraded before the public as the managers and main supporters of these shows, and the result proved that the better class of exhibitors especially had no confidence in shows that were not managed by gentlemen. Bogus medals, crooked newspaper men and unsavory management damped every attempt that was made to give a successful exhibition, and, perhaps, the Mascoutah Kennel Club is justified in publishing a catalogue which contains on its cover page these words: "First Annual Chicago Bench Show Catalogue." It is, of course, quite evident that the present club considers the one-horse shows of the past of so little importance as to place them beneath the notice of a club which is largely composed of prominent and worthy citizens. The show which opened on the 9th and closed on the 12th inst. proves that Chicago can not only hold a dog show, but it also proves that her people will flock to the support of a properly conducted enterprise.

When we reached the show on Wednesday morning the first thing that occurred to us was that there were probably as many people in the building as were admitted during the four days of the show held in 1883. From morning until night a splendid attendance thronged the benches, and we are informed that nearly 5,000 people passed the gates on the second day. The rougher element, instead of being in the majority, as was the case at other shows, were in a decided minority this time; and, if we leave Boston and New York out of the question, we think we can safely say that no such gathering has ever been seen at a dog show in this country.

In regard to the management, it was all that could be desired, and much credit is due the superintendent, who is almost as good a man at the business as Mr. Mortimer, and very much like him in appearance. Spratts people looked after the benching. Mr. Hartley, their manager, was as busy as ever, and "Old Reliable" was as usual—"steady as a top." After looking over the benches and satisfying ourselves that the show was by far the best that had been held in the West, and after noting the excellent management, the smooth conduct of affairs, and the courteous bearing of the club members, we hoped to be able to write in favorable terms of the judging, which we regret to say was the worst, without exception, that we have ever seen in this country. Never have we known awards to have been received with more "kicking." At one time it looked as if we would have to put out a notice asking exhibitors not to bother us until we had completed our work. No sooner did we take a dog from his bench for examination than we were taken by the arm and asked what we thought of the peculiar decisions in this, that and the other class, until we were compelled to say that we found it impossible to answer any questions until our work should be finished.

While the quality of the dogs was not what we find at the Eastern shows, many beautiful specimens were shown. English setters and spaniels were a very disappointing lot, and it begins to look as if Americans had far more to learn about breeding dogs than about sport and other things pertaining thereto. There was a sad lot of rubbish, also, in the pointer classes, but the Irish setters showed some quality. Taken all in all the show was a creditable one, and if a large number of exhibitors do not become discouraged and bewildered over the misleading awards that were made in many classes it will be a means of awakening renewed interest in dogs, which will lead to improvement and the holding of many other shows on a large scale. Everybody connected with the show was courteous and obliging to us and we left the great Western city with a pang of regret. Now to the dogs.

MASTIFFS—(MR. MORTIMER).

Minting, the champion of champions, scored the easiest possible win over Moses and Wacouta Nap in the challenge class for dogs, and the Lady Coleus had no competitors in the challenge class for bitches. In the open class for dogs, Melrose Prince, a winner at New York, was here placed first and was decidedly the pick of a rather ordinary lot. He was not in the best of condition. Grover Cleveland, second prize, has a skull similar to the old English champion, The Shah, that is to say, it is peaked instead of being flat between the ears, and in addition to this serious drawback he possesses the following defects: Muzzle too long; ears rather large; lacks wrinkle; is throaty; hindlegs very weak; cowhocked; bad stern; moves very badly. He is a big, lengthy dog, with lots of bone, and the best of forelegs and feet, but is not what we want for a mastiff. Plato, placed third, should have been second without doubt. He is much better in skull, almost equally as good in muzzle, and decidedly better in hindquarters and in stern. He is as good in forelegs and feet, and better in loin and is quite as large a dog. Ilford Caution III., reserve, is wrong in head, light in bone and not what he should be in set of ears. He is also much too light in body. Duke of York, vhc., was not entitled to the card. He is not only entirely lacking in mastiff character and quality, but he is without a pedigree. Defects: Long in foreface and lacking in width and depth of head and muzzle; leggy; light in bone; not massive in body; bad in ears; light behind; cow-hocked. Leo, hc., by Jacob out of Ruth, is not a show dog, as crooked as a dachshund in front, out at elbows, bad in ears, light in body and bad behind; he should not have been noticed. Leo (Ludlow's) that was given c., is a better specimen than the other Leo, but he is not a show dog. Defects: Long and light in muzzle; not straight in front; knees rather weak. His body is fairly good. Duke, unnoticed, is a decidedly better specimen than either of the Leos, and he is as good as Ilford Caution III., that was given the reserve card. Defects: Muzzle and skull lacking in volume; undersize; light in middle; wrong in ears. Morgan, unnoticed, is bad at both ends, leggy and light in bone. Chevalier, unnoticed, is houndy, leggy and bad in ears, in fact, he is not a show dog. Melrose Prince was the only dog in the class of correct type. The bitch class was weak in point of quality. Gladys, second prize, beats Menglada, first prize, in muzzle, wrinkle and loin, but is not so lengthy in body. We would have reversed the decision. Adele, third prize, is pointed in muzzle and lacking in volume of skull. Her ears are not right, she is light in bone and coarse in stern. Body, legs and feet better than average; has white breast and feet. Lady Isabelle, c., should not have been noticed. Head and ears wretchedly bad; very light in bone; body wide but lacking in depth; bad in feet and not strong in back. Plato, already described, was the best of the dog puppies. John Bruce, second prize, lacks in skull, muzzle, ears and massiveness. He will not develop into a show dog. Patron, third prize, is only moderate in head, has large ears, is not good in feet and is somewhat too long in legs. His body is fairly good, but he will not be a show dog. Norton, c., may have pleased his owner by taking the card, but he is not a show dog; and the awarding of a commendation card to such an animal is very misleading and cannot possibly benefit an owner who thinking he owns a fairly good dog may try to get another like him. Defects: Very bad head and ears; light body; large ears; high tail; lacks character and quality throughout. Jack, vhc., is what a judge of mastiffs would call a mongrel; he should not have been noticed. Defects: Head and muzzle shallow; ribs flat; leggy; light in bone. Beech Grove Baron, hc., while not a show dog, is a better specimen than Jack and beats him many points in head and muzzle. Lady Grant, the only bitch puppy shown, is a mastiff only in name; she should not have been noticed. Defects: Head altogether wrong in formation; set of ears bad; too straight behind; light in bone; carriage of stern not correct; lacks every particle of mastiff character.

ST. BERNARDS—(MR. MORTIMER).

The challenge class for rough-coated dogs brought out Ben Lomond, the Eastern crack, and the Northwestern champion Folko II. The son of Barry has all the better of it in head, length of body, coat and size. He won well. Lady Athol, in bad condition, has no chance of beating Miranda in her present excellent form, and so the Melrose representative had almost a walkover for the prize. In the open class for rough-coated dogs it was Burns first and the rest nowhere. We gave this good dog a careful overhauling in the New York report. Vallus, placed second, is a new one to us. He is a big dog, standing over a lot of ground and supported by good, strong limbs, and well-formed but rather small feet. He is a trifle coarse in muzzle and full in cheeks, and his eyes are smaller than we like, in fact the whole head, while decidedly above average, shows mastiff character; the expression is not just right. Body would be improved by massiveness, and coat is short at present. If he can be put in good coat and condition he will do some wining when *la crême de la crême* of the St. Bernard class in this country are not shown. Sam, third prize, is of average size, and notwithstanding his many defects he shows some quality. Muzzle rather fine; set of ears not just right; body rather short; hind parts rather too straight; feet somewhat too small. Hackney Monk, reserve, is defective in coat, stop, cheeks, muzzle, below the eyes, eyelids and in hindquarters (slightly). He has good bone and a fairly massive middle. Schamyl II., vhc., is not nearly so good a specimen as The Baron, that was placed on equal terms with him. Defects: Skull round; muzzle not clearly cut; set of ears not right; expression sour; light in thighs and in loin; straight behind; coat open. He is a big dog and has good legs and a fair amount of bone. The Baron is a bit wrong in cheeks and muzzle, and he would be improved by more lip and depth of stop, still he has a much better head than Schamyl II. He carries his stern too high and is straight in hocks and rather light in bone. Martigny, hc., has the following defects: Muzzle too long; stop not quite right; ears not perfect: stern too high; lightness in bone; coat curly (slightly); a dog of average size and whose worst defects are in head. Czar, c., is plain in head, large in ears, wrong in head markings, light in bone, not first-class in feet, and not all that could be desired in coat and hocks. Hero, unnoticed, is a dog but not a St. Bernard. Rex T., unnoticed, is bad at both ends, the ends commencing from the center. Leo, unnoticed, is washy in color, wrong in markings and plain in head. He has small ears and good coat. Mountaineer II., unnoticed, is narrow in head, light in bone, slab-sided, and is bad in legs, eyes and hindquarters. Czarovitch is defective in head and wrong in markings, and his hindlegs are not right. Length of body is his best point. Lyon, unnoticed, is not a show dog. Hector, in the same category, is a brown mongrel that will do better in the Chesapeake Bay class. Czar, unnoticed, is bad in markings, fine in muzzle, light in bone and defective in pasterns and feet. The show bench was not for him. Otto II. is a nice yard dog, but not a St. Bernard. Alex, unnoticed, is bad at both ends and undersized. Royal, unnoticed, is narrow in head, fine in muzzle, light in bone, straight behind and not right in head markings. His feet, too, are not well placed. Cæzar, unnoticed, is light in eyes, straight in hocks and his head markings are not correct. He should have had a card. Miscabel was best in the bitch class. She was described in the New York report. Noble Ida, second prize, was described in the St. Paul report. She should have given way to Floss, that was third. Both are defective in head and in head markings, but Floss is so much better behind the head that she should have been second. Cleo Van, vhc., is spoiled by an absence of facings, her coat is too short and open, and her head is only moderate. She would be improved with more bone. Body lengthy and roomy. Torrie, hc., has not improved on her puppy form, and was rightly pegged back. Gail Hamilton, hc., is wrong in head, but good in body. Queen Omphale, c., is wrong below the eyes and bad in stern, a trifle light in bone and not perfect in feet. She is better than either Torrie or Gail Hamilton, and should have had not less than vhc. Lady Kenwood, c., is not the equal of Queen Omphale, being plain in head wrong in markings and not good in coat. Narka, unnoticed, is undersized, light in eyes, bad in head and not first-rate in coat. Princess Theroe, unnoticed, has a nasty, sour head and gooseberry eyes. Victor Joseph, in elegant condition, was the only smooth-coat of note. He was the only entry in the challenge classes. Monarch was best of the three moderate exhibits in the open class for dogs. Eyes not quite right; skull large, not too full in cheeks; muzzle too wide in proportion to depth, and rather too long—a big head, showing some character, yet not typical; too much coat; light loin; hindquarters should be more massive; good legs and feet; high tail; good ears, short loin, that should not only be longer, but more arched. A dog of good size. Prince, second prize, is houndy, wrong in ears, straight behind, light in loin and a bit flat-sided. Rex Maximus, third prize, is full in cheeks, rather pointed in muzzle, not right in set of ears, undersized, not good in set of eyes and too coaty. The winner in the bitch class carries too much coat, is light in bone, narrow in front, rather plain in head and heavy in leather of ears. She was, perhaps, the best of a poor lot. Monastery Myrtle, not quite right at either end, was second, and Jess, a mongrel, was given third. This prize should, of course, have been withheld. There were only four entries in the four classes that were provided for puppies—a weak class.

BLOODHOUNDS—(MR. MORTIMER).

Here there were two classes and two dogs. Burniston, well known, was in no condition for the show bench, and we would have withheld the prize. Metchley Venus, a wreck of her former self, was in wretched condition, low in flesh, mangy, and lacking in muscle. She should have been ordered out of the ring; but in view of the fact that the mangy bull-terrier Lady Tarquin and several other diseased dogs were shown through the circuit, Boston and Troy of course excepted, the judge could not consistently withhold the prize.

NEWFOUNDLANDS—(MR. MORTIMER).

Three entries in the two classes. Pete, first in dogs, is wrong in coat, bad behind, not very strong in middle and only moderate in head. He has good bone and is of average size. Don, unnoticed, is a large, black dog, but not a Newfoundland. Meadowthorpe Flora, first in her class, is not good in head, but she has plenty of length, a good body, fair limbs and average coat. She should do a lot more winning if shown.

GREAT DANES—(MR. MORTIMER.)

The best class we have seen in America. Cæsar, first prize, is fairly good in head, although the cheeks are too full and he lacks in expression and character. Body strong and good; hindquarters defective and causing him to move badly; throaty; stands on good legs and feet; stands well and is of good size. Taken all in all he is as good a dog as Don Cæsar, that was given the reserve card. Pluto, second prize, was not entitled to the award. He is too full in cheeks and is not quite right in lips, very throaty, too wide in chest and not right in set of legs—a mastiff front. He is rather slack behind the shoulder, but has strong loin and is good down to the hocks, which are too straight. He was about fourth best in the class. Cæsar, third prize, was described in the St. Paul report. Marco, vhc., was placed over several better specimens. He is pointed in muzzle, wrong in lips, full in cheeks, light in eyes, too straight in hocks and not long enough between the couplings. He is vicious and was labeled dangerous. Wachtel, vhc., is a harlequin, with only moderate head and expression and a bad tail. He is also a bit throaty and has rather ungainly looking dew claws. Pluto, Jr., hc., fairly good in head, is too wide in front and is a bit off in neck and hindquarters. He is a better specimen than Marco that got vhc. Hector, hc., is also a better specimen than Marco. Defects: Cheeks, muzzle and neck not perfect; chest too wide; set of legs not just right; feet might be better; moves fairly well. A brindle with good body and quarters and of more than average size. Duke, hc., is a little plain dog that is not nearly so good a specimen as Victor and Don that were given c. cards. Sultan, c., is a young dog with uncut ears, and is not good in head. He is also somewhat throaty, and shows too much curl in tail. He is a decidedly better specimen than a number that were placed over him, and should have had vhc. Victor, c., while not just right in muzzle, has a fairly good head. He is rather light in eyes, a little slack behind the shoulders, and not quite right in stifles and hocks. He is quite as good a dog as the second prize winner and should have had vhc. Don, c., is another that was placed behind his inferiors. He is a better dog than Marco, that was vhc. Defects are in head. He has good bone, good feet, good body and average size, and should have had vhc. Theras, c., is not of good color, is throaty and wrong in expression; he should have had another letter at least. Humbert, unnoticed, has badly cut ears, rather light eyes, straight hocks and is undersized. Faust, unnoticed, is a light-loined puppy, with fairly good head and defective hocks. Ajax, unnoticed, is not first-class in head, but has fairly good limbs and body. Ben Harrison, unnoticed, has large, uncut ears, nasty yellow eyes and is not right behind. Cæsar, unnoticed, has wretched head and eyes. Siegfried, unnoticed, is not quite straight in front, and shows slight weakness behind the shoulders. He should have been noticed. The judging of this class was pronounced a farce by most of the exhibitors that were present. In bitches, Donna Minka, that was first at St. Paul, was a rather easy winner. Nora, second prize, is weak in foreface, wrong in expression, throaty and stands back at the knees. Theina, third prize, is a large specimen, with fairly good head. She is not quite straight in front, shows some throatiness and does not move right behind. She is a better specimen than the second prize winner. Markesa, reserve, is light in loin and throaty; she has a fairly good head. Elsie, vhc., is not right in stop and has a rather coarse head; she is also a bit down at the shoulders. Cantella, hc., has bad eyes and is not good in head. Her legs are not well set, she is not straight in front, is wrong behind and lacks character. Flora Marr, c., has badly cut ears and is defective in head and throaty; she shows too much mastiff character. Gipsey, c., has a very bad head, with heavy wrinkle; she cannot compare with Lady Belle, that was unnoticed. Cosette, unnoticed, is not a show dog. This class, like the preceding one, was badly judged.

DEERHOUNDS—(MR. MORTIMER).

Mac was alone in the challenge class. He begins to show age and was not in good coat. Fergus, first in the open class for dogs, is well known. Robin Adair, second prize, is rather weak before the eyes, not very well developed in second thighs, a trifle flat in ribs, and not quite as hard in coat as we like. He should have been a very easy winner. Oscar II., third prize, is a coarse specimen, with wooly coat. He is not of correct type. Phyllis, the only entry in the bitch class, is on the undersize and is a bit weedy. For reasons that are known to all exhibitors, Mr. Thayer's splendid kennel was kept at home, and the breed was not well represented.

GREYHOUNDS—(MR. MORTIMER).

The challenge class contained no entries. First in the open class for dogs was given to Master Rich, a brindle and white with good neck, average head and fairly good legs and feet. His main power is at the wrong end, in front, and he is straight behind, too short between the couplings and rather high on legs. His breast and joints showed that he had been recently treated for skin trouble and it could not have been on the score of condition that he was placed over Douglas Fleming, that was shown for the first time in this country in good condition. Douglas is making a queer record. At New York, when he was mangy and not in condition for the show bench, he was given first; and now that he is in good condition he is beaten by a dog that is certainly not his equal. Mr. Baillie must be getting a poor opinion of dog shows as they are conducted in this country. Third prize was given to Rich and Rare, a coarse but useful-looking dog. He lacks character and quality in head, is wide in front, rather straight in shoulders, and he would be improved by more depth of loin and by better feet. He is a hardy-looking customer, but not quite a show dog. He was properly placed, Rex, hc., is coarse in head, wide in front, bad in shoulders and is not strong in knees. He was lucky. Tip, unnoticed, is a weed. The bitch class brought out a very seedy-looking lot of five. Catchfly, first prize, is not a show bitch. She is bad in head, light and stilty behind, flat in loin, light in bone (especially behind) and her forelegs are not well set. She is also wrong in carriage of tail—a minor point—and lacking in true character. Shown in a good class, under a greyhound judge, she would not be noticed. Minnie, second prize, is better in head than the winner, but she

is undersize and possesses far too many defects for the show bench. Chest twice too wide, legs not well set, not quite straight in front, light behind, Italian greyhound gait. Ramona, third prize, is an unevenly balanced specimen with fairly good head and neck, but very light in thighs, undersize, and neither right in shoulders nor ribs. Lady, vhc., is an Italian weed that must have been entered by mistake. Minnie, c., will never be noticed by a judge of this breed; she is a mongrel and a bad one at that. Bad in head, legs, feet, pasterns and body and not showing the slightest particle of muscle or power behind. Minnie is actually the most peculiar looking animal we have ever seen exhibited in the greyhound class. Every exhibit in this class was noticed, but there was not a show dog in the lot.

POINTERS—(MAJOR TAYLOR).

Lad and Lass of Bow were the exhibits in the challenge classes for heavy weights. Of eleven shown in the open class for heavy-weight dogs two were absent and one not for competition. Patterson, first prize, is not a good one. Defects: Croxteth skull; face a trifle dished and too deep in stop; color of eyes too light; neck rather heavy and not quite clean; hang of ears not perfect; ribs not carried well back; loin strong, but not very well arched; knees not perfect; too short and slanting from hips to stern; hocks too straight; shoulders should be closer. A rather coarse, second-class dog. Luck of Idstone, second prize, was sent home soon after the judging, but for what reason we cannot say. Tory White, third prize, is as good as the first prize winner. This dog is well known. Trinket's Cash, vhc., is heavy in skull, bad in eyes, throaty, light and flat in loin, straight and light behind, slab-sided and lacking in character and quality. His legs are well set and he has good feet, shoulders and stern. Duke, unnoticed, is quite as good a dog as Trinket's Cash. He was described in the St. Paul report. Osborn Ale, not for competition, is rather plain in head, too wide in front, not right in set of legs, straight behind and throaty. Notwithstanding these defects he moves well and has a workmanlike appearance. Kaiser, unnoticed, has a long and rather coarse head, is leggy, light in quarters, wrong in feet, light in bone and was lame when we examined him. Joe, unnoticed, is a better specimen than Trinket's Cash, that was vhc. Defects: Full below the eyes; not true in front; shows coarseness; stern too long; lacks character. There was little quality in this class.

First in the corresponding class for bitches was given to Pride of Idstone, a conspiciously unjust decision. In the first place she is not a large size pointer, and in the second she is not a show dog in any one point. She has a nasty, plain head, with domed muzzle and houndy character. She is very throaty, has badly carried ears and is flat-sided, flat in loin, not good in feet; in fact, she is a bad one. Strange stories were told of the way in which she was packed with biscuits to make her heavy enough to compete in the class, and these stories may or may not be true. One thing, however, is certain, and that is that Pride of Idstone, under weight or over weight, is one of the queerest-looking pointers that has ever been decorated with a prize card. Queen, second prize, should have been first. She is rather weak in face, a trifle throaty, light in bone, coarse in stern, a bit leggy, not right in set of legs and she would be improved by depth in loin. Jingle, hc., is all over a better specimen than the first prize winner. She should have been second. Defects: Tail docked, ears neither quite right in set nor carriage, feet not first-class, too much width through the front. Berdie, third prize, is also a better specimen than the first prize winner. Defects: Rather shallow in head and weak in foreface, hang of ears not correct, throaty, rather wide in front, legs not well set, light in bone, gait not correct. Fannie, vhc., is fairly good in head, but light in bone, straight behind, coarse in stern and not first-class in feet. She is as good as the third prize winner and better than the first prize winner. Midnight, unnoticed, is a black bitch, rather full in cheeks, not quite clean in muzzle, a bit low at the shoulders, not clean in hocks and rather too wide behind. She is as good as the third prize winner. Westminister Sal was absent. This was a wretchedly poor class.

Naso of Kippen was alone in the challenge class for light-weight dogs. In the bitch class Queen Fan was given first, and second prize was withheld from Queen Bow; the last named was too fat. She is a better bitch than the winner. Duke of Hessen scored a very easy win in the open class for dogs. Trinket's Coin, second prize, is light in eyes, heavy in skull, throaty, bad in feet, stands back at the knees, not perfectly straight in front, flat in loin, high in stern and not good in hocks. Chicago Wick, third prize, is rather heavy in skull, not quite clean in muzzle, too heavy in neck and wide in front, and he falls away too much from the hips to the stern, is too long in tail, and is neither right in stifles nor in hocks. Sancho Panza, hc., should have been second to Duke of Hessen. Defects: Slight fullness in forehead; slight throatiness; legginess; light in bone. He is all over a better specimen than the second prize winner. Marko, hc., is not nearly so good a dog as Sancho Panza. Defects: Weak before the eyes, fold of ears not correct; neck heavy and throaty; crooked in front; feet turning outward; weak knees; coarse stern; straight hocks; short from hips to stern. Van Guard, c., is too heavy in skull, wrong in muzzle, bad in neck, light in loin and quarters, straight behind and not straight in front, light in bone. He is a merry, easy-moving dog, with a nice coat and some style and that is all. Black Crook, c., is light in loin, rather coarse in head, light in eyes, throaty, a trifle out at the elbows, not perfect in feet and he lacks true character. In chest and loin he will do. Robert Spring, unnoticed, is throaty, out at elbows, low at shoulders, flat sided, light in eyes, bad in breast, lathy and lacking in quality. Lad King Don, unnoticed, is not quite right below the eyes, wrong in hang of ears, throaty for a youngster, not perfectly straight in front and only fair in feet. He moves badly behind, and the redeeming qualities are fairly good head and good chest and loin.

First in bitches was easily won by the St. Paul winner, Lady Price—*multum in parvo*—and the Idstone Kennels, that had far more luck than dog, came second with Phantom. Defects: Yellow eyes, wrong hang of ears, coarse head, Croxteth loin, straight hocks, too wide behind, stern not well carried, feet not first-class, body rather shallow. Her best points are straight legs and lengthy neck. Flirt, third prize, is a better specimen. Defects: Not quite right in muzzle; ears set high and not quite right in carriage; rather wide in front; does not stand quite true in front; feet might be better. Chicago Fawn, vhc., while not in the best of coat, should have been third. Miss Idstone, vhc., is throaty, not quite right in muzzle, wrong in shoulders and set of legs, bad in feet, not straight in front, and a bit wrong in stifles and hocks. Her head and body are the best points in her. Frienzi, vhc. Defects: Stop not quite right; carriage of ears not perfect; a trifle throaty; wrong in set of legs; light and straight behind; whip tail; rather lathy and light throughout. The redeeming features are length of neck, good feet and nice quality. Bodine's Dell, hc. Defects: Hang of ears not right; throaty; a bit flat in body; rather coarse in stern; feet not quite right; hocks and stifles not quite the thing. Quite as good a specimen as Miss Idstone, that was given vhc. Top, c. Defects: Not clearly cut below the eyes; stop not right; ears too high; set of legs not perfect; light in bone. Meteor's Dell, c., is wrong at both ends. Fan, unnoticed, is light in eyes, bad in ears, lathy, light in bone and all wrong behind. Myrtle, unnoticed, lacks in head, ears, neck and hindparts. Sal II., unnoticed, should have been transferred to the heavy-weight class. Barring Lass of Bow, she was decidedly the best large pointer bitch in the show. We called Mr. T. Donoghue's attention to this bitch and he had her bought in quick time. Westminster Luna, vhc., has many faults, yet shows quality withal. Defects: Kippen eyes; throaty; not straight in front; not quite right in muzzle or stop; stern coarse and not well carried; not quite right behind. She showed signs of having been dressed for the mange.

The light-weight pointers, while not a level lot, were decidedly better than the heavy-weights. The puppy classes showed an absence of true pointer character and quality. First in dogs went to Premier Hessen, a son of Duke of Hessen and Peachstone. When fully developed he will not be a show dog. Defects: Bad eyes, ears set to high; feet not first-class and turning outward; leggy; stern rather long; loin flat; color dirty. Graphic's General, second prize, is not deep enough in stop and his eyes are rather light. He has a lengthy neck that is spoiled by throatiness, is too light and flat in loin, not very strong in knees (in this respect he may improve), too long and coarse in stern and light and narrow behind. Wonderful Lad, third prize, will never be a show dog. Defects: Foreface shallow and not clearly cut; feet not in good position; loin light and long; tail too long and not nicely carried. First in bitch puppies went to Lady Trinket, that is not a show bitch. Defects: Coarse head; ears not right in fold; light in loin; straight behind; legs not perfectly straight and feet not first-class. Lady Wallace, second prize, has plain head and sour expression, is coarse in stern, flat in loin and straight in hocks. She cannot possibly develop into a show bitch. Fern, third prize, has these defects: Muzzle not of correct formation; hang of ears not right; stern not straight; bad hindfeet; rather light in bone; legs and feet not of the best; too straight behind. Clio, c., is light in eyes, coarse, straight in hocks and lacking in character. She has good legs and feet. Spot, unnoticed, has a long, weak head, is bad behind, weedy and minus true pointer character.

ENGLISH SETTERS—(MAJOR TAYLOR).

There were no entries in the challenge classes, and the quality of the open classes was not what we expected to find where the setter takes precedence of all other breeds. Cincinnatus, that was third at New York and fully described in these columns, was an easy winner of first. Although not quite a good one, he stood out in bold relief from the rest of the class. Toledo Blade, second prize, is a little, wear-and-tear-looking dog, that is not up to show form. Defects: Color of eyes too light; stop too deep; muzzle not perfect; not perfectly straight in front; feet turning outward, slightly, and pasterns not sufficiently upright; rather too wide through the shoulders; not well bent in hocks and with stern too high. He would be nowhere near the money if shown in a good class, and on this occasion should have given way to Meadowthorpe Heather Jock, that got hc. Sportsman, third prize, is a strong, useful-looking dog, but as his owner rightly put it, "not a show dog." There were a dozen or more better dogs for the place. He has plain head, rather straight behind and short in coat. King's Dan, vhc., is not nearly so good a dog as Meadowthorpe Heather Jock. Defects: Head heavy; out at elbows; bad feet; flat loin; bad stern, ropy and carried high; straight behind; wrong in gait; coat not right. Rey Roderigo, hc.: Eyes not quite right; not perfectly straight in front; pasterns not perfect; stifles too much in; body rather light; in other points he will do. Duke Gladstone's Boy. Defects: Plain head; ears not correct; high stern; standing too high; coat not first-class; set of legs might be better. Nebraska, c., is coarse and heavy in head, very throaty, coarse. The redeeming points are good bone and feet, straight legs and strength throughout. Marquis N., c., was exceedingly lucky in being noticed. Leaving out of the question his numerous and serious defects, he was not in fit condition for the show bench. Loin very light; bad stern; light in bone; wrong in carriage of ears; bad in feet; curly; not a show dog. Chip, c., was also out of condition. His head is a bit plain, but the outline is not bad. He is straight in hocks and not quite right in set of legs. His knees are not very strong, his eyes are not quite right and his flag is not perfect. He is also leggy, stilty, light in bone and not right in knees. We cannot recognize him as a show dog. Zippo, unnoticed, is curly, heavy in head (it is not badly formed), straight in hocks, not quite right in set of legs. He is a far better dog than Moxie. Buck N., unnoticed, is bad in coat, light and flat in loin, coarse in head, high in stern, lathy and rather throaty. Rex, unnoticed, is plain in head, heavy in neck, throaty, straight behind and not quite straight in front. Drake, unnoticed, lacks in head, eyes, position of hocks, and does not stand quite true in front.

First in bitches was won by Bohemian Girl, a well-known field trial winner, of entirely different type from Cincinnatus and Toledo Blade. The judge has a perfect right to insist that dogs like Goldstone, Keystone, Toledo Blade and others of the like are the correct type and should win on the bench; but he must not shift from Thunder to a Toledo Blade and thence to a Bohemian Girl. If Cincinnatus and Toledo Blade were the best specimens in the dog class, Liberty II., vhc. in the bitch class, should have won over Mr. J. Shelley Hudson's brace. She is one of the razor-blade type, flat in ribs, straight behind, leggy, short in coat and feather, hard as iron, wiry as pin wire, and looks like running a ten-minute race at a speed that would only be eclipsed by greased lightning. We do not care which of the types a man holds to, so long as he is consistent; but there was no consistency in placing Bohemian Girl first, although we admit that she was the best setter in the class. We will give a full description of this bitch: Stop not clearly cut; rather full below the eyes; skull too wide—a head lacking cleanness and which would look better on a dog; neck of good length, yet not quite clean; set of forelegs not perfect and the legs themselves not quite straight; good feet; body somewhat cylindrical in formation; loin not nicely turned; good behind; strong in bone; moves well. Texas Daisy, second prize, is rather wide in skull and a bit shallow and coarse in muzzle. She stands on fairly good pins, but lacks the razor-blade bodies of the winners in the dog class. Set of forelegs not perfect—a defect which causes the feet to turn inward, slightly; feet not perfect, especially the hind ones; is not quite right behind and would do with more bone. Cambriana, third prize, was removed before we had a chance to see her. Dixie, reserve, is not quite right in lips, not perfectly straight in front, is throaty, and having had puppies, was not in good condition. This is a useful-looking one. Bess, hc., has a niceish head, that is hardly deep enough in stop and neither quite perfect below the eyes nor in lips. She does not stand quite true in front, is too short in coat at present, and was not well shown. Polly, unnoticed, is of Irish type and is wrong in feet, thighs, hocks, ears and flag. Sue of Hatchie, unnoticed, was shown too fat. She is weak in face, wrong in eyes, light in bone, straight behind, short and steep from hips to stern and has not a catchy color to recommend her. Knights Bell, unnoticed, has white eyelids, is round in skull, not clean in muzzle, a bit throaty and wrong from hips to stern. We thought her worth a card. Helen N., c., was not in show condition. Defects: Set of legs not correct; feet only moderate; not perfectly straight in front; tail ropy and carried high. M'Liss C., unnoticed, is doggy in head and a bit wrong in front. She appeared to be heavy in whelp, but was worth a card. Lady Pearl, unnoticed, is a bit sheepish in head, light in bone, heavy and wide in front and light and narrow behind. Rena H., also unnoticed, is of Laverack type. She is not quite right in stop, is out at elbows and too wide in front. Her fairly good head, excellent body and strong hindquarters should have earned her a card. Countess Amelia was absent. Puppies were not strong in quality. Dad Wilson's Boy, promising in head, legs, feet and coat and with razor-blade body, was clearly the best in the class. With a better stern, deeper body and better sprung ribs he would be a good one. Blue Link, second prize, is rather heavy in skull and throaty for a pup. He is not perfectly straight in front, his feet are not of the best, is a trifle leggy, long in stern, not good behind the hips and lacks quality. We liked the third winner, Draco's Mark, for the place. Defects: Forehead rather too prominent; ears somewhat short; too straight behind; knees not quite right. If he does not develop coarseness in head he will be heard from again. Sir Darnoc, c., is handicapped on account of age. Given a little more time he will beat two that were placed ahead of him. Lady Harriet, second in the bitch class, should have won easily over Blue Fan, that is coarse in head and muzzle, throaty, not quite straight in front, not good in feet, cow-hocked, light in quarters and leggy. She beats Blue Fan only in eyes and forelegs. We predict that if ever these bitches come together again Lady Harriet will win with many points to spare.

IRISH SETTERS—(MAJOR TAYLOR).

In the absence of Elcho, Jr., from the challenge class for Irish setter dogs, Blarney, in nice condition, took the prize. In bitches Nellie and Lou II., that have been the round of the shows, were first and second in the order named. Both were looking well considering the knocking about they have had of late. Mack N., first in the open class for dogs, is a new one to us. Head rather heavy; neck not clean; eyes rather light; coat not in the best of condition. A useful-looking dog, with good hindquarters and standing on proper legs and feet. Nelson, second prize, has rather short, but well carried ears, a head that might be higher between the ears and cleaner below the eyes. He is rather throaty, not quite straight in front, stands back at the pasterns, is not perfect in feet, too flat in ribs, and falls too abruptly from the hips. He is good in other points and has beautiful color. Max, third prize; head too strong, throaty, flat in ribs, feet not first-rate, coat a bit open, loin flat, fairly good in other points and excellent in color. Mardo, reserve, was first in the puppy class, and he had been sent home before we reached his stall. Meadowthorpe Rover, vhc., is defective in head, rather light in quarters, and not quite right in hocks. He has good body, legs and feet, and nice quality of coat. Dandy, hc., is rather wide in skull and not quite right in muzzle. He is also too wide through the shoulders and a trifle straight in hocks. Prince Rufus, c., is rather coarse in head, which is too wide and flat. He is also wide in front, rather light in bone and a bit short in coat. He has good body, fine color, and is a merry and useful-looking one. Irish Pat, c., is coarse in head, light and flat in loin, short from the hips back, straight behind, high in stern, wrong in ears and a bit throaty. Patsy, c., lacks in ears, muzzle below the eyes, stop, hindquarters, and was shown short in coat and too fat. Donegal Boy, unnoticed, was one of the best dogs in the class. He moved a bit lame, owing to having received a slight cut on one of his forefeet. As it was easy to see that his trouble was only temporary, he should not, we think, have been pegged back. Tim Pepper, unnoticed, is fairly good in head, although he lacks a bit both in stop and in muzzle. His feet are not of the best, he is rather slack in loin and a bit wrong in his quarters and in his hocks. He has a very fine color. Gordon, unnoticed, is coarse in head, straight behind and not rich in color. Mac, Jr., also unnoticed, lacks in head, shoulders, set of legs and carriage of hindquarters. First in the bitch class was won by Kitty O'Brien, whose color is simply superb. Defects: Brow a trifle too prominent; stop and below eyes not clearly cut; feet not right; falls away behind; would be improved by more bone. Against these defects we find good ears, neck, chest, back, loin and coat. This bitch came near being a rattling good one. Second prize went to Bess. Defects: Stop and muzzle just below the eyes not perfect; knees not very strong; limbs rather light; loin flat and hardly strong enough; color not quite first-class. A bitch showing nice quality, but hard pressed for the place by her kennel companions Megora and Lorraine, that were vhc. and hc., respectively. These are quality bitches that beat the third prize winners fifteen or twenty points. What the judge was doing to get Nino into third place is something we cannot explain. She is coarse in head and muzzle, has high set ears, is light in bone, very light in hocks and hindfeet, curly on the quarters, has a nasty, wiry coat and is all wrong in color. Irish Lass, vhc., fails in stop, in muzzle below the eyes, in feet and their position. She is also a bit thick through the shoulders and light in feather. She is altogether a better specimen than the third prize winner. Belle of Monico, c., rather plain in head, defective in hang of ears, too straight in hocks and not first-class in color. She equals the third prize winner. Lone Star Queen, unnoticed, is weak before the eyes, bad behind, wide in front, light in bone and too chunky. Buckeye's Pride, unnoticed, has a stumpy head, is weedy, straight behind and undersized. Puppies had been removed before we reached them.

GORDON SETTERS—(MAJOR TAYLOR).

The challenge classes for Gordons were represented by Little Boy, Don and Rose. There was a lot of fun over the judging of the open class for dogs. Mr. "Scotch" Baillie, who had charge of Meadowthorpe Heather Harold, Meadowthorpe Heather Roy and Meadowthorpe Laddie, did not wish to win the prize with his best dog, because a win at this show would have put him in the challenge class. Somebody told him that Mr. "Ben" Lewis was particularly lucky in winning prizes under Major Taylor's judgment. On hearing this he decided to let "Ben" show his second best dog, Meadowthorpe Heather Roy, and he took hold of Meadowthorpe Heather Harold. "Ben's" good luck did not desert him, and Meadowthorpe Heather Roy was placed over his more typical kennel companion, Meadowthorpe Heather Harold. There was a good deal of laughing and merry-making, and we are in a position to state that it was not done at Mr. "Scotch" Baillie's expense. The third prize winner is light in color, straight behind, throaty, too narrow through the thighs, open in coat, not first-class in stern and a trifle coarse throughout. His head, bone and feet pulled him through. Leaf, vhc., is coarse in head, heavy in neck, wide in front, rather light in eyes, not first-rate in stern, not perfectly straight in front, and is on the coarse side. Bone and color are his best points. Sancho, c., possesses many defects. Straight behind, bad in feet, not straight in front, rather light in loin, a bit leggy, too short in coat and a bit stilty. Stubble, unnoticed, must have been entered by mistake. He may be a fair specimen of the "62½ per cent. type," but he is not a Gordon setter, and not all the printer's ink in America will make him one. Sir Donald, unnoticed, has a heavy, coarse head, is wide in front, loose in neck skin and straight behind. Mr. "Ben" Lewis had his usual good luck in the open class for bitches. It is hardly necessary to state that Meadowthorpe Belmont, that was given second prize, is decidedly a better specimen than the first prize winner, Vic. Becky Sharp, well known, was rightly placed third. Moss Rose, unnoticed, is plain in head, throaty, wide in front and wrong in coat. Rose, also unnoticed, is bad in head, weedy and leggy. May, c., has a head of English type and is throaty, not straight in front, bad in feet, wrong in carriage of stern, and her forelegs are not well set. Her hindquarters are good. Two puppies were shown in the two classes provided. They were each given a third prize. If Minnie, that was not in her stall when we called, is no better than Thurman, it is as well that we did not see her.

FOXHOUNDS—(MAJOR TAYLOR).

Here there were three entries in the dog class, but none in the bitch class. Parker, first prize, had the best head, bone and brush of the three. He is leggy, light in loin, weak in second thighs and poor in coat. Dan, Jr., second prize, is plain in head, light in bone, off in feet, flat in middle, wrong

in hocks, which are too straight and too far from the ground, scanty in coat and brush. Prockey, third prize, is better in head than the second prize winner, and is also better in legs, feet and body. His hocks are too straight and he does not carry his brush in good style.

CHESAPEAKE BAY DOGS—(MAJOR TAYLOR).

Five brown dogs were shown in these classes. Some had short heads and some had long heads. One had black eyes, another had brown eyes, another had green eyes, and still another had yellow eyes. One stood well up at the shoulders and slanted well to stern; another had a back like a saddle, and another was roached in the loin like a bulldog. It did not matter a fig which took the prizes, because all were the best. If there had been among the lot one that was worse than another, who would have ventured to explain why he was worse?

ENGLISH RETRIEVERS—(MR. WHITMAN).

Meadowthorpe Diamond, a well-known second-rater, was rightly placed over Meadowthorpe Pearl, that is a plain-headed puppy. There is a nice opening for somebody to import a good specimen of this breed.

SPANIELS—(MR. WHITMAN).

The O'Donoghue had the challenge class for Irish water dogs to himself. He is not in good coat, being far too wooly and he begins to show age. Judy, from the same kennels, won in the bitch class without competition. In her present condition she would fail to receive notice in a fairly good open class. She is out of coat, is bad in head, very wide in front and wrong in carriage of stern. Barney O'Connor, second prize in the open class for dogs, was many points ahead of the rest of the class. Mallard Drake, first prize, shows poodle character in head and topknot, and his coat is all wrong. Auburn King, third prize, lacks in head, coat and size. He should have been second. Diver, unnoticed, has plain head and is wrong in color, leg-coat and tail-coat. Mollie Lever, first in bitches, is, barring her coat, of English setter type. She has a setter head, body, legs, feet and carriage, and her leg-coat is not right. Nellie Marsh and Lilly Pad, second and third in this class, were hardly good enough to take her place. Both lack size and character and neither is good in head. Bessie, vhc., was all out of condition and was lucky in being noticed. Colleen, unnoticed, is defective in head and is out of coat. Field spaniels were a weak lot, Newton Abbot Laddie, the defender of the challenge class, being the only good one. King, first in the open class for dogs, is a liver dog with rather short body, wooly coat and only moderate head. He is also too leggy and should have changed places with Bird, that was second. The last named is neither first-class in head, eyes, set of ears nor in coat, and he would be improved by more length of body and less length in leg. Romp II., third prize, is of cocker type in head. He has light eyes, high set ears, curly coat, stern carried high, is leggy, light in bone and not a show dog. The prize should have been withheld. The owner or person in charge of him informed us that he is a corker on rats. He looks it. Newton Abbot Lady and Woodstock Squaw, the only entries in the bitch class, were absent.

Although there were only two entries in the challenge class for cocker dogs and one of them so vastly superior to the other that he outclassed him, the judge, who appeared destined to go wrong, placed Mike, that was never anything but a third-rater, over Jersey. Further comment in unnecessary. The decision condemns itself. We will, however, add that Messrs. Oldham & Willey's typical little dog was shown in better form than he has been in this season. Juno W. was placed over Chloe W. in the corresponding class for bitches. Both are well-known and we need only say that Chloe W. should have won. Guy was just the better of the two dogs shown in the open class. He was described in the St. Paul report. Jack, second prize, lacks in head, coat, loin, hindquarters and carriage of stern. Bessie W., that was third at Boston, won easily enough in the bitch class. Bonita, second prize, is a bit off in head, color of eyes, length of leg and coat. Daughter, third prize, fails in eyes, size, coat, carriage of stern, feet and muzzle. Sheeny, vhc., is wrong in muzzle, but good in body. She was second best in the class. My Lady, unnoticed, is snipy, not straight in front, but good in body and better in coat than the others. She should have been noticed. There was much dissatisfaction and ill feeling over the judging of these classes.

COLLIES—(MR. MORTIMER).

The placing of Dublin Scot over his son Scotilla in the challenge class for collie dogs was generally condemned. Scotilla was in excellent condition, and every judge of collies knows that when he is in shape he is a vastly better specimen than Dublin Scot. In bitches, Metchley Surprise was absent, leaving the only other entry, Bonnie Brae, to walk over for the prize. We thought her looking better than at New York. The open class for dogs had sixteen entries, five of which were absent. Maney Trefoil and Charleroi II., the first and second prize winners at Boston, held the same positions here, and Meadowthorpe Jura, that had been around the circuit, was third. Clifton Hero, reserve, is not right in front, but there is much good in him. Tramp II., vhc., is defective in head, round, full and light in eyes, and could do with more coat. He has a good body and limbs. Stanley, vhc., is short between the couplings and has wretchedly bad ears, which are carried in correct fox-terrier style. In competition for the specials he beat Jakyr Dean, a bitch that outclassed him in nearly every essential point, and he won far more in prize money than he will ever be worth. He was catalogued "For Sale" and his owner had the good luck to get rid of him. Robin Adair, Jr., hc., is wrong in coat; his head is not good; he has a short, high-carried brush and his feet are not of the best. Robin, c., is only fair in head and is not good in ears. He is decidedly better than average in body, coat, legs and feet, and is quite as good a specimen as Tramp II., that took vhc. Glencoe II., c., is far inferior to Robin. Defects: Head moderate; ears not correct; stern not well carried; coat open; light in bone. Flurry III. won as easily in the bitch class as her kennel companion in the dog class. Meadowthorpe Parole, the Buffalo winner, was second, and Jakyr Dean, the New York winner, was third. Maritana, reserve, possesses a number of good points, and is a nice, broody-looking bitch. Her head is decidedly above average, but her ears are not sufficiently erect, feet not quite right, coat rather soft, brush carried too gaily and set of legs not all that could be desired. Ailsa, vhc., lacks in head, carriage of ears, strength of body, hocks and coat. Bonnie Bess, hc., has round, light eyes, is wrong in ears, not first-class in head and hardly right in forelegs. Puppies were a very ordinary lot, if we except Wellsbourne Flurry, a rather promising daughter of The Squire and Active. The Chestnut Hill Kennels' well-known second-rater Spot was unopposed in the class for smooth-coats.

POODLES—(MR. MORTIMER).

Berrie failed to put in an appearance, and the other entries in the dog class, Jumbo and Scrip, were given second and third prize. Jumbo, a curly-coated specimen, is short in ears and not close in curl. Scrip, a corded one, is long in tail and short in coat and ear. Bitches contained two moderate ones. Mona, short in ear, but better in coat than Rosey, was rightly placed first.

BULLDOGS—(MR. MORTIMER).

In dogs it was the old story over again, Rabagas first and Lion second. Old Romulus, looking splendidly for his age, made a good third, and Guillermo, another well known one, was vhc., the pair being split by Remus, that is leggy and light in body, not well back in face and hardly right in lip. Do Do, hc., is wrong in foreface, which is altogether too small for his skull. Cæsar, c., is leggy and defective in head properties. Dolores, although not in good condition, won easily enough in the bitch class from Princess Ida and Baby. The Baby is leggy, long in face and has a butterfly-nose. Princess Ida lacks in volume of skull and muzzle, is too long in foreface and her nose is not set well back. Joker, first in dog puppies, while not well broken in skull and only moderate in lips, is a rather promising youngster. Liscard Exile, second prize, is long in face and light in body and leggy. Murrax, unnoticed, is very bad in head.

DACHSHUNDE—(MR. MORTIMER).

Kaiser, weak in foreface, rather leggy, a bit tight in skin, and neither long nor low, was first. Fannie, second, is rather weak in head, light in bone, wrong in crook, not good in hindlegs, and rather tight in skin. Martha, third prize, has high set ears, is rather weak in jaw, not very strong in feet, bad behind, not very long in body and wrong in stern. They were a poor lot, about equal in merit.

BEAGLES—(MAJOR TAYLOR).

Little Duke had no trouble in beating Twinkle for the challenge prize. Racer, Jr., first in the open class for dogs, need not be described. Stormy, second prize, is a puppy, and was sent home before we got to his stall. Racket, Jr., third prize, is rather coarse and plain in head, and too long in body. His legs and feet are the best parts of him. Captain, unnoticed, lacks in head and is neither first-class in coat nor brush. He has good body. Flora, the only bitch shown, is rather short in ears, not quite right in muzzle and too long in body. These classes were not well represented.

TERRIERS—(MR. MORTIMER.)

Royal Rose was alone in the challenge class for bull-terrier bitches, and challenge dogs were not represented. The open class for dogs contained eight entries, and there was far more quantity than quality. Trentham Baron, alluded to in the Boston report, was wrongly placed over Dinksey, that is spoiled by badly-carried ears. Both dogs are owned by Mr. Dole, and as the mistake was "all in the family" no harm was done. Doc, third prize, was not on the bench when we called. Ned, vhc., is not so good a dog as Losso, that was unnoticed. Defects: Foreface very weak and dished; moderate body; bad stern. Losso is wrong before the eyes, long in tail and a bit cheeky. Major, c., is also inferior to Losso, being very full in cheeks, wrong in muzzle, full in eyes and out at elbows. Romeo, unnoticed, is a pit dog. Dinah, first in bitches, is a bit cheeky, wrong before and below the eyes, light in loin, coarse in stern and not quite right in hindquarters. Her condition was not of the best. Lady in White lacks in foreface, cheeky, position of elbows, carriage of tail and is too wide between the hocks and a trifle slack in back. Nell, third prize, is weak in foreface, light in bone, wide between the hocks, wrong in set of legs and lacking in muscle. Nell Bright, vhc., should have been third. This bitch is well known. Dinksey, already described, was first in puppies, with Little Joe, very bad in head, but fairly good in body, second.

Fox-terriers introduced us to Blemton Rubicon, that beat all comers at the Saratoga fox-terrier show. We did not expect to see a first-class dog, because nearly every fox-terrier fancier with whom we are acquainted had told us that Rubicon never deserved the prizes he had won; but we certainly did expect to find a much better specimen. He is not first-class in head, rather full in cheeks, a trifle weak before the eyes and round in forehead. In middle he is at present decidedly light, and if his stern had not been docked very short it would certainly have been over his back; but in none of these points do we find his most serious defect. When given the chain he stands neither better nor worse than a bulldog. He has good feet, good legs from the elbows down, well-carried ears and excellent coat. We are quite prepared to hear that he has grown the wrong way. The fact is he was never right. Lucifer was absent, and Bacchanal, second prize, should have won easily. Rachel was absent from the bitch class, and her kennel companion, Marguerite, had a walkover. Blemton Volunteer, Raby Signal and Stableford Joe, first, second and third prize winners in the open class for dogs, are well known. Nick, vhc., was placed equal with Valet at Hartford some time ago by the same judge, therefore in his opinion Blemton Volunteer, Raby Signal and Stableford Joe are better dogs than Mr. Hoey's crack. If this sort of work is continued a little longer we shall get mixed, even if the judge does not. Jack Vandal, that took the reserve card, has a long head, but it lacks character. He is leggy, long-cast and scanty in coat. Nick, already noticed, is a much better specimen. Bob Mixture, hc., is wide in front, cheeky and light in bone. Whip, c., got one letter more than he deserved. He is big, coarse, wide in front, bad in head, short in coat, and lacking in true character. In bitches it was Tiara first and the rest nowhere. Dinah, that was given second, is weak in muzzle, wide in front, light in bone, and a bit off in shoulders and set of legs. Jack Vandal was the best of a poor class of dog puppies. Tough, second prize, is coarse in head, round and large in ears and lacking in character. He has good coat and fairly good legs and feet. Floyd, third prize, is weak before the eyes, wrong in set of legs, not quite right in hocks, open in coat and too straight in shoulders. Troty Veck, unnoticed, is all wrong in head properties. Bitch puppies were a bad lot. Nancy Mixture, the only one mentioned, is too light in all points.

Billet, first in the wire-haired class, beats Capsicum in head, style and character, but is not quite his equal in quality of coat. New Year's Day, third prize, begins to show age. Salt, vhc., has a short, stumpy head, is not right in carriage of ears and is too soft in coat.

Dennis, Breda Jim and Breda Tiny, winners in the Irish terrier classes, are all of them old faces. Paddy Linden, third in the dog class, is marred by badly cut ears and bad feet. He is also pounds too heavy, and, while very useful-looking and good in coat, is not quite a show dog. Peggy, second in the bitch class, is moderate in head, scanty in coat and not first-class in legs and feet.

Rosie, the challenge Scotch terrier, is well known. Meadowthorpe Donald, better before the eyes, shorter in legs and better in ribs than Lowrie Dunbar, but not his equal in ears, should, we think, have been first. The Dodger, unnoticed, has drop-ears and wretchedly bad coat. Glen Ettle and Fannie Fern, first and second in the bitch class, are both well known. Glen Ettle, heavy in pup and not in first-rate condition, should have exchanged places with Fannie Fern.

Pansy and Bonnie Briton, winners in the challenge class for Dandies, are well-known winners that may be passed. Border Wang was absent. Meadowthorpe Baillie, first in the open class for dogs, is beaten all to pieces in head and coat by Meadowthorpe Rover. The last named should have won. Vinewood King, third prize, is wrong in several points and especially so before the eyes. Border Clinker, vhc., is too shelly for us. Vinewood Dirk, hc, is bad in head and not right in coat. In bitches Meadowthorpe Wonder was a very easy winner. Vinewood Nettie, second prize, is bad in head. Meg Linden, third prize, was not on the bench when we called. Judy, unnoticed, is a Skye terrier.

The Bedlington class contained no entries.

Gladstone Boy and Meadowthorpe Coila were the only entries in the three entries provided for Skyes.

Nanon, another well-known one, was practically unopposed in the black and tan terrier classes.

Dick, first in Yorkshire dogs, is too light in color for a blue and tan and too dark for a silver. He has nice quality of coat and plenty of it. Fishpool Fred, second prize, is bad in head and limbs, short in coat and moderate in quality of coat. Damfikare, third prize, is a rather promising puppy that may be heard from again. His leg-color is excellent. Billy, hc., is light in color and short in head and body-coat. Dandy Dick, c., is neither a blue and tan nor a silver, being too light for one and too dark for the other. Nadjy, first in bitches, while better in coat, has the same defects in color as Dandy Dick. She was the only one shown. Tiny, the only toy in the class, is snipy and only moderate in coat and color. She shows age.

OTHER TOY DOGS—(MR. MORTIMER).

Dude, Kash, Bessie, Vic, Bob Ivy and Bo Peep II. are well known winners. Lord Nelson, first in the open class for dogs, is a well bred specimen that shows his good breeding. He is smutty in color, shallow in muzzle and too big. He has good wrinkle and good limbs. Bijou, second prize, lacks in muzzle, trace, nail-color and is large enough. Climax, third prize, is smutty in color and too long in foreface. Bob Ivy, vhc., is better than Climax and as good as the second prize winner. B. & O., vhc., is long and shallow in muzzle, bad in ears and with white nails. He was over-rated in this company. Co Co, hc., was not in the pen. Muffins, c., has good nails and skin, but lacks in head properties. Juliet, second in the open class for bitches, is plain in head, smutty in color and has white nails. Lake City Bonnie, vhc., in the same class, lacks in size, eyes, color of nose and in trace.

Ten King Charles spaniels of very ordinary quality were entered and shown. Hylus, first in dogs, is just fair in muzzle, but he lacks in lay-back, chop, coat and hindquarters and might be better in eyes and ears. Rey, second prize, has white markings, is long in muzzle, not well up in skull, moderate in leg markings, not good in coat and wrong behind. Milwaukee Prince, third prize, should have been second. He is not first-class in skull, but he beats the second class winner. He is also defective in muzzle, but here again he beats the second prize winner. His markings are decidedly better, his coat is quite as good, and taken all in all he should certainly have had the place. Trouble, c., is a poor puppy, with white on breast. Billy, vhc., is shallow in muzzle, shows Japanese character and has no leg-tan. Nell Gwynn II., first in bitches, is rather small in eyes, not quite right in lips and is long-cast, curly in coat and on the large side. In color she beat the class. Mona, second prize, was about the best in the class and was beaten by the winner only in color and levelness of back. Milwaukee Gem, third prize, is long in face, short in ear and has too much color. She is not nearly so good a bitch as Milwaukee Belle, that took vhc.

Milwaukee Duke, first in Blenheims, is rather long in foreface, which is not well turned, and his skull to be first-class should be higher. He lacks the orthodox dot, and would be improved by more coat. Milwaukee Rose is bad in muzzle, which is too long and light, and to be first-class she should have much more feather. Her body is the best part of her. Young King Victor, third prize, is better in head than the second prize winner, but he lacks behind and is not right in coat. Rowdy, vhc., has no dot and is wrong in limbs, loin and coat. He beat the class in skull.

Two Italians, or so-called Italians, were shown. Dixie is a big, coarse, red and white dog. Daisy, second prize, was away ahead, and is about half the size of the winner. We would remind the judge that the Italian greyhound is a small dog.

MISCELLANEOUS—(MR. MORTIMER).

The decisions in this class cannot be criticised too severely. First prize was awarded to a little wire-haired whippet, with straight hindlegs. Buby, second prize, is the best Maltese terrier that we have ever seen in this country. She would hold her own in any company and should have been a very easy winner. Sir Lucifer, although not in full coat, should have been second, and the rest of the cards should have been withheld for want of merit.

Following is a complete list of the

AWARDS.

MASTIFFS.—CHALLENGE—*Dogs:* 1st, E. H. Moore's Minting; 2d, C. C. Cook's Moses. Very high com., St. Joe Kennels' Wacouta Nap. *Bitches:* 1st, E. H. Moore's The Lady Coleus.—OPEN—*Dogs:* Oakhurst Kennels' Melrose Prince; 2d and 3d, L. T. Kinney's Grover Cleveland and Plato. Reserve, G. Jackson's Ilford Caution III. Very high com., B. Straube's Duke of York. High com., Miss Annah M. Peck's Leo. Com., G. M. Ludlow's Leo. *Bitches:* 1st and 2d, C. C. Cook's Menglada and Gladys; 3d, R. T. Perine's Adele. Com. J. E. Holcomb's Lady Isabelle. -PUPPIES—*Dogs:* 1st, L. T. Kinney's Plato; 2d, W. C. & M. Gunn's John Bruce; 3d, C. C. Cook's Patron. Very high com., W. Woodman's Jack. High com., G. Jackson's Beech Grove Baron. Com., F. C. Farwell's Norton. *Bitches:* Prizes withheld. Com., J. E. Holcomb's Lady Grant.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—*Dogs:* 1st, E. H. Moore's Ben Lomond; 2d, Hiawatha Kennels' Folko II. *Bitches:* 1st, E. H. Moore's Miranda; 2d, J. C. Anderson's Lady Athol.—OPEN—*Dogs:* 1st, Oakhurst Kennels' Burns; 2d, Acme Kennels' Valens; 3d, H. Sherman's Sam. Reserve, F. Trimmer's Hackney Monk. Very high com., L. C. Wachsmuth's The Baron, and P. Reitz's Schamyl II. High com., D. Bergman's Martigny. Com., A. Mackay's Czar. *Bitches:* 1st, Oakhurst Kennels' Miscabel; 2d, Coughcura Medicine Co.'s Noble Ida; 3d, R. J. Sawyer's Floss. Very high com., Mohawk Kennels' Cleo Van. High com., Hiawatha Kennels' Torrie and S. Brown, Jr.'s Gail Hamilton. Com., Mrs. J. B. Carson's Queen Omphale and F. Floyd's Lady Kenwood.—PUPPIES—*Dogs:* 1st, A. Newburg's Hero II.; 2d, F. S. Gorton's Rex. *Bitches:* 1st, Alta Kennels' Miss Fortune.—SMOOTH-COATED—CHALLENGE—*Dogs:* 1st, Alta Kennels' Victor Joseph. *Bitches:* No entry.—OPEN—*Dogs:* 1st, F. W. Le Sueur's Monarch; 2d, J. C. Anderson's Prince; 3d, W. F. Horn's Rex Maximus. *Bitches:* 1st, Meadowthorpe Kennels' Meadowthorpe Norah; 2d, Monastery Kennels' Monastery Myrtle; 3d, E. S. Pinney's Jess.—PUPPIES—*Dogs:* 1st, Oakhurst Kennels' St. Michael. *Bitches:* No entry.

BLOODHOUNDS.—*Dogs:* 1st, H. Weyth's Burniston. *Bitches:* 1st, H. Weyth's Metchley Venus.

NEWFOUNDLANDS.—*Dogs:* 1st, J. F. Dagley's Pete; 2d, withheld. *Bitches:* 1s, Meadowthorpe Kennels' Meadowthorpe Flora.

GREAT DANES.—*Dogs:* 1st, A. Schultz's Cæzar; 2d, O. Reichett's Pluto; 3d, Elms Kennels' Cæsar. Reserve, Osceola Kennels' Don Cæsar. Very high com., W. E. Hagan's Marco and R. Krueger's Wachtel. High com., J. Zilligen's Pluto, Jr., W. Pfeifers Hector, J. J. Hoch's Cæsar, Miss Mary Merker's Major and Lapp & Flershem's Duke. Com., H. A. Williams's Sultan, P. Merker's Victor, E. R. Bacon's Don and W. Elser's Theras. *Bitches:* 1st, Osceola Kennels' Donna Minka; 2d, W. Pfeifer's Nora; 3d, W. Elser's Theina. Reserve, W. E. Hagan's Markesa. Very high com., P. Merker's Elsie. High com., Dr. G. M. Chamberlin's Cantella. Com., J. Zilligen's Flora Marr and L. W. Flershem's Gypsy.

DEERHOUNDS.—CHALLENGE—1st, S. W. Skinner, Jr.'s Mac.—OPEN—*Dogs:* 1st, and 3d, S. W. Skinner, Jr.'s Fergus and Oscar II.; 2d, W. J. Starr's Robin Adair. *Bitches:* 1st, S. W. Skinner, Jr.'s Phyllis.

GREYHOUNDS.—CHALLENGE—No entries.—OPEN—*Dogs:* 1st and 3d, Rookwood Landseer Kennels' Master Rich and Rich and Rare; 2d, Meadowthorpe Kennels' Meadowthorpe Douglas Fleming. High com., W. J. Bryson's Rex. *Bitches:* 1st and 2d, Rookwood Landseer Kennels' Catchfly and Minnie; 3d, A. McArthur's Romona. Very high com., F. T. Baker's Lady. Com., Miss M. F. Reis's Minnie.

POINTERS.—LARGE — CHALLENGE — *Dogs:* 1st, Westminster Kennels' Lad of Bow. *Bitches:* 1st, Westminster Kennels' Lass of Bow.—OPEN—*Dogs:* 1st and 2d, Idstone Kennels' Patterson and Luck of Idstone; 3d, F. R. Hitchcock's Tory White. Very high com., Dayton Kennel Clubs' Trinket's Cash. Com., J. O. Armour's Jupiter. *Bitches:* 1st, Idstone Kennels' Pride of Idstone; 2d, T. Donoghue's Queen; 3d, A. M. Grau's Berdie. Very high com., V. P. Strasser's Fannie. High com., Mount Airy Kennel's Jingle.—SMALL—CHALLENGE—*Dog:* 1st, Westminster Kennels Clubs' Naso of Kippen. *Bitch:* 1-t, T. H. Terry's Queen Fan.—OPEN—*Dogs:* 1st, F. R. Hitchcock's Duke of Hessen; 2d, Dayton Kennel Clubs' Trinket's Coin; 3d, Chicago Pointer Kennels' Chicago Wick. High com., M. W. Gaylord's Sancho Panza and R. Griffith's Marco. Com., T. Donoghue's Van Guard and Dayton Kennel Clubs' Black Crook. *Bitches:* 1st, Elms Kennels' Lady Price; 2d, Idstone Kennels' Phanton; 3d, F. R. Hitchcock's Flirt. Very high com., Chicago Pointer Kennels' Chicago Fawn,

H. Hardie's Miss Idstone, Westminster Kennel Clubs' Westminster Luna, and T. Donoghue's Frienzi. High com., C. I. Engle's Lady Trinket, and Dayton Kennel Clubs' Bodine's Dell. Com., C. Carmichael's Top, and A. W. Hitch's Meteor's Dell.—PUPPIES—*Dogs:* 1st, Premier Kennels' Premier Hessen; 2d, T. Donoghue's Graphic General; 3d, Dowagiac Kennels' Wonderful Lad. High com., G. E. Stockbridge's Dandy. *Bitches;* 1st, C. J. Engle's Lady Trinket; 2d, Dowagiac Kennels' Lady Wallace; 3d, Mount Airy Kennels' Fern. Com. G. G. Cornelson's Clio.

ENGLISH SETTERS.—CHALLENGE—No entries.—OPEN—*Dogs:* 1st and 2d, J. E. Dager's Cincinnatus and Toledo Blade; 3d, J. S. Hudson's Sportsman. Very high com., G. W. Ewing's King's Don. High com., B. Crane's Rey Roderigo, T. Donoghue's Duke Gladstone's Boy and Meadowthorpe Kennels' Meadowthorpe Heather Jock. Com., J. W. Brooks, Jr.'s Nebraska, Elmwood Kennels' Marquis N., Dayton Kennel Club's Chip, and W. E. Furlong's Moxie. *Bitches:* 1st, 2d, and reserve, J. S. Hudson's Bohemian Girl, Texas Daisy and Dixie; 3d, W. B. Wells's Cambriana. Very high com., A. W. Hitch's Liberty II. High com., J. H. Hodges's Bess. Com., R. N. Sanderson's Gem's Dart and Elmwood Kennels' Helen N.—PUPPIES—*Dogs:* 1st, J. S. Hudson's Dad Wilson's Boy; 2d, T. Donoghue's Blue Link; 3d, B. Crane's Draco's Mark. Com., Elms Kennels' Sir Darnoc. *Bitches:* 1st, T. Donoghue's Blue Fan; 2d, Elms Kennels' Lady Harriet.

IRISH SETTERS.—CHALLENGE—*Dogs:* 1st, E. W. Clark, Jr.'s Blarney. *Bitches:* 1st, C. T. Thompsons' Nellie; 2d, Columbus Kennels' Lou III.—OPEN—*Dogs:* 1st, W. N. Kuhn's Mack N.; 2d, J. F. Nash's Nelson; 3d, A. V. Armour's Max. Reserve, A. Carmichael's Mardo. Very high com., Meadowthorpe Kennels' Meadowthorpe Rover. High com., Helen Newell's Dane Elcho and G. L. Dunlap's Dandy. Com., J. T. Bowen's Prince Rufus, T. Donoghue's Irish Pat and R. A. Shaeler's Patsy. *Bitches:* 1st, F. V. Anderson's Kitty O'Brien; 2d, very high com. and high com., J. A. J. Sprague's Bessie, Megora and Lorraine; 3d, F. H. Perry's Nino. Very high com., T. Donoghue's Irish Lass. Com., J. F. Phillips's Belle of Monico.—PUPPIES—*Dogs:* 1st, A. Carmichael's Mardo; 2d, F. A. Hubbard's Iowa Prince; 3d, J. A. J. Sprague's Dash. *Bitches:* 1st, W. I. Carpenter's Kate.

GORDON SETTERS.—CHALLENGE—*Dogs:* 1st, S. G. Dixon's Little Boy; 2d, W. E. Rothermel's Don. *Bitches:* 1st, W. S. Hammett's Rose.—OPEN—*Dogs:* 1st, 2d and 3d, Meadowthorpe Kennels' Meadowthorpe Heather Roy, Meadowthorpe Heather Harold and Meadowthorpe Laddie. Very high com., S. E. Davis's Leaf. Com., L. St. John's Sancho. *Bitches:* 1st, W. S. Hammett's Vic; 2d, Meadowthorpe Kennels' Meadowthorpe Belmont; 3d, J. L. Campbell's Becky Sharp. Com., Z. K. Pope's May.—PUPPIES—*Dogs:* 3d, J. A. Durringer's Thurman. *Bitches:* 3d, T. Flemming's Minnie.

FOXHOUNDS.—AMERICAN—1st, 2d and 3d, W. C. Henry's Parker, Dan, Jr. and Prockey.

CHESAPEAKE BAY DOGS.—*Dogs:* 1st, J. W. Stevens's Dick; 2d, Osceola Kennels' Drake; 3d, H. D. Ford's Neptune. *Bitches:* 1st, Osceola Kennels' Dundee; 2d, withheld; 3d, S. M. Smith's Bess.

RETRIEVERS.—1st and 2d, Meadowthorpe Kennels' Meadowthorpe Diamond and Meadowthorpe Pearl.

IRISH WATER SPANIELS.—CHALLENGE—*Dog:* 1st, Excelsior Irish Water Spaniel Kennels' The O'Donoghue. *Bitch:* 1st, Excelsior Irish Water Spaniel Kennels' Judy.—OPEN—*Dogs:* 1st, J. T. Anderson's Mallard Drake; 2d, J. W. Considine's Barney O'Connor; 3d, A. Combe's Auburn King. *Bitches:* 1st and very high com., Excelsior Irish Water Spaniel Kennels' Mollie Lever and Bessie; 2d, Rodes & Fitzsimmons's Nellie Marsh; 3d, J. W. Considine's Lily Pad. High com., C. A. Blaisdell's Sea Moss.

FIELD SPANIELS.—ANY COLOR—CHALLENGE—1st, Oldham & Willey's Newton Abbot Laddie.—OPEN—*Dogs:* 1st, Woodstock Spaniel Kennels' King; 2d, W. Lawrence's Bird; 3d, R. J. Withers's Romp II. *Bitches:* Absent.

COCKER SPANIELS.—ANY COLOR—CHALLENGE—*Dogs:* 1st, C. M. Nelles's Mike; 2d, Oldham & Willey's Jersey. *Bitches:* 1st, C. M. Nelles's Juno W.; 2d, Oldham & Willey's Belle W.—OPEN—*Dogs:* 1st, Osceola Kennels' Guy; 2d, Woodstock Spaniel Kennels' Jack. *Bitches:* 1st, Oldham & Willey's Bessie W.; 2d, C. M. Nelles's Bonita; 3d, Osceola Kennels' Daughter. Very high com., Woodstock Spaniel Kennels' Sheeny.

COLLIES.—CHALLENGE—*Dogs:* 1st and 2d, Chestnut Hill Kennels' Dublin Scot and Scotilla. *Bitches:* 1st, W. D. Hughes's Bonnie Brae.—OPEN—*Dogs:* 1st and 2d, Chestnut Hill Kennels' Maney Trefoil and Charleroi II.; 3d, Meadowthorpe Kennels' Meadowthorpe Jura. Reserve, J. A. Long's Clifton Hero. Very high com., C. N. Baddeley's Tramp II. and McEwen & Gibson's Stanley. High com., A. C. Armstrong's Robin Adair, Jr. Com., S. R. Taber's Robin and P. R. Sears's Gleacoe II. *Bitches:* 1st and 3d, Chestnut Hill Kennels' Flurry III. and Jakyr Dean; 2d Meadowthorpe Kennels' Meadowthorpe Parole. Reserve, J. L. Lincoln Jr.'s Maritana. Very high com. and high com., McEwen and Gibson's Ailsa and Bonnie Bess.—PUPPIES—*Dogs:* 1st, McEwen & Gibson's Stanley; 2d, E. W. Cramer's Jamie; 3d, J. M. Douglas, Jr.'s, Earl Douglas. Com., Maplewood Kennels' Hjalmar and Eraser. *Bitches:* 1st, Chestnut Hill Kennels' Wellsbourne Flurry; 2d, Meadowthorpe Kennels' Meadowthorpe Gip; 3d, L. Smith's Mistress Dabo. Very high com., McEwen & Gibson Bonnie Bess.—SMOOTH—1st, Chestnut Hill Kennels' Spot.

POODLES.—*Dogs:* 1st, withheld; 2d, R. H. McCormick's Jumbo; 3d, L. St. John's Scrip. *Bitches:* 1st, R. H. McCormick's Mona; 2d, S. Coulson's Rosa.

BULLDOGS.—*Dogs:* 1st, G. Raper's Rabagas; 2d, W. J. Comstock's Lion; 3d, T. Patton's Romulus. Reserve, Campbell & Blake's Remus. Very high com., T. W. Mills's Guillermo. High com., J. W. Heitz's Do Do. Com., T. W. Mills's Cæsar. *Bitches:* 1st, A. F. Nash's Dolores; 2d, withheld; 3d, T. W. Mills's Princess Ida. *Puppies:* 1st J. Morehead's Joker; 2d, F. Gorman's Liscard Exile. High com., J. W. Wakem's Baby.

BULL-TERRIERS.—CHALLENGE—*Dog:* No entry. *Bitch:* F. F. Dole's Royal Rose.—OPEN—*Dogs:* 1st and 2d, F. F. Dole's Trentham Baron and Dinksey; 3d, H. Russell's Doc. Very high com., J. Callahan's Ned. Com., J. A. Beck's Major. *Bitches:* 1st, J. F. D. Walker's Dinah; 2d, J. Callahan's Lady in White; 3d, G. Jackson's Nell. Very high com., F. F. Dole's Nell Bright. *Puppies:* 1st, F. F. Dole's Dinksey; 2d, Elms Kennels' Little Joe.

DACHSHUNDE.—1st, Idstone Kennels' Kaiser; 2d, H. C. Schaase's Fannie; 3d, J. S. Barnes's Martha.

BEAGLES.—CHALLENGE—1st and 2d, Ardsley Kennels' Little Duke and Twinkle.—OPEN—*Dogs:* 1st, Ardsley Kennels' Racer, Jr.; 2d, E. Marshall's Stormy; 3d, O. G. Stolz's Racket, Jr. *Bitches:* 1st, O. G. Stolz's Flora. *Puppies:* 1st, E. Marshall's Stormy.

FOX-TERRIERS.—CHALLENGE—*Dogs:* 1st and 2d, Blemton Kennels' Blemton Rubicon and Bacchanal. *Bitches:* 1st, Blemton Kennels' Marguerite.—OPEN—*Dogs:* 1st, Blemton Kennels' Blemton Volunteeer; 2d, A. E. Pitt's Raby Signal; 3d, R. de Koven's Stableford Joe. Reserve, G. Douglas's Jack Vandal. Very high com., L. W. Hill's Nick. High com., J. Dupee's Bob Mixture. Com., W. Neef's Whip and H. Taylor, Jr.'s Bones. *Bitches:* 1st, Blemton Kennels' Tiara; 2d, J. Dupee, Jr.'s Dinah.—PUPPIES—*Dogs:* 1st, G. Douglas's Jack Vandal; 2d, W. J. Hutchinson's Tough; 3d, H. G. Nichols's Floyd. *Bitches:* 1st, J. Dupee' Jr.'s Nancy Mixture; 2d, withheld.—WIRE-HAIRED—1st and 2d, Oxford Kennels' Billet and Capsicum; 3d and very high com., G. M. Hendrie's New Year's Day and Salt.

IRISH TERRIERS.—*Dogs:* 1st, J. F. McFadden's Dennis; 2d, Chestnut Hill Kennels' Breda Jim; 3d, Dr. J. W. Streeter's Paddy Linden. *Bitches:* 1st, Chestnut Hill Kennels' Breda Tiney; 2d, Dr. J. S. Niven's Peggy.

SCOTCH TERRIERS.—CHALLENGE—1st, J. H. Naylor's Rosie.—OPEN—*Dogs:* 1st, J. H. Naylor's Lowrie Dunbar; 2d, Meadowthorpe Kennels' Meadowthorpe Donald. *Bitches:* 1st, Toledo Kennel Club's Glen Ettle; 2d, 3d, very high com., high com. and com., J. H. Naylor's Fanny Fern, Gypsy Belle, Jessie, Little Gem and Snowflake.

DANDIE DINMONT TERRIERS.—CHALLENGE—1st and 2d, J. H. Naylor's Pansy and Bonnie Briton.—OPEN—*Dogs:* 1st and 2d, Meadowthorpe Kennels' Meadowthorpe Baillie and Meadowthorpe Reiver; 3d and high com., J. H. Naylor's Vinewood King and Vinewood Dirk. Very high com., H. G. Nichols's Border Clinker II. *Bitches:* 1st, Meadowthorpe Kennels' Meadowthorpe Wonder; 2d, J. H. Naylor's Vinewood Nettle; 3d, Dr. J. W. Streeter's Meg Linden.

SKYE TERRIERS.—*Dogs:* 1st, Dr. M. H. Cryer's Gladstone Boy. *Bitches:* 1st, Meadowthorpe Kennels's Meadowthorpe Coila.

BLACK AND TAN TERRIERS.—1st, Campbell & Blake's Nanon; 2d, withheld.

YORKSHIRE TERRIERS.—*Dogs:* 1st, Mrs. F. F. Wood's Dick; 2d, Oakhurst Kennels' Fishpool Fred; 3d, A. M. Goldsmith's Damfkare. Reserve, S. Coulson's Dixey. High com., A. McGregor's Billy. Com., J. W. Merriam's Dandy Dick. *Bitches:* 1st, J. W. Merriam's Nadjy.

TOY TERRIERS.—1st, Campbell & Blake's Tiny.

PUGS.—CHALLENGE—*Dogs:* 1st, Dr. M. H. Cryer's Dude; 2d, A. E. Pitts's Kash. *Bitches:* 1st and 2d, Dr. M. H. Cryer's Bessie and Vic.—OPEN—*Dogs:* 1st, Acme Kennels' Lord Nelson; 2d, Miss I. F. Ryder's Bijou; 3d and reserve, Dr. M. H. Cryer's Climax and Bob Ivy. Very high com., Mary W. Williams's B. & O. High com., W. P. Paddon's Coco. Com., R. W. Bates's Muffins. *Bitches:* 1st, Mohawk Kennels' Bo Peep II.; 2d, Dr. M. H. Cryer's Juliet; 3d, W. P. Paddon's Chin Chin. Very high com., Lake City Pug Kennels' Lake City Bonnie. *Puppies:* 1st, Dr. M. H. Cryer's Bob Ivy; 2d, Mrs. Sohl's Flora; 3d, Acme Kennels' Tody.

KING CHARLES SPANIELS.—*Dogs:* 1st and 3d, R. W. Holmes's Hylus and Milwaukee Prince; 2d, M. J. Nolan's Rey. Very high com., Mrs. J. S. Buhrer's Billy. Com., Mrs. F. S. Flint's Trouble. *Bitches:* 1st, T. E. Camp's Nell Gwynne II.; 2d, C. W. Sander's Mona; 3d and very high com., R. W. Holmes's Milwaukee Gem and Milwaukee Belle. High com., Mrs. F. S. Flint's Mischief.

ITALIAN GREYHOUNDS.—1st, C. T. Merritt's Dixie; 2d, Mrs Geo. B. Buchanan's Daisy.

MISCELLANEOUS.—1st, Campbell & Blake's Nellie Gray; 2d, G. Tauscher's Buby; 3d, C. Rosser's Sir Lucifer.

CENTRAL FIELD TRIAL CLUB.

Editor Forest and Stream:

The attention of the members of the Central Field Trial Club having been called to Secretary Brumby's communication in your issue of April 4, I am directed to say that when we named our date we were not aware that the Southern had named a date, and we now find that circumstances over which we have no control, prevent our complying with the request of the Southern Field Trial Club, viz., that the Central Field Trial Club change its date of running. The Indiana date is fixed for Nov. 4, and the Eastern for Nov. 18, hence the Central cannot advance its date without running in direct conflict with one or both of these clubs. Every sportsman will see at a glance that the Central cannot fix their date prior to Nov. 4 or later than about Dec. 2, as the weather in North Carolina will not admit of it. Prior to Nov. 4 it would be too warm and vegetation would be too rank; after Dec. 2 the weather would be too cold and stormy.

We are informed that the Southern Field Trial Club has no trial following it until February. The season in Mississippi is very late, and when all the circumstances are considered it will be found that Jan. 1 or later would be more favorable for holding trials in Mississippi; vegetation would not be so rank and the Northern and Western dogs would have an opportunity to finish running at the Indiana, Eastern and Central, go South and become acclimated, before starting at the Southern.

The Central Field Trial Club has the very highest regard for the Southern, and begs to assure them that they can count on our hearty support and co-operation in all things possible, but we cannot undertake the impossible. Our stakes have been advertised, and the number of entries thus far received surpass the club's most sanguine expectations. To change the conditions (except to increase the stakes) would be to risk forfeiting every one of those entries. The number is so large that the Central dare not take the risk even if all other circumstances, instead of prohibiting, favored the change.

Once more assuring the Southern of the deep interest we take in the success of their trials, also of the strong desire of many of our members to enter dogs for competition in their trials, we beg them to arrange the date of their running to conform to the date of the Central, so that the dogs can complete the entire circuit, but if they cannot or will not change their date, we beg all sportsmen who originally intended entering and running their dogs at the Southern to carry out those intentions. If any of the numerous gentlemen, who have been so prompt in pledging us support and favoring us with entries, feel that they have made a mistake, or would send their entries to the Southern provided the Central were not in existence, and will promptly advise us, we will return their entry blanks and forfeit money. We trust this action on our part is sufficiently broad to convince every sportsman that the Central has no desire to weaken or injure the Southern to the extent of one single entry. We extend to each and every member of the Southern, as well as to every sportsman throughout the country, the heartiest invitation imaginable to be present at Lexington, North Carolina, Dec. 2. They can rest assured that no pains will be spared to make their visit a pleasant one, and we will try to send them home so well filled with pleasant recollections as to insure their regular attendance at every field trial thereafter held by the Central Field Trial Club, whose inaugural meeting will be held at Lexington, N. C., Dec. 2. Entries for the Derbies close May 15.

C. H. ODELL, Sec'y pro tem.
Central Field Trial Club.

THE SEITNER CASE.

WE have received from the secretary of the Pointer Club a voluminous report, giving the reasons and the reasoning by which the committee reached the decision to acquit B. F. Seitner of guilty intent in writing the confidential letter to B. F. Lewis in 1885, directing the latter to look over the all-aged class in pointer bitches, and if the bitch Carrie, entered by Seitner in the puppy class, stood a show to win in the open class, to transfer her to that class, as she was over age. We gave last week the substance of the proceedings at the committee's meeting, and now print an official copy of the resolution exonerating Seitner.

The following is taken from the minutes of the meeting of the executive committee of the Pointer Club of America, held April 9, 1889:

"The executive committee of the Pointer Club of America having this day assembled to investigate a charge of fraud made in the FOREST AND STREAM newspaper of March 7, 1889, against B. F. Seitner, of Dayton, Ohio, claiming that he won an award at the Philadelphia bench show in May, 1885, with a fraudulent entry of his pointer bitch Carrie, in puppy class No. 38, when he knew that she was over age and that her entry was consequently a fraud. After having fully investigated the matter the following resolution was unanimously adopted:

"*Resolved*, That we are unanimously of the opinion, upon the evidence submitted and for the reasons as stated in the report accompanying this resolution, that B. F. Seitner is not guilty, as charged, and that Mr. Seitner's resignation as an officer of the club be declined." (Signed) John S. Wise, Pres.; Jas. L. Anthony, Chas. Heath, J. P. Swain, Jr., G. Muss Arnolt, F. R. Hitchcock, Geo. W. La Rue, Sec'y and Treas.

DOG TALK.

THE trouble in the American Pet Dog Club has been settled in the courts. On Monday Judge Andrews handed down his decision in Supreme Court, which finds that Mrs. Sarah J. Wheatleigh, William J. Fryer, Jr., Mrs. Mary E. Randolph, Charles B. Holmes, and Crump Ormsby organized the club, and that the defendants, Dr. H. R. Surles, Mrs. Eugene Clark, and others, without authority, organized under the same name. They are restrained from advertising meetings of the club and from claiming any further right to the name.

Mr. Jas. Watson informs us that, as he cannot spare the time to attend properly to the editorship of *Reins and Whip*, he has resigned the position.

After the judge, Mr. Gresham, had departed from the Worcester show it was found that some of the special prizes had not been awarded. At the request of the managers, Mr. E. M. Oldham consented to don the ermine. It is scarcely necessary to add that his ardurous duties were performed in a praiseworthy manner and to the satisfaction of all.

Worcester exhibitors that had to depend upon the Boston and Albany Railroad for transportation home fared badly at the hands of that corporation. While dogs were allowed in the baggage cars going to the show, they were compelled to return in charge of the express company, and the exhibitors submitted to the extortion with a very bad grace, and much kicking.

The Hornell-Harmony Kennel is negotiating with Lady Charles Innes-Ker, Uxbridge, Eng., for a Siberian wolfhound bitch to add to their kennel.

A new kennel club has been formed at Pittsburgh, Pa. It is organized under the name of the Duquesne Kennel Club. The officers are Mr. S. L. Boggs, President; Mr. W. Wade, Vice-President; Mr. J. M. Chaplin, Secretary and Treasurer. A number of prominent dog men are members, and we understand that it is the intention of the club to hold a first-class dog show next season.

The German Mastiff or Great Dane Club of America was organized at Chicago, Ill., March 18. The officers elected are Mr. W. F. Fox, President; Mr. J. J. Hoch, Vice-President; Mr. W. E. Hagans, Secretary and Treasurer. The Board of Directors consists of seven. Those chosen for one year are Dr. G. M. Chamberlain and Dr. F. M. Wilder; two years, Messrs. Henry Leeb and Paul Merker; three years, Messrs. W. E. Hagans, J. J. Hoch and Joseph Zilligen.

Mr. F. R. Hitchcock sailed for England in the Umbria, last Saturday. He will have a look at some of the pointers in that country, and if he finds a bitch or two that suits him he will bring them home. Mr. F. Gresham also sailed for home in the same steamer. We wish them a pleasant voyage.

Entries for the Eastern Feld Trials Club Derby close May 1. The address of the secretary is W. A. Coster, Saratoga Springs, N. Y.

PHILADELPHIA DOG SHOW.

PHILADELPHIA, April 16.—The show which opened at Horticultural Hall, this morning, is unquestionably the best that has ever been held in Philadelphia. The building has been crowded all day, and if the weather holds good success is assured. We have never seen so much interest taken in a show in this city. The quality of the exhibits is excellent, and after New York and Boston this is the best show of the year. [Owing to the pressure of kennel news upon our columns we are obliged to postpone printing the awards till next week. They will be published then with the critical report.]

RUNNING WEIGHT OF GREYHOUNDS.—*Editor Forest and Stream:* As many people have made inquiries as to my greyhound Lord Neversettle's weight, and as Mr. M. E. Allison in your paper of March 28 guesses his weight at 100lbs., will you allow me space to say that I have just had him weighed, and his exact weight is 72lbs., but the dog at the present time is very full of flesh, his running weight would therefore be 64lbs., nothing unusually large for an English greyhound. Most of the dogs who have won the Waterloo Cup will average from 60 to 65lbs. running weight. The largest greyhound we ever saw run was Royal Stag. His running weight was about 72lbs., but he handled his hare like a little one of 45lbs., and won the great Champion Stakes (64) dogs of all ages, at Kempton Park (an inclosed meeting). A very light actioned dog is Lord Neversettle, and he can turn with a jack rabbit quicker than White Lips, who is only 51lbs. We may here state, that when Dick's Darling is all right that possibly the owners of White Lips and Dick's Darling may make a friendly match in the fall to decide which is the better greyhound. When Mr. M. E. Allison will have his opportunity of laying those considerable odds he speaks of in favor of Dick's Darling we think he will find some coursing men in the West who will take the odds.—H. C. LOWE.

THE ST. BERNARD CLUB.—At a meeting of the Board of Governors of this club, held on April 8, 1889, the secretary read the correspondence with the New England Kennel Club, relating to their classification and premiums for smooth-coats at their April show, the N. E. K. C. declining to consider their published premiums. The following resolution was then unanimously passed: *Whereas*, The Board of Governors at this meeting reviewing the action of the bench show committee of the N. E. K. C. at their recent show, hold that in discriminating between the rough and smooth-coats, they have acted discourteously toward this club. *Whereas*, The St. Bernard Club makes no distinction in quality between rough and smooth-coats, be it *Resolved*, That hereafter all special prizes offered by this club and accepted by any of the bench show clubs to be made subject to the conditions that there be no difference or distinction made in the premium list of the show at which the prizes are to be competed for, and that both rough and smooth-coats be classified equally and on the same basis.—LORENZO DANIELS, Secretary.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Pierrot. By F. D. Folsom, Dover, Me., for black cocker spaniel dog, whelped Jan. 31, 1889, by Jim Crow (Nero—Slick) out of Jet (Earl—Cully).

Alpine Kennels. By H. W. and W. S. Mack, Fairfield, Conn., and C. D. Bernheimer, New York, for their kennels of St. Bernards.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Dot—Clydesdale Hero. Curry & Parks's (Beason, Ill.) collie bitch Dot (champion Rex—Jersey Lily) to their Clydesdale Hero (Clifton Hero—Jean), March 13.

Berna II.—Martigney. D. Bergman's (St. Paul, Minn.) St. Bernard bitch Berna II. (A.K.R. 6883) to his Martigney (A.K.R. 4275), Feb. 18.

Mona—Rockingham. F. Windholz's (New York) English setter bitch Mona (Belthus—Princess Phœbus) to his Rockingham (Belthus—Bess), March 26.

Blitz—Rockingham. F. Windholz's (New York) English setter bitch Blitz (Thunder—Peg) to his Rockingham (Belthus—Bess), March 27.

Princess Phœbus—Count Howard. F. Windholz's (New York) English setter bitch Princess Phœbus (Prince Phœbus—Patch) to his Count Howard (Sir Alister—Mena), March 13.

Fannie F.—Clyde Bondhu. F. A. Frazer's (Lynn, Mass.) English setter bitch Fannie F. (Cap—Peek-a-Boo) to W. H. Beede's Clyde Bondhu (Gus Bondhu—Lady Dixie), March 14.

Sandy—Clyde Bondhu. C. T. Hilton's (Lynn, Mass.) English setter bitch Sandy (Currier's Ned—Sue) to W. H. Beede's Clyde Bondhu (Gus Bondhu—Lady Dixie), March 7.

Brownie—Obo-crit. N. V. Ketchum's (Savannah, Ga.) cocker spaniel bitch Brownie (A.K.R. 3072) to his Obo-crit (A.K.R. 4100), Feb. 22.

Phyllis D.—Little Red Rover. John E. Weston's (Utica, N. Y.) cocker spaniel bitch Phyllis D. (A.K.R. 6088) to Theo. J. Hook's champion Little Red Rover (champion Obo II., (A.K.R. 432)—Woodstock Dinah), April 8.

Nellie—Black Duke. B. J. Rae's (Woodstock, Ont.) cocker spaniel bitch Nellie (Obo, Jr.—Belle) to Jas. Luckwell's Black Duke (Obo II.—Woodland Queen), April 8.

Tough—Obo, Jr. Corktown Kennels' (Ottawa, Ont.) cocker spaniel bitch Tough (Wildair—Belle) to Rideau Kennels' Obo, Jr. (A. K.R. 1481), April 8.

Hezlep Jess—Buffalo General. Wm. Mariner's (Milwaukee, Wis.) black and tan terrier bitch Hezlep Jess (Mahomet—Lady) to A. W. Smith's Buffalo General (Halifax General—Lady Lottie), April 7.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Betsy. H. T. Wilson's (Lynn, Mass.) English setter bitch Betsy (Rex—Betsy), March 3, eight (four dogs), by W. H. Beede's Clyde Bondhu (Gus Bondhu—Lady Dixie).

Ruby Buckellew. J. L. Breeze's (Tuxedo Park, N. Y.) English setter bitch Ruby Buckellew, Feb. 24, six (three dogs), by his Gloster.

Modesta. R. C. Cornell's (New York) English setter bitch Modesta, March 28, six (two dogs), by Jas. L. Breeze's Gloster.

Allie James. P. Lorillard, Jr.'s (Tuxedo Park, N. Y.) English setter bitch Allie James, April 2, six (two dogs), by Gath's Mark.

Lavalette. P. Lorillard, Jr.'s (Tuxedo Park, N. Y.) English setter bitch Lavalette, April 6, five (two dogs), by champion Roderigo.

Belle of Stanton. P. Lorillard, Jr.'s (Tuxedo Park, N.Y.) English setter bitch Belle of Stanton, April 10, five (one dog), by champion Paul Gladstone.

Little Nell. P. Cambles's (Philadelphia, Pa.) Irish setter bitch Little Nell (champion Elcho—champion Rose), April 10, seven (five dogs), by his Dick Swiveller (champion Bruce—Leigh Doane II.).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

King Bannerman. White, black and tan beagle dog, whelped Sept. 2, 1888, by Bannerman (A.K.R. 1709) out of Blossom (A.K.R. 5711), by H. S. Gilbert, Millersburg, Pa., to W. C. Crandall & Co., Springville, N. Y.

Laddie Collier. Collie dog, age and pedigree not given, by Henry E. Alvord, Amherst, Mass., to Dr. Peter Collier, Geneva, N. Y.

Don Louis. Collie dog, age and pedigree not given, by Henry E. Alvord, Amherst, Mass., to Geo. P. Strong, St. Louis, Mo.

Joe Jeff. Collie dog, ago and pedigree not given, by Henry E. Alvord, Amherst, Mass., to Geo. P. Strong, St. Louis, Mo.

Jessie S. Collie bitch, age and pedigree not given, by Henry E. Alvord, Amherst, Mass., to Geo. P. Strong, St. Louis, Mo.

Superbus II.—Katrina whelp. Red dachshund bitch, whelped Sept. 24, 1888, by F. G. Stewart, Hoosick Falls, N. Y., to George A. Rosa, Schenectady, N. Y.

Sailor—Bess whelp. White, black and tan foxhound bitch, whelped July 24, 1888, by F. G. Stewart, Hoosick Falls, N. Y., to Nelson Brownell, same place.

Prince Paul. Orange tawny St. Bernard dog, whelped Jan. 29, 1889, by Martigney (A.K.R. 4275) out of Fanny Hamilton, by D. Bergman, St. Paul, Minn., to M. Wittleshoefer, Grand Forks, Dak.

Martigney II. Orange brindle St. Bernard dog, whelped Jan. 29, 1889, by Martigney (A.K.R. 4275) out of Fanny Hamilton, by D. Bergman, St. Paul, Minn., to M. Lewis, Aberdeen, Dak.

Governor Hill and Bessie King. Black and tan terrier dog and bitch, whelped April 24, 1888, by King out of Gipsey Queen, by A. W. Smith, Buffalo, N. Y., to John G. Burns, same place.

PRESENTATIONS.

Superbus II.—Katrina whelps. Red dachshunde, whelped Sept. 24, 1888, by F. G. Stewart, Hoosick Falls, N. Y., a dog and bitch to Chas. L. Dick, Johnstown, Pa., and a bitch to Dr. John A. Hartmann, Latrobe, Pa.

Sailor—Bess whelp. White, black, tan and blue ticked foxhound bitch, whelped July 24, 1888, by F. G. Stewart, Hoosick Falls, N. Y., to F. Dore, same place.

Trump. Black and tan foxhound dog, age not given, by Sport out of Lady, by Chas. L. Dick, Johnstown, Pa., to F. G. Stewart, Hoosick Falls, N. Y.

Betty. Black and tan foxhound bitch, age not given, by Lead out of Girl, by Chas. L. Dick, Johnstown, Pa., to F. G. Stewart, Hoosick Falls, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. L. D., Lockport.—I have an English setter puppy, about 3 months old, that has worms. What shall I do for them? Ans. A teaspoonful of the fluid extract of spigelia and senna twice daily will probably bring away the worms.

POINTER, Fitchburg, Mass.—My pointer bitch has a dry and hot nose, and at times it seems to affect her scent; general health good and seems to feel well. There are small scales on her nose sometimes. She is fed from the table, but don't give her much meat. What can I do for her? Ans. Give five grains of quinine in pill form concealed in bit of meat morning and evening for one week.

A. F. WALKER, Philadelphia, Pa.—Will you kindly prescribe for my beagle bitch, one year old the 21st inst.? About four weeks ago she came in season and was warded, and one week after her right side seemed paralyzed; when she would walk she fell over. At present she is a little better, but still twists her hindquarters when she runs, and her tail hangs down. She does not suffer any pain. Ans. Give ten drops of tincture of nux vomica night and morning. Give a Bland's iron pill three times daily concealed in a bit of meat.

J. H., Lyme, Conn.—I have a cocker spaniel bitch, 18 months old; she had eight pups on March 30, five days before the time was up; since then she has been sick with the following symptoms: Diarrhœa; choky cough, vomiting mucus, and panting for breath as if choking; eyes full of white matter; nose dry; appetite poor; very little milk for two pups I kept. I can't make out what ails her. Can you? What can I do for her? Have been using homeopathic specifics for distemper and coughs. Ans. It is not unlikely that she has a post partem or puerperal fever. If there is a profuse vaginal discharge you had better douche the vagina with a carbolized solution, one teaspoonful to pint of water. Give two drops of aconite every hour if fever be present, and five grains of quinine in pill form night and morning. You can conceal the pills in a morsel of meat.

M. J. C., Pittsfield, Mass.—I have a pointer dog, two years old, that has some kind of a humor about his head. He scratches his head a good deal, and shakes it continually after exercising and getting heated. His head and ears seem to be hot and feverish (his nose is cold at all time). He scratches his eyes until the lids are swollen and sore all the time. Think he is troubled with worms, as he passes quite a number of them. His head or ears does not break out much except about the eyes. The inside of his ears are not sore. Ans. Give your dog a tablespoonful of castor oil. Follow this in two hours with 40grs. of powdered areca nut made into a large pill with lard. Keep the bowels freely operating for two days. After the second day give 5grs. of quinine night and morning. Feed principally milk and soups; very little meat. If the head does not improve, get some zinc oxide ointment and rub a little in morning and evening.

THE following letter received by the United States Cartridge Co., Lowell, Mass., from Mr. F. S. Lindsley, Supt. American Wood Powder Co., West Hoboken, N. J., speaks for itself: "I am perfectly willing that you should use my name to indorse your shells, and especially your new primer for American wood powder, and I heartily recommend your shells to wood powder shooters. As a matter of fact I have recommended your paper shells for the last eighteen months, and have in that time shot thousands of them, and given away thousands of them loaded with wood powder.—*Adv.*

NEW YORK, May 17, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—It affords us much pleasure to report upon your latest Climax shells with strong primers received this morning. We have tested them with Schultze powder, and find them simply excellent in every particular, and practically equal to the best adapted English primer. Two and a half drams to 3¼ drams of Schultze powder in 12-bores and 3½ to 4 drams in 10-gauge worked to perfection in your shells, loaded simply like black powder and without ramming. Very truly yours (Signed), VON LENGERKE & DETMOLD.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

OWENSVILLE, Ind., April 9.—The Owensville Ballard Rifle Team. Four members made following scores to-day: Match at standard targets, 200yds. off-hand; J. Montgomery won gold medal:

J Montgomery	9	6	7	6	10	10	7	9	7	6—77
W Roberts	7	9	10	9	8	8	6	5	8	6—76
J Dougherty	5	10	9	6	8	8	3	9	7	5—72
R Speck	7	5	6	5	7	5	6	5	4	10—60

Rest Shooting.

J Montgomery	9	10	8	9	10	10	10	8	10	9—93
W Roberts	10	10	10	10	8	9	8	7	8	9—89

BOSTON, April 13.—The regular weekly shoot of the Massachusetts Rifle Association, to-day, was well attended. A strong fishtail wind from 10 to 12 o'clock made high scores impossible. Mr. Loring won the gold champion medal and Mr. Munroe won the gold medal in the 20-shot rest match. D. Webster's telescopic sights were handicapped 4 points. Following are the best scores:

Twenty-Shot Rest Match, 200yds.

J R Munroe	7	9	11	11	8	9	11	12	11	9	
	9	9	8	11	12	9	10	8	11	9	9—194
D Webster	9	8	12	10	8	7	11	9	11	12	
	8	9	12	10	10	8	10	11	11	9	9—195
J Francis	6	9	8	9	8	5	11	12	9	12

NEWARK, N. J.—The 37th annual festival of the Newark Shooting Society is announced at the Newark Shooting Park for July 4, 5 and 6. Schuetzen rules to govern. The programme includes:

Ring Target.—This target is divided into 25 rings, three-quarters of an inch apart, the center counting 25. The following prizes and premiums will be distributed. Open to all comers. The shooter making the most points on one ticket shall be entitled to first prize; the shooter making the second most points on one ticket shall be entitled to second prize, etc. First prize $50; 30 prizes; total $310. Premium for best three tickets $5, second best three tickets $3. Tickets for three shots: For the first ticket purchased by each shooter $2, each following $1. Each shooter may obtain as many tickets as he pleases, but can obtain but one prize and one premium.

Man Target.—This target represents the head and body of a man, and is divided into half-inch vertical lines, center line counting 20. Open to all comers. Prizes will be distributed on this target as follows: The shooter making the most points on one ticket to take first prize, and so on. First prize $30; 25 prizes; total $185. Tickets for three shots $1. Each shooter may purchase as many tickets as he pleases, but can obtain but one prize.

Bullseye Target.—The bullseye proper is four inches in diameter, placed in the center of a black of twelve inches. Open to all comers. Best single bullseye to count. First prize $35; 30 prizes; total $200. Tickets for ten shots $1. Each shooter can obtain but one prize and one premium. The shooter making the best bullseyes will be entitled to first prize, etc. The most bullseyes made by one shooter during the festival, $10; second most bullseyes, $8; third, $5; fourth, $3; fifth, $2; first and last bullseye each morning and afternoon, $1.

Champion Target.—Tickets for five shots 50 cents. Open to any rifle, without restriction as to weight, sight or trigger pull. 20 per cent. of receips will be deducted for expenses, balance to be divided into prizes according to number of competitors. First prize 25 per cent., balance divided *pro rata* among one-half of the competitors. Best single ticket to take first prize, and so on. Entries unlimited.

ST. LOUIS, Mo., April 13.—At the last regular weekly shoot of the St. Louis Pistol Club Fodde and Bauer quit even with 82, but on the shoot-off the former won easy with a score of 87. Mr. Perret is still high on the general averages. Fodde has worked up from third place to second and is crowding Perret for first honors. The club uses a .22-cal. Stevens gallery pistol and a 20yds. standard American target. Score:

F A Fodde	9	10	5	9	9	7	8	10	6	9—82
W Bauer	8	6	9	7	10	7	6	10	9	10—82
L V D Perret	9	7	8	5	9	6	6	10	9	7—79

UNSER FRITZ.

OWEN SOUND, April 10.—The Owen Sound Rifle Association have held their annual meeting, and the association starts with good prospects for another year. The membership list, when completed, will include about 200 names. The president's report showed the association's financial affairs to be in a flourishing condition. The officers for the year are: President, Dr. C. M. Lang; Vice-President, Lieut.-Col. Telford; Secretary-Treasurer, Charles C. Pearce. Range Officers—Charles Gordon, Charles K. Grigg, James Oatt. Executive Committee—The officers of the association and Messrs. H. W. Jenkins, A. J. Creighton, A. J. Cameron, W. J. Campbell, James Noble, James Beaton, James Allen and Dr. C. P. Johnson. Finance Committee—Dr. C. M. Lang, C. C. Pearce, C. J. Grigg. Efforts are being made to amalgamate the Rifle Association and the Owen Sound Gun Club.

A RECOIL REPEATER.—Two brothers, watchmakers in Koenigsberg, have recently invented and perfected a rifle of the repeater type, which can deliver two aimed shots every second. The force of the recoil is utilized in the action of the arm, which is said to be the highest of any type of the kind yet known, and it is now being examined by the Minister of War at Berlin.

A STRAW POWDER.—The new Hengst gunpowder is prepared from straw, which is pulverized, chemically treated, and finished in granular form for use. It is claimed for this powder that it is smokeless, flameless, practically non-fouling and non-heating, and that both the recoil and the report are less than those of black powder, with superior penetrative power.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

April 24 and 25.—Willimantic, Conn., Rod and Gun Club Tournament, open to all.

April 30.—San Antonio, Tex., Tournament. Open to all comers.

May 21 to 23.—Minneapolis Gun Club Tournament, Minneapolis, Minn. James Pye, Secretary.

South Side Gun Club Tournament, Milwaukee, Wis., May 29, 30 and 31. C. W. Milbraith, Secretary.

June.—Annual Tournament Sportsmen's Association of the Northwest, Tacoma, Wash.

June 4 to 7.—New York State Association for the Protection of Fish and Game, Convention and Tournament, Albany, N. Y.

The New York Suburban Shooting Grounds Association has joined the New York State Sportsmen's Association, and will send delegates to the State convention to meet in June at Albany. It will also send a number of members to contest for the prizes and honors to be shot for at the State tournament. It is the intention to go and return in a body, establish a New York city headquarters, and by consolidation of interests increase the enjoyment of all. It is expected to have three contingents—New Jersey, New York and Connecticut—members of the Association.

We wish to extend an invitation to any and all sportsmen visiting this city during the Centennial celebration, to visit our grounds at Claremont and participate in the shooting which will be going on from 9:30 A. M. until sundown on April 27, 29, 30 and May 1.

Sweepstakes and practice shooting will be in progress most of the time. N. Y. SUBURBAN SHOOTING GROUNDS ASS'N,
Chas. Richards, President.

W. FRED QUIMBY, CHAS. TATHAM, W. R. HOBART, Reception Committee.

TRAP CHAT.

THE Nebraska tournament will fix its dates as soon as it learns those of the Iowa State tournament, which it will immediately follow, and will announce dates as soon as determined. Norfolk is favorably situated for such an event, and is easily accessible by rail from all points.

WORCESTER, Mass., April 12.—At this week's meet of the Worcester Sportsmen's Club at Coal Mine Brook Range the men were troubled with the wind, which made the targets duck and dive somewhat. The classification series was the principal event. The classification is made on the total of 5 events of 6 birds each, Class A, all who break 22 or more, and Class B, all under 22 broken. In each class there is a purse, A aggregate $15, and B $10; ties divided. The result of each man's work at the meet this week follows:

Class A.	Classif.	Prize.	Class B.	Classif.	Prize.
M D Gilman	27	9	C R B Claflin	15	9
G J Rugg	27	9	E S Knowles	20	8
E Jewett	24	9	Dr Bowers	17	7
Chas Crompton	25	8	A L Gilman	20	6
Geo Sampson	25	8	L R Hudson	18	5
E W Russell	24	7	A B Franklin	20	4
C H Howe	25	5	H Colvin	16	4
E F Swan	24	5	C Forehand	15	3
			F Forehand	6	2

WATSON'S PARK, Grand Crossing, Ill., April 11.—Audubon Club of Chicago. Handicap match at 15 live pigeons, 5 ground traps, 30yds. rise, 80yds. boundary. Shot under Illinois State rules, for medal:

J Rice (31)	011111110101111—12	C E Fargo (31)	010000110010000— 4
Kleinman (33)	110111111111111—14	W W Foss (32)	100100111111101— 9
W Mussey (30)	110000111111100— 9	R Wads'th (30)	111010111101111—12
C Wilcox (29)	111C01111101100—10	Chas Kern (30)	111011010100011— 9
Shepard (30)	011111110100111—11	Kleinman wins the medal.	

April 13.—Match at 20 Peoria blackbirds, 3 traps, 18yds. rise:

Hamline	11000110101011110011—13	Stone	01101111111110111111—17
Foss	01100011011111110100—12	Eustis	10000000111100011110— 9
J E Price	10110101010100101111—13	Willard	11100110110011110010—12
Donnald	11101101101111110001—14	Percy Stone wins the medal.	

Match at 10 live pigeons, 5 ground traps, 30yds. rise, 80yds. boundary:

C E Willard	2210020212—7	Donnald	0212022002—6
H A Foss	1222011122—9	Stone	1011111022—8
Hutchinson	1111102111—9	Eustis	0221012120—7
J E Price	1201012001—6	Hamline	2202100020—5

Ties: H. A. Foss 2, Hutchinson 5. Doc. Hutch wins the medal.
—RAVELRIGG.

EATON SPORTSMEN'S CLUB, Eaton, N. Y., April 6.—Shoot for badge, 15 birds, 3 angles:

Richardson	0011011111101011—10	Hamlin	1110000011101111— 9
Bell	0110110011011110— 9	Curtis	1110111101111111—13
Briggs	1000101011011100— 7		

CORRY, Pa., April 11.—The Corry Gun Club held its weekly shoot to-day under unfavorable circumstances, as it rained almost the entire afternoon. As Messrs. Penrose and Wetmore are barred from shooting for the medals, Mr. Blydenburg won the gold medal. Lewis, Laurie and Scott tied for the silver medal, and on the shoot-off Lewis won, and Norton won the leather medal. Keystone targets, traps and rules were used: Penrose 25, Wetmore 22, Blydenburg 22, Lewis 21, Laurie 21, Scott 21, Swift 18, Barker 18, Arnold 16, Swan 16, Edwards 16, Green 16, Howard 16, Blair 15, Ward 15, Austin 15, Berliner 14, Waggoner 14, Kelaher 14, Brown 13, Oliver 13, Smith 13, Wilson 12, Mead 11, Newman 10, MacKenrie 10, Jacobson 9, Bentley 8, Wasson 8, Starbird 7, Norton 3. Blydenburg gold medal, Lewis silver medal, Norton leather medal.

THE ALBANY TOURNAMENT.

ALBANY, April 12.—The two day's tournament at Albany, April 11 and 12, under the auspices of the Elm Grove Gun Club, was a most enjoyable affair. There was a large number of visiting sportsmen in attendance, coming from Syracuse, Utica, Saratoga, Troy, Cohoes, Hoosick Falls, Cazenovia, Johnstown, Cambridge Catskill, and Hoboken and Plainfield, N. J. The tournament committee, Messrs. C. A. Beckford, Holly Gardner and "Charlie Ross" Gove, did everything in their power to make it pleasant for the visitors. Kingbirds were the targets used throughout the shoot. Mr. Cruttenden had charge of the traps, and they worked to perfection. Genial Horace B. Derby, of the Albany *Argus*, was the official scorer and general 'Peacemaker." Harry Ransom pulled the traps, and Mr. George Porter made an impartial referee. On the first day the weather was most delightful and the attendance very large, but on Friday it was disagreeable, light showers continued at intervals throughout the day, and the light was very bad, making it very hard shooting. The committee are making great preparations for the State shoot. A side programme will be shot, open to all, so that non-residents of the State who may attend, will be assured plenty of shooting and liberal guaranteed purses.

First event, 9 singles:

Gardner	111111111—9	J W Porter	110111111—8
Mosher	110111111—8	L P Schult	011111110—7
Apgar	111111111—9	Stockwell	010111001—5
C Ransom	111111101—8	Levingston	111011111—8
S Goggin	101011111—7	Gibbs	101111110—7
Tee Kay	001110011—5	Ramsdell	010101111—6
M Lindsley	110101111—7	C A Johnston	111111101—8
Patten	100101111—6	Cunningham	10000w.
Felton	110111111—8	Loid	111111011—8
A McClure	110010001—4	Paul	001111111—7
C E Ruth	000110011—5	Rockworth	111111101—8
Ed Collins	111101111—8	Gore	101110111—7

Apgar and Gardner first, Ransom and Felton second on shoot-off, breaking 6, third and fourth divided.

Second event, 9 singles:

Collins	111110110—7	Ruth	001001111—5
Mosher	101111111—8	A McClure	001001111—5
Gardner	111111111—9	Pattin	101111100—6
Lindsley	011111111—8	Porter	110101110—6
Apgar	111111111—9	Schult	111111101—8
Levingston	011111101—7	Gibbs	111111111 —9
Ransom	011110111—7	Partiss	111111110—8
Ramsdell	110011101—6	Stockwell	110111101—7
C A Johnston	111101111—8	Gore	011111111—8

Mosher	111111-6 10 11 11-5-11	Felton	111101-5 10 10 11-4- 9
Gardner	011111-5 11 11 11-6-11	Spinks	111101-5 11 00 11-4- 9
Gore	011111-4 11 11 11-6-10	Porter	110111-5 11 10 11-5-10
Collins	110111-5 11 10 11-5-10	Greener	111001-4 10 11 11-5- 9

Apgar, Schutt and Rockworth first on shoot-off; Collins and Porter second; Tee Kay, Goggin, Felton, Spinks and Greener third; Paul fourth.

Sixth event, 9 singles, $20 guaranteed:

Lindsley	111111111—9	Apgar	111001111—7
Gore	111111110—8	Cunningham	001111110—6
Gardner	111111111—9	Schutt	111001111—7
Tee Kay	111111111—9	Mosher	111111110—8
Goggins	110101111—7	Collins	111111111—9
Paul	111111111—9	Lord	111011111—8
Porter	100111111—7	Rockworth	111111111—9

First on shoot-off, Lindsley, Tee Kay, Collins and Rockworth; Gore, Mosher and Lord second; Schutt, Goggins, Porter and Apgar third; Cunningham fourth.

Extra No. 1, 9 singles: Cunningham 6, Tee Kay 5, Partiss 7, Apgar 8, Mosher 6, Collins 7, Becker 6, Pane 8, Schutt 9, Gove 0, Lindsley 7, Roth 6, Gibbs 6, Livingston 9, Ramsdell 4, Gardner 9, McClure 6. All ties divided.

Extra No. 2, 9 singles: Lindsley 9, Tee Kay 0, McClure 0, Felton 8, Becker 5, Paul 0, Grove 6, Schutt 9, Cunningham 7, Livingston 7, Gibbs 6, Ramsdell 5, Partiss 6, Mosher 8, Dunn 6, Stockwell 7, Gardner 6, Collins 6, Apgar 8. Lindsley, Schutt, first; Felton, Mosher, Apgar, second; Cunningham, Livingston, Stockwell, third; Partiss and Collins divide on shoot off.

Extra No. 3, 9 singles: Mosher 9, Cunningham 6, Tee Kay 7, Apgar 9, Lindsley 7, Lord 7, Collins 9, Becker 6, Spinks 8, Schutt 8, Philton 8, Gore 9, Gardner 9, Paul 6, Porter 7. Apgar and Gore first on shoot off; Spinks, Schutt, Felton, third; Tee Kay third on shoot off; Cecker, Paul, Cunningham, fourth.

Extra No. 4, 6 singles: Collins 5, Lindsley 4, Apgar 6, Schutt 6, Cunningham 4, Goggin 5, Ransom 6, Paul 6, Gardner 6, Rockworth 5, Porter 4, McClure 2, Gore 6, Lord 4. Apgar and Gardner first on shoot off, breaking 12 each. ollins, Cunningham and Rockworth second; Porter and Lord third.

April 12.—The tournament of the Elm Grove Gun Club ended to-day. Although the weather was threatening, there was a large attendance. Seven events on the programme were shot. About 5,000 ring birds were broken during the two days.

First regular event, at 9 singles:

Apgar	100111111—7	Mattice	0100110w—3
Gardner	111111111—9	Stockwell	101111101—8
Schutt	101011111—7	Gore	111110110—8
Goggin	111111001—7	Porter	111101100—6
Cunningham	00010 w.—1	Ransom	011101010—6
Collins	111111110—8	Rockworth	111101111—8
Tee Kay	111011110—6	Mosher	011111111—8
Paul	111111111—9		

Gardiner and Paul first, Collins and Gore second on shoot-off breaking 3, Apgar, Schutt and Goggin third, Ransom fourth on shoot-off breaking 6.

Second event, at 9 singles:

Apgar	111111011—8	Paul	111111111—9
Goggin	111011011—7	Mattice	111011111—8
Schutt	111111111—9	Stockwell	111101011—7
Gardner	111111111—9	Porter	100111110—6
Collins	111100111—7	Rockworth	111011111—8
Cunningham	10000 w.—1	Mosher	101101111—7
Tee Kay	000111111—6	Gore	111111111—9

Schutt, Gardner, Paul and Gore div. first, Apgar, Mattice and Rockworth div. second, Goggin, Collins, Stockwell and Mosher third, Tee Kay and Porter fourth.

Third event, walking match, 9 singles, ties div.:

Apgar	101011111—8	Stockwell	111010001—5
Schutt	101011011—6	Mattice	011011110—6
Tee Kay	111101110—7	Collins	111111011—8
Gardner	111111111—9	Porter	000110w.
Goggin	111110110—7	Rockworth	110011111—7
Mosher	111111111—9	Gove	111111110—8
Paul	110011011—6		

Fourth event, 12 singles, ties div.:

Apgar	111111111011—11	Schutt	111111111111—12
Tee Kay	010111011111— 9	Beach	111101111111—10
Collins	110111111101—10	Rockworth	111110111111—11
Gardner	111111111111—12	Dunn	101100110w.
Mosher	111011111111—11	Mattice	100010101011— 6
Paul	101111111110—10	Valentine	111111011111—11
Goggin	101110001000w.	Gove	111110101110— 9

Fifth event, 9 singles:

Apgar	111111011—8	Schult	110101111—7
Tee Kay	110111100—6	Gardner	111110111—8
Collins	111111111—9	Valentine	110100111—6
Goggin	110111001—7	Gove	101111111—8
Mosher	110011111—8	Towsley	010111001—5
Patten	101111101—7	Paul	111010110—6
Beach	111111110—8	Rockworth	110111001—6

Collins first, Beach and Gove div. second, third divided.

Sixth event, 6 singles:

Collins	101111—5	Paul	101111—5
Goggin	111111—6	Gardner	011101—4
Tee Kay	111111—6	Rockworth	111111—6
Schult	111111—6	Valentine	101100—4
Cunningham	111100—4	Towsley	110110—4
Beach	101111—5	Patten	101101—4
Apgar	111111—6	Gove	111110—5

Goggin and Schult first, Collins and Gove second, third div., Valentine fourth.

First sweep, 9 birds: Tee Kay 5, Apgar 9, Stockwell 6, Schutt 8, Gardner 8, Ransom 8, Cunningham 4, Porter 6, Gove 8, Becker 6, Goggin 8, Mattice 4, Collins 6, Rockworth 9, Paul 8. Apgar and Rockworth first, Schutt and Goggin second, Porter and Collins third, Tee Kay fourth.

Second sweep, 9 birds: Gove 7, Tee Kay 7, Schutt 7, Collins 5, Gardner 8, Cunningham 6, Rockworth 9, Becker 7, Stockwell 7. Mosher 6, Apgar 9, Paul 8. Rockworth and Apgar first, Gardner and Paul second, Tee Kay third, Cunningham and Mosher fourth.

Third sweep, 9 birds: Gove 7, Stockwell 7, Tee Kay 5, Gardner 7, Schutt 7, Rockworth 7, Collins 7, Cunningham 4, Beach 6, Paul 6, Becker 7, Apgar 8. Apgar first, Rockworth and Collins second, Beach and Paul third, Tee Kay fourth.

Fourth sweep, 5 pairs: Apgar 10, Collins 9, Tee Kay 6, Goggin 9, Beach 8, Valentine 7, Gardner 9, Schutt 8, Rockworth 6, Paul 8, Gove 10. Apgar and Gove first, Collins, Goggin and Gardner second, Beach, Schutt and Paul third. TEE KAY.

CANADIAN TRAP NOTES.

MONTREAL, April 6.—There was quite a crowd present at the rod competition on the Montreal Gun Club grounds to-day, but only seven contestants put in an appearance. However, the seven had their work cut out for them with the new birds and traps. The Keystone and Hamilton traps were on trial, and they both were a declared a decided improvement. Mr. Alexander won the first Reu on the rod with a score of 10. It must be won twice by any competitor before becoming his property. The donor arranged the handicap, and the conditions called for 24 birds thrown from a Keystone trap. Following is the score: Fishing rod competition at 24 birds. A. G. Welsh scorer, A. Rudolf referee:

Alexander (18)	110000110010001011010100—10
Lumsden (25)	011011010110011000010000— 9
Paton (21)	010110101000000000000011— 7
Parker (25)	001100000010010000110000— 6
Brainerd (18)	100011101110000000000010— 9
Cowley (25)	001001100000001010011010— 8
Laidlaw (18)	001001000001000010011010— 7

TORONTO, April 12.—The Stanley and West Toronto Junction Gun clubs' return shooting match took place on McDowell & Co.'s grounds this afternoon, in the presence of a large number of sportsmen. The scores, as will be seen below, are not up to the average, notwithstanding the remarkably fine day for shooting. This is the second time the West Toronto Club has met defeat at the hands of the young Stanley Club. The scores are:

Stanley.		West Toronto Junction.	
W Heatherington	16	E Dollery	16
C Kemp	16	W Bugg	14
W Felstead	16	D Black	14
T Sawden, Sr.	16	D Walton	13
W McDowell	15	A White	13
G Morley	15	P Wakefield	12
J Rice	13	D Bica	12
F Mallett	12	S Crow	11
J Mitchell	11	W Smith	8
T Sawden	11—141	C Hinton	7—120

TORONTO, April 13.—The Stanley Gun Club shoot for the handsome gun presented by W. McDowall & Co., took place on the latter's grounds this afternoon. The men were handicapped and the shooting in some instances was away down. Mr. F. Sawden, Jr., the youngest member of the club, and who promises to develop into a first-class shot, is the first to capture the trophy, with the score of 22 out of 25. The scores were: F. Sawden, Jr. 22, W. McDowell 20, S. White 19, J. Mitchell 18, C. Kemp 17, J. Rice 15, W. Felstead 15, S. McClure 14, T. Bennett 18, W. Emond 12, T. S. Bayles 11. Half a dozen sweepstakes were also shot.

OTTAWA, April 12.—In a cold, gusty north wind, which made the clays travel like a streak, the match between Dr. Martin and George White on one side, and A. H. Throop and J. Deslauriers on the other, at 100 birds a side (50 each man), took place to-day at the Rideau range. Some very tall shooting was expected, but the other conditions kept the score down and the result was Martin 38, White 40, total 78; Throop 36, Deslauriers 38, total 74.

OTTAWA, April 8.—The annual meeting of the Ottawa Rifle Club was held here this evening. A large number of members were present, and the prospects for the coming season gratifying. The main portion of business was left to a meeting of the managing committee to be held shortly. The election of officers resulted as follows: Pres., Major H. F. Perley; First Vice-Pres., Dr. Geo. Hutchinson; Second Vice-Pres., Capt. Maynard Rogers; Hon. Sec'y-Treas., E. D. Sutherland: Auditors, J. D. Holbrook and L. C. Gooding; Committee of Management, Major Wright, Capt. Grey and J. P. Nutting. The opening matches will commence about the 20th inst.

WOODSTOCK, April 9.—Last night a gun club was formed under the auspices of the Amateur Athletic Association. The officers elected were: Pres., J. E. Thompson; Vice-Pres., S. Woodroofe; Sec., W. G. Clarke; Treas., W. H. Martin; Capt., Geo. Harwood; Managing Committee, D. S. Kendall, A. L. Fay and James A. Sutherland. Everything points to a large and flourishing club, which will be run in connection with the Woodstock Amateur Athletic Association. The initiatory shoot will be held on Good Friday.

The Oil Springs Gun Club reorganized last week with the following officers: Pres., J. Moore; Treas., R. Whittaker; Sec., L. A. Copeland.

BROOKLYN, April 12.—The regular monthly shoot of the Parkway Rod and Gun Club took place to-day at the Old Mill Landing. The contest was for the club badge. Good shooting was the order of the day, no less than six members killing their first five birds straight. The tie was shot off at four birds each. W. Leveys killing his four straight and won the medal. Score:

John Fensch	10111—3	J Ochs	10111—4
D Van Wicklen	001w—1	H Brammell	01111—4
James Bennett	10111—4	H Van Wicklen	11111—5
E Helgans	11111—5	E Ehrichs	10100—2
Jim Savage	11111—5	Philip Kohl	11111—5
H Selover	10101—3	G Schillein	01100—2
Emil Schiellein	00111—3	H G Steinheuser	11011—4
E Schiller	11111—5	E J Steinheuser	10100—2
August Lehman	01111—4	W Levens	11111—5
R Phister	10111—4	P Hahle	10110—3

BROOKLYN, April 12.—The attendance of members at the regular monthly shoot of the Unknown Gun Club to-day was not as large as usual. A pretty stiff breeze blowing across the ground made the birds get away in a lively manner from the traps. Sixteen members competed for the club badge and extra prizes, H. Van Staden, 22yds., and H. Knebel, Jr., 27yds., killed 6 each and tied for the first prize and medal. On the shoot-off H. Knebel, Jr., won, killing 3 straight to his opponent's 2. G. Ellenhorst, 23yds., took the second prize and E. Vroome the third. Score:

H Lee (24)	1011011—5	Dr Hopkins (23)	0011011—4
J Matthews (24)	0010100—2	O Hillmer (25)	0100101—3
E Vroome (25)	1000111—4	H Knebel, Jr (27)	0111111—6
W Skidmore (25)	1000110—3	C Plate (25)	0000011—2
H Ransom (23)	1001010—3	A Hass (25)	10 0001—2
W Gilman (23)	1011010—4	D Monsees (26)	1101110—5
H Van Staden (23)	0111111—6	C Simmons (24)	0101110—4
C Ring (22)	0001110—3	G Ellenhorst (23)	1111010—5

After the shoot a sweepstakes was shot off, with G. Ellenhorst the winner.

MINNEAPOLIS, April 11.—The Minneapolis Gun Club held its usual weekly badge and sweepstake shoot to-day out on its grounds at Bloomington avenue and Thirty-eighth street, where they have decided to remain for the present, and not go to the grounds midway between the cities as at first intended. The street car strike, which both cities have on their hands, made the different shooters "rustle," especially those from St. Paul, but all got there and had a splendid afternoon's sport. The wind was strong and gusty, but some fine scores were made. Next Thursday the club has its monthly all-day tournament, and they are usually successful. Messrs. "Holt," Kennedy, "Chantler," Forbes and Skinner were present from St. Paul. The St. Paul Gun Club shoots each Saturday, and many Minneapolis sportsmen attend, so all get plenty of practice for the coming tournament. Following are the scores:

First event, 10 single peorias, 18yds. rise, $1 entrance: Murphy 6, Dunn 5, Shott 5, Kennedy 7, Lawrence 6, Holt 7, Goosman 6, Chantler 8, Forbes 7, Wiegand 8, Cutter 10, Dalton 7, Warwick 7, Griffin 5, Fox 6. Cutter first, Chantler and Wiegand second, Holt, Dalton and Warwick third, Murphy 4.

Second event, 6 single and 2 pairs peorias: Dunn 6, Shott 9, Kennedy 6, Lawrence 8, Holt 7, Murphy 8, Goosman 6, Chantler 10, Forbes 9, Skinner 6, Brady 7, Dalton 7, Fox 6, Warwick 7, Griffin 4, Marshall 3, Boardman 5. Ensign 9, Cutter 8, Cummings 8, Nicholson 7, Jacoby 0, Latz 5, Stokes 5. Chantler first, second and third divided, Nicholson fourth.

Third event, 10 single and 5 pairs Peorias, 5 screened traps, entrance $1.50, club badge shoot:

Skinner	1111111101	10 11 11 10 10—16	
Dalton	1111011111	11 11 10 10 11—17

Pratt	1011000101	11 11 10 11 10—13	
Goosman	0111111110	01 10 10 10 10—13	

Holt first, Ensign second and badge (senior) on shoot-off, ties on 17 and 16 divided, Warwick wins junior badge.

"Tribune" badge shoot, 9 singles and 3 pair Peorias, 18 and 15yds., $1.50 entrance: Dunn 11, Brady 11, Ensign 9, Dalton 9, Lawrence 13, Shott 8, Skinner 12, Latz 10, Chantler 13, Forbes 10, Cutter 13, Griffin 8, Kennedy 14, Warwick 9, Pratt 9. Marshall 10, Cummings 13, Stokes 14, Holt 11, Cutter 15, Murphy 8, Gooseman 11. Cutter wins badge and first money.

Fifth event, sweepstake, 10 single Peorias: Murphy 7, Dalton 8, Brady 6, Skinner 6, Lawrence 5, Dunn 3, Fox 4, Baugs 9, Kennedy 7, Cutter 8, Ensign 8, Holt 9, Chantler 8, Forbes 7. All ties div.

NEWARK, N. J.—The winter season of the South Side Gun Club, which has just closed, was one of the liveliest in the history of the club, and the shooting was far above that of previous years. On the first, second and third Saturday of each month each member shot at 15 singles and 5 pairs of bluerocks, the same number of clay-pigeons and the same number of bats, making 45 singles and 15 pairs. The entry fee for bluerocks was 50 cents; for clays 25 cents, to which the club added a like amount at the end of the season; to bats 15 cents, with $25 added at the end of the season. Each of these prizes was divided according to the number of classes—one for those making 90 or better in their four best scores of 25; one for those making 80 to 89; one for those making 70 to 79, and one for those making 60 to 69. The results, which have just been figured up, are given in full, giving the class into which each man landed and his four best scores at each of the three targets:

Bluerocks.	Class.	Scores.	Clay Pigeons.	Class.	Scores.
R H Brientnall	90	22 23 23 23—91	Brientnall	90	22 24 23 24—94

Thomas	90	21 22 24 25—92	D D Taylor	60	15 16 17 19—67
Hobart	80	23 22 22 23—90			

The club also offered three premiums of $5 for the best consecutive 100 of each of the targets, and all of these premiums were won by R. H. Brientnall as follows:

Bluerocks.	Clay-Pigeons.	Bats.
21 23 23 20—87	22 24 22 23—91	23 24 25 24—96

WOODSIDE, L. I., April 9.—The North Side Gun Club held its first average shoot for the year, running from April, 1889 to March, 1890, at its grounds to-day. Live birds were shot from 5 ground traps, 80yds boundary, no back boundary:

Eberhardt (27)	1011111—6	Tapken (28)	0101111—5
Manning (27)	0111111—6	Lyon (25)	1101111—6
Winholz (26)	0111111—6	Blanch (22)	0011011—4
Barlow (26)	0111111—6	Chevallier (26)	1111111—7
Bussell (26)	0110111—5	Grau (25)	1110001—4
Bohmcke (25)	1100100—3	Meyer (25)	1110011—5
Rinkhoff (25)	1111110—6		

April 12.—The Manhattan Gun Club held its regular shoot today, 10 live birds, Manhattan Gun Club rules:

Lambrecht	0000111010—6	Maisenholder	1101110000—5
Baver	1000001110—4	Gennerich	1110010110—6
Hoffmann	0011110011—6	Breitkopf	0000100001—2
Lichtenberger	1111110011—8		

BRYN MAWR, Pennsylvania, April 6.—The following are the individual scores made by 11 out of 20 members of the Bryn Mawr Gun and Rifle Club at their first club shoot, 20 bluerocks each, 18yds. rise: H. W. Barrett 3, M. M. Litzenburg 2, H. J. McClellan 6, Joseph Hamilton 4, J. J. Kerrigan 7, F. H. Shank 12, Chris. Moore 7, David Harmer, Jr., 7, Wm. Soley 5, H. A. Albertson 1, Wm. Hilyard 2.

BROOKLYN, N. Y., April 10.—The Coney Island Rod and Gun Club held a shoot at live birds at Woodlawn Park, Gravesend, this afternoon. The weather was very pleasant, and the club house on the shooting grounds was consequently crowded with marksmen and their friends. If the birds had been a good lot the conditions could not have been better. Twenty-four shooters took part in the Blattmacher medal and five extra prizes. Three of the marksmen, E. Sanguin, H. P. Donelly and I. McKane killed their 7 birds straight. In the shoot-off at three birds, Donelly and McKane each missing a bird. Five tied for second place on six birds, F. Lanher winning the shoot-off on three dead birds. Dr. Northridge took third money on eight out of a possible ten birds against four competitors. Captain Meyer and W. A. Stuart killed thirteen birds each before they could agree to divide the fourth prize. O. Detleffsen, who was tie with them, having missed. H. Blattmacher won fifth prize. H. McLaughlin acted as referee and C. H. Dellar as scorer.

SQUIRES'S GUN SHOP FIRE—On Thursday morning last a fire broke out in a shoe shop below the gun store of Henry C. Squires, No. 176 Broadway. Two fire alarms brought a lot of engines rattling down Broadway, and the firemen dashed into the basement to fight the fire. But it had got too good a start, and shortly after their arrival there was a big explosion in Squires's store, and the big plate glass of the show windows were blown into the street, scattering the crowd of early workers who had gathered in front of the building. In Squires's store there was a spring stock of guns, fishing tackle and sporting goods, valued by Mr. Squires at $50,000. There were cartridges and packages of powder in flat tin b xes in the rear of the store. The cartridges went off like firecrackers, but the gunpowder in the cars withstood the heat. The explosion was caused by the ignition of a volume of gas that had escaped from the broken gas fixtures. Mr. Squires spent the whole of the forenoon emptying water out of the barrels of his imported guns. He is insured for $50,000, but he says that that will hardly cover his loss, which it is difficult to estimate.

EATON, N. Y.—There is a club here which is busy at practice, but as yet quite a few of the birds get away.

WELLINGTON, Mass., April 10.—There was a big attendance of shotgun experts at the grounds of the Boston Club to-day. The wind was strong and variable, but notwithstanding this some excellent scoring was made in the sixteen events at Ilgowskys, Peorias and macombers. The thirteenth and fourteenth events comprised the team match for the Boston Gun Club prizes. The Boston Gun Club team, No. 1, took first with a score of 41, the Wellington second with 40, the Independent, No. 1, third, with 37, the East Boston Gun Club fourth with 35. The tenth, eleventh and twelfth matches were for the individual Bangs prizes: W. Kirkwood first, Jones second, North and Thomas third, R. E. Whittle, D. Kirkwood and Adams fourth, Whitcomb, Field and Johnson fifth, Stone sixth, Leon, Piper, West, Edward, Newton, Gay and Will seventh, Hart eighth.

NOTICE TO SPORTSMEN OF NEW JERSEY.—A meeting of delegates from all the gun clubs of New Jersey will be held in Newark, N. J., April 24, at 2 P. M., at G. Munjer's, 842 Broad street, for the purpose of reorganizing the New Jersey State Sportsmen's Association, to fix date and place to hold the State shoot, and to transact any other business of importance that may be brought before the meeting. It is earnestly hoped that a full attendance will be present and that all clubs will consider this a notice to attend, as the secretary may not have the address of all clubs. By order of the President.

DUNELLEN, N. J.—The Middlesex Gun Club will give a grand day's entertainment on their grounds here on Centennial Day, April 30. There will be open sweepstakes all day at live and inanimate targets. In the afternoon a guaranteed purse of $150 is offered, at 15 live birds each, $15 entrance, which no doubt will fill to $300.

WELLINGTON, Mass., April 13.—There was good attendance at the grounds of the Wellington Club to-day, and several good scores were made in the several matches. In the match for the silver pitcher Stanton was first with 14. Fifteen sweepstakes were shot. The team match between the Harvards and the Wellingtons resulted in the latter winning by a score of 104 to 86.

INDIANA.—The third annual tournament of the Crown Point Gun Club, at Crown Point, Indiana, will be held Thursday and Friday, April 18 and 19, 18889. Bluerock and Keystone targets will be used. Professionals barred. Loyd's system of dividing purses will be introduced, and, if satisfactory, will be adopted.

BERLIN, N. J.—At the annual meeting of the Berlin Rod and Gun Club the following gentlemen were elected officers for the ensuing year: Chas. I. Wooster, President, reëlected; Wm. H. Norcross, Vice-President; J. Wright, Secretary, reëlected; B. W. Bennett, Treasurer, reëlected; J. Wright, Captain, reëlected; Board of Directors—Capt. Levi Collins, L. Kammer, A. Wright.

OAKLEY.—Annie Oakley took a flying trip from Pine Brook to Reading, Pa., on Thursday last, and on Friday, April 12, shot a live-bird match with Frank Kleintz, of that place, at 50 birds each, Hurlingham rules, and 25yds. rise and 25yds. boundary. Each killed 45 birds, and they were lively birds, too. Counting the birds falling dead within the usual bounds of 80yds., they would have tied again on 47 birds. The match was for $100.

DEXTER PARK, L. I., April 11.—The Acme Gun Club assembled at Dexter Park, on the Jamaica Island road, and the members tried their skill at breaking bluerocks. I. Short and C. Wissel managed to break 15 out of 20, making the highest scores. Short won the shoot-off, breaking 8 straight, Wissel missing his eighth target. The second prize fell to M. Schlotter, who broke 14 and missed 8.

A TEAM MATCH.—During the Elm Grove Gun Club shoot at Albany last week a match was made, to be shot the latter part of June, between Gore and Gardner of Albany, and Apgar and Tee Kay of New Jersey, 50 kingbirds each man, for $50 a side.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Yachting.

THE CRUISE OF THE ORINDA.

BY W. H. WINSLOW, M.D.

[*Continued from Page 248.*]

WE towed in and anchored off the little village of Cutler about 8 P. M., gladdened by the sounds of voices and music and the many lights ashore, and we were not long getting things to rights and supper over. The fog horn upon the island began to blow soon and, when we looked out, the fog had shut down so thick that we could not see the shore. If we were always getting into scrapes we somehow got out of them, and "fortune favors the brave." The crew went ashore while I wrote up my log in the warm and well lighted cabin, and not a ripple sounded around. We dried clothing and sails next day, rowed around the harbor, took photographic views of ship and shore, rambled over the hills and enjoyed the bright sunny day and beautiful scenery. A sardine factory, surrounded by grime, grease and nastiness, occupies the middle shore of the village, and it is about the only industry of the place, employing nearly all of the inhabitants in its various departments. The sardines are taken in weirs all along the coast, and are collected and carried to the different canning places by smart little sloops. Some of these craft are of fine model and very fast, and we often had a brush with them when unloaded. Sardines are packed in cottonseed oil, but a few cans for samples and visitors have olive oil of the best quality. I wished a can direct from a lot that was cooking, but was persuaded to take one from the office. The reason was plain, the office supply was supplied with good olive oiled ones. Many herring are salted and smoked also, and we investigated the whole fish business.

Little River runs into the head of the harbor between high wooded hills, and the harbor is surrounded by pigmy mountains of great wildness and beauty; from their tops lovely views are obtainable in every direction, and past the island that guards the entrance Grand Menan is plainly visible. A syndicate of Western capitalists own nearly all the available building sites around Cutler; they have built a pretty hotel upon a hill overlooking the sea, and are engaged in erecting cottages and selling shares in the stock company *à la* Wall street. This is the last good harbor until Eastport is reached; it is sixteen miles away from the railroad, there is but one mail by stage a day, and there is no regular steamer. I doubt if Cutler can ever become of any importance either as a commercial center or summer resort, but "that's one of those things no fellow can find out." Here one is a slave to the tide, which runs between Maine and Grand Menan at the rate of three or four knots an hour. Vessels go and come with it and rarely start to stem it unless forced by fate or driven by a gale.

We hoped to leave next day, but were disgusted to find the wind northeast and a heavy fog at 6 A. M. The wind was still ahead the next morning, but it was clear, and I determined to try to beat up on the flood and run back if necessary; rather than to spend the whole fall trying to get to the eastward. It was necessary to reach Lubec Narrows, twenty miles to windward, before the tide turned, and we put under way at 5 A. M., savage with the weather. We crowded all sail, stood well over under the cliffs of Grand Menan, got the full strength of the tide and had near pictures of that wonderful island that stands guard over the Bay of Fundy, surrounded by dense fogs, wild currents and treacherous reefs that wreck so many vessels annually along its almost harborless shores. It rises several hundred feet almost perpendicularly from the bold northern shore and is covered by trees that seem like a lion's mane upon its hoary crest. Its southern end flattens a little for Southwest Head Lighthouse and Seal Harbor, and a shelf below its northern head is just large enough for the keeper's house and the Bishop Head Light. West Quoddy Head and lighthouse stand opposite upon the main, and the famous and dangerous Lubec Narrows separates Maine from the lower and fairer land of Campo Bello.

We had several contests with sloops and schooners along Grand Menan, and followed their courses within a stone's throw of shore several times, getting fine views of the palisade-like bluffs and cliffs that towered above us as we went in stays for the off-shore leg. One smart little sloop held us a long race in and out, but we gained on her steadily and should have soon passed her had she not suddenly kept off and ran through a little gap in the island and came to anchor inside a breakwater of logs and sand that helped to make Dark Harbor. This is a singularly interesting little dunk hole, the only place of refuge upon the western side of the island. A little way of the shore the breakwater seems to be like all the rest off the shore line, but close observation shows a little depression in the wall of the cliffs and a few buildings at their feet. On nearer view an opening like the mouth of a canal is seen just east of a fish house, having cobwork filled with stones upon each side to keep the channel from filling up. This entrance has a bar which can only be crossed after two-thirds flood and not in a heavy sea, so that time, tide and weather must be carefully calculated if one wishes to cross at all, and once in, though there is a safe snug harbor, good water and beautiful scenery all around, one must remain a prisoner until everything is favorable for going out. Of course no stranger should try this difficult navigation, but I felt the daredevil spirit rise in me and almost yielded to an impulse to follow my leader in, but Meringue would not second me and my anxiety to get on checked my rashness.

The eastern shore of Grand Menan is low and irregular; there are several islands rather near, forming channels and roadsteads of tolerable safety for large vessels with plenty of ground tackle, and between and outside the islands are lines of reefs and sharp isolated rocks that make one cringe to look at them on the chart. I had desired to circumnavigate Grand Menan, and held many conversations with sailormen and pilots from the east side of the island. They were unanimous in their statements of the many dangers of coasting those shores; the discomforts, miseries and perils of small craft in the poor harbors; the treachery of currents, winds and fogs, and the general undesirableness of such a cruise in September except in a steamer. I believed them, took advice for once and gave up my long cherished project.

The "Coast Pilot" says: "Many dangerous ledges and shoals lie in the entrance to this bay (Fundy) off Great Menan, and render a nearer approach to that island, especially in thick weather, very dangerous to strangers. The tidal current runs with great velocity, and sometimes changes of weather, the set and changes of currents and the thick and long-continued fogs are apt to confound the seaman, however experienced he may be or however good his judgment."

So we turned away from Grand Menac and our next leg took us by Sail Rock, where we were able to pay off sheets and fly past West Quoddy Head and light and Liberty Point, off Campo Bello, N.B., fairly into Lubec Narrows two hours before the time for high water, and saw in the west the clustered houses of Lubec. We had beaten up on the flood and knew that the tide began to run out of the Narrows about two hours before the ebb really began in Passamaquoddy Bay. The wind was now abeam and we made a rapid run in, guided by the buoys and fish weirs which extend to both edges of the channel upon the flats. Several small craft passed us and, as we approached the town, we hailed a boatman and asked about the tide. He said it had been running out about half an hour. This made us anxious, because it is next to impossible to pass the Narrows after the tide has gained full force. Indeed, as we looked, a large lumber-loaded schooner that had been hovering inside, payed off sheets and went back into Friar's Roads to go out the eastern way, afraid to trust her ungainly hulk to the ever strengthening tide with the light wind blowing. Meringue was at home here, having fished in Quoddy many a year, and he directed my steering and said he thought he could make it because of our sharp body and fair wind. "If we fail," said he, "we will be forced out into the lower roads and be obliged to anchor for the night." We knew the roads were terrible in easterly gales, the wind was northeast still and the sky looked unpromising. We kept on, struck the tide, ran in the Narrows proper and almost stopped, but, by favorable puffs and careful steering to prevent cutting and sheering, we gathered momentum and steadily forced the yacht against the rushing, rippling tide until we passed a buoy above Lubec, where the Narrows widened out into Friar's Roads and the broader Passamaquoddy.

"The entrance is a mile wide and diminishes gradually until at the Narrows, two miles and a half above, it is only about an eighth of a mile wide. It is full of shoals, and strangers should not attempt it without a pilot."

"The Narrows are formed by a narrow passage about 900yds. long, which leads between Lubec Neck on the west and the shore of Campo Bello on the east, and thence between Pope's Folly and Dudley Island and Treat's Island and Friar's Head into Friar's Road and Quoddy Bay. The whole distance from the entrance to Eastport is five miles."

We got in by a close shave, and were the last craft that entered that tide, and went flying along before a heavier breeze to see the beautiful shores and to inspect the great fleet of Quoddy fishing boats that were fishing on the rip to the east of Eastport. "At last," I cried, "we are here! Now we will do up this region and start homeward." I remember coming to Eastport from the eastward once in the magnificent steamer State of Maine, and being greatly surprised, as we came through the islands and entered the great bay, at a fleet of boats that reminded me of a great flock of birds bunched together and flitting around in a lively manner. I supposed they were pleasure boats then, because they were all under way and I knew Campo Bello was near. Now, we knew they were the famous Quoddy fishing boats and were going to take a leisurely look at them.

We were really in Eastport Harbor, having come in by the southern entrance, the main entrance being further to the eastward between East Quoddy and Deer Island, and in the southern end of Passamaquoddy Bay. This body of water lies between New Brunswick and Maine, is long, deep and irregular in shape, includes trib tary bays, harbors and coves, and receives the waters of Cobscook, Pembroke, St. Croix and other smaller rivers. The lovely town of Lubec covers a rounded hill, and its houses and gardens rise one above the other until they surround a pretty church with a steeple perched upon the very top. Pope's Folly and Dudley and Treat Islands lie to the northwest, and are rocky, precipitous, slightly wooded and partly cultivated, and look very pretty from all sides. A little U. S. battery, called Fort Sullivan, with barracks and quarters, is located upon the southeastern point of Treat's Island among the trees and does not lessen its attractions. A channel runs between them and Lubec, and opens to the south into Johnson's Bay, which is about a mile and a quarter broad, has good holding ground in three to seven fathoms of water and is much used as a rendezvous for vessels waiting for a favorable wind to go out the Narrows. The entrances to Cobscook Bay and Pembroke River are seen north of this, and, a little eastward, are Broad Cove, which is the only safe harbor of Eastport, and the city of Eastport covering the hills of Moose Island. Beyond Eastport, one sees far up the St. Croix River; then come Indian, Deer and a number of other islands beyond to the eastward, presenting many charming bits of scenery, and boulders, cliffs, trees, huts, boats and fishing paraphernalia in artistic yet unstudied juxtapositions.

The whole eastern shore of this bay is Campo Bello, extending from Lubec to East Quoddy. A lighthouse and Mehollan Point guard the English side of the entrance to Lubec Narrows, then a little cove with shingle beach makes in to give greater prominence and grandeur to Friar's Head, which stands out to the north, a great perpendicular cliff crowned with verdure, trees, and a summer-house for the observation of the magnificent views in every direction. The isolated, rocky column, bearing some resemblance to a headless man, stands in the water at the base of the cliff, and is called the Friar. It once had a head, but the canoneers of Fort Sullivan knocked it off in target practice years ago, which ought to have been a subject of international grievance. The stony head is lost, but the Friar lives in the name of the grand cliff that casts a shadow over the broken image far below. Once by the Head we were in Friar's Bay, a great crescent-shaped cove a mile long, terminated by Deer Point, which is covered by evergreen trees. The land rises quickly from the shore line and merges into a fine rolling agricultural country beyond. The shore is one of the finest shingle beaches in the world. Round stones of every size, from a pea to a cobble, roll and rattle as the waves rush shoreward and then recede, making peculiar music. The western part of the shore is occupied by two fine buildings united by a covered walk, and called Tyn-y-coed—house in the woods. It has a tennis court, billiard, ten pin and card rooms, and all the appurtenances of a first-class caravansary. The views from its capacious piazzas are extraordinarily fine, and the drives around this island are said to be unsurpassed anywhere in America. Several fine villas are located south of the hotel; several yachts were hauled up behind the Head, and some pleasure boats were beating against the long wharf at the foot of the winding road that led down from the hotel bank.

A number of fish-curing houses and wharves are in the middle of the cove, while at the eastern end there is quite a settlement, including Owen's Hotel, the Canadian custom house, the U. S. Consul's office, a few stores and a church. Steamers run from Eastport, touching at the Tyn-y-coed landing and Lubec every hour in summer. Beyond Deer Island is Dunn's Beach, a scattered settlement of farms, fishermen's houses and smoke houses upon the shore. The rocky, rolling country extends over a mile to Bald Head, a high rocky head with a few scraggly firs upon its rough scalp. Then a great indentation of the island between Bald Head and Windmill Point leads into Harbor-de-Lute, which is completely landlocked, very attractive and pretty around its shores, and is much used by coasting vessels. East Quoddy, the great landmark in entering Quoddy Bay from the eastward, having a good light house upon its extreme point, lies two miles and a half E.N.E. from Windmill Point, and the coast between is high, rocky, well wooded, and has deep water close in. Campo Bello is fair to look upon; its eastern shores are high and rocky; its western, sloping, low and grassy, features which are seen in very many of the islands along the coast.

We flew along down the shore, inspecting its many points of interest, until strengthening tide, stronger wind, heavier sea and lower sun warned us to turn backward if we wished to see the fishermen and obtain a good anchorage before dark. The sail was one of the most enjoyable I had ever experienced, and the pleasure was not lessened by what we soon witnessed. We hauled on the wind and ran toward the mainland below the fleet of boats, then ran past them slowly on the other tack and went completely around them, sogering along with sheets off to see all we could of the famous Quoddy fishermen. There were over fifty boats upon the rips, some drifting with sails down, some head to wind with sheets off, some trimmed flat and steered close to the wind, some broadside to wind with sheets off, some with mainsheet flat and jib to windward, some beating up, some reaching and some running rapidly down the flood. Some men were satisfied with their places and were baiting hooks, casting lines and pulling them in; some were moving to keep away from their neighbors, and others were seeking more favorable ground. The boats had two to five men each; one looked after the boat and the others were busy with lines and fish. Meringue said they were fishing on the rip.

"What is that?"

"Fishing on the drift."

"What is that?"

"Fishing in the tide rips."

This, I concluded, was fishing in the ripples formed by a strong tide meeting another current at an angle, thus causing some agitation of the water and making a sort of concentration of food and a slower current, in which the fish could find more food and swim easier than in the fierce tide of other parts of the bay. This seemed probable, because the great current of the St. Croix here met the main current of the Roads just south of Deer Island, and both went rushing onward to the ocean.

"That fellow is pulling in to look at his bait; he takes it easily. That one next to him has a fish. See how fast and steadily he pulls; now he lifts him up: no, he has lost him. Did you see the glimmer of his scales and the splash as he broke away? That fellow in the stern has a rouser. See how he pulls, and he don't get much line in, either. It's a pollock. They are hard pullers; a haddock pulls easier, but a cod makes things lively and your hands warm. Yes, there he lifts him in, a yard long, weighing 20lbs. if an ounce. That's about as large as one gets here now; the average is much smaller. All Provincial boats; no Americans allowed to fish here now. D—n a shame! Right in front of Eastport, too. The line runs where you see that English cutter fastened to that Government mooring. Didn't used to be so when I was down here. These boats are hummers; stand any weather, and carry all their rags in a gale of wind. Big cockpit, deck up to a man's chin; stand up in them and steer. Mighty good to get out of the spray and wind. Would fill, of course, but the sea has got to be humpy to get aboard, sartain. Never saw one filled. Kinder V-shaped cross sections, too, but very beamy for length, and sharp at both ends. Knock spots out of many a yacht. Could beat us all to pieces if they only had the wind. Want a regular howler or they won't race. Always hunting fancy craft like ours when they can."

We watched and enjoyed the fishing greatly and saw a score or more of fish caught, then payed off sheets for the run to anchorage off Eastport.

"Well, Meringue, I'll give your Quoddy boats a chance any time. I know these are stiff, able sea boats, but I believe a craft built for speed like Orinda can outsail them."

"Better not; you'll get beaten. I've had a good deal of experience with them and know they are the fastest boats on the coast."

"Well, we'll see sometime," said I.

There was a rakish looking sardine boat with heavy rig, a kind renowned for speed above the Quoddy fishing boats, 100yds. ahead of us, but she was well loaded with fish and sailing before the wind. We caught up to her and passed upon the weather side, and were rather amused to see the skipper and boy trim sheets and try to get the most they could out of her to keep us from passing. When we arrived within talking distance the skipper said: "I wish I had this load out of her, I'd show you a thing or two."

"Oh, no, I guess not. I am not racing a loaded boat; only happened to be going the same way you are."

This mortified the fellow and he kept off for a landing, and we ran further west and anchored in the cove beyond the steamboat wharf. The "Coast Pilot" says of Eastport: "This commodious and excellent harbor, etc." Now there is only a broad roadstead between Moose Island and Campo Bello, called Friar's Roads. The water is very deep, the tide is very strong, and holding ground poor. There are wharves with great slips between for vessels to lie in when handling cargo, as they cannot lie at the heads of the wharves, or even in the roads, in N. E. gales. The sea comes right in from outside and has a full sweep alongshore, and vessels at anchor or exposed must make sail and seek shelter at Welch Pool opposite, or in Broad Cove upon the south side of Moose Island, which is the real harbor of Eastport. It is a deep, commodious, safe inlet, having excellent holding ground, and is easily entered by strangers.

[TO BE CONTINUED.]

A COWARDLY PLEA.

THE New York *Times* puts into few words the whole argument in favor of the selection of Volunteer, ingenuously bringing into full view those ugly points which others are trying to gloss over by a plea of duty. It does not seem to occur to the *Times* that Lord Dunraven has taken it for granted that he will be fairly treated as a matter of course by the N.Y.Y.C. If he had challenged with a 90ft. yacht, knowing Volunteer to be 80ft., he would have been accused of sharp practice and a desire to overreach the New York Y. C., and now that he has challenged with a smaller yacht, but in an active and vigorous class rather than one which is obsolete he is called a fool for his pains. The *Times* says:

"At present the Thistle remains the champion British yacht, and the Volunteer the champion American yacht. It is therefore likely that the latter will again be chosen to defend the Cup. It is agreed among yachtsmen that any time allowance that is enforced anywhere does not really equalize a boat of the size of the Volunteer and a boat of the size of the Valkyrie. The power of the larger will give her an advantage, differing according to the conditions of weather, that cannot be fairly compensated by a handicap. This, however, is not our affair. The owner and designer of this challenger were aware that they might have to meet the Volunteer under the time allowances of the New York club. If they preferred taking their chances with a smaller boat to building one of the same size they have no reason to complain.

"It does not appear, however, upon what their expectation of winning the Cup can be based. The Volunteer will have to allow the Valkyrie some thirteen minutes over a forty-mile course, and the Volunteer will be her antagonist unless a faster American yacht appears in the meantime. Now, the Volunteer beat the Thistle in one race 19m. 23¾s., and in the other 11m. 48¾s. The average of the two defeats was thus something over fifteen minutes. That is to say, the Volunteer would have had an even chance of retaining the Cup if she had allowed the Thistle thirteen minutes in forty miles. Of the two races actually sailed the Volunteer would have won one and the Thistle the other under that allowance. In order to have a fair prospect of winning the Cup the Valkyrie should, therefore, be able to sail on even terms with the Thistle, a boat 16ft. longer on the water line, and, moreover, the fastest British yacht that has ever been built.

"It seems very extravagant to expect that the Valkyrie will have any chance with the Volunteer. This is rather to be regretted so far as our own yachting activity is concerned, since it is unlikely that many American yachtsmen will take the trouble of attempting to build 70ft. yachts to which the Volunteer cannot give a minute in three miles. The task is difficult, and, so far as the defense of the Cup is concerned, will appear to be useless unless the trials of the Valkyrie indicate that she is a 70ft. yacht of that character."

ANOTHER REVISION NEEDED.

IT is a wonder that no comment has been made on the thoughtless and inconsiderate conduct of Lord Dunraven in troubling the New York Y. C. with such a trivial matter as a challenge for the America's Cup at a season like this, when Com. Gerry's time is so fully taken up with the coming Centennial celebration, in which he will play a prominent part afloat and ashore. Under such circumstances the least the challenger could do would be to hold his challenge until the ceremonies were over, if not to postpone it for another year. We would suggest that the Cup be immediately returned to the "surviving donor" and that he be instructed to redonate it to the New York Y. C. under a fourth final deed of gift, in which all challenges should be prohibited at any times when the Commodore of the New York Y. C. shall be engaged in important ceremonies like that over which New York is now preparing to go wild.

SEAWANHAKA C. Y. C.—At the meeting on April 13 the amendments published last week were adopted, with the exception that one professional is allowed in the 35 and 30ft. classes, and that the length of head yard on spinakers is limited to one twentieth of the loadline.

VALKYRIE AND THE CUP.

THE name of Lord Dunraven's new cutter suggests forcibly the story of the Nibelung's Ring, about which Wagner has woven his marvelous poetry and music, and the lesson of the ring is one that yachtsmen will do well to study to-day. The legend in brief relates the theft of the Rhinegold from the nymphs that guard it, the working of the gold into a ring by the thief, from whom it is in turn stolen, only to be the cause of crime and misfortune to each who in succession wrongfully possesses it. Under the influence of the curse, the pure gold, applied to improper ends, brings evil to all who strive to possess it unlawfully, wreaking a fearful vengeance, until restored to its rightful owners. By the action of the New York Y. C. two years since, confirmed again in the unfair decision of last week, the Cup has been diverted from its high office as "a challenge cup for friendly competition between foreign countries," and already the effect of this action is seen in the eagerness to keep the Cup by any means, rather than to risk it in a fair race.

When yachtsmen who are recognized as leaders openly declare that the defense of the America's Cup is not a matter of sport, but of business, and, in accordance with this view, advise a course which they admit is unfair, it looks as though the avaricious spirit of the last deed was bearing fruit of its own kind, and preparing the way for a national disgrace. If present counsels prevail, and the Cup be held by force rather than fair sailing, it may be depended on to work a curse as certain and sure as that of the ring.

WHO MADE THE RULE?

THE adherents of Volunteer are pointing to the first clause of Rule L of the New York Y. C. in support of their claim that the regular racing classes of the club shall not be recognized in the America's Cup contests. The clause in question precedes the list of classes, and reads: "For club races yachts shall be divided into classes as follows, but this classification shall not apply to races for any challenge cups held by or belonging to the club." There might be some weight in this if it were an old rule of the club, made without regard to the present case; but the fact is, that it was but recently passed, and is a part and parcel of the general scheme to revise the deed of gift and limit all cup races to a special class. Nothing of the kind was found in the rules until the last two years. Its force, too, is impaired by the introductory article of the racing rules, which says: "The following racing rules shall govern *all* the races of the club, and any race sailed under its auspices, *unless otherwise specified between the parties making the race.*" In view of the clear and explicit wording of this clause, and the fact that it applies to all the rules which follow it, the first quoted clause of Rule L is evidently an afterthought, and it would be a very nice point to prove that it is not invalidated by the preceding section.

1870—1889.

THE proper study of mankind is man, and those who would study the man of to-day cannot do so more thoroughly than by looking back at the actions of his predecessor of a generation ago; times change and men may change with them, but human nature is pretty much the same to-day as yesterday where self-interest is concerned. We are moved to these remarks by a look into some old papers of 1870, in which the doings of the New York Y. C. at the time of the first challenge for the Cup are set forth in bold type, and where is found a striking parallel between the situation at that time and that which prevails to-day. Then as now yachtsmen were divided over a question of fair play on the one hand and the certain retention of the Cup on the other; then, as now, the New York Y. C., through its officers and as a body, was trying to do a mean and unsportsmanlike action, knowing it to be so, and was looking everywhere for something to help it out. Then, as now, men were impelled solely by a strong sense of duty, as trustees of the Cup, and attempts to discuss the matter openly were stopped by the Gilbertian chorus:

> "For duty, duty must be done,
> The fact is plain to every one;
> And painful though the task may be,
> To shirk it would be fiddle-dee-dee."

Then too the temporary holders of the Cup labored under the delusion that they had a mortgage on it, that it was given solely for the glorification of the New York Y. C., and they were disposed to make a favor of what they were compelled to grant as a right. Then as now, there were some who were opposed to the popular will, but, like to-day, only too few who had the backbone to stand up and say so in the face of general opposition. True that comprehensive and ingenious fiction of the "surviving donor" had not been invented in those dark ages, but there were sea-lawyers then as well as now, and they did not all sail on the Cambria either.

It would be hard to find an intelligent yachtsmen in this enlightened day who would seriously contend that Valkyrie should be compelled to sail one race over the club course against the entire fleet, but such was the question over which opinion was divided in 1870, when it was proposed to race Cambria, the one challenger, against as many yachts as desired to enter, and she was actually compelled to sail against a fleet of twelve.

Some of the opinions then expressed would almost fit the case to-day. "Devoted Yachtsman," presumably the late Mr. Edgar E. Holly, wrote as follows: "The America's Cup, as it is called, is the property of the New York Y. C., they are the custodians of it. It is under the protection of the *squadron* [fastest yacht], and the club should not be deprived of the possession of it except on the defeat of the *entire squadron* [peerless Volunteer] by the foreign yacht contending for it; then, and not until then, should the New York Y. C. lose their title to the ownership of the trophy. I do not think that the New York Yacht Club has the right to hazard the loss of that Cup on the performance of any *single* [70ft.] yacht." By replacing the words in italics by those after them in brackets, the argument becomes identical with that advanced to-day.

In April, 1870, the eloquent Col. Stuart M. Taylor waved the starry banner in "friendly rivalry" over the red ensign of Britain, and expressed himself as follows: "There are many who agree with 'Devoted Yachtsman' in his very sensible views over the Queen's Cup, and the very heavy vote, 18 to 1, against selecting any *single schooner* [70ft. yacht] to contend with the British champion when she makes her appearance in our waters to do battle for the America's prize, recorded at the recent meeting of the New York Club, speaks eloquently of the sentiment of the members (the boat owners only voting), concerning our possession of that valued trophy. It is looked upon justly, as those who donated it intended it should be, as the property of the club, to be defended against all comers by the *entire fleet of schooners* [fastest yacht in the world]. Its future possession is not to be hazarded to the swiftness of any *single* [like-sized] American champion, and *Mr. Ashbury* [Lord Dunraven] has no right to assume that it should be otherwise. The club has now very properly decidedly that the guardianship of our Cup shall be left to the merits of the *entire fleet of schooners* [queen of the American fleet] on the day that *Mr. Ashbury* [Lord Dunraven] may be ready to enter the *Cambria* [Valkyrie] to compete for it. And how much greater will be his rejoicing, and that of all England, if from the little *squadron* [80ft. Volunteer] he can bear away single-handed the laurels our own yachts snatched from fifteen British vessels. Our terms are certainly not so very difficult, and as far as precedent goes exceedingly fair."

It is positively touching to see the same tender solicitude for the feelings of Mr. Ashbury that many are expressing to-day for Lord Dunraven, who would not enjoy winning the Cup from yachts of his class while Volunteer is in existence. Both of these gentlemen knew at the time that what they termed a match was simply a foregone conclusion, that by no possibility could Cambria win over the New York course against twelve other yachts; and in the same way every yachtsman knows to-day that what is proposed is not a match but a certain retention of the Cup. In addition to such opinions from yachtsmen the law was called on to add its sanction, as in the case of the last deed of gift, and Mr. William Peet favored the club with a letter showing that it was their bounden duty to make a match which every one realized gave no more chance to the challenger than Valkyrie would have against Volunteer to-day.

It is interesting to know, however, that there was one man at least in the New York Y. C. in 1870 who knew what was right and was not afraid to say so. At the meeting of the club when it was finally decided to sail the whole fleet against the one English yacht, when no dissenting voice was raised, the Commodore, Mr. Henry G. Stebbins, of the schooner Phantom, forced the question to a vote, and put himself on record as the one man in the club who favored fair play. The names of the eighteen who voted against him are buried in the musty records of the club, and it is not worth while to dig them up, but brave Commodore Stebbins's name remains, while the others are forgotten. The world has grown better, "she do move," and in this day of grace not one but two men have dared to speak out for fair play in the New York Y. C. Though in a hopeless minority at the time, Commodore Stebbins had to wait but one year before he found a full vindication of his position in the consent of the club to sail but one yacht in any race against a challenger for the Cup, and Messrs. d'Oremieulx and Center may not have to wait even that long if the many other members of the club who think with them in this matter will only stiffen up their backbones a little and say out real loud what they think. There were many who wanted to two years since when the new deed was put before the club, but only one, whose voice is now silent forever, dared to question the arbitrary methods of the executive.

The question of the fleet against one was not a whit more unfair twenty years ago than that of Volunteer against Valkyrie is now; and just as to-day no one would think of defending the former, by to-morrow men will wonder that they could ever have been so unfair as to insist on a so-called match which they know can end in but one way. There was a time, far back in the past of yachting, when of necessity yachts of all sizes and rigs raced together. The fleet was comparatively small in numbers, the vessels of all sizes with so few of one size that it would have been impossible to establish fixed classes, and all must race together or not at all. A rough sort of compensation was found, however, in the fact that the smaller craft were often superior in model and equipment to the larger, and thus through quality were enabled to make up the disadvantage due to size. Such a state of affairs has long since ceased to exist, the yachts of any one class will compare favorably with those of the others in quality, and the sole difference lies in size. Thus far, however, the most successful attempts to equalize this size by time allowance have proved very faulty, and only of use when applied to yachts differing not more than 5 or 6ft. in length. This fact is recognized as clearly by the New York Y. C. as by any yachting body in the world; and when the club attempts to take advantage of such an accident (which it proposes to remedy before next season if possible) to retain possession of an international trophy intrusted temporarily to its care, the time has come for every fair-minded American, in or out of the club, to protest against such rank injustice. The task is a thankless one at the time, men must incur a good deal of ill will and gain no material advantage in return, and while there are many in the New York Y. C. who have no love or opinion of the last deed of gift and the conduct of the present races than we have, there are few who care to go into such a battle for a principle. By way of reassuring these doubting ones we would remind them that the whole clumsy fabric, built up since the Thistle races, to keep the America's Cup, is based on a shaky foundation, which could be overturned in a moment by process of law, if such a course was desirable; and that in any case it must collapse sooner or later under that sense of fair play which we believe to be still inherent in the American people.

TWO WEEKS WASTED.

IN marked contrast to the delay which has characterized the action of the New York Y. C. over Lord Dunraven's challenge is the very prompt manner in which the club shut off Mr. Sweet's challenge nearly two years since. In the present case, with a challenge received at the end of March, there was not a moment to lose, and yet three weeks have been wasted and the club has not yet come out openly with a declaration of what it proposes to do. In the case of Mr. Sweet's challenge a whole year intervened before a race could be sailed, and yet not a moment was lost in hurrying through the illegal deed of gift which prevented him from building. On Friday, Sept. 30, Mr. Sweet's challenge was written, and on Monday, Oct. 3, a special meeting of the New York Y. C. was held, nominally to arrange for a reception to Vice-Com. Bell and a dinner to Messrs. Paine and Burgess, but actually to alter entirely the conditions governing the America's Cup. We have never been able to obtain a copy of the call for this meeting, and cannot say whether or no the chief business for which it was called—the alteration of the deed of gift—was mentioned in it, in accordance with Rule III. of the by-laws; but in any case the legal limit of three days' notice (which does not usually include Sunday) was pushed very hard in order to call a meeting between Saturday morning and Monday night. Be this as it may, the fact remains that the whole business of changing the deed of gift was smuggled into the three days between Friday night, when Mr. Sweet's challenge was written, and the following Monday night.

In Lord Dunraven's case the challenge was received on Friday, March 29, and a meeting could have been called on Tuesday, at which all preliminaries might have been arranged. A simple inspection of the documents would show any intelligent man that they were in proper form, a formal challenge on behalf of the Royal Yacht Squadron, represented by Lord Dunraven, and an informal letter from that gentleman proposing a mutual agreement of certain terms. There was not the slightest question of accepting or declining the challenge, as the club had no option but to accept it. If the whole matter had been thrown open to discussion at one meeting the main points could have been quickly decided and the details left to a committee as in previous cases; but the management of the club did not care to risk such a course. A week elapsed before a meeting was held, giving time to arrange the necessary preliminaries, then the members were treated to the reading of the challenge and accompanying documents, and also to a ready-made resolution appointing an unnecessary committee, after which they were sent home. Another week was wasted, nominally, in deciding whether the club would accept a challenge which it had no power to reject, and then the members came together to be told what every one knew, that the challenge was perfectly legal and the club had accepted it. As to the great question, the size of the defender, all discussion was prevented by Com. Gerry's prompt ruling, and the matter was not suffered to go before the club, but was turned over to a committee which could be trusted.

Had it been so disposed the New York Y. C. could have formally accepted Lord Dunraven's challenge on April 3, deciding at the same time to meet him in a fair match, in which case it is safe to say that at least four new yachts would be well under way to-day, with six months' time to complete and try them in.

The reason for the delay is only too plain. In order to keep the Cup beyond hazard Volunteer is to be put against Valkyrie, whether or no such a course is in accordance with the wishes of the majority of the club, and in order to prevent any *contretemps* which might spoil this plan it was necessary to arrange matters very carefully before submitting it to an open meeting of the club.

WHICH IS IT?

THE practical selection of Volunteer by the New York Y. C. is based on the assumption that she is the fastest yacht in the world. There is no doubt that she is a very fast yacht, but at the same time there is room for doubt as to whether she is really faster for her size than any 70-footer that could be built to beat her. True she has beaten all the 70ft. class much more than her allowance, but this of itself is more proves that she is very fast than it does that the allowance is much too small, which latter is known to be true. Judged from her sailing with all classes it is probable that Volunteer is, as claimed, the fastest yacht in America; but now she stands alone, with nothing of her class to try her speed by or to improve her. If as might easily be the case, half a dozen new seventies were built at once by Burgess, Smith, Gardner and some of the "dark horses," it is more than likely that out of the fleet of nine or ten boats, old and new, including, Bedouin, Katrina, Shamrock and Titania, a far better yacht than Volunteer would be found. The choice of Volunteer means a cessation of all efforts toward improvement, an ignoble contentment with what we have, and stagnation in yacht building and racing, ending with a contest whose result is known in advance. The selection of the 70ft. class means work for designers, builders, skippers and sailors, more racing, good sport, plenty of money in yachting, and an honorable race in the end. The gentlemen who kindly conduct the destinies of the New York Y. C. have decided for the former; will American yachtsmen indorse their decision?

RATHER HARD ON THE CHALLENGER.

IF Lord Dunraven had built a yacht of Volunteer's length he would have been at once outbuilt by the defenders of the Cup; if he had built a larger yacht he would have been accused of dishonesty and an attempt to overreach; and now that he has built a yacht for the only live class of American singlestickers above 40ft., the men who propose to out-match him are calling him a fool for trusting in the honor and fairness of the New York Y. C. Verily, the lot of a challenger for the America's Cup is not a happy one.

NEW 70-FOOT YACHTS.

MR. A. E. BATEMAN, owner of Meteor, steam yacht, and Mr. P. S. Pearsall, owner of Banshee, cutter, have offered to build a 70ft. yacht in time for the trial races. Their offer was made to the New York Y. C. at its last meeting. The Seawanhaka C. Y. C. had also under way a plan to build a 70-footer immediately. In view of the last action of the New York Y. C. neither yacht is likely to be built, as there could be no hope of beating Volunteer with the present time allowance.

THE NEW YORK Y. C. AND THE CHALLENGE.

THE meeting of the New York Y. C. on April 11 was but a repetition of the farce of the previous Friday, the business being transacted in the peculiar and arbitrary manner which characterizes the present management of the club. At the previous meeting a committee, including Messrs. James D. Smith (chairman), Rutherford Stuyvesant, William Krebs, Joseph R. Busk, Ogden Goelet, J. Frederic Tams and Gouverneur Kortright, was appointed under the following resolution:

"*Resolved*, That a special committee consisting of seven, with the addition of the flag officers, *ex officio*, be appointed by the Commodore, to whom shall be referred the whole subject of the communication just received from the Earl of Dunraven, to report without delay whether the same is in proper form and in accordance with the action heretofore taken by the club, and also whether it is expedient for the club to accept the same or what action shall be taken thereto."

This committee presented a brief written report to the effect that the challenge was in due form, which report was accepted and a motion made and carried to accept the report and discharge the committee with thanks. A motion was next made by Mr. J. D. Smith to appoint a committee to have charge of all arrangements for the races, and being carried the same committee was reappointed, including the flag officers *ex officio*, Mr. Ogden Goelet, who withdrew, being replaced by Mr. Philip L. Schuyler. Mr. L. F. d'Oremieulx then offered the following resolution:

"*Resolved*, That it is the sense of this meeting that the selection of a vessel to defend the America's Cup in the coming match with the Earl of Dunraven's cutter Valkyrie be confined to Class 3 of sloops, cutters and yawls, to wit: All over 61ft. and not over 70ft. load water line length."

Mr. Robert Center spoke very strongly for the resolution, urging the club to make a fair race, but on motion of Treasurer F. W. J. Hurst the commodore ruled that Mr. d'Oremieulx's resolution was out of order, and all debate on the question was promptly shut off. Thus for a second time within a week the members has been called together to listen to a report or resolution already cut and dried, on which a vote has been taken without a fair opportunity being given for discussion. The same methods were employed two years since in revising the deed of gift, and many members are repeating the remark then made, "What are we here for?" While opinion in the club is still strong in favor of putting Volunteer against Valkyrie, at the same time the advocates of this scheme were not ready to risk a fair discussion and vote on Mr. d'Oremieulx's resolution. On the following day a meeting of the committee was held at which it was decided to sail all races outside the Hook, and also to grant Lord Dunraven's request for five races instead of three, but all to be sailed under the New York Y. C.'s measurement. The following circular was also prepared:

NEW YORK, April 13, 1889.—The America's Cup Committee request those owners who are desirous that their yachts should represent the New York Y. C. in the coming contest with the Valkyrie for the possession of the America's Cup and those who propose to build vessels with that intention, to so notify the committee at once—the sole condition being that any vessel entered on the list shall be subject to selection by the committee as the representative of the New York Y. C., the committee reserving to themselves the right of forming their own judgment as to fitness for the purpose in view, irrespective of the result of races.

For the purposes of this contest it has been deemed advisable by the committee to confine the selection to single-masted vessels, and also to vessels that would be included in classes 1, 2 and 3, New York Y. C. classification—namely, all over 61ft. long on the load water line.

Any yacht or other vessel, propelled by sails only, coming within the foregoing requirements, will be considered eligible, whether belonging to a member of the New York Y. C. or otherwise.

For the purpose of forming a judgment the committee will avail itself of the result of races during the summer and will arrange for such further trial races as they may deem desirable, due notice of which will be given.

Entries and all other communications should be addressed to the chairman of the committee, Mr. James D. Smith, 23 Broad street, New York city.

JAMES D. SMITH, Chairman.
RUTHERFORD STUYVESANT.
J. R. BUSK,
WILLIAM KREBS,
J. FREDERIC TAMS,
PHILIP SHUYLER,
GOUVERNEUR KORTRIGHT, Secretary.
COMMODORE GERRY,
VICE-COMMODORE FISH,
REAR-COMMODORE ROGERS, } Ex-Officio.

The plain English of the above is that after taking two weeks to reach a decision the New York Y. C. declines to bind itself to make a fair and equal match, but reserves the right to select the largest yacht available. If any ambitious sportsman is fool enough to hope that he can build a 70-footer that can save her time off of Volunteer, under the present rules, he is at liberty to try, and if he succeeds his boat may possibly be chosen. Beyond this the club declines to do anything to encourage the building of new yachts, in spite of the fact that at a word from it at least four new keels would be laid inside of three weeks. Messrs. Bateman and Pearsall are ready to begin a 70-footer immediately, the Seawanhaka C. Y. C. will start another, Boston will have a boat in the class and others are ready to built. Mr. Burgess has a design partly completed, Mr. Borden has one ready, also Mr. D. J. Lawlor, while Mr. Smith and Mr. Gardner have begun designs of their own. Never before was there such a boom right at hand, yet the great yachting body of the world, the rich, the powerful, the spirited New York Yacht Club bars the way by its present action. Its duty, as the club sees it, is not to promote designing, building or international racing, but to keep the cup by the surest method in its possession. The following message has been sent by cable, and letters will be mailed this week:

Secretary Royal Yacht Squadron: Please notify Dunraven challenge accepted. Details referred to committee. ODDIE.

OUR POSITION.

THE question of 86 or 70ft. has by no means been decided by the negative action of the New York Y. C., but promises to become a very important issue before the first trial races are sailed. In taking its present position in the matter the FOREST AND STREAM has sought to advocate only fair play and sportsmanlike conduct, apart from any outside issues, and to be guided only by the customs of sport among gentlemen. We have no desire to aid Lord Dunraven to capture the America's Cup, nor to contribute to the defeat of the New York Y. C.; but we have at heart the honor of American yachting and the reputation of American yachtsmen as fair-minded, liberal and chivalrous sportsmen. As we look at the question it should be discussed solely in the light of what is considered fair among yachtsmen, and without regard to such questions as the probable loss of the Cup; or of the conduct of British yachtsmen on various occasions.

It is by no means certain that Valkyrie can outsail the present 70ft. fleet and the new yachts that might be built to beat her, but even if it were we hold that such a consideration should not be entertained in deciding what is fair or unfair in itself.

The whole foundation of yacht racing rests on the assumption that speed is not absolute but relative, that it varies in a certain ratio with the size, and the efforts of yachtsmen for thirty years have been directed to the discovery of a correct method of equalizing this difference by an allowance of time. Yachtsmen everywhere have recognized that size means speed, that the largest yacht is of necessity faster, and that it is no discredit for a yacht in one class to be beaten by one in a class above her. If this were not true there would be no racing, the largest yacht, unless of very defective model, would always win, and no one would enter against her. Recognizing this fact, there is not a yachting organization in the world which has not divided its fleet into classes, with allowances for difference of size within those classes. As a matter of necessity inter-class racing is found at times, but the result is always unsatisfactory, as under all existing systems of allowance the large boat must win. The Goelet Cup race each year is open to all yachts, but no one ever expects a 70-footer to win, or thinks the worse of her because she loses.

If it could be claimed that the present time allowance in any way compensated for the difference in size between Volunteer, 86ft., and Valkyrie, 70ft., there would be less objection to such a race; but that it does not is fully conceded by those who insist on the choice of Volunteer. The first trial race proved that Puritan, 80ft. long, could more than give her time to the 70ft. class, and in four years of continuous racing nothing has been shown to the contrary in the many races which the 90 and 70ft. classes have sailed side by side. The most emphatic statement of the fact yet made was in the report of the committee on a revision of the rules of the New York Y. C., read at the meeting of March 28, one day before Valkyrie's challenge was received. In this same report, the committee, made up of such able men as Gen. Paine, Vice-Com. Fish, Messrs. John Hyslop, A. Cary Smith and E. A. Willard, laid special emphasis on the fact that *the present system of time allowance of the New York Y. C. is entirely inadequate to*

compensate for any difference in size between yachts in *different classes*, and giving notice of an intention to revise the rules at the end of the season.

With the words of this report still hot in their ears the members of the New York Y. C. propose to go through the hollow farce of a race between Volunteer and Valkyrie, knowing that, while it may decide the possession of the America's Cup, it can prove absolutely nothing as to the relative merits of the two yachts. Such a course, we say, is cowardly, unfair and a distinct perversion of the uses to which the great international trophy was dedicated by its original winners.

Yacht racing, not only in America but the world over, is governed by certain recognized principles and precedents, the result of many years of hard racing, and in no way can these be construed into a justification of such an unequal race.

We realize fully the opposition which we must encounter in claiming perfectly fair terms for the challenger. Against us are Gen. Paine, Mr. Burgess, Mr. J. Malcolm Forbes, Com. Gerry and many of the New York Y. C., in addition to a large part of the press, and also public opinion, but we are willing to go on record in favor of what we believe to be the only fair, honorable and sportsmanlike course, and to trust to the future for our justification. We have in the past been almost alone in the opposition to the New York Y. C. in regard to the Cup in such matters as the choice of a single competitor in advance, and the retention of the inside course, and time will prove the correctness of our position in the present case as fully as in both of these. The great question is the honorable defense of the Cup by fair means and those only. The New York Y. C. can afford to lose the Cup, but not its honor.

FAIR PLAY IN 1881.

WHEN the trial races were held in 1881 to select a defender for the Cup the choice lay between Gracie, 72ft. and Mischief 61ft.; the challenger being 64ft. In making the selection the committee of the New York Y. C. was guided in a somewhat difficult choice between two fast boats by the fact that Mischief was more nearly of the size of the challenger than Gracie. They evidently did not look at the Cup races in a proper light, as purely business matters, but took the obsolete standpoint of sport and fair play.

"ALL attempts to win a race by other means than fair sailing and superior speed and skill are to be discouraged."

So reads the introductory section of the racing rules of the New York Y. C. There can be no claim of fair sailing, superior speed or skill in a race between a large and a small yacht under a time allowance which the club acknowledges is entirely in favor of the larger yacht. Perhaps, however, this clause, like the club classification, does not apply to races for challenge cups, in which the club makes terms to suit itself, but only to club races in which a member would promptly object to any rules which were manifestly framed to prevent his yacht from winning.

ATLANTIC Y. C.—As a general thing we do not care to comment on the private affairs of yacht clubs, but the action of the Atlantic Y. C. at its meeting last week is so contrary to what is considered generous and sportsmanlike in yacht clubs, that we cannot pass it by without notice. A proposal was made at the meeting to open the annual regatta of the club to the visiting 30 and 40-footers from Boston, as is done in other clubs. This proposal was opposed and voted down, ex-Com. F. C. Swan, saying in debate that if any yachtsmen wished to enter the races of the Atlantic Y. C. they could pay the initiation fee and dues first. It would appear from this that the New York Y. C. is not the only American yacht club which looks at yacht racing as a matter of business and not of sport. By these remarks, coupled with some others derogatory to sister clubs which we do not care to quote, Mr. Swan has shown himself worthy of a place on the Cup committee of the New York Y. C.

THE PROPOSED SYNDICATE CUP.—A proposal has lately been made by Gen. Paine and some Boston yachtsmen to Lord Dunraven, through Mr. Beavor Webb, looking to a series of international races, the first, probably, to be sailed off Newport, for a cup, to be a perpetual challenge trophy. The races will be limited to yachts not over 70ft., and the cup will, probably, take its name from the first winner.

GALATEA.—Lieut. Henn will not visit America this summer but will fit out in the fall for a cruise to the West Indies. Galatea has been at Dartmouth during the winter, but will go to Ireland and Scotland for the summer. Sam, the Florida coon, is still an honored member of the crew.

CLARA, cutter, is now fitting out at the Corinthian Basin. Captain Barr arrived last week from Scotland and will sail her this summer.

ULIDIA, cutter, has been sold to Mr. R. W. Weston, Corinthian Y. C. Mr. Padelford will fit out his brother's cutter Ileen this season.

MAGGIE, cutter, has been sold to Mr. W. I. Van Wart.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

A. C. A. MEMBERSHIP.—Atlantic Division: F. A. Phillips, Jr., of Brooklyn. Northern Division: Thomas G. Elgie, William C. Lee, Toronto; Harry L. Dise, Montreal. Eastern Division: Clinton S. Bissell, Litchfield, Conn.; Geo. P. Butters, Wm. H. Butters, Boston, Mass.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

MANY INQUIRERS.—A large bundle of letters of inquiry from correspondents got mislaid some time ago. It has now been found, and we will endeavor to furnish answers to all of these inquiries next week.

SHOOTER, Montreal.—A is entitled to shoot out under the original conditions of the match.

M. S. G., Philadelphia, Pa.—The canoes are made by the Ontario Canoe Co., of Peterborough, Can.

W. R. P., Lawrence, Mass.—The usual officers of a canoe club are commodore, vice-commodore and purser.

J. D. P., T. J. H. AND OTHERS.—We cannot give addresses of correspondents. Letters sent in our care will be forwarded.

E. R. W., New York.—The longer canoe would be the stiffer, but both are too short for two persons. See answer to "C. W. W."

W. A. S., Haddonfield, N. J.—We cannot advise in favor of certain makes of guns, but can say that we have heard both guns spoken of in the highest terms.

C. W. W., Detroit.—14ft.×30in. is small enough for a double canoe, and too small for any but light-weights; 16×30 is the usual size. The least depth should be 10in.

J. L. M., Natick, Mass.—We have made inquiries in New York and cannot find that there is any osage orange wood in the market. You can advertise in our columns for 30 cents per line of seven words.

YACHTING MAN, Ottawa.—The Wona, illustrated in the FOREST AND STREAM of March 22, 1888, is probably as good as model as you will find. If necessary, the plans can be reduced to make a smaller boat.

J. E. C., Bolivar, N. Y.—Can you give me the address of some one that I can get an eel skin from, and the probable cost of the same? Ans. You can buy an eel in any fish market, and get the fishmonger to skin it for you.

J. S. S., Stratford.—Can you inform me where I can get colored plates of North American birds' eggs with key, and price. Ans. From Dr. C. M. Jones, Circleville, Ohio; published in about forty parts, price $5 per part.

W. A. McL., Passadumkeag, Me.—Will you please inform me through the columns of your paper where I can procure a taxidermist's guide, tools, etc.? Ans. Works on taxidermy are kept by Forest and Stream Publishing Co. All necessary implements can be obtained at the hardware or medical instrument stores.

LITCHFIELD, Ohio.—Does a hunter have to pay a $20 license fee to go to Michigan a hunting or not? Ans. No license fee is required for hunting deer in Michigan, but no venison may be taken away from the State. Open season 1st Nov. to 1st Dec. in lower peninsula, 1st Oct. to 15th Nov. in upper peninsula.

LONDON, Ontario.—Will you please let me know through your correspondent column the address of the English stock journal on dogs; also some of the kennel papers. Ans. London *Field*, 346 Strand, London; W.C; *Stock Keeper*, 140 Fleet street, London, E.C., Eng.; *Fanciers' Gazette*, 9 New Bridge street, Ludgate Circus, London, E. C., Eng.

H. C. F., Groverton, Mich.—I have a fine spaniel bitch, about 10 months old, that I cannot keep home, although she has the best of treatment. As soon as she is left off the chain she will go with any one that calls her. How can I break her of it? Ans. Hire people to call her and give her the switch when she comes within reach. This will make her shy of strangers.

AZTEC.—Is there an authoritative work on Mexican zoölogy and ornithology, especially the latter? Ans. Salvin and Goodman's *Biologia Centrali Americana Aves* is being published very slowly in parts, but probably Aves could not be obtained without the other parts. It will be a very costly work. The Reports of the Explorations and Surveys for Pacific R. R., Government Printing Office, Washington, D. C., contain information on this head.

W. A. W., Burlington, Carroll county, Ind.—Will you please answer the following questions and oblige: What part of Southern California contains the most large game? Ans. Western portion among the mountains. What part of Southern California contains the most ranches and stockmen? Ans. Southwestern. Is this business carried on there as extensively as in Texas and Colorado? Ans. No. In what part of the latter two States or Wyoming could I find plenty of elk, deer, bear and other game in close proximity to the ranches? Ans. No elk in Texas, Northwestern Colorado and Western Wyoming.

INFORMATION WANTED.

Will some brother sportsman kindly advise me where wild celery bulbs or roots can be procured, if they can be transplanted and what season of the year is the best time to plant, muddy or sandy soil?—F. S. W.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

E. C. COOK & BRO.,

40 DEARBORN ST., CHICAGO, ILL

MARLIN MODEL 1888

In the issue of February 14 was by accident WRONGLY ILLUSTRATED the sectional cuts, being Model 1881. It is here illustrated CORRECTLY.

You will notice the breech block is on the old reliable Sharp principle, and has a solid backing against the frame. **You will notice** if you TRY THE ARM that it works WONDERFULLY SMOOTH AND SLICK, that it is finished superior to any other magazine arm, and **you will notice** if you SHOOT IT that the accuracy exceeds all other repeating rifles. Weight 6¾lbs. Same retail list, same dealer's discount as the Winchester. Sizes made: 24, 26, 28in. barrel. Calibers made: .32 .38 and .44, using Winchester cartridges. Ask your dealer to show it.

Send for Catalogue of Marlin and Ballard Rifles.

Yachts and Canoes For Sale.

Cruising Yacht For Sale or Charter.

The owner of a well-known yacht, 47ft. long, 14ft. beam, 6ft. draft, perfectly fitted out for the comfort and accommodation of four to six persons in the cabin, and three men in forecastle, patent w. c. and all modern improvements, will sell or charter her at a reasonable price on account of important business engagements preventing his leaving the port during the summer months. The yacht is built upon a beautiful model, has two rigs, can be sailed as a sloop, when she is very fast, or as a yawl for cruising. She was built during the winter of 1886, of best of material, under the personal supervision of the owner, and is a staunch and excellent sea boat, well suited for cruising in the gulf of St. Lawrence, and has been so employed, where capital sea trout and other fishing can be enjoyed, and salmon may be included, seal and white porpoise hunting, duck and shore bird shooting. This is an opportunity seldom offered. Address P. O. Box 1081, Quebec City, Can. Satisfactory references in New York or elsewhere given and required.

Canoes For Sale.

Two very fast sailing canoes, one single, one double; also a very light paddling canoe.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, APRIL 25, 1889.

VOL. XXXII.—No. 14. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 80 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

PROGRESSIVE CALIFORNIA.

ALTHOUGH when first attempted it was laughed to scorn, fishculture in this country has proved a grand success. It has put money into the pockets of thousands of people, has cheapened the food which millions use, and yet they tell us that the work of the fishculturists has hardly begun, and that ultimately, by cultivation, the seas will exceed in productiveness our wildest dreams. We have often wondered, as no doubt others have, whether a day would come when the Federal or the State governments would attempt in the line of game production what they have so successfully done for fish. The conditions which control these two products are so utterly different and the earlier attempts at introducing and rearing game birds and mammals have been so futile, that we have seen but little to encourage the hope that the Government would take hold of this matter.

Recently, however, a number of encouraging facts bearing on this subject have been recorded in these columns. Prominent among these are the naturalization of Chinese pheasants on the northwest coast, from Oregon to British Columbia, the success attained with the same birds at Jekyl Island; the apparently successful acclimatization of black game in Newfoundland, and the results of Mr. Cory's experiments with native game in Massachusetts. These are matters to which we have more than once called the attention of sportsmen.

We had not looked for so prompt an appreciation of the bearing of these facts by any government, as comes to us from California. By an act of the Legislature of that State, approved March 16, 1889, the State Board of Fish Commissioners is authorized to purchase for purposes of propagation, to import and to distribute to such places within the State as may in their judgment be most suitable for the same, such game birds as they may be able to secure. In the list given in the act are specified wild turkeys, prairie chickens, bob white quail, pheasants, grouse and skylarks. For the purpose of carrying out the provisions of this act, the sum of two thousand dollars is appropriated, to be expended in the discretion of the Fish Commissioners, who are authorized to draw out the whole or any part of this money from the State Treasury. Provision is made for rigidly protecting these birds for a term of five years, until January, 1895.

The wisdom of such a law as this, when exercised judiciously, will not be questioned by any one who has given thought to the subject. The possible results of California's action are far-reaching, and the wisdom of her Legislature in this particular cannot be too highly commended. A step so radical, so important and so praiseworthy could never have been taken anywhere in this country save in the grand West, where people are not bound down by the trammels of ancient prejudice and are still able to think for themselves.

It will be acknowledged on all hands that the conditions in the East are widely different from those in the West; yet even here much might be done to increase our stock of game, were the work to be undertaken systematically and under the authority of the State. It is, however, difficult to conceive of the Legislature of an Eastern State taking a step like the one initiated by California. The East has still a great deal to learn from the free West, and we fear that it may be many a long day before we shall see followed on the Atlantic coast the good example that has been set us on the Pacific.

AN OUTLET FOR COOKE CITY.

FOR years the philanthropists of a certain section of the West have been saddened because the mining camp of Cooke City had no rail communication with the outer world. This grieved them so much that they offered—if the Government would give them a right of way through the Yellowstone Park—to build a railway through that reservation, and thus supply the iron link which should connect the mountain-clasped mining hamlet with the bustling world of commerce.

When they proposed this, some people, who had long been trying to have the National Park protected, said that while it might be very desirable to have an outlet for Cooke City, the easiest and most natural one was down the eastern slope of the mountains by way of Clark's Fork Cañon to Billings or some point near it on the Northern Pacific R. R., and not through the rough cañons of the Yellowstone Reservation. They showed that a railway through the Park would be likely to utterly ruin it, by burning the forests, by driving off the game and by introducing settlers into a land which the law has specially set aside as belonging to the whole people, and not open to settlement, and irreverently hinted that the philanthropists were mere railroad speculators, who wanted to get a foothold for a railway in the Park, so that they could control the passenger traffic which would come to such a railroad.

So far, through the public spirit and zeal for the general welfare exhibited by a few good men in Congress, foremost among whom are Senators Vest and Manderson and Hon. S. S. Cox, railways have been kept out of the Park, and now, if what we hear is true, Cooke City is to have its outlet without encroachment on the reservation.

Years ago we called attention to the fact that a practical route to Cooke had been surveyed by the Billings and Clark's Fork R. R. Co., and it appears that this corporation is about to begin the construction of its line from Billings to Cooke. The money for the line has been provided by the sale of its bonds, which found a ready market on this side of the water, although English capitalists in London would have been glad of, and indeed made offers for, them. The Montana Coal and Iron Co., a subsidiary corporation controlled by the same parties who own the railroad, has paid for its coal lands, which are extremely valuable, and will no doubt in themselves go far to maintain the road. The mine owners of Cooke have given the Billings and Clark's Fork road a subsidy in the shape of 30,000 tons of ore, which is guaranteed not to run less than $30 to the ton.

The work of construction is to begin May 1, and will be pushed forward rapidly. It is expected that the road will be completed to the coal mines this autumn, and to Cooke City in about a year. Aside from the traffic naturally falling to this corporation from its coal mines, its transportation of ore from the mines in the mountains, and its local traffic, it is pushing into an important stock country and toward the oil regions of Wyoming, a section as yet untapped by any railway, and one in which thousands on thousands of barrels of petroleum are each day wasted. This valuable product the Billings and Clark's Fork road will bring to a market. Having all these resources to draw on, and with such favorable prospects before it, it would seem as if there could be little doubt about the speedy completion of the B. & C. F. R. R., at least as far as Cooke City. When it has been built so far, there can be no further possible excuse for advocating a railway through, or even along the borders of, the Yellowstone Park. Then Cooke will have her natural outlet.

SNAP SHOTS.

SCHOOL superintendents and others interested in Arbor Day, and wanting instructions on the selection of trees and the proper manner of planting them, should apply to the U. S. Department of Agriculture at Washington for copy of Circular No. 5, prepared by B. E. Fernow, Chief of the Forestry Division. Mr. Fernow is a practical forester, and we can commend his prescribed methods with confidence. In his selection of kinds of trees for planting out, he gives three kinds for planting where nothing else will grow, four trees for street and lawn, five for lawn and yard, and six for special positions; and to these are added two foreigners, the horse chestnut and the Paulownia. Mr. Fernow excludes conifers as presenting greater difficulties, but if the methods prescribed in the articles on practical forestry in our last month's issues be attended to, conifers may be grown as readily as deciduous trees.

The question of legislating against the indiscriminate slaughter of game animals, irrespective of sex or age, which was raised by our correspondent E. Pendleton Rogers last week in his reference to the game conditions of the National Park and surrounding region, is one deserving the most thoughtful consideration of all sportsmen. Among all the horned ruminants one male suffices for a considerable number of females, and, as the births of males and females are approximately equal, it follows that quite a considerable number of males may be killed off annually without lowering the productive powers of the herd, while every female shot in a diminishing herd will result in a considerable decrease in the number of the herd ten years later. From the standpoint of economy the practice of killing females is a suicidal policy, which should be opposed by every one feeling an interest in the perpetuation of our big game. The slaughter of a buck represents just his own weight of venison withdrawn from the national supply, while the slaughter of a doe represents the annual reduction of the national supply by at least her own weight in perpetuity.

Officer Leonard and a party of law abiding citizens recently captured thirteen nets in Goose Bay, and afterward, with an increased force, raided Eel Bay, where he secured twenty-five additional nets, in spite of the threats of the law-breakers. Game Constable Gladd and Daniel Staring had a serious encounter in Swan Bay with Joseph Longton and Joseph Denny, of Clayton, who demanded the return of four nets which they had set across the mouth of a creek emptying into the bay. They threatened and assaulted the officers, but probably wish they had not, since Longton loses his nets and was fined $30, while Denny is held for the Grand Jury.

Next Tuesday being a legal holiday in New York it will be necessary for the FOREST AND STREAM to close its forms one day earlier than usual. Correspondents are therefore notified that all reports and news notes intended for our issue of next week must reach us by Monday next, April 29.

On Tuesday last Mr. Eugene Schieffelin set at liberty in Central Park, this city, seventy-two European starlings (*Sturnus vulgaris*). They at once adapted themselves to their new surroundings, and after taking a bath in the stream flew off to the lawns in search of food.

Sea lions have given the fishermen on some parts of the coast of California much trouble recently. Sixteen salmon were caught in a net and fourteen of them were eaten by the lions before they could be secured and the net was torn to pieces.

Reports from Newfoundland indicate that the number of seals already landed is 200,000, which exceeds the entire catch of last year. If this continues we will have to revise our recently expressed views as to the decrease of seals.

The Sportsman Tourist.

CAMPS ON THE MENOMINEE AND BRULE

BY JOHN DEAN CATON.

[*Concluded from Page 254*].

AFTER spending three days in this camp we started up the river for the Brule and reached the falls where it empties into the Menominee a little after noon. Here we landed, and after dinner started on foot to go around the falls and rapids above to The Farm, a large logging camp, four miles away, leaving the Indians to bring up the canoes and baggage. Soon after we started a drizzling rain set in, which made the trail slippery and very hard walking.

I stopped behind with Jake, while he killed a mess of ruffed grouse, while Jones and Norman went ahead.

At length we came to the banks of the river, where there was a ford, but no house in sight. We had not expected this, and not wishing to wade the river, which appeared to be two or three feet deep, we set up a lusty hallooing, which after some time brought a man with a canoe down the river who set us over, when a tramp of less than half a mile brought us to the Farm. The cook in charge was very civil, offered us seats, and very kindly invited us to occupy bunks in the cabin, which at first I was rather inclined to do, but in the course of conversation I learned that the bunks were infested with bedbugs, which led to a discussion on the subject of entomology, during which I advised him to get a few pounds of sulphur, set fire to a pan of it under each bunk, close up every crack possible, let the bugs have the benefit of it for ten hours, when I thought they would be less troublesome than they had been. He promised to suggest the remedy to the boss when he should come in.

In the meantime the canoes had passed up the river. We started on and in half a mile further came to where they were making camp, and here we spent the night comfortably.

It was six miles to the dam, in the neighborhood of which we intended to go into camp, and the water was understood to be strong all the way, so the boys shouldered their guns, and started on the trail leading to the dam, while I took my seat in one of the canoes, and with the four Indians commenced poling up the river, which was slow work. At noon we stopped and cooked dinner; and by the middle of the afternoon reached the dam, where we found the boys, who had arrived some time before us, and were engaged in fishing for trout in a deep pool just below the dam, and with fair success.

This ride up the Brule had been a charming one, although we had been about nine hours in making six miles. All of the rivers in Northern Wisconsin are of colored water, except two. One of these is the Brule, the waters of which are cold and as clear as crystal, so that one can see the bottom at a great depth. It is the natural home of the trout. So soon as we landed at the bridge, I got out my fishing tackle and joined in the sport, while the Indians took the canoes, and went on up the river to make camp nearly opposite Boot Lake, and then came down and took us up.

Here we spent a week, abundantly supplied with both fish and venison. If I could not go on the hunt I could fish as well as ever, and so my occupation was not limited to keeping camp. I did my share to supply its larder with speckled trout. We opened the gates at the dam, when we wished to fish in the pool below it, and then closed them when done, and in ten or twelve hours it would so fill up that the water would rise 6ft. at our camp, and once it rose up so high as to come pretty close to us.

One day Norman chose to remain in camp, while I took an excursion down the river, and the other two were in the woods with their guides. I returned with a fine string of fish, and when I rather triumphantly showed it to Norman, he stepped down to the edge of the water and pulled out a string of fish still kicking, which were so much larger than mine in number and size that I gave up at once. The pond was full, when merely for occupation he got out his fishing tackle, and baiting his hook with fresh venison threw it out into the water, where when the pond was down the land was dry, and immediately landed a half-pound trout, and repeated this many times. The string which he exhibited was by far the finest lot of trout seen during that excursion. He afterward claimed the pond as his preserve, but he graciously allowed me to fish in it, of which permission I sometimes availed myself.

One day all the boys and all the guides went over with the canoes to Boot Lake to explore that body of water. The lake is about a mile south of the Brule, with rather marshy ground intervening between. Jake and Norman took one of the canoes and two of the Indians, and started out on the lake to explore a distant bay. When nearly a mile away they observed a speck upon the water which seemed to be moving slowly about, following the shore, and no great distance from it. As they proceeded they soon discovered it to be the head of a large buck, with very large antlers, swimming leisurely in the same direction they were going. The Indians silently but vigorously applied their paddles, and rapidly gained upon the deer, and when they had got pretty close to him he had crossed the bay and quietly walked up the bank, not having seen them, and there he stood about 70yds. away gazing into the forest beyond, as if for a mate. Of course, all had become greatly excited during the silent chase. They had taken but one Winchester with them, which Jake was holding. The Indian at the stern, near whom he sat, whispered, "Shoot," which he did three times in rapid succession, as fast as he could pump up the cartridges; but there the deer stood gazing right away from them into the forest. Then he relinquished the gun to Norman, who fired three shots with like success, when he handed the gun to the younger guide, who fired one shot at the deer, who still stood looking the other way, whence the echoes of the reports caused him to look for the danger point. He then quietly walked away into the bush, which was close by, without seeing his enemies or suspecting they were in the waters behind him. This was one of the most striking (or rather missing) instances of buck fever I ever remember to have heard of. It seemed to have utterly paralyzed the whole crew, without regard to their previous experience in deer hunting, and when they got back to camp at evening they still appeared to be affected with the snakes. No doubt the long and silent chase and gradual approach, and the fear every moment that they would be discovered by the quarry, was calculated to unstring their nerves, and so I endeavored to quiet them as best I could. The hurrah and laugh in the Indians' tent was abundant proof that they, too, were enjoying themselves at the expense of their companion who had become so shaken up that he probably shot over the tops of the trees, although he was a good hunter, and had lived in a deer country from boyhood. As for the boys I think they were excusable if they looked one way and shot another, which was no doubt the case.

That day's observation convinced the party that Boot Lake was full of black bass, so one afternoon they went over to try it, and returned with as many bass as they could bring. I saw at once that there were more than we could consume, and as many of them were still kicking on the string I directed the cook to put all in the river, except what we needed for supper and breakfast. This he did. Some went off at once and nearly all revived after a short time, and went into the stream. However, justly thinking that the liveliest would be the best for the table he made his own selection, and went to work to scale them in the edge of the water, and like the boy at a barrel of apples, he selected the best first. Just as he had got it well scaled, holding it by the tail, it slipped out of his fingers, and swam out into the stream at a lively rate. Now I did not see this myself, but it was immediately reported at our camp-fire, when all rushed to the place, but only scales were there to verify the report, but we had no reason to doubt its truth.

I could prolong this article indefinitely by giving a detailed account of each day's incidents, but that would be unprofitable, so I confine myself principally to special occurrences a little out of the way of the ordinary course of camp life.

After spending a week in this camp we started on our return. Soon after we left the dam our canoe began to leak, and as the pitch was in the other canoe, which had started ahead of us, and was already out of sight, we commenced hallooing, and the way those Indians made the woods resound was truly edifying. At the same time the Indians put on a spurt with their paddles, but the leak increased so rapidly that we had to run ashore and unload the canoe as quickly as possible. Our friends in the first canoe heard our calls, but thinking it was only a fit of hilarity upon the part of our Indians, they kept on in jolly mood, but so soon as they found that our noise seemed to recede they thought there was trouble and turned and laboriously pulled back to where we were. Our canoe had been hauled out, turned over and dried and a fire made, before which the pitch and the rent in the canoe were soon heated and the leak repaired, when we all embarked and shot down the current with great speed. When the rapids were reached above the month of the Brule we shot them safely till within a quarter of a mile of the vertical fall at the mouth of the river, where we landed and made the portage around the falls and got dinner. We then re-embarked, and in an hour's time were in our old camp at Bad Water Crossing. The hay which had constituted our beds formerly, by repeated shakings and turnings was well dried, and all was nice and comfortable again.

This time we spent two days at that camp with an abundance of healthy exercise, and all the success in hunting which we needed. On the afternoon of the second day we again packed up and sped down the river to the old camp of the Mayor's party at the mouth of the Pine, which they had left on their return home a few days before. Their large party of nineteen had occupied that camp for more than two weeks, and the relics of its former occupancy were scattered about in great profusion, but the lively and animated scenes which reigned there when we left them two weeks before were wanting, and a solitude which was almost oppressive now pervaded their old camp ground. All the bluejays of the country had appeared to be collected there to hunt for gleanings, and the nimble red squirrel in great abundance was found chasing around on every tree. The bottles (I mean catsup bottles and the like) lay about in numbers, and the boys amused themselves with pistol practice, using those bottles as targets, and made many successful shots at long range, much better than they could have made before their nerves had been quieted and their muscles strengthened by the free air and exercise of this excursion.

We found this camp and its surroundings so pleasant that the young gentlemen desired to spend another day there, though game in the vicinity was rather scarce, owing, no doubt, to the long stay and industrious habits of the Mayor's party at that place.

On the second morning after our arrival in that camp we took to our canoes, and leisurely passed down to the head of the great falls of the Menominee, where we landed and took dinner, and then commenced the four-mile portage around the falls.

All the guides started with their heavy loads of luggage on the trail and we followed in a very leisurely walk, which occupied two hours before we reached the foot of the falls. Long before we got there we met the guides returning for the canoes and what baggage had been left.

Two hours after our arrival one of the guides returned with a canoe on his head and shoulders, which he had brought over without once stopping on the way, and an hour later the other three guides arrived with the other canoe, which they had brought down by water nominally, for they had made many portages around falls which they could not descend in the canoe.

In the meantime I had been engaged in cutting some cedar boughs for our beds, while some of the boys had been scouting about in the hope of finding a deer, but they came in empty-handed. Our tents were now pitched for the last time on a little peninsula which jutted out into the waters just below the falls, whose roar was rather soothing than disturbing.

The next morning we packed up our baggage for the last time, went down the river for a few miles, where we landed, and bade farewell to the Menominee, and took the trail which led up to the village of Quinnesec, where we arrived in time for dinner.

During the afternoon we took the train for Chicago, which place we reached next morning early, and thus ended my last excursion in the woods and my last experience of camp life. Its incidents constitute a pleasing memory, a retrospect of which affords me only less pleasure than did the actual experience. The young gentlemen who went with me, and who had never before slept under a tent, and had never seen large game in the forest, or thrown a fly for *Salmo fontinalis*, had learned much of woodcraft and camp life, and almost considered themselves veterans. They had enjoyed the excursion to the full, and would have been glad to stay a couple of weeks longer, but that could not be, so we had reluctantly turned our faces homeward, they hoping again to repeat their experience many times, while I appreciated that my failing vision must make it my last.

Natural History.

THE INSECTIVORA.—II.

BY R. W. SHUFELDT, M.D., C.M.Z.S.

[*Concluded from Page 233.*]

WE have in this country some half a dozen species of moles or mole-like animals, distributed among four genera; of these, perhaps, the best known are the common mole (*S. a. aquaticus*) and the star-nosed mole (*C. cristata*). It is hardly necessary to say here that our common mole is not the same species as the mole of Europe, which belongs to the genus *Talpa*; in their habits, however, they are much alike, as they are in general appearance. At different times I have kept in confinement specimens of both our common species and the star-nosed mole, and there are few people, probably, of the country districts of the Atlantic slope, but are familiar with the first-mentioned animal, while many have seen specimens of the latter in the regions where it is found. Then, too, in these days of profusely illustrated school books, and the far wider attention that is being given to such matters in our schemes of education, nearly every school boy has seen a good figure of the habitation of a mole, with its small upper circular tunnel connecting with a similar and larger lower one by means of five or six slanting cylindrical passages, the central citadel having a number of tunnels leading from it in a variety of directions to open at various points on the surface of the ground, sometimes at four or five yards distant from the aforesaid habitation. So, too, are well known its dense and flossy coat of fur of silky softness, its minute eyes, its broad forefeet, and its smaller hinder pair, and indeed, any one who has ever paid the slightest attention to its form and structure must appreciate in a moment that its entire organization has come to be most perfectly adapted to its fossorial habits and peculiar mode of life.

These "shrew-moles" of ours well deserve their generic name, *Scalops*, from the Latin *sculpo*, I scrape, but for the *aquaticus*, the name is not so well earned, as they are by no means aquatic in habit, although it is said that our moles are fine swimmers when occasion demands it. In nature their principal food is composed of earthworms, which they obtain by digging, making frequent branches to their tunnels to secure them. They are among the most voracious of animals, and in confinement will ravenously devour flesh of almost any kind, but will starve rather than eat a toad. Pugnacious to the last degree, they fight in a state of nature for their favorite females, and will kill, yes, eat, each other in confinement. Twenty-four hours time is sufficient to kill one by starvation unless he be amply furnished with fresh earth worms, or meat of some kind, and they drink no little amount of water. In their personal habits they are cleanly, and take one when we may, his coat is always well kept and the earth rarely adheres to their pretty flesh-colored little feet. When a female mole is ready to bring forth her five or six young, she makes a soft nest of grass and other similar material in the main gallery. Young moles, although comparatively helpless when first born, soon attain their full size and are able to shift for themselves. The period of gestation is said to be about six weeks. Our moles are probably more beneficial than injurious to the farmer, and as they never consume any kind of vegetable matter, they never can do any very serious damage to plants; they may, to be sure, uproot a few when their tunnels run under them, but they should be pardoned for this. When out upon the ground one of our moles can run with very great agility, and no doubt during the night time such exercise is often indulged in; indeed, I have even during the daytime seen a mole take a scamper over the grass from one burrow to another

With respect to the hibernating habits of the common and star-nosed moles in winter, Dr. C. C. Abbott's observations have led him to record the following facts: He says that the common mole "burrows deeply into dry soils, keeping just beyond the frost line; and there it remains, without a nest of any kind, until the warmth of the spring sunshine melts the frost, loosens the soil, and sets the subterranean prisoner free. If, as sometimes happens, the cold is unusually intense and sudden, the ground freezes below the resting places of the hibernating moles, and then they are frozen to death. This, I judge, does not often occur; but the approaching frost rouses them sufficiently to place them on their guard, and forthwith they burrow a little deeper. It is very different with the meadow-haunting, star-nosed mole (*Condylura cristata*). This mammal has more complicated burrows than those of the preceding, and often one or more openings to them are beneath the surface of the water. At some point in these tangled tunnelings these moles form commodious nests, placing a good deal of fine grass in them. Here, indifferent to freshets, they remain all winter, and, as they can lay up no food, sleep, I suppose, through the entire season. The fact that these moles are unaffected by being submerged during the spring freshets is interesting. So far as I have examined their nests there was nothing to show that they were water-tight; and I think that the animals must have been thoroughly soaked for from forty-eight to seventy-two hours, the ordinary duration of the high water. If through any cause the period of submergence was prolonged, it is probable that it would prove fatal to the moles." Common moles while burrowing often throw out the surplus earth from their burrows. These constitute the well-known "mole hills," but they are not the central, circular galleries of their subterranean habitations as many are led to suppose, although this latter may be constructed in a hillock.

In a former paragraph I alluded to the "golden moles" of South Africa (*Chrysochloridæ*), animals almost as eminently fossorial as is *Scalops* or *Talpa*, and yet, as has been clearly shown by Dobson, to meet this kind of life,

their organization has become modified in a very different, although equally effective, way.

Points of interest in the structure of our moles are seen in the power they have to protrude their eyes when it becomes necessary to use them outside their tunnels; in the falciform bone (radial sesamoid) of the hand to augment its strength and general effectiveness as a laterally applied shovel or digging instrument; in the delicate, tactile appendages forming the star (Fig. 1) which ornaments the end of the snout in *Condylura*, and many other features.

All the star-nosed moles that I have ever seen or captured were in some marshy tract of land, and their burrows were deeper than those of the common moles, although the galleries are quite similarly disposed. This animal can be quite easily kept in confinement by giving it a large box, containing plenty of moss, moist earth and some fine dry grass, and feeding it with plenty of raw meat and earth worms. It is an exceedingly interesting little creature to watch and study.

Talpa and *Scalops* differ markedly in their dentition, the former having a formula $i\ \frac{3}{3}$ or $\frac{2}{3}$, $c\ \frac{1}{1}$, $pm\ \frac{4}{4}$, $m\ \frac{3}{3}$, and the latter $i\ \frac{3}{2}$, $c\ \frac{1}{1}$, $pm\ \frac{4}{4}$, $m\ \frac{3}{3}$.

Viewing the *Insectivora* as a whole then, the following are some of the more important features, structural and otherwise, which may be said to characterize them:

In habitat they are nearly cosmopolitan, South America and Australia being the only two continents wherein they are not represented in the fauna; in habit they may be cursorial, fossorial, natatorial, arboreal or volant (*Galeopithicus*); most all are insectivorous, but *Galeopithicus* is also phytophagous, the *Talpidæ* may almost be said to be carnivorous, and *Potamogale*, an African insectivore, also eats fish.

As a rule they are small placental mammals with a diphydont, heterodont dentition, and with a plantigrade or semi-plantigrade locomotion, their feet usually possessing clawed toes, and are as a rule pentadactyle. With the exception of *Potamogale*, collar bones (clavicles) are always present, while the remainder of the skeleton is widely modified in the several families to meet their peculiar modes of life. The coat in the vast majority of species is of a soft fur, though in the exception this may give way to a spiny armor as in the hedgehogs. In color the hair varies from black, all through the various shades of brown and dun, to the extraordinary metallic tints in the African golden moles. With respect to their dentition we always find more than two incisors in the lower jaw, while the well-rooted molars have tuberculated crowns and are well encased in an enamel coating. Typically the dental formula is $i\ \frac{3}{3}$, $c\ \frac{1}{1}$, $pm\ \frac{4}{4}$, $m\ \frac{3}{3}$; total 44 teeth.

In the central nervous system it is to be noted that the smooth, unconvoluted cerebral hemispheres do not project posteriorly over the cerebellum. Many species possess special glands which secrete fluids of various consistencies, but always odoriferous, and situated in various localities having reference to the superficial topography of the body. In the females, both the position and number of the mammary teats may vary greatly in the different families, while a vast array of important and highly interesting variations in the other structures of the economy are far too numerous for the space we have allotted here to attempt even to allude to them.

From eocene to recent, the several geological strata have yielded many forms of insectivorous animals, several of which are undoubtedly the stock from which existing families and species have been derived, and we may reasonably expect to meet with much more such material, and it will probably throw considerable light upon the question of the affinities of the *Insectivora* in time.

BIBLIOGRAPHY OF THE INSECTIVORA.—The following are important works of reference in studying this order: Peters, "Reise nach Mossambique," Säugeth. 1852; Id., "Ueber die Classification der Insectivora," Monatsb. Akad. Wissensch., Berlin, 1865, and other papers. Parker, W. K., "Structure and Development of the Shoulder-Girdle and the Sternum," Ray Society, 1868. Huxley, T. W., "The Characters of the Pelvis in the Mammalia," Proc. Roy. Soc., Vol. XXVIII., 1879; also his "Elements of Comparative Anatomy," and "Anatomy of Vertebrated Animals," and many special monographs and memoirs touching upon the order. Leche, W., "Zur Anatomie der Beckenregion bei Insectivoren, etc.," K. Schwedische Acad. d. Wissenschaften, Bd. XX., 1882. Mivart, "On the Osteology of the Insectivora," *Jour. Anat. and Phys.*, 1867, 1868. Proc. Zoöl. Soc., 1871. Gill, "Synopsis of Insectivorous Mammals," and his "Arrangement of the Families and Subfamilies of Mammals." Cope's series of paleontological and other papers referring to the Insectivora, published in *Amer. Nat.* and elsewhere, giving a masterly classification of the order in time. Dobson, "Monograph of the Insectivora, Systematic and Anatomical," London, 1882, and his articles in the 9th Ed. Encyclo. Brit. as the order Insectivora in art. "Mammalia," and arts. SOWERBY'S WHALE.—The little whale referred to in FOREST AND STREAM April 11, was made the subject of a paper read by Mr. F. W. True before the Biological Society of Washington at its last meeting. It was found to be a male. The genus to which it belongs has one species in the North Atlantic, four in the South Pacific, and one in the North Pacific. This is the second specimen known from our coast; the Museum of Comparative Zoology has one and the one recently obtained is in the National Museum. The stomach of Sowerby's whale has about ten compartments, adapted to the assimilation of cuttle fish and other cephalopods. The intestines contained numerous parasites representing five species. Other rare cetaceans obtained from the Life Saving Service are the pigmy whale and a *Ziphius*.

CENTRAL PARK MENAGERIE.—The annual report of the menagerie recently made by Dr. Conklin to the Department of Public Works, shows that during 1888 1,018 animals were exhibited, of which 384 were mammals, 560 birds and 74 reptiles. These represented 248 species, 173 genera and 75 families. The additions to the collection during the year were 258 in number, as follows: Mammals 99, birds 111, reptiles 48. The more notable are the hippopotamus, now eight years old, a leather-back turtle and an American crocodile (Nicaragua), two Argentine tortoises (Venezuela), a pair of Sardinian mouffons, a pair of Japanese deer and an elephant, presented by Adam Forepaugh. The most serious loss of the year was the death of the chimpanzee "Mr. Crowley." A table of weights of this interesting animal shows that at the time of his arrival at the Park, June 25, 1884, he weighed 151bs., while in June, 1888, his weight was 110lbs. His death, which occurred in August, 1888, was due to chronic tubercular phthisis. During the year there were born in the garden lions, tigers, puma, agoute, zebu, bison, Cape buffalo, goats, deer, black swans, geese and peafowl. The number of visitors to the menagerie is very large, sometimes on Sundays reaching 100,000 persons. The report closes with a classified list of the animals exhibited during the year.

EFFECT OF RAIN ON EARTHWORMS.—At the meeting of the Biological Society of Washington, April 20, Prof. Joseph F. James called attention to the extraordinary abundance of earthworms after rains, and the excessive mortality among them, owing to crushing, drowning and exposure. In walking a distance of 425 feet he counted 380 worms, fully three-fourths of which were dead. At another time, in going 200 feet, he saw 340 worms, about 12 of which were alive. Darwin estimated the number of earthworms to the acre in England to be 53,767. It is supposed that rain forces out the worms by filling up their burrows. The asphalt pavements seem to be the great centers of mortality.

A NEW VOLE.—At the meeting of the Biological Society of Washington, April 20, Dr. C. Hart Merriam made some remarks on a new vole from the Gulf of St. Lawrence. This remarkable little animal belongs to a genus discovered in British Columbia by Dr. Geo. Dawson. It is intermediate between the true mice and the so-called meadow mice. The form differs from the meadow mice externally in having a sixth tubercle well developed on the hind foot and in its longer and stiffer whiskers. The important difference, however, is found in the shape of the hindermost molar tooth.

NEW HAMPSHIRE BIRD ARRIVALS.—*Editor Forest and Stream:* Since my last letter the following birds have been seen: On April 5, a winter wren; 6th, a fox sparrow; 7th, white-bellied swallow, wood thrush, black and white creeper, and herring gull; 8th, a bobolink; 9th, a purple finch; 10th, a flicker; 12th, red-eyed vireo and blue heron; 13th, bay-winged buntings. The herring gull was seen after a hard southerly gale, which may have blown him inland.—P. C. (St. Paul's School, Concord, N. H., April 15).

Game Bag and Gun.

SHOOTING NEAR ST. LOUIS.

ST. LOUIS, Mo., April 20.—*Editor Forest and Stream:* The sportsmen of this locality have no reason to complain of the sport had on snipe during the past week. It has not been of a nature to set them wild by any means; still taking all things into consideration, birds have been fairly plentiful, and a number of very good bags are reported. The prairies are becoming very dry, and wet places are few and far between, but when one of these wet places is found, the nimrod is generally rewarded with a good rise of birds, and the number that he bags is of course measured by his skill in handling a shotgun.

During the past week the Cuivre Shooting Club's preserve took the lead in the number of snipe bagged by its members. Mr. H. Clay Pierce made the banner bag of the season last Monday. In one day he counted up sixty-six, which beat all previous records this season for this locality. At the same grounds, one day later, Mr. Ike Morton, after a hard day's tramp, bagged forty-three. The birds were in magnificent condition, because they had not been disturbed for several days. Bluewing ducks were quite plentiful, and the gentleman spent the morning and evening hours in bagging a few of them. These grounds were visited later in the week by several other members of the club, but they, as a rule, only succeeded in finding few birds.

Next in point of birds bagged comes the Dameron Club, which is located several miles above the Cuivre Club, but in the same stretch of prairie. Here the ground is also dry and the birds are bunched. A party of five, composed of M. C. Billmeyer, E. Mohrstadt, W. Hettel, W. Clark and M. Mayhew, spent one day up at the Dameron preserve in the early part of the week, and on their return to the city produced 126 snipe and 42 bluewing ducks. They report having seen quite a good many mallards in the distance flying over the timber. They bagged none because they never went into the timber to hunt them.

Some fair snipe shooting has also been enjoyed by the Dardenne Club people. The Grand Pass (Ill.) Shooting Club have so far not had any snipe shooting at all. Its grounds are only about eighty-three miles north of here, and why no snipe have made their appearance up there is a puzzler to the club members. The marshes in the club's preserve are said to be in prime condition for birds, better, in fact, than any other in this vicinity. Almost the same state of affairs took place last season. When there were plenty of birds twenty and thirty miles south of the Grand Pass Club's grounds there were none to speak of on its marshes. This kept up until about the first week in May. Then the birds began coming on its grounds, and for the following two weeks the club's members were favored with the grandest kind of shooting. Perhaps this season may turn out in the same manner, at least all the members are hoping that it may. If it does they will be perfectly satisfied. So it may be said they are patiently waiting the turn of the tide. There are no more famous snipe marshes in this country than those controlled by the Grand Pass Club, and it would be a very unusual thing to have a season go by without its members having had some splendid sport on the longbills.

King's Lake reports birds exceedingly scarce, and the same may be said of the Kidd Lake grounds. The members of the above two clubs having resolved to abstain from any further effort to bag any snipe.

UNSER FRITZ.

NOTES ON THE YELLOWSTONE PARK.

YELLOWSTONE NATIONAL PARK, April 5.—*Editor Forest and Stream:* The Government Scout Ed. Wilson and Corp. Wm. L. Boyce have returned from a snowshoe scouting trip on the east side of the Yellowstone Cañon and Alum Creek country. From the hotel at the Grand Cañon they made their way to the Nez Percé ford at the Mud Geysers, where they waded the Yellowstone on a riffle. They found no ice in the river anywhere, and only from three to four feet of snow, except in drifts. The Alum Creek country was full of game. Elk in great numbers were seen on the east side of the river, the sage brush hills there being free from snow. Ducks, geese and swans were very plentiful in the rivers and on the bars.

From the Nez Percé ford they traveled east through timber, meadows and warm spring basins, visiting the Pelican Creek basins, Broad Creek and Mirror Plateau. They then worked their way northwest along the plateau and Amethyst Mountain to Specimen Ridge, down that to Baronette's Bridge and Yanceys. They were out from the hotel seven nights, camping by fires which were kept up all night. They saw thousands of elk, and followed many buffalo trails made through the snow where they have wandered around during the winter. Some of their bedding places were like cattle corrals. Owing to the nature of the country they were unable to count the buffalo in this section, as they spend much of the daytime in timber.

At Junction Butte they saw a large band of antelope, a bunch of mountain sheep, and hundreds of elk in the East Fork Valley. From all indications most of the buffalo are on the same range where they spent the summer, there not being enough snow to drive them out of the country. That is, they have wintered on the east side of the Yellowstone Cañon and in the Alum Creek and Nez, Percé Creek basins, also in the vicinity of the Upper and Lower Geyser basins. Mr. Wilson and Corp. Boyce were out from the Mammoth Hot Springs nineteen days, every day of which was spent in sight of game. They found the deepest snow in the heavy fir timber between Broad Creek and Yellowstone Lake. There it was 5ft. deep. As a rule it would be but 1 to 2ft. on the south sides of hills and 3 to 5ft. on the north slopes. There is so little snow in the Park that game of all kinds have been able to travel about with very little difficulty.

Work on the roads of the Park commenced this year in March. The first crew of twenty-eight men were put to work on the road between the Mammoth Hot Springs and Gardiner; this has been put in thorough repair. A new piece, shortening the distance, and giving a gradual grade from the first to the second terrace, is almost completed. On the first instant another crew of men were put to work on the Golden Gate road, clearing it of rocks, repairing broken places and washes made by the melting snow. On the third there was a team of four mules and a wagon driven almost to the Gardiner Bridge, there being so little snow through the Swan Lake Basin. As soon as possible a crew of men and teams will be put to work to finish the road there, build a new bridge across the Gardiner, and clear the roads of timber. Another crew will be at work on a new road down the Gibbon Cañon. This will follow down the river past the falls, avoiding the hill there and at Cañon Creek. There will be a new road most of the way from the Gibbon Falls to the Lower Basin. It is intended that most of this work, and some new road at the Grand Cañon, will be finished before the first of July, at which date the $25,000 appropriated late last fall will cease to be available. Part of this money will be expended on a portable sawmill and a building at the Mammoth Hot Springs for offices, storage and other purposes.

On July 1, 140 men and 35 teams, divided into four crews, will be put to work on the new road from the Upper Basin to the outlet of the Yellowstone Lake via Shoshone Lake, and men and teams will extend the road along the Grand Cañon to Inspiration Point. Most of the $50,000 appropriated for this season's work will be expended upon new roads; about $10.000 will be saved to commence work on in the spring of 1890. The road from the Upper Basin to Shoshone Lake will open up some very interesting country, the Shoshone Geyser Basin being next in interest to the Lower Basin. The road will follow the Lake from the Geyser Basin to some distance past the outlet, where it crosses the Lewis Fork of Snake River. This will be one of the most enjoyable rides on the whole trip. No one will be able to tell when they cross the Continental Divide between Shoshone and Yellowstone lakes; the highest point on the road will be a little over 400ft. above the lakes, and that in rather a level country. The difference in altitude in the two lakes is but one foot, Yellowstone Lake being 7,741ft. and Shoshone Lake 7,740ft. The road will strike the Yellowstone Lake at the west arm, near the Warm Spring camp and Lake Shore Geysers; from there the road will follow the shore most of the way to the outlet. Mr. Lamartine, the overseer appointed by Major Charles J. Allen, the engineer in charge of improvements in the Park, has had several years' experience in building roads in the Park under the engineers who have been detailed for this work.

Since the administration of Col. P. W. Norris as superintendent of the Park no part of the annual appropriations has been spent on improving the trail or bridle paths to the various objects of interest not reached by wagon roads. Those built by Col. Norris have been neglected until they are badly blockaded by fallen timber. What work was done on them was done by parties riding through, and only removing a tree where it was impossible to ride around it. There ought to be a good bridle path made to the summit of Mt. Washburn, and all the trails cleared of fallen timber. This would cost but a few hundred dollars.

H.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

CHICAGO AND THE WEST.

CHICAGO, Ill., April 18.—On the 15th of April the Chicago men and other shooters who visit the Kankakee country oiled their duck guns and put them away for a while, and the ducks will now have a little chance to rest. Illinois holds on for two weeks longer, and may offer some good shooting in the Fox Lake country, where the bluebill and redhead flight usually is best late in this month. The slaughter of ducks has been enormous, and I am sure I do not see what more any shooter could ask than has been offered this spring. Hardly any one has gone out who did not get a good bag, and some scores have stood very high. As stated in earlier letters, the best of the shooting has been on the Kankakee. The Cumberland marsh has sent in more birds than any other club ground; English Lake perhaps second. Mak-saw-ba has been unfortunate for some unknown reason. The Illinois River country has been unaccountably barren also. One of the very best localities this season has been that part of the Kankakee above the Diana Club, near Water Valley on the Monon road. The largest bag I have heard reported, that of Mr. Fred Ehlers, 134 ducks, killed after 11 A. M. of one day, was made on the big marsh above the Diana Club. This marsh seems to have held the bulk of the game in that section, and the closer the Cumberland boys got over toward it the better shooting they had. Messrs. Gammon and McFarland got their big week's shooting over in that direction, going up the main marsh ditch about eight miles from the club house. This "North Marsh," which lies just across the river from the grounds of the Kankakee Lard and Cattle Co., has been swarming with game, including numbers of wild geese. The falling water cut off the entrance to this marsh for boats two weeks ago, and few hunters have had the hardihood to wade the two miles of swamp which lie between the outer world and its hidden penetralia. One market hunter by the name of Ainsworth, who has been camped at the lower Red Oak cabin, week before last shipped ninety geese, the product of one week's shooting, wading and dragging on the North Marsh. He does not use decoys, but calls the geese by honking, without a call, in which art he is an adept. He has three pits dug, and alternates them.

Some of these facts I learned on my last week's trip in pursuance of the Kleinmann tip, which I afterward learned was indeed steering me straight for the country where the game was. However, when I told Mr. E. C. Cook where I was going, he said he knew a surer and pleasanter trip than that, and after a moment's thought he gave me what very few men get, a letter to the keeper of the Kankakee Land and Cattle Co. Club, usually called "De Golyer Club" for short, and privilege to shoot on their marsh, known all through this country as the *sanctum sanctorum* of wildfowl. I had made some little mention of this club in an earlier article, but had never seen the grounds, which I was delighted now to visit. I had, therefore, the Kleinmann tip and Mr. Cook's tip to struggle with when I boarded the train for Water Valley; and when I had done that, almost the first persons I saw were Messrs. McFarland and Gammon, going down to the Cumberland for another carload of ducks. They gave me a tip that I was a chump if I didn't come right along with them, and go where the ducks really and actually were. Of course, I couldn't resist a good tip, and was just about to get off at Lowell with them, when I met Mr. Kreutzberg, secretary of the Diana Club, and he gave me a tip that if it was ducks I was after, I would better come right along with him. I now had four tips on my hands, and I really hardly knew what to do. With a modesty which I sometimes think nearly amounts to genius, I rapidly made my decision. I decided to accept them all. Therefore, I went on to Thayer, instead of Shelby or Water Valley or Lowell, and spent that night at the Diana Club with a pleasant lot of fellows who were down.

In the morning, by virtue of courtesy, I was offered the services of the best pusher on that marsh, old McDowell, and before daybreak we were gliding silently but swiftly through the wide submerged timberland of the Kankakee. Oars are not used on the Kankakee, the pusher's pole replacing them, much to the good of speed and ease. McDowell was astonishingly able at the pole, and owing to this and to his thorough knowledge of all the cut-offs, we arrived at the De Golyer club house by ten o'clock. We must have traveled up stream at the rate of four miles an hour for fully fifteen miles by the river. We saw a great deal of game, and put out the decoys once, getting but three birds. We found Mr. Fred Cook and a friend, Mr. Springer, just going home. They said the shooting had been poor, as the ducks were not moving; but I noticed they had two sacks full of ducks.

The De Golyer marsh is in a country naturally wild. It is only three years or so since the last deer was killed near the lower end of the marsh, and ten years ago there were a good many in that vicinity. A year ago five timber wolves, black and gray, frightened the women about the club house nearly to death by making a dress parade in the door yard. Even as we looked out we could see great numbers of wildfowl, and it seemed not strange to know they nested very often in the marsh even to-day.

I was astonished at the great numbers of mallards on the De Golyer marsh, as I saw so few elsewhere. I was told that this club did not shoot mallards in the spring. That accounted for it. It was a very pretty and very conclusive lesson on the subject of game preservation. I am willing to go upon record that I saw more mallards on four miles of the De Golyer marsh than I did on all the rest of the country I visited, which I should think to be forty miles or more. The club feeds the mallards and preserves them. The mallards go there and stay and breed. It might look strange, but it is really as simple as a, b, c. Protection protects, and the birds know it if the hunters don't. This little club—there are only eight members—certainly deserves mention for its liberality and forbearance with the game. The marsh is admirable and admirably stocked. No one is allowed to kill a muskrat on the marsh, as that animal keeps open ponds and channels. The mink are killed, as being destructive to the birds. No shooting is allowed after sundown, and none upon any Sunday. Could anything be finer than this? And could any confirmation or comment be stronger than the circling flocks of birds and the merry quack of the exultant mallard coming cheerily up out of the reed-?

My stay at the De Golyer marsh was short, and the trip down the river rapid and delightful. On the way down I shot among other ducks a magnificent specimen of the wood drake. The skin was wonderfully beautiful, and one could feel little less than remorse at having killed the bird. Had I not shot so wretchedly the string that we took to the Diana Club might have been twenty birds instead of ten; but I explained that—the way shooters usually do.

Finding it difficult to get into the North Marsh country, I now started for the Cumberland Club, via the noon train to Lowell. At hospitable Cumberland lodge I found Messrs. McFarland, Gammon, Stevens, Gillette, Freeman, Grey, Farmer, Harmeyer and others. No great bags had been made, twenty being about the limit, except Mr. McFarland's bag of 32. Mr. Gammon and I went out in front of the house and killed a couple of jacksnipe, starting two or three dozen, very wild and out of reach. The marsh was pronounced to be in excellent shape for snipe, and great shooting at them was expected within a week or so.

I had always longed for one good day at the ducks, so that I could see just how these big bags were made which are so often scored to our Chicago men. I got just such a day at the Cumberland. Alf. Dodd, perhaps the best pusher on that marsh, was directed to take the longing aspirant out, and he did so. We put out our decoys once, and I got three ducks while Alf. explored a little. He came back, told me he had "found where they were," and we pulled up, moving nearly a mile, and making a little portage, getting into the open marsh south of the South Islands. We drove out a great body of birds, and a little before noon put out our decoys, crawled into the grass, and were soon in the middle of a "big day." I stopped early in the evening at forty birds, and we had an easy and pleasant trip down the ditch to the club house, unloading 40 ducks, and also 14 snipe which we had acquired on the way up in the morning. When I counted up my game after I got home, I found 59 ducks and 17 snipe, and I'm sure that one hunt is enough for my share.

One can always learn something, and on this little trip I learned something about a 12-gauge gun. The birds were coming in very fast about noon, and we couldn't get time to eat. Alf. Dodd told me to go ahead and eat, and he would take my gun (a 12-gauge hammerless) and keep the ducks out of the blind. He killed three shots straight with it, and they happened to be very long and difficult. I bantered him to get more difficult shots, and he killed six straight at ranges I had never dreamed were possible for any gun. The birds were killed dead, struck with the center of the charge every time. The man would kill practically every duck he shot at, and in a style that seemed to me very wonderful. I always load my own shells, and shoot at ducks 3¼drs. of powder and 1¼oz. of shot, No. 6, this being the load shot in this case. After this I realized that it is with a gun much as it is with a violin. There is music in the violin which only a master can bring out. I know very well now that I am not master of my own gun, and that it has capabilities which it takes an old marsh shooter to get out. The gun shoots infinitely better than I do, and hereafter I could not conscientiously blame it for any miss. As for the man who says a 10-gauge is necessary for duck shooting he doesn't know what he is talking about, and moreover, he doesn't know how to shoot. He can't get the music out of the instrument. He wants a bull fidddle.

There was another pleasant episode in this trip. I was in a blind about 200yds. from Mr. John Grey, who had very cleverly got his decoys out where they cut off all the flight from my blind, although he didn't mean to do that especially. I watched the birds draw down to his fleet, and hardly a flock passed that he did not strike. Very often I would see two birds wilt, one after another, and I must say I never saw such double shooting at ducks. Mr. Grey fired twenty-four shots and bagged twenty-two ducks, never killing more than one bird at a shot. That was the best duck shooting I ever happened to see, and I did see that. Mr. Grey says, "In shooting doubles out of a blind you always want to figure where the second bird is going to be when you want to pull on him. If the birds are going away you always shoot the furthest first. If they are incomers you shoot the closest first. The second bird is carried on by its momentum, and as it starts to climb is an easy shot. You must be careful with your first barrel, as if it were your only chance. Be sure you kill your first bird, but never stop to see whether you do or not. Pull your gun right on to the place where you have figured the second bird ought to be, and let him have it. You can always kill the second bird easier than you can the first, if you remember this, because the second bird will begin to check up and climb at the report of the gun. I often kill the second bird before the first strikes the ground, and when I don't know whether I have killed the first one or not. I always suppose I have. In that way I don't allow myself any loose shooting on the ground that I can kill a bird with the second barrel if I miss it with the first." As to the efficiency of Mr. Grey's system, there can not be any doubt. In a set of shooters such as he travels with, I shouldn't like to call him, or anybody else, the best shot of the lot; but if I could shoot ducks the way he can I would cease this mad struggle for riches and go into the market-hunting business.

Jacksnipe got here April 14, and are now pretty much all over the country out here, and this bids fair to be an exceptionally good season for them. The rapidly falling waters of the marshes have left better working ground for them than has been the case for a number of years.

There have been five of great trumpeter swans on Calumet Lake, just at the edge of the city, for the past week or so. Mr. E. C. J. Cleaver, secretary of the Grand Calumet Heights Club, a few days ago killed a trumpeter on the river, and it is thought to be one of these five. The swan was a fine specimen, and will be mounted. It was killed with No. 5 shot.

Our shooters are now turning their attention to Fox Lake, and big bags of bluebills are soon to be expected. Lake George, in the Calumet region, was covered with bluebills a week ago. It is a great place for them. Dick Turtle killed forty-one in two half-days, evening and morning.

The duck season may now be said to be over. Snipe shooting will occupy the boys till the fishing season begins. Some of our shooters will go down to the Crown Point trap tournament Thursday and Friday of this week. The town has been crowded the past week with sportsmen attendant upon the Mascoutah Kennels' bench show, which but just rolled its muttering thunders away.

Mr. G. W. Williams, of Lexington, Ky., who was here with the winning greyhounds in the late show, is a brother of Roger D. Williams, one of the judges in last fall's American coursing meet. Mr. Williams says that he is a member of a club which shoots ducks every fall on the New Madrid marsh, over the line in Arkansas. The shooting is usually magnificent there in the fall. Reelfoot Lake, in Tennessee, says this gentleman, is no longer of much value as a duck ground. Lexington shooters have a few quail and rabbits in their own country. A club of the young anglers of Lexington has been formed, most of whose fishing is done in the Reservoir, three miles or so from town. The artificial fly is almost the only lure used, and very good strings of croppies—locally called "New Lights"—and bass are being taken now. Warm invitations come up to FOREST AND STREAM to visit the land which is proudly declared to have the best whisky, the most beautiful women and the fastest horses on earth. It would be hard to imagine a more pleasant trip than one into the royal Blue Grass country.

Mr. Rollo M. Heikes, a well-known shooter of Dayton, Ohio, was in town April 16, on his way to the Omaha tournament.

Dr. Baxter has been absent two weeks, duck shooting in Dakota. Nothing has been heard from him, but he must have had good sport.

Mr. John Gillespie killed 34 ducks on Fox Lake on 13th. The flight went north, then settled back, and he caught it.

Mr. Wm. Payson bagged 40 jacksnipe at Harvard, Ill., April 13. Mr. R. B. Organ got 26 jacks and 2 ducks on the Kankakee the same day; also a good wetting in a muskrat hole. Messrs. J. A. Sharp and Al Carlyle got 70 snipe one day week before last, at Water Valley. Messrs. Stevens and Street got 24 snipe and a number of ducks on their late Cumberland trip. Messrs. W. H. Lees and John Matter had good snipe shooting at the "Sag" week before last, the latter getting 10 jacks and 10 yellow plover one day.

The Grand Calumet Heights Club, a very active young organization, has appropriated $50 as a donation to the State Sportsmen's Association. If other clubs would follow this commendable course it would help the meet out wonderfully in the way of prizes, etc.

The ninth annual tournament of the Southern Illinois Sportsmen's Association will be held at Belleville, Ill., June 6, 7 and 8.

Will some one please tell why a State like Indiana, so large, so intelligent, so wonderfully well supplied with game and game resorts, and yet so persistently robbed and threatened by a lawless element which has no respect whatever for even such loose laws as Indiana has, cannot claim a State sportsmen's association? Time the Indiana boys got together. It will not be a very expensive or a very troublesome matter to organize, and the work thus made possible might be productive of the greatest good. Certainly there is a wide field for such work. If there is any State organization of this nature I owe it an apology, for I never heard of it. If it is too bashful, let it get over that; and if it does not exist let it summon itself together out of chaos. It is time.

The date claimed for our State tournament is Tuesday, June 4 and the remainder of that week. John Watson, of Grand Crossing, will furnish the birds, and the trap shoot will be at his grounds. Committee on programme consists of R. B. Organ, W. P. Mussey and Alex T. Loyd. They meet this week. The Loyd system of trap shooting, first presented in these columns April 4, has been laid before the association. It has already met the approval of most of our leading shooters here, and will doubtless be used at the State meet.

E. HOUGH.

No. 175 MONROE STREET.

A SPORTSMAN'S COMMENT.

Editor Forest and Stream:

By means of the excellent articles from the pen of Mr. E. Hough, that have appeared in the pages of FOREST AND STREAM during the past winter, sporting and shooting matters in and about Chicago have been placed prominently before the sportsmen of the whole country. No doubt every reader of this paper who is interested in the subject, has studied closely the exposition of the question of game protection as it exists in the States of Illinois and Indiana, and waited anxiously to see what would be the outcome of the efforts of sportsmen before the legislatures of these States.

So far as I have been able to understand the situation, there has been a woeful lack of concerted action among the sportsmen; powerful influences in an opposite direction have been brought to bear, and the results have been practically *nil*. The influence of those great and wealthy shooting clubs, described by Mr. Hough, should be sufficient, if exerted in the proper manner and direction, to accomplish almost anything in the shape of necessary legislation for the proper protection of game. But, that no effort with wise and unselfish ends in view will be made, is evident from the following paragraph clipped from an article of Mr. Hough's in FOREST AND STREAM of April 11: "Messrs. McFarland and Gammon in their week at the Cumberland bagged 520 ducks, besides their geese, cranes and snipe mentioned earlier. * * * Mr. C. D. Gammon has put up a gold medal for the Cumberland Club, the man killing the most ducks this season to win it." Mr. C. D. Gammon evidently intends to keep that medal for himself.

On the same page with the paragraph quoted above appears the following: "The Michigan Legislature has passed a bill to repeal the law prohibiting spring duck shooting," and small wonder might have been very appropiately added.

After reading such statements as the above in regard to the exploits of Messrs. Gammon and McFarland, the sportsmen of adjoining States would be very foolish if they continued to allow themselves to be used as the pole with which the thrifty Illinois shooter gathers the spring duck persimmon. The shooting clubs of Chicago need never expect that public sentiment will be anything but hostile toward their organizations, nor that depredations on their territory by pot-hunters, market-shooters and others of that class will not be winked at by local courts, so long as they permit within their precincts and by their members such wholesale slaughter of the game birds that belong to the people of the whole United States.

The idea of a uniform inter-State game law advanced by Mr. Hough is good, and such a law offers the only satisfactory solution of the problem of game protection. I think, however, that Mr. H. is too modest in crediting

the idea to a game dealer. Read between the lines, it has the ring of true, unselfish sportsmanship, which no one would ever expect to emanate from a game dealer. I suspect the facts in regard to sportsmen quoted by Mr. H. have been observed by him in his intercourse with the Chicago article.

In the meantime, until a uniform game law for the whole country can be adopted, the best course for sportsmen to follow will be the advocacy of as wise and effective game laws for each State as it is possible to pass and enforce, coupled with an iron-clad non-export law, to prevent game being shipped out of their States.

VICTORIA, Tex., April 17. GUADALUPE.

ST. CATHARINES.—The regular meeting of the Peninsular Gun and Game Club was held in the office of James A. Keyes on April 8, and was largely attended. Five applications for membership were received and accepted. The report of the scouts showed that the members of the club in the vicinity of the Twenty and other ponds were doing splendid work, with the result that not a single duck had been shot there this spring, while along the Niagara River, from Fort Erie to Lake Ontario, ducks were being shot in large numbers by men who know the law, and could have no possible excuse for violating it. It was decided to notify the executive committee of the Dominion Gun Alliance of the violations, and the names of the parties so far found out, and render them every assistance in the prosecution of the parties. The committee on game reported that they had secured 150 Indian Territory quail, which would be turned out in different parts of the country. The club is now in a flourishing condition.

AN OHIO SPORTSMAN.—A correspondent referring to the Sunset Club papers and to the portrait of Judge Potter, of Toledo, which appeared in a recent issue of FOREST AND STREAM, says of Judge Potter: "He was once judge over nine counties in northwest Ohio; has shot deer in every ward in Toledo; smoked (when in Congress) with Gen. Jackson; fished on the Potomac with Daniel Webster; played whist with John C. Calhoun, Thomas H. Benton, Silas Wright and others; was with Henry Clay when he died, and on board the Princeton at the time of the bursting of the big gun. And now at 84 past, is still hale and hearty, quick of sight and hearing, clear of mind and memory, entertaining and companionable. These are a few of the facts concerning Judge E. D. Potter, of whom no one will speak ill."

MICHIGAN DUCK LAW.—"It shall be lawful to hunt and kill jack-snipe, redhead, bluebill, canvasback, widgeon and pintail ducks and wild geese, between the first day of September in each year and the first day of May next following." Approved, March 28, 1889. Unless you have already published the above, it will be of interest to many, as being the substance of the recent Michigan legislation with regard to spring shooting.—KELPIE (Central Lake, April 15).

CROSS SHOOTING.—Mechanicville, N. Y., April 12.—*Editor Forest and Stream:* In the FOREST AND STREAM, April 4, "Sinkboat" gives his experience in cross shooting. Will some others please give us points under the same head. This is just what has bothered me many a time, how to hold on a fast-moving duck or other bird when we are nearly always obliged to take them on cross shots. Will the old gunners take a hand in educating a—NOVICE.

NEW JERSEY.—The Chatham Fish and Game Protective Association was organized at Chatham, New Jersey, on April 17. The objects of the association are, as its title signifies, the protection of fish and game under the laws of the State; also trap-shooting. Its officers are as follows: Pres., Geo. Shepard Page; Vice-Pres., W. W. Ogden; Sec'y-Treas., Wm. Elder.

GAME LEGISLATION AT ALBANY.

ALBANY, N. Y., April 19.—The Assembly has ordered to a third reading the bill creating a game commission to modify the game laws.

Mr. Mead's concurrent resolution against the squatters in the Adirondack forests has been favorably reported in the Assembly.

Sea and River Fishing.

FISHING NEAR NEW YORK.

II.—STATEN ISLAND.

THE favorite fishing waters for New Yorkers are those which wash the shores of Staten Island. In the height of the season New York anglers go to Staten Island by thousands every Saturday night and Sunday morning. Mr. R. W. Pollock, the general traffic agent of the Staten Island Railway, was unable to give me exact figures of the number of fishermen who use the company's ferry boats and trains during the summer and fall months, but he says there are so many anglers carried to the island and back again that it is a matter of wonder to him that there is a fish of any kind left to catch between St. George and Tottenville.

The east shore of Staten Island is the fishing ground. The north shore, from St. George to Elm Park, is bounded by the Kill von Kull, and the Standard Oil docks, the Chemical Works and other nuisances on the New Jersey shore fill this stream so full of "sludge acid," petroleum and other nasty compounds that fish can scarcely live there, and if they can be caught they can scarcely be fit to eat. Where the Kill von Kull ends, at Newark Bay, there is sometimes good fishing for striped bass, but as this is in Jersey waters it will be considered in another article. At Buckwheat Island on the Arthur Kill, near the new drawbridge, there is also good fishing at times, but this place is as yet practically inaccessible by way of Staten Island and will be mentioned under New Jersey fishing. In Staten Island Sound, which separates Staten Island from New Jersey below Elizabethport, there is very good fishing for weakfish in season. Rossville, on Staten Island, is near the best grounds, but it can only be reached by the steamer plying between New York and New Brunswick, N. J., which leaves its city pier at the foot of Vesey street in the afternoon, so that the fisherman would have to stay over night. He can reach the same or better grounds in the Sound, however, by taking the C. R. R. of N. J. to Sewaren.

The Staten Island Railway is *par excellence* the angler's road. It carries, for its short distance, more fishermen in one season than any other New York railroad does in three. Throughout its length, from St. George, where the Staten Island ferry boats land, to Tottenville, at the south end of the island, it passes within easy distance of the whole eastern shore, and at every station below Garretson's, stages connect with each train to carry anglers to the beach. At present, both on week days and Sundays, trains run in both directions almost every hour, and in the summer and fall they run much oftener. The route is by way of Staten Island ferry from the foot of Whitehall street to St. George, S. I., where the trains are waiting.

The king of Staten Island waters is the striped bass. He comes in small numbers in the spring, is caught in late April, May and June, but the best striped bass fishing is in the fall, September and October being the best months. The Staten Island fishermen are just beginning to troll for striped bass as the Hell Gate fishermen do (see first article of this series), but they prefer still-fishing, which is done inside the sandbar that follows the eastern shore for a good portion of its extent, in water from 2 to 10ft. deep, and they find the best bait to be the white sand worm. The red sandworm ranks next, and after this shedder crabs and shrimp. The last of the ebb tide and first quarter of the flood is the favorite time, giving six hours for fishing.

Weakfish begin to bite as soon as the fireflies show themselves, say from May 25 to June 10, and the southern part of the island is the best ground for catching them, although there are many caught in the Great Kills. They run in weight from ¼lb. to 2lbs. and sometimes larger. Shedder crab is the best bait, and the same conditions of tide hold good as for bass; indeed, the same may be said for all fish caught in these waters.

Kingfish make their appearance in the neighborhood of the Great Kills about Aug. 1. Use shedder crabs or shrimp for bait, and fish close to the bottom. These fish may be "chummed" for, in the same manner as bluefish or sea bass, but the Staten Islanders haven't yet tried it. In Raritan Bay I have found it a very successful way. Collect at low tide a big basketful of the little mussels that cling to the muddy banks of a creek; break their shells and cast them overboard freely, shells and all, when anchored for fishing. Then bait your hooks with mussel, if large enough, or with a piece of shedder crab the same color as the mussel.

Bluefish, or "snappers," are caught after the middle of May, principally at the southern end of the island. Fish for them as for weakfish, except that hooks must be tied on gimp instead of gut snells. Strips of white flesh and skin cut from the belly of a porgie or other fish are good bait.

Large plaice or "flukes" are sometimes caught along the island's shores, and so are flounders, an occasional drum, a blackfish (tautog) now and then, and sometimes sheepshead.

The nearest fishing resort of consequence is at Elm Tree Beacon or Cedar Grove Beach. Fare to New Dorp and return, 40 cents; stage to the beach, 10 cents each way. It is about a mile from each station to the beach all along the railroad. Excursion tickets are good three days. J. C. Swaim is the keeper of the Elm Tree Light, and has ten boats for hire at $1 a day. He cannot furnish bait, but it can always be had at Peteler's Hotel, near by. Last autumn a Mr. Dill, who lives in the vicinity, caught a striped bass here weighing 64lbs. Swaim and a companion set fyke nets, and they claim to have caught bass in them running as high as 24lbs. in weight.

Cedar Grove Beach is just below the Beacon, and is reached from New Dorp station. At this place is Peteler's Hotel, a large house with a reputation for good cookery and excellent accommodations for families. Board at the hotel can be had (including room) for from $2.50 to $3 a day. Fifteen boats are for hire at $1 a day, and bait is always to be had.

The Great Kills is a favorite fishing ground for weakfish in the summer and bass in the fall. Get off at Gifford's station (round trip fare 50 cents) and take stage to any of the three resorts (fare 10 cents). Boats can be hired at any of the resorts for $1 a day.

At Fitzgerald's Excelsior Hotel here there are sixty boats for hire, and shrimp and crab bait is always kept on hand, but no sandworms. Tackle can be hired if desired, and a boatman at $1 a day. Lodgings 50 cents. Fitzgerald says last year the weakfishing began May 17, and kingfishing about three weeks later. Plenty of flounders may be caught now.

At Collins's Hotel there are forty boats, and shrimp and crab bait can always be had. Meals may be had *à la carte.*

The Bay View House (Charles M. Wolff, proprietor) will open May 1 for the season. There are eight boats for hire, and rooms and meals (European plan) may be had. None of the Great Kills hotels are family resorts like the Captain's Villa at Eltingville and Peteler's Hotel at Cedar Grove Beach.

At Eltingville station (round trip fare 50 cents) stage may be taken for "The Captain's Villa," a resort kept by Capt. H. Lowenstein, who has fifteen nice Whitehall boats to hire at $1 a day. Bait must be brought from New York, as the captain isn't always supplied. This is one of the famous fishing grounds along the shore, especially for bass. There are a number of rocks scattered about which are uncovered at low tide, and if the fisherman trolls among and just outside of these during the young flood with 50ft. of line and a fat white sandworm on the hook he is pretty sure of success. Dinner may be had at 75 cents, other meals 50 cents at the "Villa," if desired, and lodging at 50 cents. Board by the day, $2; by the week, $9. The house and grounds are very pretty, and this is one of the most charming spots on the island. The "tough" element is discouraged by the Captain.

At Annadale, the next station south of Eltingville (round trip fare 50 cents), stage may be taken to Smith's or Pollion's, where boats may be hired at the regular rate. Bring your own bait. Weakfish are caught here, the natives say, earlier than at any place along the shore. No hotel accommodations.

There are two places where boats may be hired at Huguenot station (fare, round trip, 55 cents), and stages connect with all trains. Andrew Beasley's "Fishermen's Retreat" is one of the best known places on the beach. He has twenty-five good boats for hire at $1 a day, and if one wishes to stay over night Andrew will let him have a cot for 25 cents, or a whole room to himself for $1. Meals can be had at reasonable rates. The other resort is kept by Charles Neumann, who has good boats to let at the prevailing rate. Bait may be had at Beasley's, but in all cases it is best for the fisherman to bring his own bait if possible.

Between Beasley's and Neumann's are the houses and grounds of the Columbia Fishing Club, one of the most prosperous of the several clubs on the island. It has thirty members, most of them New York business men, who bring their families down for a summer stay. Most of the fishing clubs are "stag" affairs, but bachelorhood is frowned upon in the Columbia Club. They own extensive grounds and have a large club house with dining-room, bedrooms, etc., and a two-story boat house nicely fitted with lockers, cots, etc., and containing many fine boats. Just at the rear of their club house is a large fresh-water pond which the club stocked two or three years ago with black bass, but up to date no fish except catfish have been taken in it. The officers of the club are: Jacob Hatzel, President; Albert Lorey, Corresponding Secretary; Charles Eppleur, Financial Secretary; and Frederick Moore, Treasurer. The members are all enthusiastic fishermen, and what they do not know about Staten Island fishing is hardly worth learning. The fishing here for weakfish and bass is excellent, and the angler who goes to Huguenot will probably do as well as he can anywhere on the island.

The oldest fishing club on Staten Island is reached from Huguenot station. This is the Excelsior Fishing Club, which was founded twenty-two years ago, and which has a fine house and stable and thirty-eight acres of land, situated on the old Aspinwall estate, the house, set back from the shore, commanding a magnificent view of the bay. The New York Fishing Club at Richmond Valley and the Columbia Club at Huguenot are both offshoots of the old Excelsiors, and two other clubs have been founded by its members which have since become extinct. The officers of the club at present are: Leonard R. Kerr, President; Daniel Kuhn, Jr., Vice-President; William Glaser, Secretary; Charles McK. Loeser, Treasurer; Daniel Kuhn, Jr., William Glaser, George Hatzel, William D. Bruns, Jr., Otto Burkart, Charles C. Heydt, G. Mundorf, Trustees.

At Prince's Bay station (fare, round trip, 60 cents) the stage will take you for a dime to Isaac B. Smith's place. Prince's Bay is the great resort for weakfish, and they are said to run larger here than elsewhere along the shore. Smith has thirty-two first-class boats for hire at $1 a day, and he always keeps bait. He can also accommodate fishermen with meals and lodging at reasonable rates. His post office address is Richmond Valley, S. I.

Carl Schopp also rents boats here, and can give valuable information as to the best places for weakfishing.

Half a mile south from Smith's place, but reached from Prince's Bay station, is the Manhattan Fishing Club. There are seventy-two members, who occupy a comfortable house set back some distance from shore, overlooking the bay. They own a considerable tract of ground and are building a new house. The officers are: H. McFadden, President; Edward Coppers, Vice-President; John Conlan, Secretary.

The last of the east and south shore fishing resorts are reached from Richmond Valley station (round trip, 60 cents). J. J. Butler's stages, fare 15 cents each way, connect with the shore. Henry Laforge has 25 good boats for hire at the prevailing rate, and Fred Bradell has about the same number. The latter says he will have bait this season. From this place it is only a short pull to the famous weakfish grounds at Buoy 10 and on the Raritan Bay oyster beds. Post office address, Tottenville, S. I.

The New York Fishing Club, the largest club on the island, has its houses here. It has a large membership, well cared for houses and grounds, and many handsome boats. Nicholas W. Morrell, of 253 East Fifty-second street, is president, and Conrad Platte, of Second avenue and Forty-fifth street, is secretary. SENECA.

CHICAGO AND THE WEST.

CHICAGO, April 19.—A convention of the fishing clubs of Chicago has been called to meet in Chicago at the same time as the State Sportsmen's Association, in view of coöperation between the State organizations in the matter of general fish and game protection. This is a move in the right direction. Mention has already been made in these columns of the work of the Fox River Fish and Game Protective Association, and of the backing it had received among other fishing clubs. It is to be hoped that the Fox River Association will show up in full force and bring other clubs in with it. Now is a good time for a gathering of the clans. E. HOUGH.

CARP FISHING.—Oblige a couple of anglers by telling them whereabouts in the Passaic River in New Jersey we can fish for carp, what bait to use; what trains to take and whether it is necessary to have a boat. Also if a float or sinker is needed, also what kind of hooks is required, and what time of the year is the proper time to go. Having read so much about carp recently, we have decided to ask you to give us a day's sport at them as far as your information goes.—E. H. R. [We advise you not to catch carp at this time of the year, because it is their spawning season and they are not fit to be eaten. In the months of September and October they will be in good condition, and you will have a better return for your trouble. Use comparatively small hooks, about such as you would take for black bass. The carp ought to be pretty generally distributed in the Passaic by this time and you might take the New York, Lake Erie and Western road to Garfield or Singac, or the Delaware, Lackawana and Western to Lyndhurst. Any of these places will furnish good fishing for bass and other fishes from June to September. Read FOREST AND STREAM of Aug. 19, 1886, for description of carp fishing with a fluttering fly, and the number for Sept. 23, 1886, will tell you that grasshoppers have been successfully used on the surface, while the usual bait is cornbread or wheat bread crumbs. Sometimes bread dough is mixed with cotton for carp bait. In the winter of 1887-88 a gentleman in Troup county, Georgia, caught 100 pounds of carp with hook and line in a hole baited for suckers.]

PHILADELPHIA, July 20, 1888.—*United States Cartridge Co., Lowell, Mass.:* Your new Climax paper shells with strong primers are the best shells made yet. (Signed) ANNIE OAKLEY (Little Sure Shot).—*Adv.*

SAWDUST IN STREAMS.

BUFFALO, N. Y., April 12.—*Editor Forest and Stream:* Noticing the discussion in your paper in regard to sawdust in streams, I beg to say that I have known it to have the effect of either killing or driving trout away in a number of streams, several of which I remember. The Shohola stream above Shohola Glen, Pike county, Pa., one of the prettiest streams in the country for fishing with ample room to cast the fly, once had plenty of trout in it; now from the Shohola Glen up to the sawmill, 10 miles, you will not catch half a dozen trout in a day. Before the mill was there you could catch 150, many of them quite large. Another is below Judge Dobbins' cabin, some 15 miles back of Oakland, Md. Another in Sullivan county, Pa., northeast from Lackawaxen. Another in the same county, northeast of Hancock. Another, Lycoming Creek in Lycoming county, Pa.

J. M. D.

Editor Forest and Stream:

I note that immense slaughter of trout which "Sportsman" tells took place on that New Brunswick river with the jaw-cracking name, and as I happen to know something of the stream myself, I know it does not supply the conditions I asked for, because an impassable mill dam near the head of the tide completely blocks the stream, so that fish cannot reach their spawning grounds; hence their scarcity. It goes without saying that such a sight as described, as the result of sawdust, never was seen or occurred on any river on this planet; somebody has been fooling your correspondent, and I protest that this is not the sort of evidence that counts in this discussion.

I would refer "Sportsman" to the eloquent denunciation of sawdust, with repeated assertions, in the reports of the New Brunswick Inspector of Fisheries, to be found in the Blue Books from 1875 to 1878, in which he tells the Minister of Fisheries that unless the sawdust law is at once enforced with vigor the speedy destruction of the fisheries of the St. John is certain. The law has not been enforced. On the contrary, the numerous mills, big and small, have continued to throw all sawdust and other refuse into the water. And now, after some twelve to fourteen years have passed away, let me refer him to the catch of fish on that same river as given by the same officer, and let him explain how and why this large increase, if sawdust is so deadly to fish, and let me particularly invite his attention to the trout column.

The opinions of men on this subject are not worth "a row of pins" in the absence of facts such as the following:

Year.	Salmon—lbs.	Shad—lbs.	Alewives—lbs.	Trout—lbs.
1876	173,186	2,363	12,361	2,700
1877	184,544	3,172	4,464	1,500
1878	249,536	429	6,770	900
1879	328,313	521	10,360	2,100
1880	225,424	613	11,170	1,000
1881	72,137	1,885	14,997	1,150
1882	286,612	1,882	20,940	784
1883	121,586	1,728	16,769	13,300
1884	225,572	2,420	19,942	29,400
1885	255,200	2,189	17,882	25,450
1886	189,498	2,716	11,567	21,100
1887	254,500	3,950	12,633	27,600

The first period of six years produced of salmon 1,233,200, and the second period 1,282,968, or an increase of 49,769. The catch of shad the first six years was 7,983 barrels, the second 14,885 barrels, or an increase of 6,902 barrels, nearly double. Alewives yielded the first period 60,122 barrels, the second 99,733 barrels, an increase of 39,611 barrels. Trout the first period 9,350, the second 99,733, an increase of over 90,000.

The logic of this is, open the dams and let the fish up to their spawning beds, and protect them during the spawning season, and let all the sawdust run you please, you will have plenty of river fish. This is proved in every instance where the dams have been opened for any length of time.

PISCATOR.

TROUT AND SALMON IN MAINE.

THE weather and the season in Massachusetts and States further south would indicate an early opening of the Maine trout lakes. The streams in that State are generally open, and this a fortnight earlier than in many a season. There is also much less snow in the woods, and in the southern part of the State it is all gone, or rather there has been little or none for the winter. The roads are in some cases dry, and "mud time" is over, though this is not true of the celebrated trout regions. Still the indications are in the direction of an early opening of the lakes. Already the Boston rod and reel sportsman is looking over his tackle, and repairs are being made. The tackle trade is good for so early. But after all the opening in Maine, so far as the trout lakes are concerned, may be a late one. The weather has been cold down there. A recent letter from Rangeley says that the ice in Rangeley Lake is yet as solid as at any time for the winter. A party just returned from a sleighing trip on the ice down Rangeley Lake and across the carry to Mooseluckmaguntic reports the ice still thick and strong and the sleighing good. One gentleman who has lived a long time at Rangeley suggests that the ice may not go out before the last of May. At the Richardson end of the lakes the feeling is that the ice will get out by the first of May; possibly before April is gone. It all depends on the weather.

The trout show has been taken out of Appleton's window, having been in fourteen days. The brook trout appeared to be doing fairly well, but the water was evidently getting too warm for them. A curious feature has been noted in this display this year. The male trout have been, three or four of them, engaged in terrible battles. In one or two cases they have fought so severely that they had to be moved to other tanks. They would dart at each other with open jaws, biting and tearing savagely. They would seize each other by the fins, often tearing the fin severely. They seemed determined to fight to death, and evidently would have destroyed each other if they had not been separated. The worst battle fought was between a couple of brook trout, weighing somewhere about a pound each. The 24-inch landlocked salmon grew very "loggy" and slow toward the end of the confinement, and the story is that he has eaten nothing since he was put in the tank. At least no one has seen him take food. He is transferred to a fish pond, where the accommodations are better for his salmonship, and the experiment will be tried of restoring him to health. This is the first time the keeping of a landlocked salmon so large in a show window has been tried.

The salmon season has opened at Bangor, two weeks earlier than last year. Mr. Fred Ayer took with a fly, on Friday the 12th, the first salmon of the season. He landed that day two; one weighing 8 and the other 21lbs. A big run is expected. This early opening was expected, for salmon had been taken at the mouths of the rivers, both in Maine and in the Provinces, much earlier than usual. It is suggested by the Maine commissioners, and others well posted on the habits of the salmon, that as the number increases arrivals may be expected earlier each year.

But the trump card of the whole pack has been turned up. The superintendent of the Maine Central Railroad has issued some ironclad orders to his subordinates in regard to the transportation of fish and game in close time, and contrary to law, even in the open season. The order absolutely forbids station agents receiving the large game for transportation between the first day of October and the first day of January, the only open season of the year; and at any other season nobody would care to offer it for transportation, because it would be illegal, and the possessor would surely be asked to pay fines and costs for every moose, caribou or deer he had in possession. The Maine game laws are certainly strong under the management of such a railroad as that. It reaches, with its branches, as near as any railroad, about all the regions worth hunting in that State. If the Legislatures of Maine have for some years been controlled by politicians and lumbermen, who have defeated wholesome game laws, her great railroad management evidently understands what is conducive to the best interests of the State, and appreciates the value of her fisheries and game.

Some things are true blue, and the management of the Maine Central is on that list. But how about the manager of the Fulton Market, first-of-April trout show? Is everything true blue there? It is in your own New York city, dear FOREST AND STREAM. Now did Mr. Blackford know, or did he not know, that baby lobsters, illegal in the State from which they came—doubtless Maine—were opened there on more mornings than one? A gentleman, well known to the FOREST AND STREAM, called on Mr. Blackford on one of the mornings early in April, but Mr. Blackford was not in. He saw the little lobsters being opened and taken from the barrels. Some of them were hardly more than six inches in length. Did Mr. Blackford know of this? True, there is no law to hinder these little lobsters from being sold in New York, but how about the State from which they came?

SPECIAL.

TROUT OPENING IN PENNSYLVANIA.—The trout season opened at Newville, Pa., April 15, with a large number of fly-fishermen from Eastern cities and towns, whose aggregate catch in the Big Spring exceeded 2,500 fish. The day was admirably adapted in every way to the sport, and the trout as a rule were fairly large. Cowdung, stone-fly, willow-fly and crown-ant were the favorite flies. Among the good catches were those made by Frederick Jones, Jean Laizeane and J. F. Parker, of New York; W. W. Abbott, of Philadelphia; John U. Adams, of the Hagerstown, Md., *News*; J. M. Keedy, Hagerstown, Md.; A. Z. Hode, Charles Murdock and R. W. Short, of Mechanicsburg, Pa.; B. M. Nead, editor of *Morning Call*; Dr. Vallerchomp, Dr. Moffitt, Dr. Peddicord, Dr. Hollingshead and Jacob Hess, of Harrisburg, Pa.; Edward Hutton, of Carlisle, Pa.; and A. C. Lay, of Newville.

AMERICAN FISHERIES SOCIETY.—The eighteenth annual meeting of the American Fisheries Society will be held in Philadelphia at the rooms of the Anglers' Association of Eastern Pennsylvania, No. 1020 Arch street, on Wednesday and Thursday, May 15 and 16, at 11 o'clock A. M. On the afternoon of the 16th the Society will be the guests of the Anglers' Association of Eastern Pennsylvania and will have an opportunity to observe the artificial hatching of shad upon the U. S. Fish Commission steamer Fish Hawk, which has been placed at the service of the Anglers' Association for the occasion. This will be followed by a planked shad dinner at Gloucester City, N. J.

FLY-CASTING TOURNAMENT.—Indianapolis, Ind., April 20.—The Fly-Fishermen's Club, of Indianapolis, will hold its second annual fly-casting tournament on Friday, May 31, near this city. Our club is the first in the West to hold an anglers' tournament, which it does for the purpose of encouraging others in the art of fly-fishing. It is hoped ere long to build up a sentiment in this State sufficient to enforce our fish laws, but it is uphill work at present. The club is arranging to go into camp during the summer about twenty miles above the city, on White River, which stream is becoming noted for its bass.—JESSE H. BLAIR, Sec'y (36½ East Washington street).

FIRST SALMON IN THE HUDSON.—The first North River salmon of the season was to be seen on Monday of last week in Fulton Market. It was caught off Coney Island in a shad net by Joseph Denyse. It weighed 11½lbs., and was in fine condition.

THE FISHERY LAWS OF CANADA.

TABLE OF CLOSE SEASONS IN FORCE ON 1ST JANUARY, 1889.

Kinds of Fish.	Ontario.	Quebec.	Nova Scotia.	New Brunswick.	P. E. Island.	Manitoba and N.-W. Ter.
Salmon (net fishing)	.....	Aug. 1-May 1	Aug. 15-March 1	Aug. 15-March 1	.....	.....
Salmon (angling)	.....	Aug. 15-Feb. 1	Aug. 15-Feb. 1	Aug. 15-Feb. 1	.....	.....
Speckled trout (*S. fontinalis*)	Sept. 15-May 1	Oct. 1—Jan. 1	Oct. 1-April 1	Oct. 1-April 1	Oct. 1-Dec. 1	Oct. 1-Jan. 1.
Large gray trout, lunge, winninish and landlocked salmon	.....	Oct. 15-Dec. 1	Oct. 1-April 1	Oct. 1-April 1	.....	.....
Pickerel (doré)	April 15-May 15.	April 15-May 15.	.....	.....	.....	April 15-May 15.
Bass and Maskinongé	April 15-June 15	April 15-June 15	.....	.....	.....	.....
Whitefish and salmon trout	Nov. 1-Nov. 30.	.....	.....	.....	.....	.....
Whitefish	.....	Nov. 10-Dec. 1	.....	.....	.....	Oct. 5-Nov. 10.
Sea bass	.....	.....	.....	March 1-Oct. 1	.....	.....
*Smelts	.....	April 1-July 1	April 1-July 1	April 1-July 1	April 1-July 1	.....
Lobsters	.....	July 15-Dec. 31	July 1-Dec. 31†	July 1-Dec. 31†	July 15-Dec. 31	.....
Sturgeon	.....	.....	.....	Aug. 31-May 1	.....	May 1-June 15.
Oysters	.....	June 1-Sept. 15	June 1-Sept. 15	June 1-Sept. 15	June 1-Sept. 15	.....

*Bag net fishing prohibited, except under license.

†On Atlantic coast, from Cape Canso to boundary line, United States, July 15-Dec. 31, in remaining waters of Nova Scotia and New Brunswick.

NOTE.—The following regulations are applicable to the Province of British Columbia: 1. Net fishing allowed only under licenses. 2. Salmon nets to have meshes of at least 6in. extension measure. 3. Drift nets confined to tidal waters. No nets to bar more than one-third of any river. Fishing to be discontinued from 6 A. M. Saturday to 6 A. M. Monday. 4. The Minister of Marine and Fisheries to determine number of boats, seines or nets to be used on each stream. 5. The close season for trout is fixed from Oct. 15 to March 15.

SYNOPSIS OF FISHERY LAWS.—Net fishing of any kind is prohibited in public waters, except under leases or licenses. The size of nets is regulated so as to prevent the killing of young fish. Nets cannot be set or seines used so as to bar channels or bays. A general weekly close time is provided, in addition to special close seasons. The use of explosives or poisonous substances for catching or killing fish is illegal. Mill dams must be provided with efficient fish passes. Models or drawings will be furnished by the Department on application. The above enactments and close seasons are supplemented in special cases, under authority of the Fisheries act, by a total prohibition of fishing for stated periods.

All communications relating to fisheries should be addressed to the Deputy Minister, Department of Fisheries, Ottawa, Ont.

SHAD AND SALMON MIGRATION.—The first shad of the season in the Connecticut River was taken April 11, nine days earlier than last year. The first salmon of the season at Bangor was taken April 12, two weeks earlier than last year and five weeks earlier than any record previous to last year.—*Gloucester Daily Times.*

OPEN FISH SEASONS.

Maine.

Salmon, April 1 to Sept. 15. Between April 1 and July 15 there is a weekly close time from sunrise Saturday to sunrise the following Monday, during which no salmon, shad, alewives or bass may be taken. Landlocked salmon, trout or togue, May 1 to Oct. 1; in the St. Croix River, May 1 to Sept. 15; certain streams around Rangeley Lakes, May 1 to July 1. Black bass, Oswego bass, white perch, July 1 to April 1 following, except that citizens of the State may fish and take landlocked salmon, trout and togue during February, March and April, and convey the same to their own homes, but not in Rangeley Lakes.

Massachusetts.

Black bass, July 1 to Dec. 1. Trout, lake trout, and landlocked salmon (except in Berkshire county), April 1 to Sept. 1. Salmon, May 1 to Aug. 1.

Missouri.

No close season.

Michigan.

Speckled trout or landlocked salmon, May 1 to Sept. 1. California trout, grayling, June 1 to Nov. 1. Black, strawberry, green or white bass, muskallonge, no close season for rod and line.

Mississippi.

No fishing laws.

Montana.

No close season.

New Hampshire.

Landlocked or fresh-water salmon, lake trout, brook or speckled trout, May 1 to Sept. 30. Pike-perch or white perch, July 1 to May 1 following. Black bass, June 15 to April 30 following. Muskallonge, pickerel, pike, grayling, June 1 to April 1.

New York.

Salmon, March 1 to Aug. 15. Trout (speckled, brook, brown, California), April 1 to Sept. 1. In forest preserve, May 1 to Sept 15; salmon trout and landlocked salmon, May 1 to Oct. 1. Steuben county: Trout (speckled trout, brook, California), May 1 to Aug. 1. Dutchess county: Speckled and brook trout, April 15 to Aug. 1; salmon trout, April 1 to Oct. 1; pike and pickerel, June 1 to Feb. 1; black bass, July 1 to Jan. 1. Lake Champlain and tributaries: Muscallonge, black or Oswego bass, pike or pickerel, June 15 to Dec. 31.

Pennsylvania.

Speckled trout, April 15 to July 15. Black bass, green bass, yellow bass, willow bass, rock bass, Lake Erie or grass bass, pike or pickerel, or wall-eyed pike, commonly known as Susquehanna salmon, June 1 to Jan. 1.

Ohio.

Black bass, rock bass or goggle-eye, June 15 to May 1 following. Streams flowing into Lake Erie open all year below first dam above lake. No prescribed season for trout.

FISH LEGISLATION AT ALBANY.

ALBANY, N. Y., April 19.—Attorney-General Tabor has rendered an opinion that, according to the provisions of law, no trout can be caught in Washington county in April.

Assemblyman Pearsall has introdcced a bill making an appropriation for fishways in the Chenango River at Chenango Forks. The Chittenango Creek fishway bill has become a law.

Fisheculture.

GEORGIA FISH COMMISSION.

THE fifth bi-ennial report, for 1887 and 1888, of Dr. H. H. Cary, Superintendent of Fisheries, was submitted to the Commissioner of Agriculture Oct. 20, 1888. At the outset of his report, Dr. Cary regrets the limitation and embarrassment of his work by reason of the small appropriation. He describes at some length the experiments of Messrs. Ellis and Page of the U. S. Fish Commission, by which it was established "(1) that the artesian water at Atlanta, when fresh from the well, will destroy shad eggs, but if time be allowed for the sulphuretted hydrogen gas to escape, the water would answer the purpose of hatching; and (2) that the minimum quantity of alum used in the filtering of the city water would also be harmless." When the fire pressure is put on the distributing pipes an excess of alum sufficient to kill eggs and young fish is carried over.

"During the last two years, by the aid of the United States Fish Commission, we have been able to plant many millions of shad fry in the rivers of Georgia; and there is now no difficulty in getting abundance of milters and spawners for the purpose of artificial propagation." Dr. Cary wishes to plant 20,000,000 of shad fry annually, and urges an appropriation for building a commodious hatchery in some part of the State.

Great interest is felt in the German carp, and during November, 1887, a shipment of between 15,000 and 18,000 young carp was sent by the U. S. Fish Commission to be

planted in the open waters of Georgia, under direction of the Governor and the State Fish Commission. The Savannah and Chattahoochee rivers and all the rivers within the State received their quota of carp. This species was discovered to be present already in most of the streams, having escaped from ponds scattered all over the State. "It was found that carp were being caught with hook and line, of all sizes from a fryling up to sixteen pounds, and the universal testimony seemed to be that these wild carp were of excellent table qualities. One genleman in this county [Troup] reported to me that in a hole baited for suckers in one of our adjacent streams he had caught, with hook and line, during the winter, one hundred pounds of carp."

The superintendent describes and figures a simple apparatus devised by himself for draining ponds. Attention is called to the possibilities of oyster culture along the coast, and the plan adopted by some of the Northern States is recommended for the State of Georgia. One hundred and sixty thousand fry of the California salmon were planted several years ago in the headwaters of Savannah River, but no results have followed the experiment. As a measure of fish protection, Dr. Cary notes the desirability of building fishways around dams which obstruct the ascent of fishes to their spawning grounds. He acknowledges his indebtedness to the U. S. Fish Commission, the railroads and the press for many favors to the Georgia Fish Commission, as well as to FOREST AND STREAM for the list of Fish Commissioners which follows his report. The amount appropriated by the Georgia Legislature for the use of the Board of Fish Commissioners, which includes the Commissioner of Agriculture, Hon. J. T. Henderson, and the Superintendent of Fisheries, Dr. H. H. Cary, was $500 a year.

THE FISH COMMISSION SCHOONER GRAMPUS.—After spending two days at the Tortugas investigating the fisheries and making collections, the Grampus arrived at Key West April 10, where she remained several days in preparation for the return voyage to New York. Dr. Henshall will make the voyage with her. During the coming summer the Grampus will be engaged in making soundings and taking serial temperatures between Block Island and the Gulf Stream, in depths ranging to 1,000 or more fathoms. For this service she will be furnished with steam apparatus and special appliances for sounding, and will be accompanied by a specialist eminent in physical researches. The region to be investigated is in the track of the migratory fishes, including mackerel, bluefish, shad, alewives and menhaden, and it is expected that by means of these studies we may arrive at a knowledge of the conditions determining their routes of travel.

PLANTING OF WHITEFISH.—The Pennsylvania Fish Commission has recently liberated fifteen millions of young white fish in Lake Erie. The eggs were collected on this lake by the U. S. Fish Commission and hatched at Erie, Pa. The unusually large number of 215,000,000 eggs was gathered last winter and distributed by the United States to hatcheries at Duluth, Northville, Alpena, Erie and Sandusky. The period of incubation lasted about five months. The hatching was done in McDonald jars, holding 180,000 eggs each. The fry were deposited a few miles from the shore, at suitable distances between the various lots. Fishermen of Lake Erie realize the great benefit arising from the hatching operations, as the fish have become more abundant since 1886.

The Kennel.

FIXTURES.

DOG SHOWS.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary pro tem., Mill's Building, New York, N. Y.

PHILADELPHIA DOG SHOW.

THE seventh annual exhibition of the Philadelphia Kennel Club will go on record as the best ever held in the Quaker City. This year the club was fortunate enough to secure Horticultural Hall, which, although not very well adapted for a large show, is well located and infinitely preferable to the old musty rink which seemed to be boycotted by the better class of people. The change resulted as was anticipated; there was a larger attendance than at any other show given by the club, and many of the most prominent people of the town passed the ticket office.

Mr. H. J. Ireland—a new man at the business, but not a new dog man—was superintendent, and he conducted the show on a different system than has hitherto been attempted. He worked the wires from a comfortable seat in his office, and as the smoke of a sweet Havana hovered around him he was practically obscured from the gaze of idle questioners. When he wished anything done he waved his hand, and what appeared to be an incomprehensible order was immediately attended to, but how, or by whom, nobody knew. At the close of the show he was given the well-earned title of Electric Manager.

The entertaining of the visitors was left to one of the most popular members of the club and one of the best dog men in this country—Mr. J. H. Winslow. His lavish generosity, amiability and open-hearted hospitality were not forgotten when the last sounds of "For he's a jolly good fellow" had been wafted from the comfortable rooms of the Art Club to the starry firmament. No. It will be many a long day before the visitors at this show forget the countless courtesies that were extended to them by J. H. Winslow.

The catalogue showed that there were 615 entries. Absentees were less numerous than one would have supposed, and the quality, taken as a whole, was better than has been seen at any show, save Boston and New York. Several judges made their debut. Some of these acquitted themselves in a creditable manner, while the others, either from nervousness or lack of experience, got things badly mixed. In only one instance did a "kicker" allow bad blood and ill feeling to shelter where common sense and gentlemanly instinct should have reigned. This Philadelphian clearly proved that his lack of knowledge of Gordon setters was at least equalled by his ignorance of the law which allows a man, even if he be a judge of dogs, to think and have an opinion of his own.

The judging was completed the first day and a neat catalogue with a full list of awards was for sale by noon of the next day. For this catalogue much credit was due Mr. Jas. Watson, whose energy, foresight and good judgment would have been sadly missed, on the first day of the show especially. The judges and the classes they handled were as follows: Mastiffs, St. Bernards, Newfoundlands, Great Danes, deerhounds, greyhounds, whippets, Italian greyhounds, poodles and miscellaneous, Jas. Watson; English, Irish and Gordon setters, Percy C. Ohl; pointers, J. H. Phelan; spaniels, S. R. Hemingway; collies, Dr. J. P. Gray; basset hounds and dachshunde, C. Stevenson; fox-terriers, W. Rutherfurd, bull-terriers, black and tan terriers, toy terriers and bulldogs, J. Deville; Skye, Irish, Scotch, Yorkshire and any other variety terriers, Dr. W. P. Sanderson; pugs and toy spaniels, Dr. M. H. Cryer; beagles, F. D. Hallet; foxhounds, W. T. Boyer.

MASTIFFS—(MR. WATSON).

Minting and The Lady Coleus were the entries in the challenge classes and both were as usual in grand condition. In the absence of Sears' Monarch from the open class for dogs, Clement, that is well-known, was properly placed at the head of affairs, and Brother, another well-known one, was second. Both are getting very gray. Sir, third prize, is not quite a show dog. Defects: Skull very small; muzzle neither wide, deep nor blunt; ears too large; feet not first-class; rather leggy. His fairly good body and limbs are spoiled by a head that will not do for the show bench. Pasteur, hc., while far from being first-class in head, having yellow eyes and not being perfect behind, shows decidedly more true mastiff character than Sir, and we would have placed him third. Brutus, hc., is long and light in muzzle, small in skull, undersize and not nearly so good a dog as Pasteur. Thane, c., is long and boundy in head, large in ears, light in loin, weak in middle, wrong in feet and wretchedly bad behind. He is not a show dog. Duke of Bethlehem, c., is wrong in muzzle, light in ears, shows excessive dewlap, is tucked-up and light in loin, bad behind, not good in feet, in fact, not a show dog. Napoleon, c., is a puppy that had been removed when we reached the stall. The class was weak in point of character. First in the bitch class was, on this occasion, rightly awarded to the now well-known Boss Lady Clare, closely pressed by the highly commended Countess that, notwithstanding her many defects and the wide margin that is seen between her form and that of a good one, should certainly have been second. This bitch was second in the novice class at New York. Her claim to notice consists in none of her defects being very pronounced. For instance, she is too long before the eyes, but the muzzle is cut off square and her lips are well nigh perfect in hang; her ears are rather large and they lie as if she had little control over them; she lacks in wrinkle, but without a sacrifice of much character; her chest, while not bad is too narrow, and the ribs are not well sprung; her loin, while not bad, is too light; while she cannot be called cow-hocked, she is neither correct in formation nor movement of hindparts. Lady Caution, third prize, is not well marked. Her skull is wide, but not deep, and the same may be said of her muzzle, and this formation gives to her a froggy appearance, which is very undesirable in a dog of this breed. Her ears are not well carried, eyes are too light, legs too long, hocks light and she does not stand right in front. Mai, second prize, is a rather promising puppy by Minting. At present her ears are her worst defects. She took first in the class for bitch puppies, her kennel companion and litter brother, Czar, being first in the class for dog puppies. The bitch has the better of him in head and massiveness of frame. They were points ahead of the other puppies that were shown and both may be heard from again.

ST. BERNARDS—(MR. WATSON).

Otho and Ben Lomond here met for the first time in the challenge class. Otho in skull, muzzle, expression and forelegs is a good winner, but the Melrose crack is so very much better in length of body, strength of hindquarters, tail, coat and hind action, that he was fairly entitled to the award. In bitches it was Gemma I. first and Miranda second. It is a close thing between these bitches, but we must say that equal in condition we prefer Gemma I. Prince, first in the open class for dogs, is a white and orange tawny with black facings, ears and orbits. Defects: Foreface small in proportion to size of skull and lacking more especially in depth; expression not good; stop hardly deep enough, and eyebrows not sufficiently prominent; forelegs not perfectly straight, but better than average; back and loin should be longer; thighs should be deeper; coat not in good condition; rather undersize; does not move very well behind. Marquis of Stafford, second prize, is a white dog, with bad tail, moderate head and short body. He never would have won the place if Alpine Chief, third prize, had been in show condition. The last named is of decidedly better type; in fact, he was the best St. Bernard in the class. Montezuma, vhc., is wrong in markings, bad in ears, pointed in muzzle, light in eyes, wrong in expression, small in feet, open in coat. His good body and hindquarters cannot overcome these defects, most of which are very pronounced. Mac, hc., was not on the bench when we called. Faust, hc., is undersize, wrong in set of ears, expression, stop, and was not in good condition. Leo, hc., is a red dog, wrong in coat and character. First in bitches was given to the orange and white Rose, that is hardly deep enough in muzzle, not quite right in set and carriage of ears, hardly typical in eyes or expression, a bit over at the knees and not just right in position of feet, somewhat short in loin, inclined to be open in coat and undersized. She is a useful second-rater. Betsey Bobbet, second prize, is not quite right in head markings. Muzzle too pointed and wrong in lips; color of eyes too light; head too round; ears not carried close; very light in bone; feet too small. She has good body and hindparts, and average coat, but her bad head and very light limbs will always prevent her from finishing in the first flight if the class is fairly good. Jessie, third prize, is very light and pointed in muzzle, wrong in ears and their formation, not perfectly straight in front, rather too small in feet, wrong in stern and its carriage, and undersize. To sum up she is a little bad-headed one, but not a weed. Lady Wellington and Alpine Maid were absent from this class. We shall be surprised if any of the puppies shown hold a prominent position next year.

Hector, that is coming back to his old form, defended the challenge class for smooth-coated dogs, and his kennel mate, Daphne, was on this occasion rightly placed over Flora II. Nevis, first in the open class for dogs, was second in New York and fully described in our report of that show. Nigel, second prize, was vhc. at New York. He has improved some in head. These dogs are a credit to their sire, Victor Joseph, who is making quite a name for himself in the stud. Lord Hector, another well-known one, was third, with Ivan vhc. and Trojan Hector hc. These dogs are well known and we thought the class was well judged. Apollona, looking well considering that she has been the circuit, was placed at the head of the bitch class, with Grimsel second and Reka third. We would have disqualified Grimsel and put Monastery Mercedes, hc., either first or second. These bitches need not be described again. Belle, vhc., is defective in head, carriage of ears, coat, and strength of bone, and is not on a large scale. Lady Bernard, hc., is light in bone, cow-hocked, light and weak in quarters and not good in feet. Her fairly good head and body won her the card. Kara, c., is narrow and boundy in head and light in bone. Trojan Hector, first in the puppy class at New York, was first here in a class of two entries, his brother, Trojan Knight, getting second money.

NEWFOUNDLANDS—(MR. WATSON).

This class, as usual, brought out a nice lot of mongrels. Frank H., first prize: Muzzle too pointed; eyes rather too prominent and a shade light in color; rather light in bone; coat and stern should be longer; carriage of stern not correct; coat on neck very curly; lacks true character; undersized. Bess, second prize: Muzzle too long and shallow; skull not truly formed; eyes and expression not correct; carriage of ears not right; does not stand well in front; light in bone; coat should be longer; feet not right; undersized. Don, unnoticed, is bad in head, tail, coat and limbs. Duke, also unnoticed, is plain in head and bad in coat. Brunette, unnoticed, lacks in head and expression and is very weedy. Fido, unnoticed, is a large mongrel black animal, that must have been entered by mistake.

GREAT DANES—(MR. WATSON).

Marco, first prize, is light in eyes, wrong in lips and expression, straight behind, weak in back and too flat in ribs. Notwithstanding these defects he was the best in the class. Flora, second prize, is wrong in lips, throaty, hollow in back, not perfect in feet, rather light in bone and a bit weak in knees. We liked the weak-headed Lady Bess, that took c., about as well as the second prize winner.

DEERHOUNDS—(MR. WATSON).

Highland Laddie, the only entry in the challenge class for dogs, was absent, and his kennel companion Wanda represented the ladies. The open class for dogs was strong in point of quality, Mr. Thayer supplying the first and second prize winner with his well known exhibits Clansman and Robber Chieftain. For reasons that were given in the New York report we would have reversed the decision. Sir Kenneth, vhc., is wrong in front, and being all out of coat, had no earthly chance of beating the winners. Bevis, unnoticed, is small, plain and light in loin. Mr. Thayer's Heatherbelle was absent from the bitch class, which left his strong kennel to be represented by the undersized, but stout and good-limbed Thora, that was beaten by a useful-looking specimen, Lady Strike. Head might be stronger, loin flat, set of legs not just right, would be improved by depth in loin, tail defective, feet inclined to turn outward, shoulders too upward, undersized.

GREYHOUNDS—(MR. WATSON).

Lancashire Witch, that has been on the shelf for some time, made her appearance in the challenge class and won without opposition. The winner in the open class for dogs turned up in Molech, a dog showing good breeding and many defects. Among them may be noted: Very weak foreface; coarse neck—it is arched on the under side and the wrong way; chest should show more depth; loin also would be improved by depth; shoulders and set of legs not perfect; hocks too straight; stifles too much out. A dog of handy size. Hazelhurst, second prize, notwithstanding his bad hindquarters, was well placed. Harper, Jr., third prize, is a rank bad one and the prize should have been withheld. Defects: Weak muzzle; prick-ears: very wide chest; shoulders altogether wrong; very crooked in front; wretchedly bad feet, which turn outward; flat ribs; light loin; bad stifles; straight hocks. An under-sized and tucked-up weed. Skip, unnoticed, is a large, leggy, coarse, flat, stilty bow-wow, "breeder and pedigree unknown." Captain, unnoticed, has great length before the eyes, in fact, more length than strength, and he is flat-sided and light in bone. Scipio, unnoticed, is a funny-looking little weed. Tim, unnoticed, is a terror for the greyhound class. His one grand point is that there is very little of him. Dora, Lady Olivia and Queen in Black, winners in the corresponding class for bitches, are well known to all greyhound fanciers. The best of them might take the hc. card in a good class. Purity, vhc., is plain in head, light in bone, and defective behind the hips. Zoe, hc., is plain in head, light in bone and flat-sided. Saturday Night, unnoticed, looks like a rake. The greyhound class is not for her. Highland Guard, first in puppies, should develop into a better specimen than anything in the open classes. Vanguard, second prize in this class, was out when we called.

POINTERS—(MR. PHELAN).

King of Kent and Lad of Bow, two well known good ones, were the competitors in the challenge class for heavy weight dogs. Lad of Bow is of better type for the heavy weight class and was rightly placed first. Lass of Bow was unopposed in the bitch class. The open class for dogs was well judged. Brake had no trouble in beating Pontiac; and we are glad to find that the judge considered him a very easy winner. A review of the performances of these two dogs during the past few weeks will be interesting to many. Pontiac was placed second at New York and Brake fourth, Mr. John Davidson being the judge. Our criticism of Pontiac concluded as follows: "We thought the judge gave him more than he was entitled to in this company. Our choice for the place would have been the fourth prize winner, Brake." At Troy, the week following, Mr. Davidson again placed Pontiac ahead and we criticised the award as follows: "Here we think Mr. Davidson made a mistake. Pontiac beats Brake in hindquarters, but in other points Mr. Pentz's dog is well ahead and was clearly entitled to second." A week later Mr. Tallman indorsed Mr. Davidson's opinion, at Albany. Here is our report: "Pontiac and Brake, in the open class for dogs, held the same position as at Troy. The more we look at these dogs the more positively certain are we that Brake is the better, and more than that, very decidedly better." The next time that the dogs met in competition was at Lynn, where Mr. Mortimer was the judge. This judge indorsed Mr. Tallman and here is our report: "In the open class for heavy-weight dogs Pontiac, Brake and Beaufort II. are well known. Pontiac, that was wrongly placed over Brake at New York, Troy and Albany, was, of course, placed over him again. Brake is decidedly the better dog, as time will show." A week later the dogs met at Boston, where Mr. Winslow was judge. Brake won and he was not hard pressed either. The next week the dogs came under Mr. Gresham at Worcester. Brake won. Just because Mr. Davidson did what any man is liable to do, make a mistake, the owner of Brake was deprived of four prizes which any man who has a knowledge of pointers must have seen he was fairly entitled to. "Follow the leader," seems to be the motto of several judges in this country. Mr. Davidson had very large and strong classes to judge at New York, and it was the easiest thing in the world for him or for any other man in a similar position to make an error of judgment. Tory White, in fairly good condition, was entitled to third place, but if "Old Bang" had been in his usual good form he would have been our choice for the place. He carried his tail badly when under judgment and lacked the vigor of movement that he usually displays. If the old dog has good food and necessary attention during the hot spell we shall expect him to come to time in the fall and take another ribbon. Sachem and Victor the Blue Stocking, that got vhc. cards, are well known. Lebanon and Dick of Delphos, that also got vhc., are no match for "Old Bang," when the last is fit, and if they meet again our prediction will be: "Old Bang" first and the rest nowhere. Bing Bang, c., is plain in head, houndy in ears, wrong in feet, leggy and rather shallow in middle. Lady Snow, Belle Randolph and Devon Nell were the winners in the bitch class. All are well known. As a large size pointer Devon Nell was clearly the best. Devonshire Countess and Ruby, the vhc. winners, need not again be described. A person, whose name we were unable to ascertain, tried to protest the decision in favor of Devon Nell on the ground that she was mangy. This protest was probably the outcome of our comments on several of the Bryn Mawr exhibits at Albany. The owners of the kennels had unwittingly intrusted their exhibits to the care of an inexperienced and indolent fellow who was wholly incapable of caring for them. Several of the dogs were in a mangy condition, and it was not until they had been placed in other hands that they were cured. Devon Nell is a recent addition to the Bryn Mawr Kennels, and the individual who was anxious to have her disqualified must have laughed at his own ignorance when somebody told him that Devon Nell's skin was as clean as a healthy babe's.

Naso of Kippen added another to his long string of winnings by taking the prize in the challenge class for light-

weight dogs. This good little dog is still in bad condition as regards coat. Queen Fan, that is not a show bitch, had the corresponding class to herself. What a farce it seems to allow a specimen like this to walk away with a prize of $20. Why not withhold the prize for want of merit? Duke of Hessen distanced his competitors in the open class for dogs. Next came Vanderbilt, that has already been described in these columns, and then on equal terms followed Ned B. and Fashion, two well-known faces. No fault could have been found had Ned B. changed places with Vanderbilt. Spot Sting, vhc., is throaty, wide in front, wrong in shoulders, not straight in front, moderate in feet and only just fair in other points. He certainly got all he deserved. Bang Soy, vhc., lacks in head, stifles and set of forelegs. Gambol, vhc., is throaty, plain in head, not quite right in hang of ears, carriage of tail is not correct, color of eyes too light, flat in loin and light behind. We did not think him worth a vhc. card. Bruce Beaufort, c., lacks in head, neck, loin and set of legs. The Strand, unnoticed, is a tan dog. Stratford Joe, unnoticed, has good legs and feet, an average head and by no means a bad body. He should have had a card. Luck of Donald, unnoticed, was not in good condition. First in bitches was won by Lady Tammany, a puppy of some merit. She is light in eyes, rather too wide in skull, slightly dished in muzzle, not quite right in carriage of ears and is a bit leggy. In other points she is promising. She also won in the puppy class and took the special for the best puppy of both classes. Flirt, second prize, was described in the Chicago report. Mayflower, third prize, is an oldtimer that is well known. Mollie Beaufort, c., is a better specimen than Penelope, hc., Carolina, vhc., Alameda II., hc., or Princess Bang, c. She was first at Buffalo and need not be described. Carolina is very bad in head, wrong in color, light in bone, flat in ribs, bad in feet. Alameda II. has wide skull, yellow eyes, bad hocks and is light in bone and shelly. Penelope is well known. Princess Bang is washy in color, dark in nose, plain in head, wrong in shoulders and set of legs, not quite straight in front and lacking in character. Tory Tanner, first in dog puppies, is a coarsish youngster that stands on good legs and feet. He is coarse in skull, throaty, not quite right in set of legs and has Kippen eyes. Westminster Cato, second prize, is well known. The Beau, third prize, is all off in eyes, neck and loin. Sport D., unnoticed, is very plain in head. Lass of Beau, second in the bitch puppy class, is light in eyes, not quite right in stop, a bit off in set of legs and is not of great quality. Temptation II. lacks in brow, eyes, knees and true pointer formation. The judge, who made his *debut* at this show, made a fairly good impression.

SETTERS—(MR. OHL).

Rockingham and Count Howard were the entries in the challenge class for English setter dogs. As the son of Belthus and Bess was only to compete for specials, his kennel companion, that was in fine condition, had a walkover for the prize. In the next class for the tender sex the beautiful Cora of Wetheral, with her lovely quality, was unopposed. The open class for dogs brought out a new one in Sir Tatton, that has been a well known winner over the water. He is a blue belton, with left ear and an inch around it black, and right ear black, with white on the fore edge, his body being beautifully flecked and legs ticked. He is sired by the prince of stud dogs—Sir Alister, and his dam is Belle of Furness. He has a really good head that could only be improved by being a bit cleaner below the eyes, a trifle deeper in stop and a little more pronounced in eyebrows. His eyes are a couple of shades too light, but barring these failings, none of which are of a pronounced character, it is a beautiful front, and the elegant formation and set of his ears lends a further charm to it. He has a neck that is well turned, showing plenty of length from occiput to withers, but it is unfortunately marred by excessive throatiness. We heard exception taken to his shoulders, which are long, clean, beautifully placed, fine in the points and well up at the withers. They play on a most superbly formed chest, which is little superior to his back and loin. The set of his forelegs, which by the uninitiated is mistaken for a wrong formation of the shoulders, is not just right. His quarters and second thighs are well nigh all that could be desired, but his hocks would be improved by more bend. While his forelegs are not perfectly straight they are decidedly better than average; in fact, they are good legs and are supported by the very best of feet. An almost perfectly formed and beautifully carried stern is another point in his favor. He has plenty of strength and bone for a dog of his inches, and while his coat is not at present in good condition, we are quite sure it is of first quality. His worse defects are lack of size, throatiness and a rather shuffling gait. Taken all in all, he is a grand little dog—one of the very best ever seen in this country, and a dog that should largely contribute toward the improvement of the very ordinary-looking setters that are raised in America. He is not quite a Royal IV., but when he shall be in full coat and hard flesh, only the very best of setters will have any chance alongside of him. In competition for the special prize for best English setter dog he was placed over Count Howard. This decision we cannot indorse. Dogs should be judged as they are; and a judge goes out of his way when he says that one specimen will be better than another when his condition shall have improved. Lindo was second, as usual, and Clipper W. was as good as anything for the third place. He is a white, black and tan, good in color and with these defects: Stop not very clearly defined; forehead rather too prominent; lips not quite right in hang; eyes and expression not all that mind could wish; ears well set, but rather short. Taken all in all this is not a bad head, although it is a rather bitchy one. Set of legs not just right; does not stand perfectly straight in front; shoulders not bad, yet not perfect; loin would be improved by more arch; tail somewhat long; quarters rather light; hocks showing slight weakness and rather close when in movement; coat should be longer. A dog that would have made a better bitch. He shows quality. Wayne Buckellew, vhc.: Light in loin; not quite straight in front; feet only moderate; head only fair; throaty; moves wrong in front; shows some character. Blue Eagle, vhc.: Coarse in head; rather short in neck; light and flat in loin; light behind; strong in bone, but not quite right in front. A dog that will look much better when he is shown in good condition. Rocket II., hc.: Coarse in head; legs not well set; flat-sided; narrow behind and straight in hocks; coat not right. Cloud, hc.: Nasty, sour head; light eyes; not good in ears; short in coat; shoulders not right; plain in hocks. His body the best part of him. Princess Beatrice II. was away ahead of everything in the bitch class, and Zona and Chautauqua Belle came next in order, properly placed. Foreman's Pride, vhc.: Not quite right below the eyes; feet not perfect; ears and lips not first class; throaty; body and stern the best part of her. Cornelia G., vhc.: Defective in stop and below the eyes; rather cheeky; muzzle not clearly cut; ears only fair; not quite straight in front; light in hock bone; tail not just right; short in feather; undersize. Puppies were a weak class of four. Taken altogether we thought these classes well judged.

The judge clearly proved by his decisions in the Irish setter classes that he was not at home with the breed. He commenced proceedings by placing Desmond II. over Blarney in the challenge class for dogs. Admitting that Desmond II. is the better in shoulders, set of legs and in feet, we fail to see how any judge that has even a smattering knowledge of the breed could have permitted these points to outweigh Blarney's better head, better bone, better size, better body, better hindquarters, better hocks better coat, better color and better movement. In the bitch class Mr. Thompson had again the pleasure or displeasure of seeing his Nellie placed over a specimen that can beat her all to pieces. We refer to Laura B. The decision is too ridiculous for us to condemn. We will leave it to condemn itself. The judge guessed Larry S. for first in the next class, and his splendid back and loin, good body, excellent coat and color, and fine condition fairly entitled him to the place. Dick Swiveller, that is far more typical in head than Larry S., but weak in his hindparts, was about as good as anything for second place. Judge, third prize, got more than he deserved. Defects: A shade coarse in skull and not just right in stop or below the eyes, muzzle too wide and neither deep nor clean, hang of ears not perfect, neck clean, but rather short, stands too close in front and would be improved by more spring in ribs, slants too much from the hips back, thighs light, only fair in stifle movement, light in hock bone, stands too high behind, knees showing slight weakness, back a trifle hollow, should have more feather, stern carriage not merry. A specimen showing little symmetry. Redstone, vhc., is well known. We would have placed him third. Gem., vhc.: Not good in loin, too flat in ribs, fairly good in head, wrong in front. Head and tail are the best parts of him. Don II., hc.: Moderate head, bad eyes, short, leggy, not good in color; wrong type. Lance, hc.: Head only moderate; straight behind; shows age. Jack Malone, c., is a better dog than Don II., that was he. First in bitches went to Chipeta, a new one so far as we remember. She created a bit of furore, which we think will soon die out. Defects: Not clearly cut below the eyes; eyebrows not nicely defined; muzzle should have a cleaner cut and neater appearance; color of eyes a shade light; just a fair head; average ears; loin scarcely sufficiently arched; shoulders should slant more and be set further back; feet not perfect, but not bad—the left is better than the right; legs might be better set; hocks should be more bent. A handy-looking, second-class bitch of useful size. Bessie Glencho, tucked-up, light in bone and all gone on her forelegs, should have given way to Cora B. and Kate, that were given equal third prizes. We would have placed Cora B. second. Kate has these defects: Muzzle very weak; forehead too prominent; eyes too light and with a rather wild expression; light behind; hocks too close; set of legs not quite right; hocks should be lower; light in bone, shows slight weakness in knees and stands back at pasterns; feet not right and inclined to turn outward; color a shade too light; stern not well carried; a specimen whose body is entirely too heavy for her limbs. Jessie, vhc., has, we think, been described before. Belle Ida, vhc., lacks in head, ears and position of forelegs. Her body is the best part of her. Leda Glencho, hc., is coarse in head, knees are not quite right, shoulders are only fair, coat not in good condition. Is rather doggy. Luray III., c., is undersized, weak before the eyes, feet inclined to turn outward and forelegs not in good position. Puppies were a very weak class.

In the challenge class for Gordon setter dogs, Beaumont was rightly placed over Little Boy. It has always been a mystery to us how Little Boy ever beat Beaumont, and we have maintained since the first time they have met that Beaumont is a decidedly better specimen. Little Boy took his defeat as little boys usually do. He barked, he snapped, he gnawed at his chain, refused to take his food, upset his drinks, looked daggers at the management, growled at the judge, bared his teeth at Beaumont, showed all the white of his cock-eyes, and was finally taken home, as we suppose, to be locked up in the nursery. In bitches, Roxie fairly outclassed Rose. The open class for dogs contained a couple of rank bad ones in Dixon and Dom Pedro. Dixon, first, is light in color, has black toes—we do not mean by this that the toes are penciled as they should be, but that the black spreads down the sides of the toes, which is wrong. No thumb marks; skull much too heavy for his muzzle; gooseberry eyes; throaty; flat ribs; light loin; light quarters; straight hocks; nice stern; light in hock bone; wretchedly bad in feet—they are too small by half; coat of good color, but too open; feathered below the hocks and scanty in feather of forelegs; short between the couplings; lacks true character. The prize should have been withheld. Dom Pedro, second, is a black, tan and white dog. Head coarse all through; ears too high; throaty; chest should be deeper; falls a little behind the shoulders; flat in loin; elbows out; not perfectly straight in front; straight in hocks; hocks should be lower; coat on quarters rather curly; moves very gingerly behind; better than the first prize winner, but a bad one. In bitches, Vic was properly placed first. Becky Sharp, vhc., should have been second. The placing of Katie B. over this bitch was a farce. Becky Sharp is worth as many bitches like Katie B. as would reach from New York to Philadelphia. One is a show bitch, the other is not. Becky Sharp is well known. Katie B.'s defects are as follows: Color too light; thumb marks not clearly defined; stop not right; coarse below the eyes; round in skull; has nasty yellow eyes; muzzle weak; hang of ears not correct; shallow in chest; flat in loin; shoulders too forward; stands over at the knees; light in bone; light in second thighs; weak in hock bone; weedy; coat open and wavy. We shall be very much surprised if any of the puppies that were shown are heard of next year.

FOXHOUNDS—(MR. BOYER).

Here there was a very large entry of very ordinary looking animals. Browser, first in dogs, is good in head and ears, throaty, badly sprung in ribs, light in loin and quarters, cow-hocked, wrong in carriage of stern, legs not well set and feet turning outward, feet of defective formation; a dog whose head and ears are his only good points. Rattler, second prize, is good in head and ears, but is throaty, splay-footed, flat-sided, light in loin, straight in hocks, weak in thighs; light in bone, weak in pasterns and wrong in set of legs. First in bitches was given to May, that is not nearly so good a specimen as Music, that got vhc.: She is pig-jawed, light in bone and very weedy throughout. Fannie, second prize, is plain in head, short in ears, wrong in eyes and expression, not good in hang of ears, light and flat in loin, light behind, stands low in front, is slightly hollow in back and not right in coat or brush. We could not follow the judge in his awards in these classes.

SPANIELS—(MR. HEMINGWAY).

Patsey O'Connor, Duchess III. and Captain Muldoon, first, second and third in the Irish water class, were the only entries, Patsey outclassed his competitors in head, ears and expression.

There was only one white and lemon dog in the Clumber class. In a class of Clumbers proper it might take a hc. card.

Among the field spaniels Glencairn, Newton Abbot Laddie, Bridford Gladys, Miss Newton Obo, Newton Abbot Lord, Lady Abbot, Newton Abbot Skipper, Newton Abbot Don, Bridford Ruby and Bridford Lady need not be described. Rochester Prince, that was second in the open class for black dogs, is rather coarse in muzzle and his head is more of cocker than of field type. He is badly underhung, is too light in eyes, throaty, a bit down in back, throws his feet outward and is very curly in coat. Miss Bend Or, that was second in the open class for black bitches, was fairly outclassed by Newton Abbot Lady II. She is too wide and flat in skull, weak and pointed in muzzle and has nasty yellow eyes. She stands down a bit behind the shoulder, carries her stern too high when in motion, is not quite right in knees, is a bit woolly in coat and appeared to be lame in one hip.

The challenge class for cocker dogs brought out those old competitors Doc, Hornell Silk, Brant and Jersey. Brant is blind, or nearly so, in one eye and was soon out of the race. Doc proved the winner. We thought his curly coat and rather slack back should have put him behind Jersey, that is hardly his equal in head. Miss Obo II. and Chloe W. were worthy representatives of the softer sex and the open class for dogs was made conspicuous by the absence of good ones. Dick was rightly placed first. Muzzle not right below the eyes and not square enough in profile; body wide, but not deep enough; cut up in loin; rather light in thighs; tail too high; texture of coat not quite the thing; body rather too long for a cocker; throat too heavy; hocks too straight. A rather oversized dog that is decidedly straighter in front than most of the prominent winners. King Bee, second prize, was not on the bench. Black Dan, hc., is defective in head and coat. In the bitch class Hornet, Bessie W. and Hornell Martha, first, second and third prize winners, are well-known. It was a close thing between the first two. Smug, vhc., is a bit off in muzzle and is not just right in elbows. She is also too long in body. We were unable to find Miss Topsy, that was vhc. Little Dan and Robin, first and second prize winners in the class for cocker dogs of any other color than black, need not be described. There was very little quality in this class. Hornell Velda, first in bitches, held the same position at Utica. La Tosca, second prize, is a nicish puppy, barring her undershot jaw. Pansy W., third prize, is not right before the eyes and is longer in body than we like. Puppies were not a brilliant lot. Pansy W., that was placed behind La Tosca in the open class, was put over her in the puppy class. While this sort of thing is all wrong we have a profound respect for a man who, when he finds that he has made a mistake, has the courage to correct it. Brant's Girl, third prize in this class, lacks in muzzle and loin. She is also too leggy. Smut II., vhc., while not right in muzzle is a better specimen than Brant's Girl.

COLLIES—(DR. GRAY).

Scotilla, Dublin Scot and Clipper represented challenge dogs. Scotilla, that is vastly better than either of his competitors, won very easily. In bitches Bonnie Brae was outclassed by the typical Flurry III. In the open class for dogs the Boston awards were repeated, Maney Trefoil taking first, Charleroi II. second and Roslyn Sensation third. Fordhook Squire, vhc., pricks one of his ears and gets the other too high. He has no undercoat, and his top coat, although of good quality, is too open. His legs all around might be better. Taken all in all, he is a dog that shows quality and good breeding, but is not a show dog. Bevis, vhc., lacks in expression and carries his ears carelessly. His coat is too open. Lochgarry, hc., has drop ears, is rather coarse in head, straight and heavy in shoulders, wide in front, straight in hocks and not first class in coat. Glencairn, hc., is off in ears. This was a fairly good class. Jakyr Dean, first in bitches, is well known. Countess of Dalkeith, second prize, is a little bit plain in head, her ears are rather large and are not sufficiently erect. She is a strong, useful-looking specimen of fairly good type. Wild Rose o' the Thorpe, third prize, is decidedly better than average in head and muzzle, but is much too straight in stifles and hocks, and her coat, while hard, is too open, the undercoat being scanty. Wellesbourne Flurry, hc., may yet prove the best collie in the lot. Elsie Scot, vhc., lacks in ears, coat, set of legs and in back. Lady Mall, vhc., is defective in coat, ears, formation of eyes and would be improved by more bone and undercoat. Adila Doon, vhc., is wrong in ears. Nellie Scot, unnoticed, was worth a card. Puppies were not strong in point of quality. The special for best collie of all classes was awarded to Scotilla. We would have given it to Many Trefoil.

POODLES—(MR. WATSON).

Pierrot, first in this class, is a fairly good specimen of the corded variety. He has not the length of coat that is seen in his sire, Styx. There is no reason why he should not do some winning when the cracks are absent. Athos, second prize, is light in bone, flat in loin, leggy and wrong in coat; it is too short for a corded and too long for a curly, and, instead of being densely black, is intermixed with grey. Lady, hc., is neither corded nor curly, and General Boulanger, that was also hc., is likewise off in coat.

BULLDOGS—(MR. DEVILLE).

Britomartis and Robinson Crusoe accounted for the challenge prizes and the bitch took the special for the best of all classes. In the open class for dogs Monarch VI. was wrongly placed over Lion; both are well known. Prince, unnoticed, is bad in stop, not well up in face and is also long-cast. Thespian proved an easy winner in the bitch class. Gypsey Girl, second, is rather long in foreface, which is, however, fairly well turned up. She is also rather long-cast, stands too high, carries superfluous flesh behind, and would be improved by more bone. Columbine took the puppy prize without competition.

BASSET HOUNDS—(MR. STEVENSON).

Babette, a well-known second-rater, was first in a very weak class. The second prize should have been withheld. Ned, that took second, is one of the queerest looking animals we have ever seen in a dog show. He has a tail like an English setter, coat like an Irish terrier, and head—well, like a crocodile.

DACHSHUNDE—(MR. STEVENSON).

Here there was very little quality. Croquette, first prize, while not first-class in head, all wrong in crook and only moderate in coat, was the best of the lot. Waldman, second prize, is weak in jaw, light in bone, not good in crook, too high on the legs, moderate in coat and not loose enough in skin. Waldine, hc., is bad in head and is leggy. Mermaid, vhc., is not a show bitch.

BEAGLES—(MR. HALLET).

The winners in the challenge classes, Little Duke, Myrtle and Twinkle, are well known, and the same may be said of Royal Krueger, Racer, Jr., and Tony Weller, the winners in the open class for dogs. Plunger, vhc. in this class, is neither first-class in head nor in ears. His legs are not put on right. Roland, unnoticed, is far too large and coarse for a show dog, and the same may be said of Nero, that was also unnoticed. In the open class for bitches Una, that took first, must have been crowded by Elf, that was placed second. The winner is rather flat in skull, pointed in muzzle, not quite first-class in ears, hardly straight in front and the set of her forelegs might be better. She shows some quality and is fairly good in coat and brush. Elf is well known. We liked her for first place. Blanch, third prize, is weak in foreface, not quite right in hang of ears, rather flat in skull, not perfect in feet, a trifle light in bone and might be better both in coat and brush. Flora V., vhc., is undersize, soft in coat and throaty; she stands on good legs and feet. Stella, hc., is throaty, long in body and not right between the eyes. Her tail, too, might be better. Little Duchess, c., fails in muzzle, which is snipy, and in ears. She is too large and coarse throughout. Maud, c., lacks in head, coat, neck, ears and width of chest. Oakview Dinah, first in puppies, was sent home before we called at her stall. Tonnie W., that was second, has already done some winning and has been described in these columns.

FOX-TERRIERS—(MR. RUTHERFURD).

Valet, Lucifer and Bacchanal made a creditable showing in the challenge class for dogs, the son of Splinter and Kohinoor standing out in bold relief from Valet, that was second. The peerless Rachel represented the ladies, and in the open class for dogs Raby Mixer, far ahead of his competitors, won easily enough. Veronese, second prize, was described in the Utica report. Blemton Ravager, the chump-headed wonder, that won the Apollo stakes at Albany, and was criticised on his merits in one paper, was rather lucky in getting third, because Reckoner, vhc., and Blemton Volunteer, vhc., are quite his equals, and if his age is considered

they are his superiors. General Grant, that was a niccish puppy, has gone wrong in front, and got all he deserved with the hc. card. Hillside Flash, hc., lacks more especially in head and coat. Rowdy and Teddy, unnoticed, are not show dogs First in bitches was given to Blemton Verity, that was sent home the first day of the show on the ground that she was sick. We regret very much that we did not see this bitch, as we are informed by one of the best judges of terriers in this country that she was neither the best nor second-best in the class. A protest was lodged against her on the ground of deafness, and her owner, Mr. Belmont, was requested to return her to the show for veterinary inspection. He telegraphed back, asking the club to send the veterinary surgeon to his kennels, and offering to pay all expenses, and expressed an opinion that it was not nice to protest in such a case. The club refused to pay the prize money, and the case will come up before the American Kennel Club, of which Mr. Belmont is president. Blemton Consequence and Rosa Canina, second and third prize winners, need not be described again. Trixi B., vhc., is only fair in head, wrong in set of legs, not first-class in feet, but good in coat and body. Lottery, hc., is light in loin, and although she has a long head, it is not of the right type and lacks character. The placing of Blemton Verity over Raby Mixer in the special for best fox-terrier in the open classes caused intense ill feeling and dissatisfaction, and the decision was pronounced to be wrong by everybody. Blemton Ravager, first in the class for dog puppies, should have given way to Hillside Dandy, that is a decidedly better specimen. Fox-terrier men present at the show said that Blemton Verity had no business to win in in the bitch puppy class. The decision in this class gave her the Tom Boy Stakes. It is to be hoped that when the question of her deafness is brought before the American Kennel Club the proceedings will be characterized by justice rather than good fellowship, as in the Seitner case. Cotswold Jocko, in the wire-haired class, had no trouble in beating Pussie, that is wrong at both ends.

BULL-TERRIERS—(MR. DEVILLE).

Cairo, Bonnie Princess and Grabber being absent from the challenge class for dogs and bitches, left Jubilee and Royal Rose to fight out the battle. Jubilee won. Our opinion in regard to their merits has often been expressed. Trentham Baron, first in the open class for heavy weight dogs, should have given way to Dinksey, an unnoticed dog that is vastly better in head. Nitchie, second prize, is wrong in muzzle, which lacks in squeezing power, and is not of correct formation, his eyes are too large and full, he is not straight in front, carries his tail too high, and would be improved by more depth in body. Rocky, unnoticed, has a tan ear and is defective in cheeks and before the eyes; he should have been vhc. in this company. Burt, unnoticed, is a mongrel. In bitches My Queen, with her very weak muzzle, should have been second to Starlight. Kettering Maggie, unnoticed, while not now good in head, should have been vhc. Duchess of York, that is well known, was worth a commended card. In the light-weight class Nell Bright was wrongly placed over Marguerite. These bitches are well known. Dinksey and Rocky, first and second in puppies, have already been alluded to. We cannot leave these classes without a word of remonstrance to the scoundrel who poisoned Mr. Harris's good bitch, Queen Bess, and attempted to poison the others. Lynching is too easy a death for the villain that will stoop to such work as this, and we hope that Mr. Harris will spare no trouble to lay hands on him.

IRISH TERRIERS—(DR. SANDERSON).

The challenge class for dogs and bitches contained two entries, Dennis and Breda Tiny. Dennis has been overrated to such an extent that people are actually beginning to believe him a wonder. Breda Tiny, although again placed second to him, is a decidedly better bitch than he is a dog; she should have won. The open class for dogs brought out a new one in Benedict II., a dog with nice, small, natural ears, but on the large side and a bit plain in head. He should have exchanged places with Breda Jim, that was vhc. This dog, while not so good in coat, shows decidedly more true character and has a vastly better expression. Burnside, second prize, lacks in head. Bitches were weak in point of quality. The winner has badly cut ears, wrong expression, and is neither good in legs, bone, knees nor in feet. Rags, second prize, was at Boston. Roslyn Nora, vhc., is only a third-rater. In puppies Benedict II. and Burnside, that were winners in the open class for dogs, repeated.

BLACK AND TAN TERRIERS—(MR. DEVILLE).

Buffalo General was rightly placed first in the dog class, and Lever, that is wrong before the eyes, rather light in color of eyes and full in cheeks, was second. In bitches Sheffield Lass, that is rather better before the eyes than Meersbrook Girl and a little stronger in bone, was placed first. Meersbrook Girl has decidedly the better of it in loin and hindquarters and shows much quality throughout.

TOY TERRIERS—(MR. DEVILLE).

Fairy Queen, first in this class, is a black and tan with fairly good color. She is apple-headed, weak in muzzle, not first-class in hindlegs, open in coat, and would not be noticed in good company. Prince Henry, second prize, is a plain-headed black and tan with badly cut ears. He is light in color; weak in loin and very full in eyes. The rest were a bad lot.

OTHER TERRIERS—(DR. SANDERSON).

Dandies were a very weak class, as may be imagined when we say that Border Wang and Meg of the Mill were far ahead of the others. Sheila, second prize in the bitch class, is weak in head, wrong in muzzle and body-coat, light in bone and showing Bedlington character. Eppie, vhc., lacks in muzzle, coat and expression.

Lovet, the New York winner and an excellent specimen, was first here in a very strong class of Skyes, and Sir Stafford, long and low and with better than average head and coat, made an excellent second, with Gladstone Boy, an old face, vhc. Sir Roger, that was also vhc., does not get his ears up. Charlie, unnoticed, is a nice mongrel. Kirkella, first in bitches, while still out of coat, was the best in the class. Skye, second prize, does not get her ears up. Daisy, vhc., is not first-class in coat.

Mr. Shinn had matters all his own way in the classes for Clydesdales. His exhibits, Clydesdale Loris and Clydesdale Lady, won at New York.

Dr. Sanderson made a terrible blunder in placing Actor over Blackburn Teddy. The last named is simply better all over, and in coat and color there is no comparison. These were the only Yorkshires shown.

ITALIAN GREYHOUNDS—(MR. WATSON).

Tiny and Lilly, first and second prize winners in this class, are well known. Gypsey, vhc., lacks in head, color of nose, depth of body and general symmetry. Jolly, vhc., is an unsymmetrical puppy. Little Phil, vhc., is little in name and true character. Cupid, hc., was much the best in the class.

OTHER TOY DOGS—(DR. CRYER).

The judge showed a splendid kennel of eleven pugs, "not for competition." Kash, Bradford Ruby's best son, was alone in the challenge class for pugs. First in the open class for dogs was rightly awarded to Guess, that lacks in muzzle, lips, ears, carriage of ears, loin, carriage of tail and wrinkle. This dog is entered as being sired by Max, but Dr. Cryer says that he is not by his champion Max. Jumbo, Jr., second prize, is a plain and coarse dog that would surely have been beaten by the third prize winner had he been in good condition. This dog is not right in ears, his face is rather long, eyes not of the best, nails not quite black, body color rather smutty, stands rather high and would be improved by more wrinkle. Bismarck and Bradford Rowdy are defective in head proportions. Judge, vhc., is too long in face. He has white nails and is too large. Capers, vhc., lacks in foreface, has light nails, is not perfect in tail and might be better in ears. The puppy classes contained no entries.

Romeo, winner of first prize in the class for King Charles spaniels, dogs and bitches, is very short in foreface; in fact, in this respect he is about the best specimen we have seen in America. Eyes rather small, ears set too high, bad tail, coat showing curliness, light in loin. What a smasher he would be if he were all over as good as his muzzle. Philadelphia Charlie, second prize, is leggy and light in body, not good in color, curly in coat, too long in front of the eyes and not good in flag. Flossie, hc., has white markings on hindfeet, is too long in face, shows too much tan, and is going wrong in eyes. Sweet Violet, probably the best Prince Charles spaniel in the country, was first in the class for Blenheims, Rubys and Prince Charles. Prince, second prize, is a Blenheim. He is too long in face, has no dot, is rather short in feather, not very good in ears, in fact, is a bit plain throughout. The Japanese spaniels Yum Yum and Mikado are very ordinary specimens.

MISCELLANEOUS—(MR. WATSON).

Beauty, first in the heavy-weight class, is a smooth-coated sheepdog, plain in head and bad in ears. It has too much coat. Spot, that was third, is, we think, a better specimen of the breed. This dog is well known. Queen Coffee, second prize, while by no means a crack, is one of the best English retrievers in the country. She lacks in eyes, muzzle, knees and in tail, and is rather leggy. Othello, a Schipperke, and Beauty Vaders, a Chinese crested dog, were given equal first in the light-weight class. We are willing to wager that we know as little about these dogs as the owners themselves. Prince of Malta, third prize, while hardly clear in color, is not a bad Maltese terrier. White Wings, vhc., cannot be a good Mexican hairless dog if his sire, Me Too, was the wonder he was represented. As Mr. Watson gave several prizes to Me Too he was consistent in pegging back White Wings.

Following is a list of the

AWARDS.

MASTIFFS.—CHALLENGE—*Dogs:* 1st, E. H. Moore's Minting. *Bitches:* 1st, E. H. Moore's Tae Lady Coleus.—OPEN—*Dogs:* 1st and 2d, Kensington Kennels' Clement and Brother; 3d, S. Anderson's Sir. Cryer. Best Irish terrier, Dennis. King Charles spaniel, Hylus.

OTTAWA DOG SHOW.

Editor Forest and Stream:

We have much pleasure in notifying you that a bench show of dogs will be held in Ottawa on the 11th, 12th and 13th of September next in connection with the Central Canada Exhibition Association's second annual exhibition. We deplore the fact that our dates conflict with those already claimed by the London Kennel Club, but as it is imperative that the dog show should be held during the continuance of the general exhibition, we must either conflict with London or have no show this year. The entry fee to be charged is only one dollar; therefore, as will be seen, the prize list is a liberal one. Many valuable specials will be given and announced later. It will be to the advantage of the exhibitors to show here, as it is a new territory and many of the breeds of dogs are utterly unknown to the mass of our people. It is estimated that upward of fifty thousand people will visit the exhibition. The prize list is as follows: Mastiffs, Newfoundlands, greyhounds, foxhounds, beagles, bull-terriers, Scotch terriers, Skye terriers, Dandie Dinmont terriers, Irish terriers, Bedlington terriers, Airedale terriers, black and tan terriers and Pomeranians have one class each, $7 and $3. Smooth St. Bernards have two classes, dogs and bitches. Pointers, bulldogs, toy terriers, the same. Gordon setters, Irish water spaniels and miscellaneous have two classes each, open and puppy, $7 and $3 in the former and $5 for the latter. Rough St. Bernards have three classes, open dog, bitch and puppy, (this includes smooth puppies) also English and Irish setters, Clumber, field, cocker, (black) cocker, (any other color) spaniels, collies, fox-terriers. All communications should be addressed to Capt. R. C. W. Mac Cuaig, Central Canada Exhibition Association, Ottawa, Canada. BENCH SHOW COMMITTEE.

RUNNING WEIGHT OF GREYHOUNDS.—In referring to the article headed as above in this weeks issue of FOREST AND STREAM, I trust Mr. H. C. Lowe will pardon me if I take exception to his statement that the average weight of the Waterloo winners is from 60 to 65lbs. I have gone back for many years both in Waterloo and other great courses and find that it will barely reach an average of 56lbs. Some great dogs have run at 64lbs., but they are the exception rather than the rule. The most phenomenal bursts of speed as well as cleverness at the turn are found in dogs of the lighter weights, though there are many large dogs whose names will never be forgotten which ran at weights beyond any mentioned by Mr. Lowe. Tipsey Cake, a fine red dog by Master Mockingbird, ran at 89lbs., while Caralradzo, brother to Coodareena, a marvelously handsome and exceedingly stylish and flashy looking blue dog, divided the Douglass cup ran at 74lbs., and this was the lowest weight at which he ever went out of the slips. He was as tough as iron, and exercising, grooming and walking only served to add to his flesh, while he did not seem to lose either vigor or heart by running at heavier weights. Black Cloud, too, was a bad one to reduce in flesh, and if the weight could be reduced to 72lbs., the slipper thought him drawn very fine. The great Priam, which won the Waterloo in 1842, was another top weight greyhound, and when put in the slips for the Waterloo he weighed 74lbs. (full) and he did not have one ounce of superfluous flesh on his bones. He was a most clever dog, a first-class worker, quick and nimble as a cat on his feet and possessed the exceeding good sense as one of the famous old coursers said of "never giving a chance away." He was regarded as one of the greatest dogs of his day and it is very doubtful if there has ever been so big a dog since that was his equal in all respects.—H. W. HUNTINGTON.

FIELD TRIAL DATES.

THOMASVILLE, N. C., April 8.—*Editor Forest and Stream:* I see there is a clash of dates between the Central and Southern Field Trial Clubs, and I presume it will not be considered out of place for me to suggest what I believe to be the most equitable adjustment of the difficulty. I want all the field trial clubs to stay, therefore I hope the order of their meetings will be so arranged as to leave it possible for me to attend all if I desire to do so. Very properly the circuit commences at High Point. Lexington naturally comes next in order, for who wants to jump clean from High Point, N. C., to Amory, Miss., then back to Lexington, and immediately another jump to West Point, Miss., again? The Central trials could not possibly take place before the Eastern and leave any time at all to prepare our dogs, neither could they take place after the conclusion of the Southern trials, for North Carolina is too far north to hold trials at that time of the year, whereas I think trials could be better conducted in Mississippi or Tennessee late in December or early in January than at any other time. I cannot see how the Central club can hold a successful meeting in North Carolina if it changes its date; it would be simply impossible to do so. Therefore let us hope that the Southern gentlemen will decide to postpone their trials and leave it possible for Eastern handlers and dogs to attend them. I trust no change will be made by the Central club, as the only one possible to make would be to declare the trials off. I, for one handler, would seriously object to this. I want a pluck at that "rich plum." I want to see pointer vs. pointer and setter vs. setter, and the best of the two breeds compete under experienced and impartial judges for highest honors, and above all, I want to see the best dog win, be he pointer or setter. I want to see all the good ones in the second series, and to take my leave of the bad ones in the first series, even though I produce the rankest of all myself. It will be refreshing to run dogs under judges who have "been there" themselves. They know where and how the shoe pinches, and will be likely to give good-fitting ones, not too troublesome to the understandings. Candidly, the new club deserves great credit for the wise reforms it proposes to put in practice, as well as for the bold step they have taken by selecting for judges men who have trained and handled dogs themselves; also for the magnificent inducements in the way of prizes they hold out to pointer and setter breeders. If I said the Derby prizes were handsome I would be giving but slight expression of the fact; they are noble and generous in the extreme. I trust there will be no clash of dates, but clash or no clash, I hope nothing will interfere with the meeting of the Central club at Lexington Dec. 22. I hope to see everybody there. Let the hatchets be buried forever, let us smoke the pipe of peace and good will, commencing at High Point, continuing to Lexington, and again renewing the pleasure away down in Mississippi. LUKE W. WHITE.

DOG TALK.

MR. G. H. COVERT, Chicago, Ill., has purchased from Mr. J. J. Giltrap, Dundrum, Ireland, the Irish setter dog Garryowen IV. He is a young dog by Avondale (Garryowen—Moll Roe) and out of Dora (Frisco—Cora).

It appears that when the black and tan terrier bitches Meersbrook Maiden and Meersbrook Girl were delivered to Dr. Foote, their owner, somehow the right name was given to the wrong girl, and the consequent muddle suggests the conundrum: Why should the Girl and the Maiden be alike? Answer next week. On second thought, as this is really a hard one, the answer is appended: Both should be spotless. To put it more plainly, Meersbrook Maiden, who has taken so many prizes, was supposed to be Meersbrook Girl, and the other bitch, marked on the breast with a white spot, was called Meersbrook Maiden. Hence the heartburnings and bickerings that have arisen over the black and tan terrier judging.

Philadelphia's claim to be city of brotherly love will be disputed nevermore. At the dog show last week several prominent dog men, who for some time have been on only growling terms, became imbued with the peaceful spirit that pervades the Quaker City, and with mutual protestations of respect, admiration and esteem, cordially shook hands over the bloody chasm, buried the gory hatchet and smoked the pipe of peace. It is sincerely hoped that the glorious edifice of friendship here reared may ever endure, and that the mortar may ever cling to the masonry, and that no glove or other gage of battle may ever be thrown in the now peaceful sawdust ring.

At the Philadelphia show. Enthusiastic cheering and loud clapping of hands when Scotilla beat Maney Trefoil. Warm friend to Scotilla claps Mason on the shoulder and remarks, "The public appears to indorse that decision." "Yes," said Mason, "but the worst of it is the public is generally wrong." With a twinkle in his eye the friend to Scotilla whispered back, "How about the applause for Beaufort at Newark?" Exit Mason and friend to Scotilla at the double quick, in search of refreshments.

The Omaha *Herald* is down on the dog show held at Omaha last week, calls it a fake and says "The affair is the creation of a person whose sole object is to rake in as much gate money and expend as little of it for prizes as he possibly can. It is to the interest of breeders of blooded dogs to protect the public as well as themselves from imposition of this kind."

The Collie Stud Dog Stakes as announced in the catalogue of the Philadelphia show will be decided at a "show in the spring of 18889." As the entries closed last July it is very properly added, "The death of a stud dog not to disqualify his get.

A correspondent from Charleston, W. Va., writes that a terrier bitch, owned by a gentleman of that place, whelped March 31 two puppies, and ten days later she gave birth to another, and that all are alive.

Mr. Frank F Dole has recently received from England quite an addition to his kennel of bull-terriers, consisting of Hinks (formerly Professor) and the two bitches Miss Bendigo and White Daisy.

We are pleased to learn that one of our prominent dog show judges is opposed to the cruel practice of cropping.

The English Toy Spaniel and Pug Club will holds their annual show at the Aquarium, May 14 to 16.

The London terrier show held at the Westminster Aquarium, April 3 to 5, had 1160 entries.

COLLIE CLUB MEETING.—At the annual meeting of the Collie Club held in Philadelphia, April 16, 1889, the old board of officers and members of the executive committee were re-elected to serve for the ensuing year. The secretary's and treasurer's report showed the club to be in a flourishing condition financially, and a flattering increase of members. —J. D. SHOTWELL, Sec'y.

MEERSBROOK MAIDEN.—*Editor Forest and Stream:* I was quite surprised when looking through the report of the Utica dog show to see that the American judges still give prizes to the black and tan terrier bitch Meersbrook Maiden. If such a thing is tolerated in America it would not be here, and if it is not put a stop to it is useless for fanciers to import perfect animals. I should fancy that after the remarks of your reporter at the above show, the judges will disqualify her when she next appears on the bench. The owner of Buffalo General should most certainly have lodged a protest against her. As they are a pure English dog, they must or at least ought to be judged by the English club standard, and any signs of white is a certain disqualification. It is whispered over here by a select few that they knew about Meersbrook Maiden while she was in England, but I have strong faith in the straightforward dealings of her late owners, and cannot but think they thought her all right when shipped.—W. SIMPSON (Eagles-cliffe Kennels, Yarmouth, England).

DR. CRYER ON PUG JUDGING.—*Editor Forest and Stream:* It has been intimated to me that the reason I did not enter my pugs at the late Boston show was that C. H. Mason, Esq., was to judge the classes. Never was there a greater mistake. There were three sufficient reasons for my dogs not going, and at the last moment, knowing that Mr. Mason was to judge, I came very near sending them. There is no judge I would rather show pugs under than Mr. Mason.—M. H. CRYER (Philadelphia, Pa., April 16).

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Racket III. By A. C. Krueger, Wrightsville, Pa., for white, black and tan beagle dog, whelped July, 1885, by Cameron's Racket (Rally—Louise) out of Maggie (Sport—Fannie).

Eadbold, Ebissa, Edgar, Eadburga, Eaglesford, Eriant and Enid. By W. Wade, Hulton, Pa., for fawn mastiffs, three dogs and four bitches, whelped March 15, 1889, by Baldur (A.K.R. 6617) out of Elgiva (A.K.R. 5221).

Sir Warwick and Warwick Edward. By Warwick Kennels, Bridgeport, Conn., for blue belton English setter dogs, whelped March 1, 1889, by Warwick Albert (Royal Albert—Maida) out of Daisy Druid (Ted Llewellin—Trusty Gladstone).

Warwick Snowball and Warwick Pansy. By Warwick Kennels, Bridgeport, Conn., for blue belton English setter bitches, whelped March 1, 1889, by Warwick Albert (Royal Albert—Maida) out of Daisy Druid (Ted Llewellin—Trusty Gladstone).

Aurore and Banshee. By St. Cloud Kennels, Mott Haven, New York, for red Irish setter bitches, whelped March 25, 1889, by Royal Ruby (champion Glencho—Lady Edith) out of Zylla (St. Cloud—Princess Ida).

Hoosier and Indienne. By Jas. E. Unks, Muncie, Ind., for white, black and tan fox-terrier dog and bitch, whelped Feb. 28, 1889, by Beverwyck Trap (Dusky Trap—Daze) out of Lillie Belmont (Earl Leycester—Coquette).

Sandycroft Comrade, Sandycroft Grit and Sandycroft Clipper. By V. M. Haldeman, Milford, Del., for red Irish terrier dogs, whelped March 26, 1889, by Dennis (Bachelor—Jilt) out of Sandycroft Vim (Benedict—Geesala).

Sandycroft Fearless, Sandycroft Shona, Sandycroft Ruth and Sandycroft Restless. By V. M. Haldeman, Milford, Del., for red Irish terrier bitches, whelped March 26, 1889, by Dennis (Bachelor—Jilt) out of Sandycroft Vim (Benedict—Geesala).

The Elm Kennels. By Paul Gotzian, Forest Lake, Minn., for his kenneis of English setters, pointers, Irish water spaniels, Great Danes and St. Bernards.

Great Eastern Beagle Kennels. By Jas. & D. A. Williams, Lynn, Mass., for their kennels of beagles.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Trinket—Trailer. H. F. Schellhass's (Brooklyn, N. Y.) beagle bitch Trinket (Flute—Queen) to his champion Trailer (A.K.R. 6610), March 29.

Goodwood Music—Racket III. T. W. Hemphill's (Glen Mills, Pa.) beagle bitch Goodwood Music (Flute—Victress) to A. C. Krueger's Racket III. (Cameron's Racket—Maggie), April 4.

Ruby—Bannerman. T. W. Hemphill's (Glen Mills, Pa.) beagle bitch Ruby (Krueger's Racket—Belle II.) to A. C. Krueger's Bannerman (A.K.R. 1709), April 3.

Dora—Laick's Rattler. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Dora (Ringwood—Birdie) to his Laick's Rattler (Chancellor—Careless), March 15.

Beauty—Laick's Rattler. Geo. Laick's (Tarrytown, N. Y.) beagle bitch Beauty (Hero—Snap) to his Laick's Rattler (Chancellor—Careless), March 17.

Lill—Bannerman. F. Eibel's (Lancaster, Pa.) beagle bitch Lill (Cameron's Racket—June) to A. C. Krueger's champion Bannerman (champion Marchboy—Dewdrop), March 11.

Daisy—Glen. F. Eibel's (Lancaster, Pa.) beagle bitch Daisy (Cameron's Racket—June) to A. C. Krueger's Glen (Cornet—Solo), March 3.

Belle II.—Bannerman. J. G. Messner's (Pittsburgh, Pa.) beagle bitch Belle II. (Bradlaugh—Belle) to A. C. Krueger's champion Bannerman (champion Marchboy—Dewdrop), March 30.

Maggie—Bannerman. F. F. Davison's (Allegheny, Pa.) beagle bitch Maggie (Mark Anthony—Flora) to A. C. Krueger's champion Bannerman (champion Marchboy—Dewdrop), Feb. 9.

Letter—Bannerman. Dallett Bros.' beagle bitch Letter to A. C. Krueger's champion Bannerman (champion Marchboy—Dewdrop), Feb. 23.

Rena—Bannerman. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Rena (Cameron's Racket—Vickey) to his champion Bannerman (champion Marchboy—Dewdrop), Feb. 8.

Maybelle II.—Bannerman. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Maybelle II. (Lee—Maybelle) to his champion Bannerman (champion Marchboy—Dewdrop), Feb. 21.

Sunrise—Bonnie Dunkeld. W. S. Powers's (St. Louis, Mo.) collie bitch Sunrise (champion Scotilla—Luella) to McEwen & Gibson's Bonnie Dunkeld (Highlander—Electric), April 18.

Holly—Maney Trefoil. McEwen & Gibson's (Byron, Ont.) collie bitch Holly (Fitz Charlie—Pattie) to E. H. White's Maney Trefoil (champion The Squire—Scotch Pearl), Feb. 23.

Merry—Bonnie Dunkeld. McEwen & Gibson's (Byron, Ont.) collie bitch Merry (Scotson—Madge) to their Bonnie Dunkeld (Highlander—Electric), April 16.

Nydia—Edwy. Hamilton & Shugart's (Council Bluffs, Ia.) mastiff bitch Nydia (King of Ashmont—Ashmont Queen) to Dr. Geo. B. Ayres's Edwy (champion Orlando—Countess of Woodlands), April 16.

Dot Noble—Warwick Albert. D. Eldert's (Bridgeport, Conn.) English setter bitch Dot Noble (Dashing Noble—Bess Belton) to Warwick Kennels' Warwick Albert (Royal Albert—Maida), April 1.

UNSER FRITZ.

WILMINGTON, Del., April 15.—The attendance at the shooting at Healdmoor Rifle Range, Wilmington, Del., this afternoon, was increased by the addition of Old Boreas, who renewed his rampage of a week ago and with still greater vigor. He swept across the range from a 10 o'clock quarter during the entire afternoon, and not only exacted a windage of from three to five points, but insolently flew in the faces of the marksmen too:

Revolver Match—50yds.

E J Darlington	8	7	7	7	8	10	9	7	7	8—79
J Evans	8	8	7	10	7	6	7	9	9	9—77

NEW YORK CITY.—The Barry Rifle Club, which has heretofore been a gallery organization, has now an open-air corps and will hold its first annual shooting festival on Monday and Tuesday, May 20 and 21, at Washington Park. All shooting on 200yds. ranges. The club offers $600 in prizes and premiums on targets open to all comers. Target of honor.—Prizes on this target sent by clubs, judges or individuals will be competed for by members of the club only. Ring target—Open to all comers, $265 in 20 prizes, tickets, 3 shots, $1, 3 best tickets to count, re-entries allowed. Bullseye target—Open to all comers, for the best bullseye according to measurement, $200 in 20 prizes. Twelve premiums, aggregating $122, for the most bullseyes during the festival. For the first bullseye each day $5, last $2. Tickets on bullseye target, 5 shots, $1, re-entries allowed, any rifle and any trigger pull and sights (except magnifying) are allowed.

CONLIN'S REVOLVER MATCH.—During the past month some of the most remarkable revolver shooting on record has been witnessed at Conlin's Broadway gallery, New York city, and a very spirited and evenly-contested series of matches have just been completed. The past records of target shooting with the revolver have been broken, and the gentlemen who have won honors in the competition have earned for themselves a position in the very front rank of the crack amateur pistol shots of the world. To illustrate the skill brought into service a silver 25 cent piece would cover the 18 shots of each of the winners of first prizes in the three events contested. The number of entries was very large, and over 10,000 shots were fired in the last of the series of contests. She first match, open to beginners with the revolver, began March 1. The second contest of the series was open to amateurs only, and the third trial of skill was open to all comers, and was entitled the "expert match," and ended on Tuesday night, April 9. In the three contests the general conditions were: Each match to continue for ten days, the number of entries to be unlimited, the best three targets of a competitor to count, the shooting to be done with a Smith & Wesson .44cal. Russian model with improved sights, ammunition to be special cartridges with round ball and 6grs. of powder (this charge has given the best results for indoor target shooting), 6 shots per target, the standard decimal target, reduced in size so as to equal shooting at 50yds. range, was used, the shooting distance being 22yds. offhand. The following are the names and scores of the winners:

Match for beginners, open only to those who had never made a better record than 53 out of a possible 60 on this target. First prize won by C Stagg, score 167, possible 180; second prize won by Major W. R. Pryor, score 163, possible 180.

Match for amateurs, open only to those who had never made better than 56 out of a possible 60. Mr. Stagg, who in the beginners' class made a score of 57, was barred from the amateur class. The first prize in this contest was won by Albert A. Cohen, score 166, possible 180; second prize, Major W. R. Pryor, score 159, possible 180; third prize, W. K. Benedict, score 154, possible 180.

Match for experts, open to all comers; First prize, Alfred Bernon, 59, 59, 59, 177, possible 180; second prize, Major W. R. Pryor, 60, 58, 58, 176, possible 180; third prize, A. A. Cohen, 59, 58, 57, 174, possible 180.

Major Pryor, of the Twenty-second Regiment N. G. S. N. Y., besides winning second prize in all three contests, has the honor of being the first man to make a full score of possible 60 on this target. It is a noteworthy fact that Mr. Cohen, Major Pryor and Mr. Stagg have only recently taken up revolver shooting as a pastime, and the contests just brought to a close have really been the means of bringing out their remarkable skill with this weapon.

NEWARK, N. J., April 18.—To-day was the Newark Shooting Society's "banner day" in the Park, the shooting house being occupied by a larger representation of bona fide members than on any one practice day since 1879. Five targets were kept in constant use from half-past one till dark. The infusion of new blood into the society has given a fresh impetus to rifle shooting and as soon as the recently elected members secure their new rifles the shooting house will be crowded on every practice day. Twelve of the new members were present to-day. The majority of those present confined themselves to practice on the ring target, though the expert match was well patronized and kept two targets in use. A fifty-shot match on the ring target between George Plaisted and A. Bertrand, both of the Zettler Rifle Club, was started about 3 o'clock, but as Plaisted led his opponent 88 points at the twentieth round, he decided that he had had enough. In the expert medal match some very fine shooting was done all around and on the division of money for best single tickets nothing below 63 was of any value. The winners of the best single tickets were as follows: H. Williams and B. Walther, 69 each, div. first and second money; F. C. Watts 68, third; M. Dorrler and C. H. Townsend, 67 each, div. fourth and fifth; H. Holges 66, sixth; G. Snellen 63, seventh. M. Dorrler won a bronze medal on his first ten entries, scoring 63, 62, 60, 67, 65, 58, 63, 64, 65, 60. H. Williams made a sufficient number of scores above 62 to secure a silver medal, and F. C. Watts finished his winning scores for a bronze medal. Other scores were: J. Coppersmith, 58, 58, 60; G. Snellen, 58, 58, 63; F. A. Fredenschner 52, E. Flocke 47, C. Trefz 51. A number of the new members, made scores ranging from 175 to 209 on the ring target, and with a little practice some of them will make the "old timers" hustle to keep on the top of the list.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE NORWICH TOURNAMENT.

NORWICH, Conn., April 18.—The two days' tournament of the Shooting Association at Norwich, Conn., April 17 and 18, was one of the most successful shoots ever held in Connecticut. The management was perfect, and everything that could be done for the pleasure and comfort of the visitors was attended to by the committee, which consisted of the following gentlemen: E. W. Yerrington, W. L. Sargent, J. E. Olcott, Chet Barnes and Fred L. Osgood. Mr. Chas. R. Butt attended to the finance department in a very able manner. W. A. Breed and Wm. Walker were official scorers. Keystones, bluerocks and Ligowskys were the targets used, and 10,000 of them were thrown during the two days. The Keystones and bluerocks were thrown by Keystone targets under that system, the clays under National rules. Mr. H. F. Penrose, the representative of the Keystone Target Company, ran the events shot under that system, and the way he rattled them off was a revelation to the Eastern men, as this was the first time many of them had seen this system worked. The attendance was large, although the weather was unfavorable. Wednesday, the first day, the programme was shot with the rain falling in torrents, and twenty-five of the most hardy shooters faced the traps. On Thursday the conditions were better, and there was a large number of spectators present, including many ladies. The programme was an attractive one, and with but two exceptions on the first day it was shot through.

April 17.—Event No. 1, 10 Ligowskys:

E D Miller	1111111111—10	Manley	1111111111—10
Apgar	1111111111—10	Sterry	1111001011—7

Sterry	1011011111— 8	Harvey	1111110110— 8

Miller first, Apgar second on shoot off, Sigler and Dickey third on shoot off, Hunter fourth.

CROWN POINT TOURNAMENT.

CHICAGO, Ill., April 19.—The two days' tournament just closed at Crown Point, Ind., has been a great success in every way in spite of the rain of to-day and yesterday, which did little more than freshen the air. The Pan Handle train from Chicago brought down Messrs. F. A. Place, A. E. Young, I. Wells, Alex. T. Loyd, R. Donnelley, C. S. Cleaver and J. E. Newell, all of whom were at once hospitably received and disposed of. The C. & A. train discharged its passengers a few moments later, and the younger shooters fairly gasped when they saw climbing into the band wagon such old-timers as R. B. Wadsworth, J. E. Price, and not less than three of the Kleinman family, John, George and Henry. The rest of the Kleinmans could not come. Some of the Hammond shooters also appeared with blood in their eyes, Ed Irwin, lately back from the Corry (Pa.) shoot and fresh from three weeks' snipe shooting for the market, showed up, and in I. W. Budd and J. A. Ruble, who came in time for all of the second day, the crowd found two men who are practically professionals. On-top of all this it was well known that Messrs. Hart, Wheeler, Hayward, Fehrman, Elliott, Maillet, and others, notoriously hard shooters of the hard-shooting Crown Point Club, would be on hand for keeps, so that the fact was evident that whoever got money in this particular tournament would have to earn it. This is usually the case at the tournaments of the Crown Point boys, which are held by shooters of this vicinity as among the most interesting and important events at the trap. The quality of Crown Point shooting and Crown Point hospitality is not strained, and these joint features have built up a reputation for the club which is flawless, and justly so. As a trap club the Crown Points are newly organized. They lost only two weeks from practice during the whole of last winter, and in the course of the year, as has been stated elsewhere in these columns, they broke nearly 40,000 inanimate targets. Not so strong at live birds, it is probable that they could pick ten men from their club who could beat any ten actual members of any club in the State. There is talk of a match between them and the gun club of Chicago in the near future. The latter club is a paralyzer at live birds, and an all-round match between these clubs would be a prime event.

The Loyd system of dividing prizes was tried in two of the shoots of this tournament, and it is probably fair to say that it was well received and proved satisfactory, even under the conditions it had. There were only 38 entries at most in any shoot, and it is not claimed for the system that it is so applicable to small shoots as to large ones. It is better when the entry is over 50 than when it is less. Even in this case, however, its advantages in such a strong gathering of shooters were apparent and appreciated, and under it men won money who could not otherwise have taken a cent. The vote of the club as to its adoption has not been passed at this writing, but should so strong and even-shooting a club as the Crown Points decide to use it, it would be a practical indorsement from the shooting fraternity of this region. Some little delay, quite unnecessary, was caused in the Loyd shoots by the use of dice. It is much shorter and better to use balls or gun wads, numbered 1, 2, 3, etc., and have the drawings on ties made at once after shooting. In his hurry in figuring the ties, also, Mr. Loyd forgot to deduct the price of the birds in one shoot, and so cost the club over $10, for which he had to submit to a lot of good-natured guying.

There was plenty of fun at the shoot, even after the irrepressible "Wadworth" and the great part of the Chicago boys had gone home Thursday evening. Probably the heartiest laugh occurred Friday evening. A big German farmer by the name of Kindberg, a rank novice at the trap, was induced to try his hand. He shot an 8-gauge gun and No. 4 shot, and made nine beautiful misses. Kindberg's yellow dog was running around in the field, trying to retrieve something, and some one asked Kindberg why the dog didn't bring in some of the blackbirds he was shooting at. The old German looked thoughtfully at the dog and at his gun, and replied, "I guess he was acking for de wild meat." This tribute to the shrewdness of the dog brought down the house.

FOREST AND STREAM is indebted to Mr. and Mrs. M. T. Hart for many courtesies. So is Mr Loyd. It was here that Mr. Loyd, while pondering over what to do with his money he was going to win, got up Friday morning, and put his left shoe on his right foot, and vice versa. It was kind of the family not to notice such things, although it was apparent that Mr. Loyd's face had an absent and distant expression, as if he had forgotten something. All in all, Crown Point tournament for this spring was not only successful but truly enjoyable in every way. Following are the scores:

Match No. 1, 6 singles, 50 cents entrance, Keystone system:

A Coffin	111111—6	J J Kleinman	011000—2
John Wheeler	101101—4	E P Price	111111—6
Ed Irwin	011111—5	C S Cleaver	011011—4
W H Hayward	011111—5	R H Donnelley	111001—4
T S Caswell	011111—5	J T Newell	011001—3
H Marble	111011—5	R Puccini	010110—3
Geo I Maillet	011011—4	M T Hart	100111—4
B Kouts	0110.1—3	J Atkins	111111—6
F J Place	0.1111—5	T Banks	110001—3
R B Wadsworth	111111—6	J B Stoddard	111010—5
W C Nicholson	111100—4	E Hough	001111—4
H Green	011000—2	A Fehrman	111111—6
J B Smith	101111—5	I Wells	100101—3
G A Elliot	111011—5	W Bullock	100111—4
T Hammond	000011—3	E P Ames	010010—2
S E Young	110111—5	J Rosenbauer	111100—4
H H Kleinman	101111—5	Alex T Loyd	111100—4
Geo Kleinman	101011—4		

On the ties, R. B. Wadsworth won first on 3, H. H. Kleinman second on 3, Geo. Kleinman third on 6.

Match No. 2, 9 singles, $1.50 entrance, Loyd system, 50, 30 and 20 per cent. and 4 moneys:

J J Wheeler	111111110—8	R Donnelley	050100000—1
J A Elliott	111010010—5	J J Kleinman	111110011—7

CINCINNATI, April 15.—The East End Gun Club shot to-day, each man firing at 100 Keystones from five traps, 18yds. for 10-gauge and 16yds. for 12-gauge guns. Kennedy, 16-gauge Lefever, 97; Andrews, 10-gauge Parker hammerless, 69; Courtney, 10-gauge Lefever, 75; Bandle 10-gauge Parker hammerless, 85; Richard, 12-gauge Parker, 46; Murphy, 10-gauge Smith, 32; F. Ferris, new 10-gauge Parker hammerless, 57; Cole, 10-gauge Lefever, 84.

April 18.—The East End Gun Club was out for the regular shoot on the Columbia Grounds to-day, over 10 traps (2 sets), American Association rules. None of the A class men were out, and two of the B class handicapped themselves, Richard by shooting 12 instead of his 10-gauge, and Ferris had not quite got the hang of his new Parker hammerless.

Twenty larks, 5 traps:

Schatz'an	01130110111111111101—14	F Ferris	1900111011111010111—14
Cole	1101101101111111111—17	Powell	0101001010100130116—11

Conover	1101111111— 9	Williamson	1011101110— 7

WRIGHTSVILLE, Pa., April 19.—The Columbia Gun Club is in a blooming condition after quite a lengthy term of inactivity. The following officers were elected at our last meeting: Pres., W. G. Taylor; Vice-Pres., John Broom; Sec., A. C. Krueger; Treas., F. Cromwshield; Capt., A. C. Krueger. The club numbers 13, with several applications pending. To-day the first club shoot of the season was held on our new grounds on Mifflin's Island, in the beautiful Susquehanna River. We are still at work on the improvement of this island, and in a short time the club ground will compare favorably with any in the State. The shoot was a pleasant affair. The following are the scores.

Event No. 1, at 9 bluerocks, 18yds. rise, 3 traps, Chamberlin rules:

Krueger	110111111—8	Heckel	110101010—5
Taylor	111101101—7	Fendrich	101111111—8
Broom	111000011—5	Stevens	101100101—5
Franciscus	010011011—5		

In the ties, which were shot off in the next match, miss and out, Krueger won first, Taylor second and Heckel third.

Event No. 2, same conditions:

Krueger	111110111—8	Wayne	110101101—6
Taylor	111001010—5	Heckle	111001011—6
Broom	011110111—7	Fendrich	011111011—7
Franciscus	100101101—5	Stevens	001011111—6

Krueger first, Fendrich second, Heckel third.

Event No. 3, same conditions, except 6 instead of 9 bluerocks: Krueger 6, Taylor 4, Broom 4, Franciscus 6, Wayne 1, Heckel 5, Fendrich 4, Stevens 3. Krueger first, Heckel second, Broom third. —BANNERMAN.

DUNELLEN, N. J.—The Middlesex Gun Club will have a big day's sport on its grounds at Dunellen on Centennial Inauguration Day, at both live birds and inanimate targets. Five hundred good live birds will be on hand, and the event of the day will be a 15-bird sweepstakes, with a guaranteed purse of $150. The entry will be $15, and Hurlingham rules will govern. Delegates will be present from all parts of the State, and from Norwich, Conn., New Haven, Conn., Philadelphia and other places. Shooting will begin at 9 A. M.

NEW RULES.—Von Lengerke and Detmold have copies of the new American Association rules in a shape suitable for framing. Secretaries of clubs will be sent copies free on application.

MINNEAPOLIS, April 17.—The Minneapolis Gun Club held its regular monthly tournament to-day at its grounds on Bloomington avenue, and though it rained quite hard throughout the forenoon, and on account of street car strike no cars were running, there was a fair attendance and the shooting was excellent. There were four averages given of $10, $5, $3 and $2 respectively, for first, second, third and fourth averages. Peorias were exclusively used and Minneapolis rules, which the Keystone Company have adopted with slight modifications, were also used. The best shooting was done in a pouring rain, when there were two 15 straights and six 14s, which shows that the "old duck shooters" can shoot at the trap, the market-hunters' opinion to the contrary notwithstanding. One incident of the day was when "Murphy's" gun went off accidentally and broke a bird within 24ft. of the trap, giving him straight 10. There were some visitors from abroad and they captured a large share of the purses and averages. H. W. Jones and Lee, from Atwater, Minn., the former capturing first average; J. H. Balsom, Hudson, Wis., getting second average; Cummings, Skinner, Howard, Burke and Chantler, from St. Paul, the latter getting third average, while fourth was divided. On the whole, each client appeared to have what one seemed satisfied. Several sweeps were also shot, and "straights" were common. Following is the score of the regular programme events:

First regular event, 10 single Peorias:

Skinner	1111001101— 7	Balsom	1101111011— 8
Jones	0111110111— 8	Stokes	1100010101— 6
Chantler	1110111111— 9	Shott	1110.00110— 5
Nicholson	0001010111— 5	Cutter	1111111051— 8
Lawrence	111 1100110— 6	Christensen	1111111110— 9
Lee	1111111111—10	Burke	1110111111— 9
Cumings	1011101111— 8	Fox	1101010001— 5
Murphy	1111111111—10		

Ties on 10, 9 and 8 div., Skinner fourth.

Second event, 6 singles and 2 pairs:

Balsom	111111 11 11—10	Nicholson	100001 10 10— 4
Whitcomb	010111 00 10— 5	Christensen	111110 10 10— 9
Skinner	111111 11 10— 9	Lawrence	001110 10 10— 5
Lee	011111 11 00— 7	Ensign	011111 10 10— 5
Jones	110111 11 11— 9	Murphy	111101 10 11— 8
Chantler	110111 10 11— 8	Shott	100111 10 10— 6
Burke	111111 10 10— 8	Cutter	110311 11 10— 7
Stokes	110100 11 11— 7		

Balsom first, Skinner and Jones second, Chantler and Murphy third, Lee fourth.

Third event, 15 single Peorias:

Skinner	111111111111111—15	Whitcomb	110111101011111—12
Christianson	111111111111111—15	Lawrence	101111001000111— 9
Lee	111111101111111—14	Cummings	110011110111011—11
Jones	111111111111111—15	Pratt	101100101001 001— 8
Balsom	111101111111111—14	Ensign	111110011111100—11
Shott	011110101010101— 9	Murphy	111111111110111—13
Fox	110900111100101— 8	Chantler	011111111111111—14
Stokes	111111011111111—14	Burke	110111111111111—14
Nicholson	001110101011111— 9	Cutter	011111111110111—13

Skinner and Jones first, Stokes and Burke second, Murphy and Carter third, Whitcomb fourth.

Fourth event, 4 singles and 3 pairs Peorias:

Skinner	1111 11 00 11—8	Lawrence	1110 10 10 10—6
Shott	1111 10 11 10—8	Ensign	0101 10 01 11—6
Nicholson	1010 10 10 10—7	Murphy	1111 01 11 00—7
Balsam	1101 10 10 10—6	Chantler	1111 00 11 11—8
Fox	0011 11 00 10—5	Stokes	1110 10 11 11—8
Whitcomb	1011 10 10 11—7	Pratt	1001 10 11 10—6
Jones	1111 11 10 11—9	Burke	0110 11 00 01—5
Lee	0111 00 10 10—5	Cutter	0111 11 10 10—7

Jones first, Shott second, Cutter and Whitcomb third, Lawrence fourth.

Fifth event, 10 single Peorias:

Balsom	1111111111—10	Jones	1011101111— 8
Lee	0110111110— 7	Fox	1010101111— 7
Skinner	1111111 01— 9	Cummings	1101111111— 9
Shott	0001111001— 5	Pratt	1111011111— 9
Chantler	1110011110— 7	Lawrence	1110100111— 7
Whitcomb	1111111011— 9	Ensign	1011111011— 8
Stokes	1111010010— 7	Murphy	1110010111— 7
Nicholson	1000101101— 5	Cutter	1110111110— 8

Balsom first. Ties on 9 divide second. Ties on 8 divide third. Chantler fourth.

Sixth event, club badge, 10 singles and 5 pairs Peorias:

Skinner	0011011101	11 11 10 00 10—12	
Jones	1111111101	11 11 11 10 10—17	
Balsom	1110111101	11 11 11 01 10—16	
Stott	1010101110	10 10 10 00 11—11	
Whitcomb	0111111110	01 10 10 11 11—15	
Marshall	0111110111	10 11 10 11 10—15	
Lee	1011110011	11 10 11 00 11—15	
Cummings	1100110111	11 11 10 10 10—14	
Anderson	0011010110	10 11 11 10 11—13	
Nicholson	0011011110	10 10 11 11 10—13	
Fox	1100010100	10 10 10 10 11—10	
Stokes	1111110111	11 10 11 10 10—16	
Chantler	1111111010	10 10 11 11 11—16	
Ensign	1111111011	10 10 11 00 11—15	
Murphy	0110101111	10 10 10 10 10—12	
Cutter	1111111111	11 00 10 00 11—15	
Pratt	1010111110	10 00 10 10 10—11	
Griffin	0001011011	11 10 11 10 10—12	
Lawrence	0110110111	10 11 10 10 11—14	
Burke	1110111111	11 00 11 01 11—16	
Brady	1110110111	10 11 10 10 11—14	
Osmer	0011111111	10 11 11 11 11—17	

Jones first, Stokes second, Whitcomb third, ties on 14 div. fourth. Stokes wins club badge.

Seventh event, 9 singles and 3 pairs Peorias:

Ensign	111111110	11 00 12—12	
Lawrence	0111011110	11 10 11—11	
Brady	1101010011	10 10 11—10	
Cutter	1010011101	11 10 11—10	
Balsom	0011111111	11 10 10—11	
Stott	1110111011	10 10 10—11	
Skinner	1011111111	11 00 10—11	
Jones	1110110111	11 10 11—12	
Stokes	1011111111	10 11 11—12	
Fox	1111010111	10 00 01—9	
Cumings	0011111111	10 10 11—11	
Howard	1010000101	10 10 11— 9	
Morse	1111111111	11 01 10—13	
Chantler	1111111101	10 10 10—11	
Lee	0111111111	11 00 11—12	
L Kennedy	1110011010	11 11 11—11	
Griffin	1001010110	11 11 10—10	
Whitcomb	1101111010	01 10 11—11	
Murphy	1111111001	11 10 11—12	
Osmer	1111111111	10 10 11—12	
Pratt	1111110110	11 00 01—10	
Burke	1111011111	10 11 11—13	

Stokes and Burke first, ties on 12 divided second, Cutter third, ties on 10 divided fourth.

First average, Jones, $10; second, Balsom, $3; third, Chantler, $3; fourth, Stokes and Skinner, $2.

LEONIA, N. J., April 12.—The Bergen Gun Club came over for a shoot with the Leonia Gun Club to-day, and went home with a victory to their credit. The scores stood:

Leonia Gun Club.

S G H Wright	1101110001011011101011—17

EATON, N. Y., April 20.—To-day our boys chose sides. Captained by Bell and Curus and to shoot 15 each, but this resulted in a tie and it was then agreed to make it 50. Curtis's side won by one bird. The average of both sides was 75 to 100.

Bell	34	Curtis	40
Richardson	42	Hall	43
Briggs	31	Sackett	35
Morse	17—124	Hamlin	7—125

BRYN MAWR, Pa., April 20.—The following are the scores made by nine members of the Bryn Mawr Gun and Rifle Club, 25 bluerocks each, 16yds. rise: John J. Kerrigan 15, Wm. Soley 12, Caris, Moore 18, H. J. McClellan 14, David Harmer, Jr. 20, George W. Soley 12, Hugh W. Barrett 17, F. Howard Shank 23, Wm. Hilyard 13.—F. HOWARD SHANK, Sec.

HAMILTON, Ont., April 19.—The Wildfowlers' Gun Club shoot on Good Friday, at 20 Hamilton blackbirds, resulted as follows, 5 traps, 18yds. rise, National rules, ties divided: Jas. Smyth 16, C. C. Hunt 15, W. Watson 13, G. Brant 15, H. Davis 12, J. Bowron 12, T. Stephens 12, J. Hunter 11, H. Graham 10, B. McLeane 10, W. Hamilton 10, E. Spencer 10, Jas. Pett 10, W. Paine 10, A. Smyth 9, W. Cliff 9, Jas. Smith 7, J. Hamilton 6.

ST. PAUL, Minn., April 13.—The St. Paul Gun Club held its usual weekly shoot yesterday, with a good attendance, many Minneapolis "boys" being present. The day was delightful and many scores were good. A strong wind blew across the traps from right to left. The individual challenge badge was shot for first, in which members challenge the holder in alphabetical order, Boyd won it in the first contest, and as Chantler came next he promptly challenged and deposited the $5 required from each contestant. As both parties made excellent scores, both before and after this match, it looks as if both had a bad attack of buck fever. Following are the scores:

Boyd	0110101100101100	01 10 11 11 10—14	
Chantler	1100110011010110	10 01 11 11 01—15	

First sweepstake, 10 Peorias, 18yds. rise, Keystone rules, three prizes: Chantler 9, Pfister 10, Boyd 8, Bennett 7, Holt 9, Forbes 7, Fisk 9, Stone 10, Max 8, Cummings 8, Kennedy 6, Hill 6, Elt 6, Murphy 9, Burke 10, Fox 9. Pfister won first after a sharp fight, in which he shot at 12 birds, Murphy second on shoot-off, Max third.

Second event, 5 singles and 3 pair Peorias:

Chantler	11101 11 11 10— 9	Max	11111 00 01 10— 7
Pfister	10110 11 11 10— 8	Cumings	11101 10 11 11— 9
Boyd	10101 11 11 11— 9	M Kennedy	11001 11 11 10—8
Bennett	11111 11 11 10—10	Hill	01101 10 11 11— 8
Holt	11111 11 11 11—11	Murphy	11111 10 11 11—10
Forces	11111 10 11 10— 9	Burke	11111 10 10 11— 8
Fish	01101 11 11 10— 8	Fox	01111 11 11 00— 8
Stone	11010 11 11 10— 8	Smith	11110 00 01 10— 6

Holt first, Bennett and Murphy second, Forbes third after shooting off tie.

Third event, 10 singles and 5 pairs Peorias, 5 screened traps, 18 and 15yds.:

Chantler	1111101111	11 11 10 11 10—17	
Pfister	1101111101	11 11 11 01 10—16	
Boyd	1110111111	11 11 10 00 11—16	
Bennett	1111111111	10 10 11 10 10—15	
Holt	1111110111	10 10 10 10 10—14	
Forbes	0001111111	10 11 10 01 11—14	
Fish	0110001111	11 11 11 11 10—15	
Stone	1110100000	10 11 11 11 11—13	
Max	1111101111	10 11 10 10 11—16	
Cumings	1101111111	11 11 10 11 10—17	
M Kennedy	1111110111	11 11 11 11 11—19	
Hill	1011111111	00 01 00 10 11—13	
Murphy	1101101110	11 11 11 00 10—14	
Burke	1110111110	11 11 11 01 11—17	
Fox	1111111111	00 10 11 01 00—14	
R Kennedy	0101010100	00 11 10 10 11—11	
Smith	1111100100	00 10 10 10 11—11	

M. Kennedy first, Burk second on shoot-off, Pfister third on shoot-off.

Fourth event, 5 singles and 3 pairs, same conditions:

Pfister	11111 10 10 11— 9	Cumings	11111 11 10 10— 9
Chantler	11111 11 10 11—10	Kennedy	01111 11 11 11—10
Boyd	11110 11 10 10— 8	Hill	11101 11 10 10— 8
Bennett	01110 10 11 11— 8	Murphy	01001 11 01 11— 6
Holt	10110 11 01 01— 7	Burke	01011 11 11 11— 9
Forbes	11111 11 01 11—10	Fox	10011 01 10 11— 7
Fish	01101 11 10 11— 8	R S Kennedy	10001 01 01 10— 4
Stone	11110 11 10 10— 8	Smith	01100 11 00 10— 5
Max	11111 11 11 00— 9		

All ties were shot off, in which Chantler won first, Burke second and Boyd third.

Fifth event, 10 singles and 5 pairs Peorias, same conditions:

Pfister	0110101011	11 11 00 10 11—13	
Chantler	1111111111	10 11 11 10 11—18	
Boyd	1101011111	10 01 10 11 11—15	
Bennett	1110111111	10 11 11 11 11—18	
Holt	1111001110	00 10 11 10 11—13	
Forbes	1111111111	11 10 11 11 11—19	
Fish	1110111111	10 11 01 10 11—16	
Stone	1101111110	10 10 11 10 10—14	
Max	1001101110	01 11 10 10 11—13	
Cumings	0111111110	10 11 01 00 00—12	
M Kennedy	1111111110	10 00 11 10 10—14	
Hill	1011111111	11 11 10 00 10—15	
Murphy	1001101011	10 11 10 11 11—15	
Burke	1101111111	11 10 11 01 11—18	
Fox	1011001000	01 10 11 01 10 13	
Smith	1100111110	11 01 10 01 10—12	
R Kennedy	1100111011	10 00 11 01 11—13	

Forbes first, Burke second, Fish third. Ties on 15 divided.

HARVARD MARKSMEN.—The Harvard Gun Club shot with the Lexington Club at Lexington April 20. The teams consisted of five men each, 125 clays each. The Lexington team won by a score of 106 to 88. Following is the score:

Harvard.		Lexington.	
Lamb	18	Hutchinson	20
Quinlan	18	Tilton	20
Bacon	16	Reed	19
Macay	17	Herrick	24
Green	19—88	Vickery	3—106

Following is the result of the sweepstake: First event, 25 clays—Herrick. Second event, 6 clays—Herrick. Third event, 6 blacks—Quinlan. Fourth event, 6 clays—Quinlan, Reed and Vickery. Fifth event, 6 blacks—Tilton and Rrigley. Sixth event, 6 clays—Bacon. Seventh event—Green. Eighth event—Vickery.

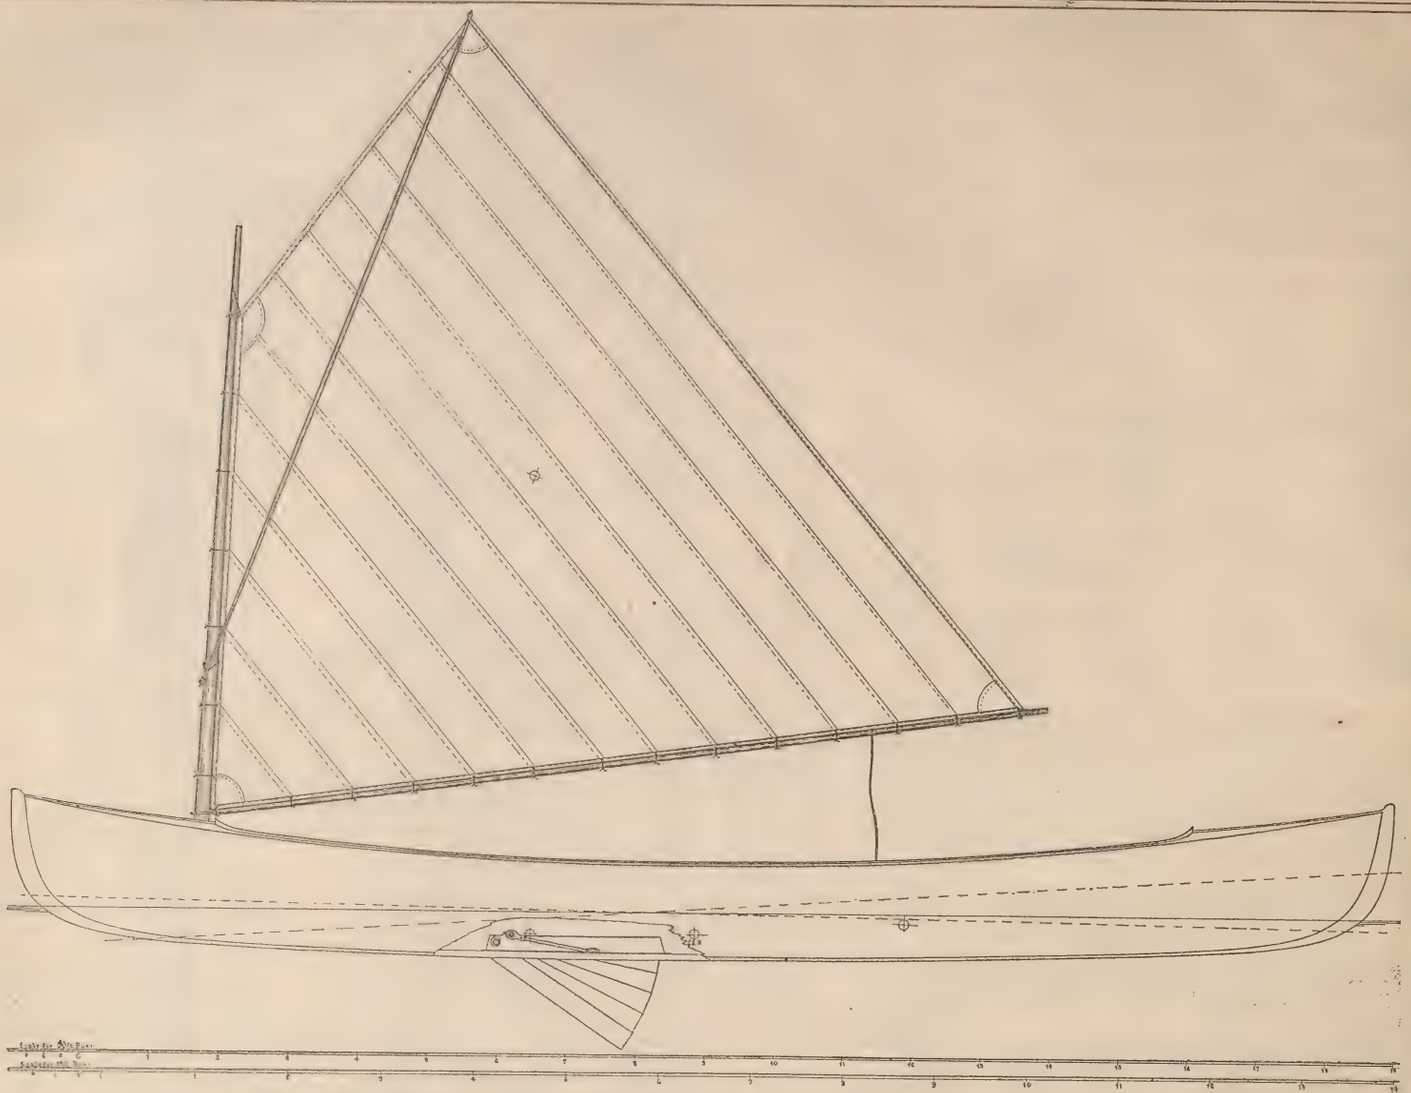
SOUTHERN ILLINOIS SPORTSMEN'S ASSOCIATION.—The ninth annual meeting and tournament of this association, will be held in Belleville, the first week in June. The programmes for the tournament will be issued about May 1. The membership is very large, embracing all the prominent trap shots in the State south of the Ohio & Mississippi Railroad, and also many who devote a great deal of time each year in quest of the various kinds of game that is to be found in this and adjoining States.

DES MOINES, Ia., April 18.—C. W. Budd, of this city, to-day issued a challenge to Dr. Carver to shoot 100 live pigeons, club rules, the match to be held in Chicago, St. Louis, Kausas City, or Cincinnati, for the championship of the world and a purse of $200 a side. This is the outcome of a recent match in this city, when Carver and Budd shot under unfavorable conditions.

TORONTO, April 19.—The following matches were shot on McDowall's grounds to-day:

Match No. 1, 4 prizes, at 20 birds each, 18yds. rise: C. Kemp 17, W. Felstead 15, C. Charles 15, F. Emond 15, T. Sawdon, Jr., 15, W. McDowall 15, J. Drasey 16, J. Mitchell 10.

Match No. 2, 5 prizes, 20 birds, 18yds rise: Charles 17, Sawdon, Jr., 16, Andrews 16, Phillips 15, Bennett 14, McDowall 14, Felstead 13, Kemp 13, Emond 13, Rice 12, Drasey 10.



Match No. 3, team shoot, 3 prizes, 15 birds, per man.

Kemp	13	Thomas	13
Felstead	11	Harrison	14
Sawdon, Jr	11	Bennett	11
Emond	10	Draisey	8
Rice	9—54	Mallett	7—53
McDowall	12	Walton	13
Charles	12	Phillips	8
McClure	11	Lervy	7
Kicher	10	Thornton	7
Mitchell	6—51	Best	7—42

At the shoot of the Stanley Gun Club for the gold watch presented by the president, Mr. W. Felstead captured the trophy with 23 out of 25, at 23yds. rise.

RED BANK, N. J., April 18.—The regular monthly shoot of the Riverside Gun and Rifle Club was held this afternoon on the club's grounds in Middletown Township. Clay-pigeons were used. Edward M. Cooper did the best shooting. The first match was a sweepstakes at 9 birds, there were three entries, the scores were: Ed. Throckmorton 8, J. Cooper, Jr. 8, Asa Whymer 4. In the shoot-off Throckmorton broke 3 birds and Cooper 4. A shoot at 3 live birds between Mr. Cornwell and Capt. W. L. Conover was won by Cornwell. A sweepstakes shoot at 6 bluerocks, ten entries, followed. E. Cooper and J. Cooper tied for first, breaking all of their birds. E. Throckmorton, W. G. Conover and J. B. Bergen each broke 5, and Asa Whymer won third money. The two Coopers div. first money, and in the shoot-off for second Throckmorton won. A shoot at 6 birds, in which there were eleven entries, was won by Chas. Grassenger, with Ed. Cooper second, Ed. Bussell third, and J. Cooper, Jr., fourth. The next sweepstakes was a shoot at 5 doubles. This was won by Ed. Cooper who broke 9, J. Cooper came next with 8, and Ed. Throckmorton third with 7. The last and most amusing shoot of the day was a walking match. Edward and John Cooper won first money, each breaking 10 out of 11. Throckmorton won second with 6 out of 9, and Conover third with 3 out of 6. The club will hold its live bird shoot Thursday, April 25.

NEWARK, N. J.—A big sweepstakes will be shot at John Erb's on Thursday, April 25, commencing at 10 A. M. The conditions will be 25 live birds each, $25 entry, Hurlingham rules to govern. It is likely that the entry list will include at least twenty-five of the most expert shots in this State, as well as a number of equally good ones from New York and Pennsylvania.

SAIL PLAN OF ST. LAWRENCE SKIFF.

ELM CITY GUN CLUB.—New Haven, Conn., April 19.—The Elm City Gun Club held their first tournament to-day on their new grounds, and also threw open the new club house for the first time. The weather was all that could be desired, and the crowd, though small, came there to shoot, as witness the number of extras not down on the printed programmes. The new grounds were voted by the visitors to be as good if not better than any in this vicinity. The birds used were principally kingbirds thrown from 3 traps. The following scores show that very good shooting was done: First event, 10 birds, 50 cents entrance: Ortsiefer 8, Carney 8, Tyler 5, Porter 7, Bailey 6, Albert 10, Hill 8, Penn 5, Ridge 9, Stone 9, Potter 9. Albert first; Potter, Ridge and Stone div. second; Ortsiefer, Hill and Carney div. third; Porter fourth.

Second event, same conditions: Ortsiefer 5, Carney 8, Tyler 6, Porter 9, Bailey 5, Albert 7, Hill 10, Penn 7, Potter 9, Ridge 8, Stone 10, Marlow 7, Smith 7, Savage 7, Webb 5. Hill and Stone div. first; Porter and Potter div. second; Carney and Ridge div. third, Smith and Savage div. fourth on shoot-off.

Third event, 10 straightaways, 21yds., 50cts. entrance: Ortsiefer 9, Carney 9, Tyler 6, Porter 7, Bailey 8, Albert 9, Hill 10, Penn 7, Potter 10, Ridge 9, Savage 8, Smith 8, Webb withdrew, Marlin 6, Stone 9, Hill and Potter divided first, Ortsiefer second on shoot-off, Bailey, Savage and Smith divided third, Porter and Penn divided fourth.

Fourth event, 5 singles and 5 pairs, 75cts. entrance: Smith 11, Penn 9, Savage 11, Ortsiefer 11, Albert 11, Ridge 6, Marlin 9, Tyler 8, Porter 10, Calahan 10, Potter 7, Stone 11, Bailey 11, Hill 12, Carney 12, Tuttle 13. Tuttle first, Hill and Carney divided second; ties on 11, 3 singles, 1 pair, Smith and Savage, 5 each, and divided third, Porter and Calahan divided fourth.

Fifth event, 10 singles, 50cts. entrance: Potter 9, Smith 6, Ridge 9, Savage 9, Hill 9, Webb withdrew, Albert 10, Marlin 6, Tyler 9, Porter 6, Penn 5, Sandford 3, Tuttle 10, Bailey 5, Stone 8, Ortsiefer 6, Calahan 7, Widman 9. Albert and Tuttle first; ties on 9, Savage, Tyler and Widman divided second on shoot-off; Stone third, Calahan fourth.

Sixth event, 2 men team, 10 birds each, entrance $1 per man: Smith 7, Ortsiefer 6; total 13. Hill 8, Potter 7; total 15. Savage 9, Albert 5; total 14. Tyler 6, Porter 8; total 14. Widman 9, Carney 9, total 18. Tuttle 9, Penn 6; total 15. Ridge 10, Stone 6; total 16; Widman and Carney first, Ridge and Stone second, Hill and Potter third, Tyler and Porter fourth.

Seventh event, 5 pairs, entrance 50 cents: Ortsiefer 6, Tyler 4, Hill 5, Sherman 7, Porter 7, Widman 7, Savage 4, Smith 7, Calahan 6, Potter 6, Ridge 7, Tuttle 9, Penn 5, Bailey 7, Woods 4, Hawley 5, Stone 8, Carney 8. Tuttle first, Stone and Carney second, Porter third, Potter fourth.

Eighth event, 15 singles, entrance 75 cents: Savage 13, Ortsiefer 9, Albert 15, Widman 15, Stone 13, Bailey 10, Smith 13, Carney 14, Hill 10, Potter 15, Sanford 5, Hawley 11, Porter 9, Ridge 12, Webb 9, Penn 11, Tyler 12, Tuttle 14, Coyne 8, Calahan 11, Marlin 14. Potter, Widman and Albert first, Marlin, Tuttle and Carney second, Smith, Stone and Savage third, Tyler and Ridge fourth.

Ninth event, 6 singles and 3 pairs, entry $1: Ortsiefer 7, Savage 9, Smith 7, Bailey 6, Widman 11, Ridge 9, Porter 9, Albert 10, Stone 8, Potter 7, Hawly 7, Carney 10, Martin 6, Woods 4. Widman first, Albert and Carney divided second, Porter third, Stone fourth.

Tenth event, 10 straightaways, 21yds., 50 cents entry: Ortsiefer 5, Smith 5, Stone 7, Porter 10, Widman 10, Savage 10, Albert 6, Webb 2, Hawley 8, Martin 9, Mitchell 5, Bailey 6, Bartram 6, Hill 9, Potter 9, Ridge 8, Tuttle 9, Carney 8, Longdon 6, Coyne 5. Porter, Widman and Savage divided first, Hill, Potter and Tuttle divided second, Ridge and Carney divided third, Stone fourth.

Eleventh event, 10 singles, entrance 50 cents: Hill 9, Widman 10, Savage 10, Tuttle 9, Potter 9, Albert 9, Penn 8, Porter 7, Longdon 10, Bartram 4, Martin 8, Ridge 8, Smith 10, Hawley 8, Stone 8. Smith, Savage, Widman and Longdon divided first, Hill second, Stone third, Porter fourth.

Twelfth event, extra, 6 singles, entrance 50 cents: Longdon 5, Widman 5, Porter 4, Albert 5, Carney 5, Savage 6, Hill 3, Tuttle 6, Humphrey 2, Marlin 3, Hawley 6, Mitchel 2, Ridge 3. Savage, uttle and Hawley div. first, Widman, Albert and Carney div. second, Porter third, Hill and Ridge fourth.

Thirteenth event, extra, same: Widman 6, Savage 5, Hill 5, Tuttle 5, Coyne 5, Longdon 6, Porter 4, Smith 4, Hawley 4, Sanford 3, Marlin 5, Mitchel 5, Albee 3, Carney 5, Albert 6. Widman, Longdon and Albert div. first, Savage and Carney div. second, Smith third, Albee and Sanford div. fourth.

Fourteenth event, extra, 9 singles, entrance 50 cents: Albee 9, Longdon 7, Widman 9, Coyne 4, Hill 7, Savage 8, Hawley 7, Porter 5, Tyler 5, Moran 4, Marlin 8, Smith 9, Mitchel 3, Albert 7. Albee first, Savage second, Hill and Hawley div. third, Porter and Tyler div. fourth.

Fifteenth event (extra), 6 birds, entrance 25 cents: Hill 5, Hawley 5, Coyne 3, Albee 6, Smith 5, Longdon 4, Widman 6, Ortsiefer 6, Porter 2, Tyler 3, Savage 5, Albert 5, Carney 6. Albee first, Hawley and Smith divided second, Longdon third, Coyne and Tyler divided fourth.

Sixteenth event (extra), miss and out, 25 cents: Savage 1, Hill 3, Widman 0, Longdon 2, Porter 0, Albee 2.

Seventeenth event (extra), 5 pairs, 50 cents: Albee 7, Savage 9, Widman 7, Longman 6. Savage first, Albee second on shoot-off.

Scrub race for amateurs only, 20 birds: Chickent 7, Y. A. Cooper 12, Moran 8, E. E. Cooper 9, Pomeroy 6, Eddy 8.—ELM CITY.

QUIMBY'S PRIZE.—An L. C. Smith hammerless shotgun has been presented by W. Fred Quimby to be shot for a ternately on N. Y. Suburban Shooting Grounds, at Claremont, Jersey City, and Jersey City Heights Club Grounds at Marion, N. J., the first and third Saturdays in each month. Open only to amateurs, who have never made 70 out of 100. Entry free. Targets will be charged for at three cents each to all. 18 scores of 25 birds, blue-rocks or Keystones, may be made, the 12 highest to qualify, under rules in practice on these grounds. The first regular shoot was held on the N. Y. Suburban Grounds, April 20. This competition will close on Jan. 4, 1890, or when 18 regular matches have been shot. Ties shall be shot off before Feb. 23, 1890, on either the N.Y. Suburban Grounds or Jersey City Heights, as preferred by the majority of the shooters, at 5 birds, miss-and-out. The contestant making the highest count in 12 shoots wins the gun. There must be at least 10 entries. Any one who may not be able to enter at the beginning, may enter and shoot up the requisite number of scores at any time prior to July 6. Shooting an equal number of times upon each ground, under the supervision of two judges acceptible to the management. Those who may be prevented by sickness or unavoidable detention, may shoot up their scores under same condition, except that they must shoot in at least 12 regular contests for this prize.

CLEVELAND, April 18.—The regular badge shoot of the East End Gun Club was held this afternoon, 25 single standards, at 18yds., being used. Captain Sweetman's score entitled him to the first badge, and Auld won the second. A team shoot, at 10 singles and 3 pair doubles was then held. Following are the scores: Hogen 18, B. W. King 17, Sweetman 21, Auld 19, Harris 14, W. G. King 13, Wherry 13, Maygo 15, Held 17, Brown 12. Visitors: F. King 10, Comstock 9, E. Harbaugh 17. Team shoot:

Sweetman..1010110110-6	10 10 11-4	Auld 1101111011-8	10 11 11-5
Hogen 1000111101-6	01 11 11-5	Held 1111110111-9	10 10 11-4

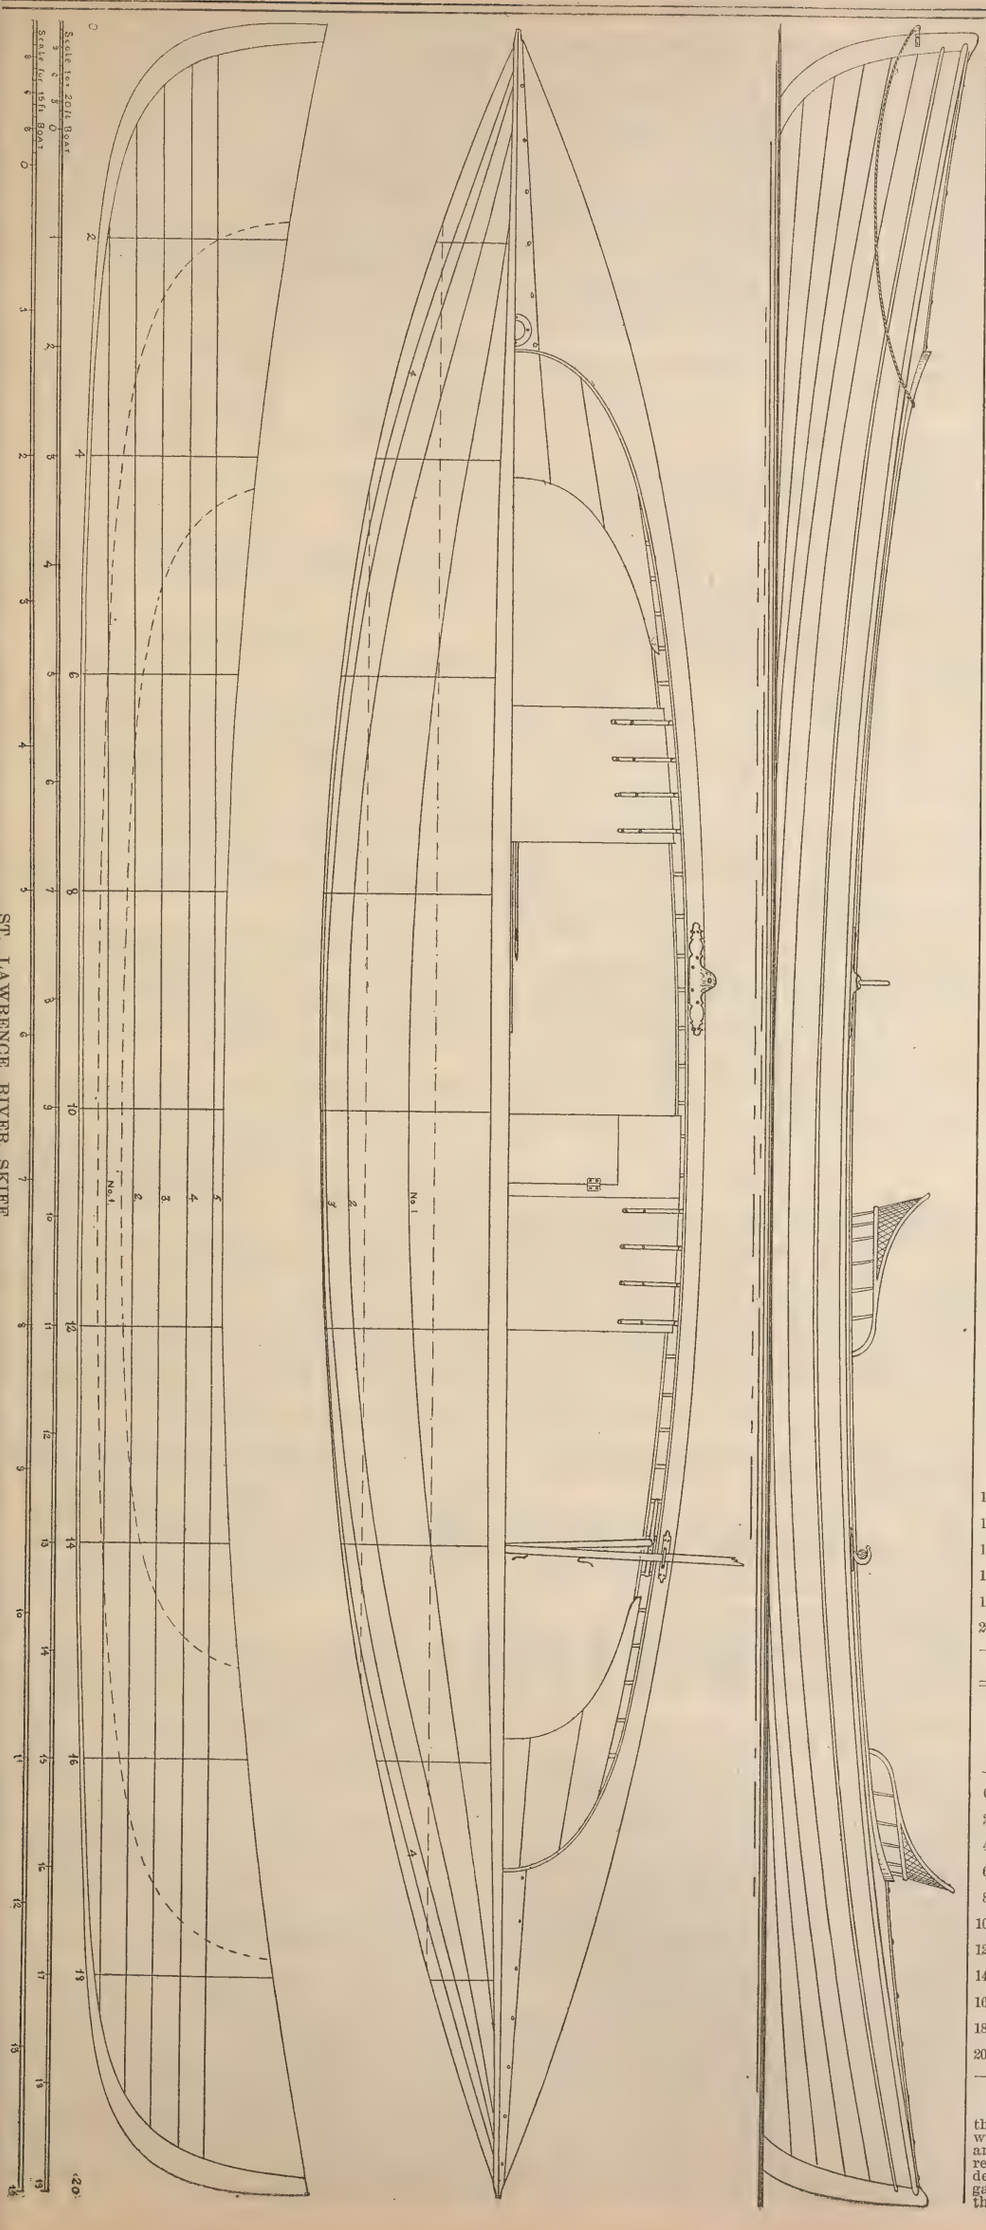
W King....1010010110-5	01 11 10-4	Harbaugh..1011100011-6	00 10 10-2
Brown.....1011010110-6	10 11 10-4	Wherry....0001110001-4	10 00 01-2
	32 21		35 16

The attendance was rather small at the badge shoot of the Kirtland Club to-day, and the scores were not up to the average. 20 single standards at 18yds.: Prechtel 18, Turner 6, Elworthy 15, James 6, Tettelbach 13, Ward 14, Norton 15.

LEFEVRE TROPHY.—The manufacturers of the Lefevre automatic hammerless gun have presented to the N. Y. Suburban Shooting Grounds Association a handsome gold badge for the encouragement of amateur trap shooting, to be shot for upon the grounds, where the protection of amateur interests is made a specialty, and the ordinary shooter is not compelled to compete on even terms with the more expert. This trophy will be shot for during the year ending April 1, 1890. Any, or every Saturday afternoon, under such rules as are in practice for amateur trap shooting at these grounds. Open to any one whose record as an amateur may be satisfactory to the classification committee. The committee having the right to bar any one who, in their judgment, is not within the intention as an amateur prize. No one who has ever won a championship trophy can enter. Entry fee, when 100 birds are shot at, $1. Four entries may be made, 25 cents each, at 25 birds, to be shot at different dates. As many trials as desired may be made during the year, and the best 100 counted. The four best scores of 25 may be taken. The money from the entries will be divided into fourths, one for the 90 class (those making 90 or better); one for the 80 class; one for the 70 class; and one for the 60 class. Should there be less than four classes, the money will be divided accordingly. The trophy shall become the property of the shooter who makes the highest score out of 100 shots. All entries paid in after qualifying shall be a special prize fund to be paid into the class in which such participant may be placed, the others of his class to pay into the fund sufficient to make their shares equal. The money in each class will be divided into 50 per cent., 30 per cent. and 20 per cent. All ties must be shot off, no divides, at 50 singles, same rules, any Saturday in the month of March, 1890. Scores shot for the N. Y. Suburban S. G. Amateur Championship may be counted by paying the additional entry fee. All day, from 9:30 A. M., tournaments April 27, May 25, June 22, July 27, August 24, Sept. 28, Oct. 26, Nov. 23, Dec. 28, and all holidays.



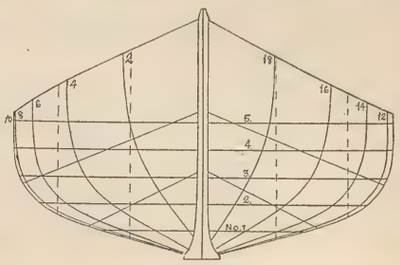
MONTREAL, April 17.—The third and what proved to be the final competition for the fishing rod presented by Mr. N. P. Leach took place this afternoon on the Montreal Gun Club grounds. It will be remembered that the first match was won by Mr. Alexander, the second by Mr. R. James, and the latter gentleman also came out first best to-day, thus winning the rod, the conditions requiring two wins. He had a close call for the prize, however, and only won in shooting off the tie with Mr. J. Paton. The following is the score at 24 birds: R. James 14, J. Paton 14, H. Beckham 13, W. Frew 10.

CORRY, Pa., April 18.—The Corry Gun Club had their weekly shoot this afternoon, Scott, Babcock, M. Arnold and Blydenburg tied for the gold medal, and on shoot-off Babcock won. Mead silver medal, and Jacobson leather medal. Following are the scores at Keystone targets, Keystone rules: F. Babcock 20, Blydenburg 20, M. Arnold 20, Scott 20, Mead 18, Laurie 17, Waggoner 17, Nichols 17, Berliner 16, Wilson 16, Swan 16, Jones 16, Austin 15, Gartner 14, H. Arnold 13, Edwards 13, Swift 13, Blair 13, Smith 12.

Canoeing.

TORONTO CANOE CLUB.—During the past winter the different aquatic clubs of Toronto have amused themselves and their friends by holding "smoking concerts" which, as may be supposed, are conducted in a very free and easy style. Not the least enjoyable of these was the one lately given by the members of the Toronto C. C. The visitors and friends having fired up, the ball was set rolling by Com. N. A. Powell calling for the opening hymn by the chorus, which was quickly followed by songs, etc., nearly all of which had rollicking choruses in which every one joined. Several readings were also capitally rendered, the whole being interspersed with stereopticon views of canoe and camp life by Mr. Hugh Neilson. These were chiefly from photographs taken by himself of the club while on their different cruises and meets and recalled many pleasant recollections to those who had participated in them. On account of the lack of space some very interesting bouts with gloves and foils had to be ruled off. This also prevented their tug-of-war team from distinguishing themselves as they had done once before on a similar occasion. Thanks are due to several members of other clubs who attended and assisted materially in making the evening pass so pleasantly. The affair broke up about 11 o'clock by singing the national anthem.

CANOEING AT OTTAWA.—A new canoe club has been formed at Ottawa, Can., in connection with the 43d Battalion of Ottawa and Carlton Rifles, though the membership is not confined to the officers and men of the regiment. The following officers were elected: Com., Major Sherwood; Capt., Captain M. S. Rogers; Sec.-Treas., F. W. G. Cummings; Committee—John Ogilvy, E. A. Grant, C. Abbott, Ed. Mills and A. W. Jones; Auditors—G. Spittal and E. P. Dey. The club starts with about 50 members, and for the present will make the Rideau Canal their cruising ground. The colors of the club are cardinal and navy blue. The flag is blue and has a cardinal bar and the letters R. C. C... At the annual meeting of the Ottawa C. C. the following officers were elected: Com., E. King; Capt., F. H. Gisborne; Sec., Henri Roy; Treas., W. H. Cronk; Committee—W. McL. Maingy; A. O. Wheeler; Auditors—R. W. Baldwin, J. S. Brough; Official Measurer, E. A. Black. The club propose to hold their annual regatta on the Deschenes Lake, an extension of the Ottawa River about 8 miles above the city, and to hold a camp in connection with the regatta. Several new sailing canoes have been added to the fleet and quite a number of paddling canoes. The season was opened on April 5, the ice having left the river unusually early this year.



ST. LAWRENCE RIVER SKIFF.

THE ST. LAWRENCE RIVER SKIFF.

LIKE the sneakbox, the ducker and the tuckup, the St. Lawrence River skiff, so highly praised by all who have used it, is the outgrowth of certain conditions and local surroundings, and like each of the others it is specially good for its destined use. The exact origin of the boat is not quite clear; it is practically but a large canoe, and so it might be considered as an enlargement of the ordinary open canoe so common on the St. Lawrence; but as the drawings show, it resembles much more closely the decked canoe of the States in model and construction.

The boats are used everywhere about the Thousand Islands for fishing, rowing and sailing, to the exclusion of all other small boats. They are handled by professional boatmen, who show the greatest skill in their handling. The accompanying design, for which we are indebted to Dr. A. Bain, of the St. Lawrence River Skiff, Canoe and Steam Launch Co., was made to send to Switzerland, the boat being built there. Dr. Bain has used and studied the St. Lawrence skiff for many years, and has probably done more to improve and develop it than any one else.

But little explanation of the drawings is needed, the dimensions being given below. The ordinary size is 20 to 22ft. long and 3ft. 6in. beam, but a scale is given for a 15ft. boat as well, which would be a very good 15×3½ canoe. The boat is rowed in either direction, and is provided with chair seats for the passengers. In the center is the fish box, the top of which forms a seat. In

MIDSHIP SECTION.

addition to the rowlocks the gunwale is provided with a folding metal hook on each side, with a socket on the opposite side of the boat, to hold a trolling rod, as shown. The hull is lapstrake, with timbers small and closely spaced, there being a small deck at each end. A folding board and one sprit sail is used.

The chief peculiarity of the boat is the absence of a rudder, even in sailing, the steering being done by trimming the sheet and changing the balance of the boat. The boatman brings her up into the wind by moving into the bow, and causes her to fall off by moving aft, handling her as perfectly as could be done by a rudder. The shifting position of the center of lateral resistance is shown in the sail plan, the after center being when trimmed by the stern for running, and the forward one when going to windward. The measurements are as follows:

	20ft. boat.	15ft. boat.
Length over all	20ft.	15ft.
L. W. L.	19ft. 1 in.	14ft. 3^{6}in.
Beam, extreme	3ft. 6 in.	2ft. 7^{4}in.

MOHICAN C. C.—The last camp-fire of the season was held on the evening of April 6 at the Windsor. Plans for the summer work were arranged, and there is every appearance of an active and successful season. After the meeting we were entertained in regal style with eating, drinking and smoking, interspersed with delightful music, excellent singing and stories old and new. We gathered around the bowl of glorious punch, determined to make this the closing of our winter camp-fires a grand success.—PURSER.

CHANGES IN THE A. C. A. RULES.

Editor Forest and Stream:

In regard to the matters under discussion by canoeists which some think require changes, the questions of standing rig and extension seat seem to be the most prominent. I shall be very sorry to see the standing rig abolished, always believing that in the long run the hoisting reefing rig will prove superior, though the standing rig may be a trifle faster to windward on account of its lightness and simplicity. It seems as though a man should have the right to use any form of sail he pleases, especially when, as in the case of the standing rig, the sail is so easily designed, made to set well, and costs so little comparatively. It is true it is called a more dangerous sail, but a canoeist who regards an upset as dangerous should be careful about sailing at all.

The exsention seat has received rather more adverse criticism than it deserves, and almost wholly from those who have never given it a fair trial. At the Lake George meet last year the only sliding seats were those used by the Lowell men, and I have seen but one used by any others. It seems hardly fair to condemn the use of an appliance which is devoutly believed in by those who use it and whose advantages are so little known in general. The great complaint is that it adds to the effective beam of the boat, the fact is the additional amount of sail it enables one to carry is very small, if any, being less in proportion for a light or weak man than for a heavy one.

The largest sails of last year were by no means those carried by the owners of extension seats.

The canvas a man can handle depends on his ability to carry it before the wind, when the extension seat is of no advantage. By the wind, with any seat, much more sail is often carried (or rather lugged) than is of any benefit.

The great advantage of the sliding seat is the easy and comfortable position it admits of, to say nothing of the fact of being so much higher the crew are less liable to a wetting than when on deck. The weight being supported in a natural position, the legs are less cramped and the muscles of the whole body less strained than when trying to hang out to windward with the head in the water or sitting in it. If a race were long enough a man with a sliding seat, other things being equal, would win through the exhaustion of his opponent. Beyond all this, there is as much difference in the pleasure of sailing between the use of the extension seat and the deck seat as there was between the deck seat and the old method of sitting on the floor of the canoe.

I cannot believe that any man who will give the seat a fair trial, especially when he feels the canoe work under him in rough water, as though on springs, will ever give it up unless compelled to. PAUL BUTLER.

LOWELL, Mass., April 13.

Editor Forest and Stream:

Permit me to point out a possible interpretation of the amendments suggested in the sailing regulations, which may lessen their effect:

The amendment to Rule 1 would still allow a canoe, whose beam was not of the full limit, to use a sliding seat extending up to the limit. Is this the intention of the committee? It certainly is not in accord with the report which declares that these things "should not be retained."

The amendment to Rule 14 will, if left in its present form, be the subject of much contention. The standing rigs can be effectively and readily raised and lowered when afloat, according to the opinion of some of those who use them.

At Lake George Jabberwock, even after capsizing in a squall, managed to raise his rig and go on with the race. Perhaps this was not done readily, but we have seen Lacowsic take down and stow, and take out and reset her sails in a way which the owner could certainly claim was readily done.

Is not this sufficient to show that while the intention and purpose of these amendments are good, yet the proposed wording of them is not sufficiently clear and definite. It is a declaration of principles rather than a strict set of rules. R. W. GIBSON.

A. C. A. REGATTA COMMITTEE.—We have received the programme for the races of the meet, which will appear next week.

Yachting.

VALKYRIE'S CHALLENGE.

THE following letter has been sent to Lord Dunraven on behalf of the Cup Committee of the New York Y. C.:

NEW YORK, April 15, 1889.—*My Lord:* The secretary of the New York Y. C. has already advised you of the appointment by that club of a committee, of which I am chairman, for the purpose of "conducting negotiations with the owner of the Valkyrie, representing the Royal Yacht Squadron, for the challenge for the America Cup, with power to arrange all preliminaries and the details of the races to be sailed, and to take charge of all matters pertaining thereto."

The committee beg me to acknowledge receipt of your letter and to state they have much pleasure as requested in communicating with you directly regarding the details of the proposed match, but before entering upon the subject, and with reference to the second part of your letter, they desire to point out, lest there should be any misapprehension on your part, that the classification of yachts under the racing rules of the New York Y. C. does not "apply to races for any challenge cup held by or belonging to the club." (*Vide* Racing Rule I.).

The committee are of the opinion that three races are ample to test the respective merits of the competing yachts, but if you prefer that the match shall be for five races they will concede this point, subject to the conditions given below in the clause referring to courses.

In view of the fact Sept. 30 falls on Monday, which for many reasons is an inconvenient day, the committee would suggest that the races be sailed on Tuesday, Oct. 1, Thursday, Oct. 3 and Saturday, Oct. 5, and should you adhere to your desire to have five races, then that the other two shall be sailed on Tuesday, Oct. 8 and Thursday, Oct. 10, respectively, but in all cases one week day to intervene between a completed race and the next one. The committee would be quite willing to change these dates slightly to suit your convenience.

While not admitting that the inside course is not of itself a perfectly fair test of the racing vessels, the committee are willing to accede to your request that the races shall take place over outside courses, starting either from the Scotland or Sandy Hook Lightship. In view of the fact that the windward work is universally admitted to be the best test of a sailing vessel the committee propose the following courses:

First Race—To windward or leeward and return.

Second Race—Equilateral triangle, one side (the first if possible) to windward.

Third Race—To windward or leeward and return.

Should you elect to have five races, then

Fourth Race—To be equilateral triangle as in case of second race.

Fifth Race—To windward or leeward and return.

From experience, the committee believe that it would be desirable to shorten the courses, and suggest that the windward races, at all events, should not exceed thirty nautical miles, but are willing to accept a course of forty nautical miles if you insist. At the time of year heretofore selected for these races by the challengers the winds are so uncertain that a shorter race may frequently be sailed off in the specified time when it would be impossible, owing to the falling wind, to finish a longer one.

The committee agree that the race (over a forty-mile course) shall be made in seven hours; should it be decided to shorten the course, the time to be reduced proportionately. Your letter reads six hours, which, it is assumed, is a clerical error, seven hours having been the limit of the Genesta, Galatea and Thistle races.

The committee regret that they cannot accede to your suggestion that the basis for time allowance shall be the mean between your allowances and those of the New York Y. C.; but they accept the alternative you suggest—viz., that the New York Yacht rule shall govern.

From the nature of the races which the committee propose you will see that your suggestions in regard to making out courses would be impracticable; at the same time the committee beg me to assure you that they will be most ready to adopt anything you may suggest which would, in their judgment, prevent either boat getting an unfair advantage over the other. They think, however, that these matters had better be dealt with after your arrival in this country.

For the reasons given in the clause relating to length of courses, the time of starting must absolutely be left to the discretion of the Regatta Committee of the New York Y. C., who will have charge of the races. It is useless starting a race in a calm or even in a very light air, when by waiting a short time there is a chance of a breeze coming up which would enable the yachts to complete the course within the given time. It is, of course, understood that should there, in the judgment of the Regatta Committee, be wind enough or likely to be wind enough to make the course at the time fixed for starting the race, a start shall be made, but under no circumstances shall a race be started in a fog.

The committee agree that the clause with regard to accidents, adopted in the case of the Volunteer and Thistle races, shall be held to apply to the Valkyrie. They desire to draw your attention to the latter portion of the clause alluded to, which provides "that no race shall be sailed after the close of the yachting season as prescribed by the club rules"—namely 1st November.

The committee believe that all essential points are covered by this communication, but, should you have anything further to suggest, they will give the matter their immediate attention. Minor details, of course, had better be left for settlement till your arrival in this country, it being understood that such portions of the by-laws and racing rules of the New York Yacht Club as apply shall be the basis of settlement, and that generally speaking the precedents of the three preceding contests for the Cup shall be followed. For your guidance I send you a club book for last year. There may be one or two minor changes in this year's book, which is not yet published, but nothing that will in any way affect this match.

The committee also asked me to place their services at your command, and to say that it will give them much pleasure to give you any information you may need or to take charge of any matters requiring attention before or after the arrival of Valkyrie, and they trust you will not hesitate to avail yourself of this offer.

I remain, my Lord, very sincerely yours,

JAMES D. SMITH, Chairman.

To the Right Honorable, the Earl of Dunraven, K. P., No. 20 St. James Square, London.

PODGERS AND THE DREAM.

Editor Forest and Stream:

I saw in a recent number of FOREST AND STREAM a notice of the capsizing of the sloop yacht Dream in Jekyl Creek, in which it is particularly stated that she was a centerboard yacht. Now, I am not going to let you have the doubt in your mind presumably whether that centerboard was not in some way responsible for the catastrophe, and whether had she been a keel boat it would have happened.

The facts are simply, that the owner was not aboard. He had hired a couple of irresponsible men to bring the yacht from below to Brunswick, and to while away the monotony of the trip, they had recourse to a beverage that not only cheers, but does inebriate. In plain English, they got very drunk, and ran the yacht out of the channel on to the edge of the c t just made by the Government dredger, where they stuck; and when the tide fell the boat fell over on to her beam ends into the deeper water of the channel and filled. That was all there was about it. If she had been a keel boat or any other kind it would have been all the same. So just chalk off from your score of centerboards this case as another "lamentable example."

The centerboards generally stand up well enough for themselves, but occasionally, as in this case, need some one to state facts. There is no kind of a boat I ever saw that could stand a heavy pressure of old rye, and especially the kind they have down in Georgia, and when the man at the wheel gets about four fingers of it into him he is capable of capsizing the Eiffel Tower.

The yacht referred to, the Dream, was pumped out, raised and taken up to town, and when washed up seemed none the worse for her mud bath.

I grant you this would never have happened to a cutter for the reason she never could have got into the creek. There is only about 15ft. at high water. It is one of the pleasures of owning a cutter that you never can get anywhere with them, and consequently are never there to have anything happen to y u, a merit, by the way, that FOREST AND STREAM has omitted to mention. The Lord knows they need all the virtues you can rake up in their favor. By the way, what is the market quotation per dozen for them now? any more than it was? Hardly possible I imagine.

PODGERS.

JEKYL ISLAND CLUB, Brunswick, Ga., April 6.

[Perhaps our friend "Podgers" can tell us all about this one, too: "Dr. Gilbert E. Palen's crack yacht Ariel capsized off Somers' Point, N. J., Wednesday afternoon, and those on board narrowly escaped drowning. The yacht was in charge of Captain John Morris, of Somers' Point, and he, in company with Lucian Cox, of Ocean City, was bringing Porter C. Atwood, of 1944 North Eleventh street, around from May's Landing to Somer's Point, where he was to catch the train for Philadelphia. When off Somers' Point a squall struck the yacht and she went over before those on board could get the sails trimmed. Mr. Atwood clung to the side of the vessel, but the others were thrown into the water. Fortunately the accident was seen by some men on a fishing schooner that was at anchor near by. A yawl was put out and all hands were picked up and taken to Somers' Point. Mr. Atwood reached home Wednesday night and said that the Ariel was righted and taken back to May's Landing."]

LAKE ONTARIO.

AS one of the older contributors to the yachting department of the FOREST AND STREAM, I ask the privilege of expressing my sorrow at the untimely fate of the gentleman who, as editor of that department, placed your journal at the head of all the publications in America devoted in whole or in part to yachting. Your appreciative notice of his career leaves but one point untouched, and that was his friendly regard for the contributors to his department, as evidenced in my case at least, by many personal communications of a most pleasing character, and by the gift of a pair of handsome oleographs taken from Mr. Cary Smith's spirited pictures of the Mischief-Atalanta cup races. The sight of these works of art will hereafter cause me to mingle with deep regret for the mournful fate of the donor a feeling of pleasure that I was thought worthy by such a man of a lasting token of his friendship.

All our yachts are still in winter quarters, from which they will not be removed for some weeks to come, as the ice has not all gone from our inland waters.

The only one of the fleet that has had any work done on her as yet is Mr. Ellis B. Burnell's Argo (formerly the Peerless), which has been thoroughly overhauled and strengthened, and will have a new suit of sails. She is a third class boat, but it is not probable that she will do much, if any, racing.

The Iolanthe will be given a new suit of sails, and in light weather the Merle will find her even faster than before. If these yachts make the entire circuit of the L. Y. R. A. matches it will be quite interesting to note the result.

Speaking of the L. Y. R. A., it may not be out of place to suggest that they adopt the system of classification by corrected, instead of waterline, length. Otherwise the result may prove highly unsatisfactory.

The Murray Canal, which connects the waters of the Bay of Quinte with those of Lake Ontario, has been opened informally, and will be formally opened on Dominion Day. It will be of great benefit to yachtsmen wishing to visit Belleville, as it cuts off about 100 miles of the most dangerous portion of Lake Ontario, and shortens the distance between Toronto and other parts west of the canal and Belleville by upward of same distance.

PORT TACK.

BELLEVILLE, Ont., April 10.

A NEW INTERNATIONAL CUP.

FOR some time past a plan for establishing another international cup has been under consideration in Boston, and overtures for a series of races between Valkyrie and her American classmates have been made through J. Beavor Webb to Lord Dunraven. As a result the following circular has been issued by the Eastern Y. C.:

"A challenge cup for international matches between yachts not exceeding 70ft. waterline measurement has been offered to the Eastern Y. C. by one of its members. At the meeting held to-day the council of the club, holding the opinion that the America Cup represents the championship of the world, to be raced for by the fastest yachts within the prescribed limits, voted to accept the offer, and now announces that a match of one or more races will be sailed for the above International Challenge Cup after the races for the American Cup. Previous to the offer of the cup assurance was obtained that the Valkyrie would compete for it. Further particulars will be duly published. By order of the council.—EDWARD BURGESS, Secretary. Secretary's office, 50 State street, Boston, April 17, 1889."

As far as the Eastern Y. C. is concerned, such a course is perfectly right and proper, Boston yachtsmen have paid the bills for defending the Cup long enough, and if they want races of their own no one can blame them. At the same time, taking the proposal to establish a new cup in connection with the action of the New York Y. C. in regard to the America's Cup, it would be interesting to know what right any persons have to set aside the America's Cup from the purpose for which it was first given, the encouragement of yacht racing in craft from 50 to 500 tons, and to dedicate it practically to one size of yacht, supplanting it by another cup in the class which must be the popular one here for some time to come. The 90ft. class is now dead as far as interest and competition go, and on the other hand the 70ft. class was never as prosperous as it is to-day. The best use the America's Cup could be put to would be to building up the 70ft. class.

MONTGOMERY SAILING CLUB.

THE recent election of officers resulted as follows: Com., Levi G. Palmer; Vice-Com., Geo. Ritter; Sec.-Treas., E. A. Leopold.

It was decided to hold races semi-monthly, commencing in the middle of April and closing the last week in September, 13 races in all. A silver cup will be awarded to the boat securing the greatest number of points in the 13 races. Skiffs, canoes, duckers and tuckups will race together in one class, as has been done during the past two seasons. In former years the owners of tuckups have done considerable kicking on account of being handicapped in competition with smaller craft. This year not a single objection has been made by any tuckup man against sailing in the same class with duckers and canoes, and being handicapped 10 minutes for the 5-mile course. With a fresh breeze and one-half the work to windward, the tuckup will almost certainly win; but with a beam wind, the canoe, small skiff or ducker stands a very good show of getting there first. As the latter conditions seldom prevail on the course, the tuckups are supposed to have the best of it, taking a whole season's races into consideration.

77 MAIN STREET, Norristown, Pa. E. A. LEOPOLD, Sec.

First regatta, April 14; course, Norristown to Indian Creek and return; distance, 5 miles; wind, fresh, northerly:

	Length.	Start.	Finish.	Corrected
Volunteer, tuckup	15.00	1 40 00	2 59 50	1 19 50
J. S. Frith, tuckup	15.00	1 40 00	2 59 59	1 19 59
Playford, tuckup	15.00	1 40 03	3 00 00	1 20 09
Priscilla, tuckup	15.00	1 40 00	3 00 02	1 20 02
J. A. Lever, tuckup	15.00	1 40 00	3 00 07	1 20 07
Pennsylvania, biker	16.00	1 46 20	3 00 12	1 20 12
Starlight, canoe	16.00	1 54 40	3 00 14	1 20 14
Lola, ducker	15.00	1 20 00	3 01 53	1 24 53
Flying Eagle, tuckup	15.00	1 40 00	3 10 30	1 50 30
Igidious, tuckup	15.00	1 40 00	3 12 57	1 32 57
Gracie, skiff	12.00	1 30 00	- 3 14 35	1 34 35
Stranger, sharpie	15.00	1 40 00	3 30 00	1 50 00
Cocktail, tuckup	15.00	1 40 00	Withdrew.	

Volunteer was sailed by Vice-Com. Geo. Ritter, owner of the canoe Sadie. The tuckups carry 162ft. of sail, the duckers 110ft.; the sharpie carried 110ft. in this race, but will carry 162ft. during the balance of the season. The Starlight carried 108ft. and the Gracie 73ft. Judge, Wm. Alcorn.

GEN. PAINE'S POSITION.

THE *Field*, in discussing the probable action of the New York Y. C., says:

"On the other hand we are informed that an entirely different view is taken by some American yachtsmen, and among them, we believe, by Gen. Paine. They argue, we are told:

'That it would be unsportsmanlike to sail an 85ft. boat against a 70-footer. No representations, however eloquent, can convince them that they are wrong on this point. They contend that first-class sloops and third-class sloops are never sailed against each other in this country, and they ask why foreigners should not be entitled to the same privileges which are accorded to American yachtsmen. Of what value is the Cup, they ask, if it cannot be held against any class of yacht provided for by the deed of gift, under which Lord Dunraven challenges? The honor of the New York Y. C., they declare, is far above the possession of the trophy, and they even go so far as to proclaim that if the Valkyrie is beaten by the Volunteer the English will carry off all the honor of the contest. English yachtsmen will always have it against the New York Y. C. that it was afraid to meet Valkyrie with a vessel of about the same size.'

"It seems to us that many of the New York yachtsmen are too much afraid of giving themselves away in selecting a defender of the Cup; but it is at least satisfactory to learn that some of them are men of the world enough to regard the affair as true sportsmen. In other words, their instincts lead them to be influenced as much by the love of fair play as by the desire to defeat the British yacht and retain the Cup."

The *Field* is wrong in its assumption. Gen. Paine believes in keeping the America's Cup by means of the largest available yacht and an unfair table of allowances.

TIME ALLOWANCE IN THE CUP RACES.

Editor Forest and Stream:

Wishing to thoroughly understand the subject, I take the liberty of applying at headquarters for information regarding the coming race for the America's Cup. Seeing by the daily papers that there was considerable difference of opinion as to whether we should meet the Valkyrie with a 90ft. boat or with one about her own length, viz., 70ft., I became quite interested, and have been questioning my friends A and B, who each profess to know it all.

A explains as follows: "You see in yacht racing it is customary for the larger boat to allow the smaller one a certain amount of time, a handicap, so to speak, which allowance is so justly and satisfactorily computed that it sheds a benign and equalizing influence on all, like unto the millenium, 'When the wolf also shall dwell with the lamb, etc.'" This sounded all right, but B, whom I next consulted, says the trouble is, this race has got to be sailed next fall, and he don't expect the millenium before Christmas. Under the present conditions the wolf generally dwells outside and all around the lamb, and in spite of the all-saving time allowance of the N. Y. Y. C., the large boat usually gets away with the small one. In support of this statement he informs me, that out of some 15 or 16 boats built this year to race in the 38-40ft. class, not one measures less than 39ft. 6in., and each owner is trying to out-do the other in rig.

Am I to infer from this that time allowance occupies the same equalizing influence in yacht racing as did the buzzard in the division of the day's spoils, "White man take turkey and Indian take buzzard, or to be perfectly fair and sportsmanlike, the Indian can have the buzzard and white man will take the turkey." Now will the members of the N. Y. Y. C. (who so thoroughly appreciate the "buzzard" time allowance that not one of them would think of building a racer even 2ft. under the class limit) ask Lord Dunraven to accept time allowance to the extent of from 16 to 20ft.? Perhaps they can convince him that the arrangement is perfectly fair "because it is such a big buzzard."

P. S.—Do the N. Y. Y. C. race their 70ft. boats against the Puritan, Mayflower and Volunteer? Have they a separate 70ft. class? If so, why? X.

NEW YORK, April 15.

LAPSTRAKE OR CARVEL BUILD.—*Editor Forest and Stream:* Can any of your readers tell me of a cement or adhesive material better than white lead in oil for attaching a triangular piece of wood to the lands or streaks of a clinker-built boat, in order to approximate a smooth-built lapstrake. The boat is a small jib and mainsail, about 15 to 16ft. waterline. I find that in light winds the resistance of the strakes against the water retards her speed, or seems to, but in a strong breeze she goes about as well as most boats of her length. The edges of her strakes are not rounded. I would also like to ask among those who have had experience if the resistance spoken of is not more apparent than real, would like, in fact, to invite an expression of their opinion.—RICHMOND.

LAUNCH OF THE MERLIN.—On April 20 Col. W. H. Forbes's new schooner Merlin was successfully launched at Lawley's yard, South Boston, a large number of spectators being present. The Merlin is a modern centerboard schooner of the same class as Sachem, Grayling and Sea Fox, her dimensions being 112ft. over all, 89ft. 6in. l.w.l., 23ft. 9in. beam, 9ft. 3in. draft. The board is of the usual construction, the trunk extending up to the deck. In model the new yacht is an improvement on Sachem, and she is likely to prove faster and handsomer. She has a clipper stem, a long overhang, and a moderately high bulwark, and altogether is a very handsome craft above water. Her topsides are painted white.

LAUNCH OF THE ELFRIDA.—A decided novelty in the way of launches was that of the Elfrida, steam yacht, built for Dr. W. S. Webb, by Harlan & Hollingsworth, of Wilmington, and launched by moonlight on the night of April 13. She is built of steel, 112ft. over all, 18ft. beam, and 12ft. 6in. hold, with triple expansion engines and Hazleton boiler. In order to permit of passage through the canals to Lake Champlain, where she will be mostly used, the overhang at each end is made detachable, so as to be laid on deck. The yacht is flush decked with a bridge.

VERENA.—On April 16 the new Burgess cutter, Verena, built by Lawley for J. A. Beebe of Boston, was successfully launched at South Boston. She is a centerboard boat, but with outside lead keel, and differs but little, save in draft, from the other forties. Her dimensions are: 56ft. over all, 39ft. 8in. l.w.l., 14ft. 6in. beam and 6ft. draft. She has a clipper stem and long overhang, and her topsides are white. Below she has very good accommodation under a cabin house.

MIRAMICHI Y. C.—At the annual meeting the following officers were elected: Com., J. C. Miller, of Millerton; Vice-Com., J. L. Stewart, of Chatham; Rear-Com., Robt. Loggie, of Black Brook; Sec.-Treas., Geo. Watt; Trustees, J. C. Miller, R. H. Grenley, P. Wheeler and Jas. Miller; Membership Committee, P. Cox, Jr., W. A. Park, Dr. Pedolin, R. A. Lawlor and Jas. Robinson; Regatta Committee, C. Sargeant, E. Hutchison, E. Lee Street, L. J. Tweedie and Frank Loggie.

MICHIGAN Y. C.—Officers 1889: Fred C. Whitney, Com.; Judge Nicholas Longworth, Vice-Com.; C. B. Joslyn, Second Vice-Com.; C. H. Brucker, Sec.; T. C. Langley, Treas.; Dr. Duff Stewart, Fleet Surgeon; E. Brady Wendell, Meas.; Capt. John Ferguson, Fleet Captain, and Messrs. Bruce Goodfellow, Joseph Nicholson, Chas. Warren, Col. Fred E. Farnsworth and S. Dow Ellwood, Members of the Board of Directors.

NEW BRITISH YACHTS.—The *Field* has taken a hint from us and publishes a long list of new British yachts, similar to that in the FOREST AND STREAM of Jan 24, but as none of the dimensions are given it is very much like the play of Hamlet with the Prince of Denmark left out. We hope to publish our list in a more correct form very soon.

FREDONIA.—On April 17 the Burgess fisherman Fredonia was launched at Essex, Mass. She is 112ft. over all, 94ft. l.w.l., 23ft. 10in. beam and 12ft. draft. She will be fitted out at Boston with cabin and staterooms for temporary use as a yacht, Mr. J. Malcolm Forbes, one of her owners, having chartered her for a cruise to the Azores.

HELEN.—On April 17 the new cutter Helen, designed by A. G. McVey, of the Boston *Herald*, and built by A. J. Frisbee, of Salem, was launched, being christened Helen. Her owners are Messrs. Gordon and Chas. A. Prince, of Boston. She is 56ft. over all, 40ft. l.w.l., 12ft. 6in. beam, 10ft. 6in. draft, and will carry a large sail plan.

ATLANTIC Y. C.—We are informed that at the meeting of the Atlantic Y. C., to which we alluded last week, Mr. Lawton's motion was passed so as to admit of entries from beyond Cape Cod, but that part of the motion relating to clubs this side of Cape Cod was killed.

KATHLEEN.—On April 15 the new Whitlock 30-footer, designed by Wm. Gardner, was successfully launched at Ayres's yard, Bay Ridge. The hull has turned out lighter than was expected, as the yacht is considerably above her designed line.

WAMPANOAG, steam yacht, has been sold by A. Benjamin to H. L. Willoughby, of Newport, who will use her about the Sound this summer and in Florida waters next winter.

MR. REEKS AND HIS CHALLENGE.—The latest news from New South Wales states that Mr. Reeks proposed to commence his design for a challenger for the America's Cup within two weeks, and to have her ready within five months.

NEW 70-FOOTERS.—It now seems certain that no new yacht will be built to defend the Cup, though Boston will possibly build one to sail for the new syndicate cup. Mr. Jeff. Borden, Jr., has completed a very handsome model of a new 70 with keel and board.

MAYFLOWER.—The new owner of Mayflower is Mr. F. Townsend Underhill, of the Seawanhaka C. Y. C., owner of Mischief. Mayflower will be in New York this week, where she will be rigged as a schooner.

LARCHMONT Y. C.—The following appointments have been made by Com. Lowery: Regatta Committee, Edward J. Greacen, chairman, Chester C. Monroe, Otto Sarony; Fleet Surgeon, Chas. Selover Allen, M.D.

A CHALLENGE TO NEW YORK CATS.—The R. S. Patterson Association, of Philadelphi, has challenged all catboats not over 18ft. 2in. about New York to a race for $500 per side against the cat R. S. Patterson, of Philadelphia, 15ft. 2in. long.

TROUBADOUR—NOMA.—Lucius H. Smith, owner of Troubadour, schr., formerly the Marion Wentworth, has sold her to C. V. Whitten, of Boston; and has purchased Noma, schr., from the estate of the late Townsend Smith.

GRACIE, sloop, is hauled out at Poillon's for a new keel and trunk, the latter being shorter than the old one; while part of her ballast will be cast on the keel. Mr. Smith has charge of the alterations.

STEEL SHIP BUILDING IN BOSTON.—Boston is to have a new yard fully equipped for ship building in iron and steel. It will be a part of the City Point Iron Works in South Boston.

ÆGIR, keel sloop, has been sold by J. F. Lovejoy to Rev. Roderick Terry. She is now hauled out at Poillon's to receive a longer overhang under the direction of A. Cary Smith.

MARGUERITE.—The steam yacht Adelaide, sunk last fall and since rebuilt, was launched at Hawkins's yard, City Island, on April 18, being rechristened Marguerite.

MINERVA, cutter, Admiral C. H. Tweed, has been hauled out at Salem to have 1,500lbs of lead taken from her keel. Lawley will make her a new mainboom.

MAHAQUITA.—The Belmont 40 was launched at Lawley's on April 23.

TRENTON Y. C.—Officers 1889: Com., J. H. Wilson; Vice-Com., Alfred Wilson; Rear-Com., Jos. Wilson.

ATLANTIC, sloop, has been towed to Port Jefferson to be changed to a schooner.

FEARLESS, schr., has been purchased by H. H. Hogins of the Atlantic Y. C.

MAGIC, schr., has been sold by T. H. Motley to Mr. Power.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. R., Brooklyn.—Deer mate usually in the late fall.

G. S. S., Naugatuck, Conn.—We do not know who keeps the gun.

W. P. W., Campello, Mass.—We do not give the names of our reporters.

M. A. M., Philadelphia, Pa.—Consult our catalogue of books in back numbers of FOREST AND STREAM.

FRANK McF., Medford, Ark.—Describe what you want to American Dynamite Co., New York city.

C. V. Y. Appleton, Wis.—Cut off a few of the warts daily with sharp scissors and they will soon disappear.

E. W. W., Farmington, Me.—A well bred greyhound has plenty of courage to tackle and strength to kill a fox.

C. T. R., Indian Rock, Me.—Is it a common practice for partridges to drum in the night? Ans. Yes, quite common.

S. R. I., Cleveland, O.—Write for a copy to W. W. Byington, Secretary Eastern New York Game and Fish Protective Association of Albany, N. Y.

L. C. F., Liberty Hill, Ga.—Will you please give me the name of some reliable dealer in old coins? Ans. E. N. Torrey, corner Nassau and Ann streets, New York.

A. C. J., Mechanicsville, N. Y.—Bitches generally come first in heat when between 9 and 12 months old. If held up the state ordinarily recurs six months later.

W. G. H. Chehalis, Washington.—Deer, bear and mountain sheep are found in New Mexico. Please send the sketch. You want a book on fly-fishing and tackle.

G. R., Cleveland, O.—Hallock's "Camp Life in Florida" gives a great deal of information about that State, but it is out of print. Consult back files of FOREST AND STREAM.

E. O. C., Montreal.—Kindly send me or rather write the address of the best man to get a well-trained Chesapeake Bay dog from. Ans. Chesapeake Kennels, Malvern, Iowa.

D. W. H., Hartford, Conn.—What is the most effective way of removing lead from a .22-cal. rifle barrel without injury to the rifling? Ans. Quicksilver, followed by a stiff brush.

H. E. D., Fall River, Mass.—You can fish with fly anywhere in public waters in open season. Shad do not take the fly freely, but will do so sometimes when they are crowded at the foot of a fall.

C. M. W., Providence, R. I.—Will you kindly inform me if one can get any duck and geese shooting during the summer months at Labrador? Ans. Yes, ducks, but they ought not to be shot in breeding time.

E. G. S., Wilkesbarre, Pa.—Is the angler for trout required to take out a license in Nova Scotia, and if so, what is the amount required to be paid? Ans. There is no fishing license required in Nova Scotia, but some of its streams are leased, and of course the lessees close them to the public.

C. H. B., Tallman, Mich.—Where can I get some wild rice, and when should it be sown, and how much to the acre, also in how deep water it should be planted? Ans. Is advertised in our columns every season, and methods have been frequently given in full detail. See back numbers of FOREST AND STREAM.

J. D., New York.—Could you or any of your numerous readers give me the name of a nice quiet place to camp out in summer, not over 200 miles from New York? Ans. The Catskills in this State, a score of nice places in Connecticut, Vermont or Massachusetts, or along the Sound if you prefer the sea coast.

J. C., Charleston, W. Va.—Will a chokebore breechloading shotgun shoot buckshot as well as a cylinder barrel, and does the chokebore shoot closer or scatter more than the cylinder bore? Ans. Buckshot in a chokebore may be dangerous and its use is not recommended. The chokebore shoots closer with suitable shot, but there must be no danger of jamming at the muzzle.

C. H. W., Buffalo.—I have concluded to buy a repeating rifle. The regular size is 24 to 26in. barrel. Now, would I gain anything by purchasing a 28 or 30in. barrel in accuracy or distance? What length would you advise in .32-cal. Ans. The length of barrel is not important so far as the shooting qualities of the gun go. Choose that length which balances best as you sight it. Your height, weight, strength and length of aim should determine the question.

R. G. H., Urbana, Ill.—1. How can skins be cheaply and quickly tanned for use as floor rugs or lap robes? 2. Where can a good Chesapeake Bay dog be obtained? None are advertised in your paper? Ans. 1. Clean the skins by washing with soap and water, (ammonia for wool) soak three days in a solution of alum, and peg out on the ground to dry. Manipulation and scraping is next wanted to render it supple. 2. For Chesapeake Bay dogs apply to Chesapeake Kennels, Malvern, Iowa.

A. H. Providence, R. I.—1. If buckshot be loaded in three layers of three shots each, with a card wad between each layer, would they shoot better at long range than if loaded loose? 2. What is the open season for squirrels and rabbits in this State? 3. Are woodcock found in the eastern and south eastern parts of Maine? 4. Is there any show for pups from a setter bitch, 11 years old, but in prime condition? 5. Where could I get a bullet mould for a .50-cal. round ball? Ans. 1. No, not if they chambered loose. 2. Sept. 1 to Feb. 1. 3. Yes. 4. The chances are against her bearing. 5. Any gunsmith.

J. L. R., Charleston, W. Va.—Will you kindly tell me what will brown a pair of gun barrels. Ans. Make a mixture of 1 oz. muriated tincture of iron, 1oz. spirits of wine, ¼oz. each of corrosive sublimate and strong nitric acid, ½oz. bluestone and a quart of water. This mixture should stand three or four weeks before using, as some chemical decompositions take place. The barrels being thoroughly cleaned and freed from grease, the solution is laid on lightly with a sponge every two hours, and scratched off with a steel wire brush night and morning until the desired appearance is produced.

A. W. C., Weiss Bluff, Tex.—1. Is not the reason that fine grained powder is used in rifles that it "goes off all at once," *i. e.*, exert its maximum force instantly? 2. Is not the reason that coarse powder is used in shotguns that it may burn slowly, even to the extent with some brands of having the charge nearly to the muzzle probably before the powder has exerted its maximum force? 3. What are the average muzzle velocities of rifles and shotguns respectively? Ans. 1. Yes. 2. Yes. 3. Muzzle velocity of shotguns from 700 to 800ft. per second; of rifles, 1300 for common rifles to 1800 for express rifles.

W. J. S., New York.—1. Please inform me what pattern a 12-gauge, 30in., 8lbs. gun should make in a 30in. circle at 40yds. Load 3¼, 1⅛oz., No. 8 chilled shot. 2. Can I get such a gun of Daly make? 3. Is the above weight right for a 12-gauge trap gun or would you advise more weight? 4. Can a gun have too much choke? Ans. 1. For patterns consult our shotgun tests, which we shall commence to publish shortly. You can get such a gun of almost any make and grade. 3. Eight pounds is heavy enough for a substantial 12-gauge gun and heavy enough for a man under 150lbs. weight to handle all day. 4. Most certainly.

H. V. S., Dublin, N. H.—1. I want a rifle for close target shooting and hunting. For safety, accuracy, strength and durability is there any better rifle than the Winchester single shot? It is claimed by some that the Ballard is the best gun for close shooting. 2. Can a round ball be used with good effect in a Winchester .40-cal. single shot straight shell with a light charge of powder by forcing the bullet deep into the shell? 3. Is the inside of the Ballard .40-cal. everlasting shell straight so that a round bullet can be used with a light charge of powder? 4. Are the .40-cal. Ballard and Winchester the same size, so that a Winchester 40-cal. 210-grain bullet can be used in a Ballard .40-cal. 333 grain bullet? Ans. 1. Both Winchester and Ballard are good weapons. 2. Yes. 3. Yes. 4. Yes.

A. K. R., New York.—Would you kindly inform me in your next issue where there is good trout fishing in the States of New Jersey or Pennsylvania, near as possible to New York. Ans. In Passaic county, N. J., Midvale (New York, Lake Erie & Western); Oak Ridge (New York, Susquehanna & Western) has many trout streams. In Sussex county, N. J., Branchville Junction, Vernon (Lehigh & Hudson River). In Warren county, N. J., Butlsville (Lehigh & Hudson River) has some trout; Townsbury (same road), trout, bass, etc. Pike county, Pa., Dingman's Ferry and Pond Eddy (New York, Lake Erie & Western). Wayne county, Pa., Cold Spring (Philadelphia & Reading); Starucca (New York, Lake Erie & Western). Monroe county, Pa., Delaware Water Gap (New York, Susquehanna & Western), good trout region, June to August; Henryville and Pocono (Delaware, Lackawanna & Western), April to June; both said to be good; Stroudsburg and Tobyhanna (same road). Susquehanna county, Pa., Montrose (Delaware, Lackawana & Western), July to September; Thompson (New York Lake Erie & Western), June.

S., Montreal.—A gun club near this city gave a prize to be shot for by both active and honorary members of the club. The conditions were that the person who made the highest aggregate in three shots was to have the prize. A, an honorary member, at the close of the second shoot stood in a fair position to win. The next and final shoot was postponed until after annual meeting of the club, when it was voted to cancel all honorary memberships. When A tendered the amount of the entrance fee at the last shoot for the prize it was refused, and he was informed that his name had been struck off from the club books, etc. A claimed that the original conditions should be carried out, that he had paid two entrance moneys, and that he should be allowed to shoot at the deciding contest, though, of course, he would be debarred from shooting for any prizes that the club might offer in the future. Will you kindly decide whether A had a right to shoot at the last contest for that prize? Ans. A had a right to shoot through the match. No change in the rules governing a contest is permissible without the consent of every contestant.

LAFAYETTE, Ind., July 24, 1888.—*United States Cartridge Co., Lowell, Mass.:* DEAR SIRS—I find your Climax paper shot shells excellent and quite equal to Eley's. There is no hang fire or tendency to do so. I intend using your shells in a match next week. I will give them a good boom, as they deserve it.

Yours truly,

—*Adv.* (Signed) W. GRAHAM, Champion English Shot.

IN THESE DAYS when food adulteration is so common, it is a comfort to find an article for the table that is thoroughly reliable. Walter Baker & Co.'s breakfast cocoa is eminently in this limited class. No chemicals are used in its manufacture, and it is absolutely pure. It forms moreover a delicious and healthful drink, as refreshing and more nutritious than tea or coffee, and free from the injurious effects that those beverages sometimes produce. And it is very cheap withal. The house of Walter Baker & Co. has maintained for more than 100 years a great and honored repute by the excellence and purity of its manufacture.—*Adv.*

THE J. B. WILLIAMS CO.'S

PRESIDENT PUZZLE!

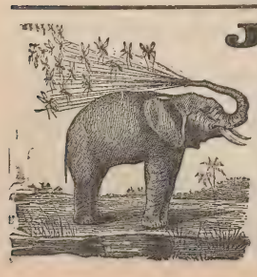
IT is a curious fact that all but three Presidents of the United States have SHAVED.

It might almost be said to follow, that if one desires to be President he *must* shave. It *can* be said truthfully that if one *does* shave, he cannot know the LUXURY of shaving *except he use* WILLIAMS' famous "GENUINE YANKEE SHAVING SOAP."

To still further introduce this famous Soap, which is now used by "crowned heads" as well as by a vast army of "shavers" in nearly every part of the globe, we offer the following

PRIZE.

Cut out this advertisement and write opposite each one of these chins the correct name of the President to whom it belonged. (For example, see Grant's chin as it was in 1875.) Send this to us with 10 cents to defray expense of packing, postage, etc., and we will send you by mail FREE a full sized Cake of the famous "GENUINE YANKEE SHAVING SOAP."



All men who shave should test this celebrated article.

WIVES, MOTHERS OR CHILDREN may accept this *instructive* offer and obtain a cake of this famous Shaving Soap for a HUSBAND, FATHER, BROTHER OR FRIEND.

Address all replies to

BRENTANO'S, Publishers,
5 UNION SQ., NEW YORK.

No Chemicals.

W. BAKER & CO.'S Breakfast Cocoa

Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

Grand Rapids Portable House Co.

Hunters' Cabins, Club Houses, Summer Cottages, Camp Meeting Cottages, Lawn Houses, Play Houses, Photograph Galleries, etc.

All sizes. Especially designed for Hunting, Camping and Fishing. Are made of 3-ply veneer, very light, strong and durable. All parts thoroughly seasoned and painted in attractive colors. The only target having the patent

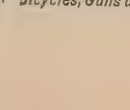
INTURNED EDGE.

2,000 shots out of each 1,000 targets on account of non-breakage in shipping, trapping and falling upon ground. The only target made with the INTURNED EDGE, producing the surest breaker when hit, and surest non-breaker when not hit. Our traps are sold for the sole purpose of shooting our targets.



THE SURPRISE CART

For SPORTSMAN'S USE. Besides our regular cart for **Road Speeding and Track Purposes,** we manufacture the only cart especially adapted for hunters' use, having gun holder, ammunition box, etc. Send direct to the manufacturers for wholesale prices and circulars.

WINANS, PRATT & CO. 69 Pitcher Street. KALAMAZOO, MICH.

Hotels and Routes for Sportsmen.

GRAND TRUNK RAILWAY.

When planning your summer piscatorial tour remember that this company controls over 4,100 miles of railway, equipped in the most approved modern style, and passing through a magnificent country, noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

PORTLAND, ME.—For salt water fish.
RANGELEY LAKES (via Bryant's Pond or Bethel, Me.)—For brook trout, pickerel, yellow perch, rock bass.
THE WHITE MOUNTAINS (via Gorham, N. H.)—For pickerel, trout, bass, cusk.
THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).
LAKE ST. JOHN DISTRICT.—For Ouinaniche (reached via Quebec).
THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For mascalonge, pike, bass, whitefish, pickerel, perch.
THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, mascalonge, pike.
MUSKOKA LAKES (the best place on the continent for fishing, shooting and camping, reached from various points on Northern and Northwestern Division).—For brook and salmon trout, black bass, mascalonge, pickerel.
PARRY SOUND AND GEORGIAN BAY.—For pickerel, mascalonge, black bass.
LAKES ONTARIO, ERIE, HURON AND MICHIGAN, (via stations at all principal ports).—For the varieties of fish for which they are noted.
LAKE SUPERIOR (via Collingwood, Wiarton, Sarnia, in connection with steamship lines).—For lake trout, etc.

The charges for hotels, guides, and camping at many of the fishing waters named above, are extremely low. Full particulars of same, with many valuable hints as to baits, best months and general facilities are published in a pamphlet entitled **"Fishing and Hunting Resorts of the Grand Trunk Railway,"** which will be furnished gratuitously on application to any of the company's principal agents, or of the General Passenger Agent, Montreal, P. Q.

WM. EDGAR, Gen. Pass. Agent. **JOSEPH HICKSON,** Gen. Manager.

The Tomahawk Lakes & Trout Lake

Are the very best fishing grounds in the State of Wisconsin. These lakes are located in Oneida county, along the newly completed line of the Wisconsin Valley Division of the *Chicago, Milwaukee & St. Paul Railway,* and the whereabouts is just being made public. Muscallonge, bass and trout in abundance.

During the season of 1889, necessary hotel and camping facilities will be provided for all sportsmen who are looking for "greener fields and pastures new."

Buy tickets to Minocqua, Wis., via the Chicago, Milwaukee & St. Paul Railway.

For further information address A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.

Bromfield House, Boston.

SPORTSMEN SMOKERS

SHOULD ALL SMOKE OUR CELEBRATED

Hand-Made Havana Cigars.

MADE IN TWO STYLES AND SIZES.

LONDRES PERFECTO, 5in. long @ $7.00 per 100
CONCHAS ESPECIALS, 4¼in. @ 6.00 "

The favorite cigar of Rod and Gun Clubs generally. These cigars are made of the choicest tobaccos grown, and selected with the greatest care. They cannot fail to suit the taste of all lovers of the fragrant weed. Each cigar has the brand impressed on it, and every box has a label, fac-simile of the title of the popular journal, and our firm's signature, without which none are genuine. We are the only authorized manufacturers of the above brand, and to insure the smoker of the genuine we would ask you to send us your orders direct. We will deliver, free of express charges, either size, on receipt of price.

A. W. FOOTE & CO., Sole Manufacturers,
125 Maiden Lane, New York.

ABOUT GLOVES.

When you are buying **gloves,** kid or dogskin, for driving or street wear, remember that there is such a thing as a price that is too **cheap.** It is best to pay a fair price and get good gloves like **Hutchinson's,** they are made from selected stock in the best manner and are warranted to be the most serviceable made. If you want to know more about gloves in general and Hutchinson's gloves in particular, enclose stamp for the book **"ABOUT GLOVES."** No matter where you live or what you do it will interest you. It gives a history of gloves and illustrations of their use, prices of the different styles and qualities, directions for measurement and ordering, also testimonials from those who **know** the value of Hutchinson's gloves. **Established 1862.**

Yachts and Canoes For Sale.

Cruising Yacht For Sale or Charter.

The owner of a well-known yacht, 47ft. long, 14ft. beam, 6ft. draft, perfectly fitted out for the comfort and accommodation of four to six persons in the cabin, and three men in forecastle, patent w. c. and all modern improvements, will sell or charter her at a reasonable price on account of important business engagements preventing his leaving the port during the summer months. The yacht is built upon a beautiful model, has two rigs, can be sailed as a sloop, when she is very fast, or as a yawl for cruising. She was built during the winter of 1886, of best of material, under the personal supervision of the owner, and is a staunch and excellent sea boat, well suited for cruising in the gulf of St. Lawrence, and has been employed, when not capital sea trout and other fishing can be enjoyed, and salmon may be included, seal and white porpoise hunting, duck and shore bird shooting. This is an opportunity seldom offered. Address P. O. Box 1081, Quebec City, Can. Satisfactory references in New York or elsewhere given and required.

FOR SALE.—COMPROMISE SLOOP YACHT, six years old, 40×13⅔×5, lead ballast, sound, able, fast; designer, A. Cary Smith. SAMUEL M. FOX, 244 South Third st., Philadelphia.

FOR SALE.—THE CELEBRATED SINGLE-handed yawl Windward. Can be seen at the foot of Spring st., Newport, R. I. Address C. F. L., 14 Walnut st., Boston, Mass.

Wanted.

WANTED.—A TENANT FOR A FARM ON St. Simons Island, Georgia. A Scotchman and married man preferred. The land is well adapted for raising stock and crops of all sorts, fruits and early vegetables. Delightful climate, healthy and moderate all the year round. Daily communication by boat with Brunswick, Savannah and other points on the coast. Comfortable dwelling house and outbuildings. Terms moderate. For further information address HENRY C. ESLING, 402 Walnut st., Philadelphia, Pa. ap25,4t

COPIES WANTED.—JAN. 6, 1881; MAY 22, June 5, 19, 1884; Oct. 1, 8, 15, Dec. 31, 1885; May 24, 1888. We are short of these issues and will pay 10 cents each for them. FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

For Sale.

FOR SALE.

A limited number of shares of the capital stock of this Association at **$50 each.** The business of the Association for the last two months has shown a net profit above running expenses of about *30 per cent. on its entire capital of $5,000.*

There is no doubt now that so soon as all our stock is sold and our debts paid that our stock will pay a handsome dividend.

There are several sources of income yet to be developed, such as gate receipts at exhibitions, which it is intended to give, advertisements on our fences, etc.

Our entire income heretofore has been from profit on sale of material; and as this shows such a fine net profit we feel encouraged to predict a grand financial success.

N. Y. SUBURBAN SHOOTING GROUNDS ASSOCIATION,

COCKER SPANIELS.—PUPS, ANY COLOR, grown stock, bitches in whelp. Write for low prices to HANDSOME BROOK KENNEL, Franklin, N. Y.

DOGS FOR SALE.

Newfoundlands, St. Bernards, Mastiffs, Setters, Pointers, Fox, Bull, Skye, Scotch, and Black and Tan Terriers, Beagle and Fox Hounds, Dogs and Pups at low prices. Write before purchasing.
F. Hope, 464 N. 9th, PHILAD'A., PA.

WM. GRAHAM, PARK LANE, WELLINGton Park, Belfast, Ireland, is prepared to purchase and ship dogs for importers. Dogs purchased from him had the following prizes awarded to them: At New York and Chicago, 1883, sixteen 1sts, nine specials, three 2ds and one 3d. At New York, 1884, seven 1sts, six specials and one 3d.

BULLDOGS

CHAMPION MERRY MONARCH (7348), winner of 22 prizes, kind, gentle and a good companion. Price $100.

HARLEQUIN (11,564), winner of 3d, puppy class, New York and Troy; over distemper. Price $35. For particulars address
R. B. SAWYER,
River View Kennels, Birmingham, Conn.

SELLING OUT.

Ulmer or Great Dane dogs very cheap; all out of imported and prize winning stock. Address WOLVERINE KENNEL CLUB,
ap11,3t 442 Brush st., Detroit, Mich.

ITALIAN GREYHOUNDS AND FINE ENGlish pugs from imported, registered and prize winning stock. In Stud—Prize pug stud dog Cricket, weight 10lbs. HENRY C. BURDICK, 150 Bridge street, Springfield, Mass. jy7,tf

K 9 Breaking Kennels.

Pointers and setters thoroughly broken for field trials or private use. Reference given. W. G. SMITH, Marydel, Md.

PRIZE BRED COLLIES.

I have a few dogs and bitches to dispose of at moderate prices. They are of the strains which have produced more winners than any in the country, and are certain to breed prize winners. JAS. WATSON, 114 Seymour st., Germantown, Philadelphia. dec6,tf

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B RICHMOND, Lakeville, Mass. sep22,tf

HILL ON THE DOG.

THE STANDARD WORK ON THEIR
MANAGEMENT AND DISEASES.
Price $2.00.
FOREST AND STREAM PUBLISHING CO.,

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MAY 2, 1889.

VOL. XXXII.—No. 15. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

DOGS IN WAR.

CUVIER spoke of the domestication of the dog as "the completest, the most singular, and the most useful conquest ever made by man." Yet, when we consider this conquest, its completeness, and the length of time it has endured, it seems surprising that the uses to which the dog has been put are so few, and that so little advantage has been taken of his wonderful intelligence. We know him chiefly as a guard, as an aid in hunting, as a help to the farmer, and as a beast of burden. In whatever capacity he is employed, his vigilance and his faithfulness stand him in good stead, while his keen senses and his inherited feral instincts make his use in the pursuits first mentioned well nigh universal. Hunters and herdsmen, civilized and savage, have used the dog from time immemorial to secure their game or to guard their flocks.

The dog's work as a beast of burden is chiefly among wild races of men, though he is employed as a carrier by smugglers on the frontiers of France and Belgium and Spain. In this service it is said that the smugglers alone employ 100,000 dogs, while the customs officers use a much smaller number in endeavoring to capture *les chiens fraudeurs*. The latter are trained to carry across the frontier light packs of laces and tobacco, and so high is their education and intelligence that, notwithstanding all the efforts made to intercept them, not more than one in each hundred is captured. Moreover, in this service there seems to have been made in the education of the dog a step quite in advance of anything known heretofore. Something like organization has been effected, and the dogs have learned to obey a leader. The loaded animals are sent out in companies, and a dog of presumably high intelligence and training has charge of them. He is encumbered by no pack, his duty being to take the train through in safety. To this end he goes ahead, scouts over the country, and if danger appears, returns to the loaded dogs and guides them away from or around it. The others obey his instructions and follow his leadership.

At the present time the governments of Russia, Austria, Germany and France have training schools for dogs to be used in warfare. Systematic attempts in this direction have been made only recently, though it is true that in this use of dogs there is nothing very new. The old Greeks and Romans used the dog in war. A great dog protected by a coat of mail is pictured on the walls in the buried city of Herculaneum. Corinth is said to have been saved from the enemy who had landed while the soldiers slept, by a band of fifty dogs, which fought until all but one had been killed and the garrison had been roused. Vegecius speaks of the custom of having dogs sleep in the forts and says that their keen sense of smell enabled them to detect the approach of the enemy, when they would bark and put the garrison on their guard. The historic dog Moustache is a familiar figure in stories of the Napoleonic wars. The dogs in the Indian camps of our own West often gave warning of the presence of horse stealing parties, and in the Arab skirmishes in Algiers dogs did good service for the French troops in finding out the hiding places of the enemy.

His keen senses, his vigilance, faithfulness and intelligence make it certain that the dog could be employed to great advantage in war. He would be efficient as a scout, as a sentinel, as a courier and as a trailer in pursuit. Perhaps he might be employed as a pack animal, to carry extra ammunition. He would prevent surprises and ambuscades, and would give timely warning of night attacks; would give notice of the presence of spies in the camp. As a messenger he would be invaluable, traveling faster over almost any country than a man on horseback, and easily able to surmount obstacles that might stop both horse and man. Another use which has been suggested is that of searching out and bringing aid to the wounded after battle.

The different kinds of service required would of course call for the employment of different breeds of dogs, and probably, if the subject is carefully studied, it will be found that some use can be made of a considerable number of the 189 varieties of domestic dogs which we are told exist.

The subject is interesting and worthy of the attention of the citizen soldiers of our own country, many of whom would take delight in showing what services dogs can perform in military operations. It would be practicable to train these dogs so that their work might be exhibited during the summer encampments of the regiments of the National Guard, and the work of these intelligent animals would be hardly less interesting than the drill of the troops themselves.

A SIGN OF THE TIMES.

LAST week we spoke of the wise action of the California Legislature in authorizing the expenditure of $2,000 in introducing exotic game into that State. We mentioned then a number of successful experiments in this field in the United States and Canada. But American enterprise in this direction has not been confined to the continent. In Cuba, the Ever Faithful Isle, steps have been taken toward preserving the native game and introducing species from abroad, which deserve the strongest words of praise, and ought certainly to be put on record. Some five years ago the Field Sport Club of Havana was organized. Until the present year it has been a close corporation, its membership limited by its constitution to twelve. Now this has been changed to permit the membership to be extended to as many as may be elected by a majority vote. The name of the club has been altered to the Sociedad de Caza de la Habana.

Among the objects of the Association as laid down in its constitution are game preservation, the introduction into the Island of Cuba of new and useful species, and the improvement of the breed of dogs by means of bench shows and field trials. The Society possesses extensive grounds in a beautiful country, and its preserves are well stocked with game, but the game laws of Cuba are not generally respected, and the club has found it uphill work to protect itself from lawless poachers, who prowl around the borders of its grounds, seeking to destroy any unwary and costly exotic that may venture into unprotected territory.

The first importation of the club consisted of four hundred Spanish partridges, of which but thirteen arrived alive upon its grounds. Large flocks of guinea fowl inhabit the preserves, but the right to shoot them is limited by the club rules to two each shooting day to each member. Quail have increased wonderfully on the club grounds, which also contain some very good snipe marshes. It is intended to import certain species of game birds from Mexico, and also to introduce the pinnated grouse of the Southwestern States, where the climate is not very different from that of Cuba. The shooting season in the island is from Oct. 1 to March 1.

The Sociedad de Caza extends to kindred associations in the United States its greeting, and wishes to establish close relations with them. It is especially desirous of exchanging copies of rules and regulations with other clubs, and wishes to receive copies of the most generally approved game laws.

This Society is making a gallant fight against lawlessness in Cuba, and it will receive the heartiest wishes for success from every true sportsman.

SNAP SHOTS.

ONE of the recommendations of the New York Forest Commission is the passage of an act to enable the State to receive gifts of land subject to the rights of the grantor to go on cutting out all the valuable timber, after the land shall have been assigned to the State. A more flagrant and unblushing piece of jobbery in a small way was perhaps never suggested by any public official. The lands contemplated in the recommendation are lands that would under any circumstances revert to the State for non payment of taxes after the valuable timber shall have been cut out, and the evident purpose of the bill is to leave the timber with the would-be grantors, but transfer the onus of taxation to the State. We have already commented on the suggestions of the Forest Commission that the men who jumped the islands in Lake George and built on them should now be relieved "from their somewhat unfortunate dilemma," and the proposals to allow the State to receive conditional grants of land is evidently animated by the same philanthropic spirit.

Tourists who are promising themselves a trip this summer to the Yellowstone National Park will be interested to learn that among the privileges granted by the Interior Department to one of the lessees is the right to put a steamboat on the Yellowstone Lake. It cannot be denied that the presence of a steamer on this lovely sheet of water will add greatly to the charms of this spot, by many thought to be the most attractive in the whole Park. It will open up to the casual tourist a hundred beautiful bays and interesting hot spring and geyser regions, which he could never see except in this way, and will be an especial boon to the women and children who may travel as far as the lake. We have always felt that the beauties of Yellowstone Lake were far too little known and appreciated, and since improvements must come into the Park, it is perhaps as well that a steamer should plow these clear waters.

The gun with fool attachment has been heard from again; this time in Arkansas. It appears that Mr. John Gurley, a well known citizen, and formerly sheriff of St. Francis county, went out to hunt wild turkeys, and, hiding himself in a patch of tall grass and weeds, began to call. To the call presently came up the gun with a fool neighbor at the other end. Hoping to kill the supposed turkey, the gun was fired into the grass, and the ball from a Winchester rifle entered Mr. Gurley's shoulder. He will lose his arm if not his life. It is a very old story. No doubt we shall hear it many times again.

The legal sale of short lobsters in this city while they are protected in certain neighboring States affords a forcible illustration of the harm which is constantly being done by the lack of uniformity in our game and fish laws. It must be very discouraging to earnest and energetic officials in New England, who may do their utmost to enforce the law in their own State, to feel that all their efforts are being frustrated by evil doers, whose infractions of the law are encouraged by an open market for their spoils within easy reach.

It seems as if the anglers this year had made up their minds that they were going to have all the fish. The various tackle stores report an unusually heavy business, and reports come to us of numbers of men who are spending the holidays of this week on the streams of Long Island, Sullivan and Delaware counties, and of Pennsylvania. We shall look for reports of their success later.

The Sportsman Tourist.

PUGET SOUND JOTTINGS.

Editor Forest and Stream:

An incident that occurred last April while I was circulating one of the FOREST AND STREAM petitions for the preservation of the National Park, was brought to mind a few days ago, and it struck me that it might interest some of your readers.

I had taken the petition into a jewelry store where several friends had congregated, and, after they had all signed it, we were engaged in a discussion of various features of the National Park, when in came a settler from Whidby Island. I recognized him, and knowing he was fond of hunting, asked him to sign the petition. I instantly saw by the expression of his face that the subject was entirely new to him, and that he had evidently never even heard of the Yellowstone Park, so I explained the situation to him at great length. He then refused to sign the petition, and I asked him why. He replied: "Because I have so much trouble with deer that I don't want them protected anywhere. They get into my garden and eat everything up, making life a burden."

This statement was the more surprising when I remembered that during the previous season the hunters almost invariably came home empty-handed, so I concluded to investigate. The result was to convince me that rather than decreasing the number of deer was on the increase on this island. This is due to two causes: Firstly, the extermination of cougars, which formerly preyed on the deer. Secondly, the education of the deer to the white man's fatal modes of hunting and consequent change of habits. They now hide away in the dense thickets during the day and can only be found by the use of dogs, which is prohibited by law. At night they steal forth and make raids on the truck patches of the settler. That is the reason the deer, though as numerous on the islands as ever, are not so frequently seen as formerly.

A good story is told on Joe Lynch, one of the best known and most successful of the veteran hunters of Puget Sound. It is a common report among the boys that every deer on the islands know Joe. He formerly lived at Deception, on the south end of Fidalgo Island, but has been away all winter, returning for a visit a few weeks ago. During his absence some blasting operations on the other end of the island drove the deer all over around Joe's old home, and his former companions were having great sport until Joe appeared on the scene. The instant the deer heard of his return they all disappeared, knowing it was certain death to remain in that vicinity, and have not been seen since.

By the way, this same gentleman has the honor of having killed the only bear ever seen on Fidalgo Island since the advent of white men. This island is some fifteen miles long and eight wide, and is only separated from the mainland by a channel some 400 or 500yds. wide. However, though bears were found on the other island, the hunters, with the exception of Mr. Lynch, always averred that there were none on Fidalgo. Joe took exception to the statement, and for years maintained that he had seen signs of bruin and would yet bag his game. He finally demonstrated the truth of his assertion by locating and killing the "critter," and as evidence of good faith brought one of the claws to my office on June 23, 1887.

Owing to the open winter, extending as far north as Alaska, ducks were not nearly so numerous on Puget Sound as usual this year. Though not appearing in such countless myriads, there were still enough to astonish the average tenderfoot, but the continued fair weather has spoiled the hunting, the ducks all flocking to the center of the bays, instead of seeking the sloughs and land-locked waters. Even the Indians, though frequently bringing canoe loads to market, were not so successful as usual, and ducks on the hotel tables were a rarity—something that was never before known to occur.

Indications now point to an early run of salmon this year. The Indians are already bringing in many salmon trout. We expect good trolling in July or August. Last year it was much later, I believe, the best sport being about the 10th or 15th of October. JUNE.

LA CONNER, W. T., April 15.

RANCHING IN TEXAS.

Editor Forest and Stream:

This country has, by legislative enactment, been laid off into counties, or what are to be counties when they become sufficiently populated to organize. It is now a stock country, where ranches are ten, twenty and thirty miles apart, and our grandfathers on the frontier knew no more primitive style of living than at present obtains in this country. After having traveled all day without seeing a ranch, the traveler unacquainted with our style and knowing he was approaching a ranch where the cattle are numbered by the thousands, might naturally look for a neat and substantial house, with extensive and well-filled barn, stables, etc., all with strong pretentions to architectural beauty. This is the imaginary part of ranch life. When the imaginative traveler has found it in reality, there is a pit or cellarlike excavation about 14x16ft., generally in the side of a hill, fronting south, with poles laid over the excavation and about a foot of earth thrown over the poles for a roof. Another similar structure near at hand, if it be winter time, will be filled with flour, bacon and other provisions, and a lot of sacked corn or oats, all hauled long distances over nature's roads and often some of nature's pretty rough work. These "dugouts," as the pits are called, serve to protect the ranchmen from the snows and "northers" of winter, and occasional rains in spring, summer and fall.

Winter is the season when there is little work with stock, and most of the ranchmen and many of the stock hands leave for the towns and settlements where they can enjoy some of the advantages of civilized life. It is also the season for hunters from the towns and settlements to come and kill the surplus game which has grown during the year. One of these hunting parties has just completed a ten days' hunt and returned to their homes. The results were, one bear, nine deer, ten antelopes, one panther, forty-seven prairie wolves, two large gray wolves, three catamounts, one fox, a few wild turkeys and some smaller game. They found the trails of two other bears, but from the loss of some of their favorite hounds the bears were not taken. Hunting parties are always particularly welcomed by the stockmen, as large numbers of calves and colts are destroyed by the carnivorous classes of wild animals, and it is a great saving of stock to have the beasts killed. A bounty law is in operation, but it is a local option matter with the county officials, to which these unorganized counties are attached, and is inefficient. The mountain lion is the most savage animal with which we have to contend, and they are ugly creatures, sometimes killing horses which are tied out to graze. This was done some time since, not far from where I now write.

I have been in camp through the winter. We have not had ice exceeding a quarter of an inch in thickness, and toward the end of January I heard wild turkey gobblers for the first time. Birds begin their spring songs in that month. The winter was unusually mild, but thunder showers of warm rain have fallen at frequent intervals all winter, with bright sunshine usually following. Stock have done well.

Winter is now past, and the last hunting parties are about closing their sports for the season. The number of deer and turkeys killed is not as great as formerly, for the reason that they are not as plentiful. The great number of panthers and catamounts caused parties to equip specially for them, and as a result many more than usual have been killed. One man on the Double Mountain Fork of the Brazos River killed ten panthers up to the first of February. The number since has not been learned. One of my shepherds a few days since came across a large deer that had just been killed by a panther or a mountain lion. It was yet fresh, but coyotes or prairie wolves, as soon as the beast that had killed the deer had left, at once pounced upon the carcass and completely tore it to pieces. The shepherds often find it difficult to keep these coyotes off of the flocks of sheep during the day. Good wolf-proof corrals keep them off at night. One of my shepherds is a new arrival from "the States," as we old Texans say when speaking of the older States of the Union. This shepherd had never seen a wild turkey. I showed him some large trees about half a mile from camp, and told him to go there after dark and he would find them. He went, and soon came back puffing and blowing with two large gobblers and a hen. Said he would have taken more, but that was all he could carry. The next day his shepherd dog treed a fox, which he killed. Then his dog bounced a catamount, but it bounced off again, glad to let his catship alone. Great numbers of calves, colts and sheep are annually killed by wild animals, and the Legislature of Texas, now about to adjourn, have for some time been discussing a law with the object of paying a sufficient bounty for the destruction of these animals, to make it an object to hunt and destroy them. It is to be hoped such a law will soon go into effect.

Great activity will soon prevail among stockmen, as the annual roundups are soon to begin, when thousands of cattle will be thrown together every day, the owner or his representative being there to cut out and claim his own.

I was driven from city and office life, where overwork had ruined my health, to this rough life, and have gained in health wonderfully by the change, while my purse is not suffering, having cattle, horses and sheep, the 3,500 sheep demanding my attention and keeping me in winter camps. STOCKMAN.

JAYTON, Kent County, Texas.

WOLVES AND OTHER THINGS.

Editor Forest and Stream:

Have just returned from a trip into Stonewall county, about seventy-five miles west. There they have the biggest wolves in the world, I think. And their voices are very great and sonorous; so that when a few of them let fly in concert, they seem to shake the hills. They make the atmosphere tremble very distinctly. It is worth one's while to go into that region and sleep a few nights in the grizzly cañons to hear the music. In order that there may be a large number in chorus, it would be well to hang up the skinned carcass of a deer or antelope near your couch; then retire to rest and the serenade will soon begin. The more savory the carcass, so that it be not spoiled, the more earnestly will the musicians perform. They will usually end every song or role with a smart smacking of their jaws, as if they were tasting in fancy the rich meat. I dare say that while thus performing, with all eyes gleaming on the savory carcass, their mouths are watering copiously. One who has not heard such a serenade is ignorant of one of the most interesting things in nature. There is just enough of suspicion of danger attending these concerts to keep the attention keenly alive. There is not much probability that one would fall asleep, and so miss some of the music, even though the performances be kept up till good dawn of day. Indeed, a good wolf concert, with the performers a few yards off, is one of the most wakesome things in the world. There are few people in Stonewall county, but wolves are very numerous; gray wolves, black wolves and coyotes.

I secured the skin of one which measures now 6ft. 6in. from tip to tip, and 3ft. in width. It has been dry some months, and is greatly shrunken. It was no doubt more than a foot longer and a half-foot or more wider when stripped from the animal. I shall dress it for a robe, and under the treatment I expect it to reach its original size. This wolf was a gray wolf. At the same time I obtained two beautiful coyote skins. In fact all three of the skins are very beautiful and rich.

I met a cowboy who had a couple of skins of the black wolf, which I vainly tried to persuade him to part with. They were not all black, but there were streaks of rich brown, and the hair was very soft and silken. Their ears are deep black; those of the gray wolf and coyote are yellow, or in color precisely like what is often called a "yaller dorg." I wrote you some months ago about a white wolf that had been seen near this place. They tell me he has lately been seen again. I would his skin were mine. But as this beautiful wolf's life is probably as dear to him as mine is to me, I will not put a price upon him, lest some of the bad boys about here be tempted to kill him.

I wish FOREST AND STREAM would publish a recipe for dressing skins with the hair on. I am ignorant of this art and would like to learn it. I find a strange fancy growing upon me to own many dressed skins of wild beasts.

On this trip I saw many blue quail (*Callipepla squamata*). After crossing the 100th meridian they became very numerous. On the east of that line I saw but a single flock, and they were not far from it. About five years ago I observed this bird closely, and never before saw one further east than about twelve miles this side of the 101st meridian. Thus it appears that they are slowly advancing eastward, becoming civilized probably.

On this trip I saw a most noble country, wonderful for fertility and most lovable for beauty and climate. Haskell county, lying east of Stonewall, is for the most part level like a billiard table; stoneless and almost treeless, except hackberries, elms, cedars and plums along the streams. The latter grow in great abundance, and their fruit is large and luscious. The algeretta, a sort of berberry, is also abundant in places, yielding a berry delightful for pies, and I think it would also make good wine. Throckmorton, east of Haskell, is a region of rolling prairies, underlaid by limestones of the Permian or upper carboniferous age. Haskell is Triassic. Stonewall has also much fine country, but there are parts which are fearfully rough and forbidding; ghoul-like, witch-like, terrific, and full of snakes and skunks. The air is often laden with the odor of these walking rosebuds, the most impudent creatures that exist.

A peculiar feature of the country west of Haskell is the mountainous peaks that usually stand solitary, sometimes two together, looking over a vast expanse of prairie, many miles apart. Such are Double Mountains, Kiowa Peak and Buzzard's Peak. These mountains, as I am told, are capped with massive limestone, probably of Jurassic age. They are historians, venerable historians, informing us of the elevation at which the surface of this country once stood, and the vast erosion that has been wrought by water.

In the western part of Haskell county the Brazos River divides into two nearly equal streams, one coming from southwest sweeping by the base of Double Mountains, and hence called Double Mountain Fork; the other from northwest, very salty, and hence called Salt Fork. The Double Mountain Fork is good water.

As I gazed on the Double Mountains, which I had not seen since thirty years ago, my mind filled up with reminiscences and comparisons. Some of these we may tell later on. N. A. T.

CARBONDALE, Tex.

Natural History.

FIVE DAYS A SAVAGE.—IV.

NOTES OF A HUNTER-NATURALIST IN THE NORTHWEST.

GULF OF GEORGIA, British Columbia.—Early on the morning of the fourth day I turn out and built up my fire with some great logs, for it is very chilly here in the early morning. Then sitting down, I skinned my birds killed the day before, using an old barrel for a table. I took breakfest with the fisherman, whose squaw was a good cook. In fact, so far I have found that these squaws who have married white men are nearly all good cooks, and they say that one of the squaw-men would not exchange his squaw for the best white woman that ever lived. Well, there is no accounting for tastes.

There was a little dinghy drawn up on the beach, which the fisherman used to go out to his boat. His three children (of whom the youngest was not three years old and the oldest about ten) would run to this little box of a boat, pile in, and, the oldest taking the oars, they would dash out on the bay, the boy pulling as if his life depended on it. Then turning, he would row ashore, and all would pile out into the water and pull up the boat. They seemed perfectly at home on or in the water. When I told the squaw that I had shot some birds, and showed her the cormorant as one, she seemed surprised, said they were hard to kill and that they were good eating. This was news to me, as I supposed they would have about the flavor of a kerosene lamp wick. However, as I now had more respect for the Indian's taste in culinary matters, I resolved to try one for dinner. Talking with the man about birds, he said there was a rock a few miles off on the east side of this island where there were many sea birds, and that with this tide I might just about reach it.

I determined to try. But the fisherman was wrong, for the tide turned and a head wind sprang up, and when within half a mile of the island I was vexed to find I could not gain another foot. As the wind and tide were both fair for me to return to the rocks where I had spent the day before, I put out for them and soon landed on the larger of the two. Here I explored the rocky face on the west side, and found in the crevices numbers of the beautiful eggs of the pigeon guillemot. It seems that this rock had on it a flock of sheep, which were continually climbing up and down. I suppose the birds became so accustomed to this that they paid little attention to my presence. At any rate some of them sat so closely on their eggs that I caught them alive. I found here a few of the black oyster catchers out on the reefs, and crawling up carefully I shot a pair of them. Going out on the edge of the reef to get them I looked for signs of nesting and finally saw a nest and one egg. As I do not know that the nest of this bird has been described I will give a description.

On these outer reefs there is here and there in a hollow between two ridges a round depression, saucer-shaped and perhaps 6 to 10in. in diameter, which has been hollowed out probably by the action of the wind, which has for ages whirled the sand and debris round and round. The rock itself is a kind of conglomerate or pudding stone and full of little pebbles, dark and mottled in color.

Some of these as they become loosened by various causes, roll down into the cavities. Well, right in one of these saucer-shaped depressions lay the egg, and it seems that the bird had been arranging pebbles underneath it, for they were nicely laid in concentric circles with the egg in the center. The dark mottled egg harmonized well with its surroundings, being almost exactly the color of the vein in the rock and but little lighter than the pebbles. To say that I was pleased feebly expresses my feelings, as I had been looking for this for two weeks. I hunted the island over, but although I found a few more birds and one or two nests, the crows had been there before me, and not another egg did I see.

Climbing the sides of the cliffs I found a few nests of the glaucous-winged gulls with eggs, but no nests of the white-headed gull, though a number of them were flying about. I found one gull's nest containing a young bird and two pipped eggs. I took the little downy young

one, dried him and added his skin to my collection. There were no puffins on this rock, so, with the turn of the tide I sallied for the rock where I had seen so many the day before. Here, indeed, I found them, but I also found that the hour was at hand for my afternoon meal, and now was the time to try the cormorant. First, I climbed to the top of the rock, which was covered with vegetation. I found growing here a plant called by the Indians *lac-a mos*, which has a bulb like the potatoe, and which is gathered by the old Indians for food. Some of these I dug up with a stick. I also found the wild onion, and a sort of wild mustard, both of which I gathered.

Building a fire, the cormorant, which had been soaking in the salt water, was roasted over the coals, after being stuffed with the wild onions, and I will say that I never tasted better game. Of course, I had the best sauce possible, *i. e.* hunger, to go with it. The oyster catchers are famous eating, and one of these helped to make out a meal. Now I begin to feel sorry I had not saved the young crows and tried them. While I was getting my fire a flock of harlequin ducks paddled into the little cove to be out of the tideway. I kept perfectly quiet, and they came up within a few feet of me. How beautiful they were, resting lightly on the water! They swam about me awhile, and then, taking alarm from a screaming gull, all rose and flew away. I could not have harmed them if I would, as my gun was then in the boat.

As night came on it looked like rain, so I took the mast and sail of my boat and made a shelter against a niche in the rocks, gathered in some dry firewood, and, building a good fire, rolled into my blankets in the firelight. But it was long before I slept. The gulls, disturbed by the fire, kept up a wandering flight above me, and their wild and plaintive cries sounded far into the night. These weird cries, with their sad cadence mingling with the sound of the rising storm, and coming down to me through the rain and darkness in that lonely place, filled my soul with sadness as I gazed into the embers of the fire, and thought of the dear ones at home and the vacant chair waiting for me. Thus, pondering on thoughts of home I fell asleep. The storm swept on, and the sky cleared. The full moon came out and shone on that far isle. The fire died out, the gulls ceased their cries, and finally all nature was at rest.

EDWARD HOWE FORBUSH.

SCENT OF CARIBOU.

NUMBER FOUR, New York.—*Editor Forest and Stream:* I noticed in your journal of Feb. 21 some correspondence in relation to the scent of the caribou, and beg leave to relate my own experience with that interesting animal. The morning of Oct. 23, in company with Mr. Eugene Seitze, of Troy, we left our camp in pursuit of caribou. It had snowed about four inches the previous night, thus making good stalking. We climbed the mountainsides, traveled through ravines and picked our way through almost impassable windfalls in quest of caribou tracks, but none could be found.

Thoroughly discouraged, wet and cold, as the water from the melting snow was pouring from the trees, we turned our course toward the camp. We had not proceeded far when suddenly there appeared before us, not five rods away, three caribou making off at a lively pace. The fawn was ahead, the doe came next and the old buck brought up the rear. They did not carry their tails erect and stiff like the deer, but nearly in a line with the body, and a constant rapid switching or rotary motion was observed. We succeeded in stopping the buck, when one ball from the .38 Winchester brought him down. As we followed on a few rods and found him stretched at full length on the ground, a noble specimen with branching antlers, our joy could only be imagined by the sportsman who has been as suddenly transported from discouraging bad luck to such a glorious success. The following day, accompanied by our guide, we went to bring the meat and head to camp. While skinning the hindquarters, the guide remarked that there was a very strong odor, which, on examination, we found to proceed from the tail. This led us to examine the feet to see if, like deer, they had any scent. We could not discover the least bit of odor about the feet or legs, while the tail gave off a very strong, pungent odor. I am inclined to think that the sacks or glands which secrete the odor peculiar to the caribou may, like the muskrat, the beaver and most of the carnivorous animals, be located at the base of the tail. CHARLES FENTON.

QUESTIONS ABOUT CHIMNEY SWIFTS.

Editor Forest and Stream:

My record of observations on the chimney swift for 1886 are to me so peculiar that it may be worth space in FOREST AND STREAM to state them, thereby perhaps eliciting information from others which will aid in the solution of their mysterious appearances.

After their arrival in May, the swifts are numerous all summer, my notes showing their departure to be about Aug. 15. In 1886 they were observed on Aug. 19, and though I was not out again in August, by Sept. 22 I had been in the country looking for birds ten times, and had not once observed them, but my diary for that day bears this record: "After having seen no swallows or swifts for some weeks, I saw about a dozen swifts about a hundred yards up, moving south." Though I kept a sharp lookout for them during the rest of the month, I saw no more; but in October I undertook a canoe voyage down the Thames, which flows west from London to Lake St. Clair, and though I spent the 8th, 9th and 10th entirely in the open air, with the observance of birds constantly in mind, I saw no swifts on these days, but on the 11th I saw many, probably a hundred, at a considerable height, flying around as they do in summer, and there I left them circling, and saw no more until the following May.

The questions which naturally propound themselves are these: Why did these birds appear on the days noted and not on other equally fine days of the same weeks? Where had they been and what had they been doing? By nature incredulous, I take no stock in the hibernation of swallows and have never seen the idea applied to swifts; besides, the weather had not been hibernating weather, particularly before the September observation. I had not observed them coming north, but the September lot were going south, and from where? W. E. SAUNDERS.

LONDON, Ont.

[For suggestions as to the possible hibernation of swifts see Coues's "Birds of the Colorado Valley" p. 377. But we do not know that Dr. Coues has ever published his reasons.—ED.]

MIGRATION ON THE PLAINS.

IN observing the avifaunal migrations this spring, I have learned to look for arrivals and departures immediately after a storm. This seems to be the period chosen by all our game birds for their long flights. Comparison of observations with the Report of Migration, recently issued by the Department of Agriculture shows that the migratory wave is about a week later on the ninety-ninth meridian than it is in the level country immediately adjacent to the Mississippi River.

The week ending April 6 was marked by the northern flight of ducks in great waves. The weather was mild but threatening, and the prevailing direction of the wind was northeast. Teals and widgeons did not migrate at this time. On April 4 I secured a ruddy duck, being the first one of the species for the season. This is not a common bird in this section.

With the departure of the ducks came the cranes and swans. One party on the 3d secured nine specimens of the sandhill crane, and two of the white or whooping crane (*G. americana*). Another party on the same date secured two trumpeter swans (*Olor buccinator*).

After the storm of April 7 the marsh birds began to arrive, and on the 8th I noticed the killdeer, Wilson's snipe and American golden plover. Two days later the long-billed curlew was first seen.

On the 17th, while after ducks, my companion exclaimed, "What a curious white-breasted lark!" As he had a few shells loaded with No. 8 shot I asked him to secure it, but the bird was so tame that it seemed impossible to get so far away that it would not be blown to pieces. It proved to be a horned lark (*Otocoris alpestris praticola*), and served to convince several of the local sportsmen that this bird is really found in Central Nebraska. Those who have hunted over the country for years told me that it was the first bird of the kind that they had ever seen. Another comparatively rare visitant that I saw to-day was the great blue heron (*Ardea herodias*). It was shot on Wood River. I learn that the first duck wave reached the Niobrara eight days after it was chronicled on the Platte. This would indicate a short rest on the Loups.

This year an unusual proportion of the specimens that are shot of the lesser snow goose (our white brant) are gray or slaty above. Can this be a cross between *Chen cærulescens* and *C. hyperborea?* The two species may be found together between Hudson's Bay and the Rocky Mountains, upon the breeding grounds of the snow goose.

The ducks that nest in northern and western Nebraska are already at their breeding grounds, and we begin to ask ourselves about the prospects for fall shooting. They never were better. The mild winter and early prairie fires insure double the number of chickens and quail that there were last year. There will be no cooked eggs this season. I have never seen the prairie sharp-tailed grouse in Nebraska, but old settlers tell me that ten years ago they were common in this section, while the pinnated grouse were rare—another proof that civilization has its disadvantages. SHOSHONE.

KEARNEY, Neb., April 18.

[The gray or slaty "brant" may be young *C. hyperborea.*]

THE OTTER'S HABITS.

Editor Forest and Stream:

I find, by reading your valuable paper, that one man does not know everything about birds, animals and fish. The very interesting article on the habits of the otter, by "J. G. R.," in a recent issue of FOREST AND STREAM, especially attracted me.

I commenced to trap otter in the fall of 1861. I was located where they were very plenty, and I think I had as good an opportunity as any one could have during the winter, of learning their habits.

I noticed that at times they would start at the head of a pond one mile long, and swim the entire distance under the ice to the outlet. I have seen where the mother and kittens have traveled on ponds, but never saw the tracks of more than two kittens with the mother, which shows that we do not know for a certainty how many young they have at a litter. At one time I was guided to the Seven Ponds by following an otter's track. I have seen them hunting for muskrats, also have known them to go into a bank beaver's hole. I think the otter killed the beaver, as the latter did not come out after the otter went in.

Otter commonly have a certain beat, and as near as I could calculate travel over the same route as often as every two weeks. They are not very particular about their food. They will readily eat fish after it has commenced to decay. I never knew an otter to leave his foot in a trap unless he staid with it. They ordinarily kill themselves within twenty-four hours after being caught. If the otter is wounded or injured by being taken in a trap he is likely to leave the water and wander into the woods. I knew of one that freed himself from a trap and was found a mile from the stream on which he was caught in a fisher trap. I knew another which had been wounded by a bullet, caught in a mink trap within two days after he was shot. Another peculiarity is if one is fatally wounded by shot, they leave the water and crawl on to ice to die. They are very easy to trap as soon as their habits are learned. C. J. R.

INDIAN ROCK, Me.

HABITS OF THE BEAVER.

Editor Forest and Stream:

In your issue of Jan. 31 I read an article on habits of the beaver, which induces me to give my experience. While looking over some pine lands last September, in crossing a small creek, I saw fresh signs of beaver. In a few weeks the White & Friant Lumber Company had located a lumber camp and commenced making roads in the same locality, one of which ran up this same creek. Having to pass there often, I saw that the beaver had two or three dams, and a house built, all in shape to spend the winter. The man that carried lunch to the men several times saw the beaver at work carrying birch and alder sticks into their winter store houses. He said he watched them one day for an hour, and this was in the middle of the day. In November, after it froze up, I set two traps and caught one beaver, another broke the chain to my trap and got away under the ice. Thinking he might have got fast with the trap and drowned, I took two boxes with me one day, and cut a number of holes through the ice along their road. As the water in their dam was only 2 or 3ft. deep I could easily see the bottom, but could not find my trap or beaver. As a last resort I cut a hole in the dam, so as to draw the water off. In about an hour the pond had lowered a foot. The beaver came out of their hiding places and made straight for the hole in their dam. We saw three of them, and as they swam past the holes we had cut in the ice we caught two young ones, two-thirds grown, by the tail and pulled them out. On the ice they were helpless. They showed fight but did not make much effort to escape. The other was an old fellow, and we tried to catch him in the same way, and had hold of his tail several times, but he was too strong. Just then a hunter happened along with a gun and shot him for us. We were eight miles from home and had no way to carry the two live beaver, so we very foolishly killed them, and I have been sorry many times since, as I think they might have been tamed, or I could have sold them alive for double what I got for their hides, $3 each. The old one weighed 30lbs. and his hide brought me $6. I caught one two years ago that weighed 49lbs. They are not very plenty and will soon be a thing of the past. There have been twenty-seven caught in this locality this fall and winter, on the headwaters of the Little Sturgeon. H. N.

METROPOLITAN, Mich.

RANGE OF THE WILD TURKEY.—Hartford, Mich.—*Editor Forest and Stream:* I saw in your paper some time ago an inquiry by Chas. F. Batchelder, of Cambridge, Mass., in regard to wild turkeys, and being quite a turkey hunter and fond of the gun, I write you, so if you see fit you can publish it for the benefit of your readers. I have hunted the wild turkey since I was a boy, and have killed three fine turkeys before breakfast with an old long-stocked Kentucky rifle. This was in Medina county, Ohio. In 1851 I moved into Cass county, Michigan, where turkeys were very plenty. In 1863 I moved to Van Buren county, where I now reside. I have killed twenty-five wild turkeys here in five days. That was fifteen years ago; there are very few in this county now. I have killed some old gobblers that dressed 24lbs. Turkeys never were plenty in this State north of Grand River. I suppose the deep snow and hard crust starved them in the long winters, as I have hunted all over this lower part of the State and have never seen any north of about the Grand River Valley. I have come to the conclusion that there are a few scattered all over the southern part of the State, and they are very dark-colored. If you want to see turkeys plenty and of different colors go to Arkansas or Missouri or any of the Southern States.—SULLIVAN COOK.

LOCKED HORNS.—Chicago, Ill., April 22.—Fred Kæmpfer shows in his taxidermist shop's windows a pair of mounted heads of bucks, the horns of which are so closely interlocked that no amount of force could pull them apart. One of the deer was still living when found, the other dead. Interlocked deer antlers are not new, but I fancy the two heads, full mounted as they are and found as they were, will be a novelty. The heads are those of full-grown bucks, and were found in the Indian Territory.—E. HOUGH.

WHISTLING SWAN IN NIAGARA COUNTY, N. Y.—On Saturday, March 30, Mr. Charles Sharpstine, of Newfane, brought to me a swan of the above-named species, that was killed on the Eighteen-Mile Creek, about seven miles from Lockport. I have seen specimens that were secured on Niagara River below the falls in a disabled condition, probably by flying into the falls during stormy nights, but have never known one to be taken so far from the river or Lake Ontario before.—J. L. DAVISON.

Game Bag and Gun.

A PLEA FOR THE DUCKS.

Editor Forest and Stream:

In your issue of April 11, I read the report of your interesting correspondent, Mr. E. Hough, on game protection, and I think that the idea that is expressed therein, that of an inter-State law, is just what is wanted.

While this law would be the law *par excellence*, still, if sportsmen would repress their slaughtering instincts and not put up prizes for the champion duck destroyer, as is done in one of our rapidly advancing cities, I think that this would be a step in the right direction. Again, if some of these gentlemen would look at the matter in a common sense way, they might account for the disappearance of some of the ducks, and thereby lessen the weight of sins on the shoulders of the market-gunner, who, in spite of his trade, has as much right to the game, also to kill his 100 or more ducks a day, as that special class called sportsmen.

Although I do not believe in a man being too careful in his shooting, still I believe there is a certain limit to everything, and that even in duck shooting, where the largest bag is always bragged of, a man can overdo the thing, and then he becomes a duck slaughterer, and not any better, if even as good, as the pot-hunter.

Another thing which does not seem consistent with game preservation is the awarding of a gold medal to the champion duck killer, for in striving to win the medal, men who would otherwise be moderate in their shooting would be stimulated to kill ducks, not because they wanted to use them nor because their friends wanted them, but simply for the glory—if glory it is—of being king slaughterer in his club. Therefore, while it is bad enough for a man to go out and kill such a large number of ducks (especially in the spring time), it is a thousand times worse for any one to put up a medal to advance the science of duck slaughtering, in which most modern sportsmen, to judge by their tales of large bags, are already quite proficient enough. If most sportsmen would notice these things and practice them, I think that one step in game preservation would have been taken, and I think that the old saying, "Be moderate in everything," could apply even in duck shooting, and that the ducks would be greatly benefited thereby. R. A. MONKS.

NEW YORK, April 21.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

CHICAGO AND THE WEST.

CHICAGO, April 23.—In response to letters lately sent out to the keepers of the different clubs I have received only meagre and unsatisfactory details as to the amounts of game killed this spring. The record books at the clubs do not seem to have been very well kept. For instance, Mr. Ira A. Pease writes for the Mak-saw-ba: "J. F. Whiting, March 18, 22 ducks; H. C. Burchner, 16 ducks. April 8, C. S. Petrie, 32 snipe and 33 plover. There have been numbers of good bags, but they were not recorded." I should think not! I have heard of and reported a great deal more than that from Mak-saw-ba, and do not suppose I get much of it. The only club to send in anything like a full report so far has been the Cumberland. Mr. Martin Driscoll, superintendent, writes as follows under date of April 18: "W. W. McFarland and C. D. Gammon, total, 749 ducks, 22 geese, 2 cranes; John Heiland 1 duck, Henry Stephens 133 ducks, 1 goose, G. T. Farmer 146 ducks, James Gardiner 7 ducks, H. G. Purington 1 duck, 1 brant, H. D. Nichols 17 ducks, 3 geese, W. N. Low 22 ducks, E. Hough 45 ducks, R. R. Street 6 ducks, G. M. Davis 23 ducks, 2 geese, 1 swan, John Gray 27 ducks, W. P. Freeman 32 ducks, E. W. Gillett 24 ducks. There have been about 150 jacksnipe killed to date. The natives keep them pounded out, so the shooting will be rather poor."

Word should be sent to Mr. W. A. Wheatly, secretary of the Beaver Dam Duck Club, of Memphis, Tenn., that the experiments of this spring at duck feeding show that buckwheat, planted on wet ground or thrown in shallow water, makes a much-appreciated food. The De Golyer Club found a "hole" so planted was always full of ducks. The keeper of that club told me also that he found the mallards had eaten three and a half bushels of corn in two days out of one pond. Corn is good mallard feed. The "jonquepins," or lily seeds, are eaten by the ducks, but it would hardly pay to seek after them as artificial food. Celery is hard to get started, Wild rice is better. Buckwheat and corn, or mill screenings, make the most available feed for planting. The only rule for putting down the feed is the general one to scatter near the bank and in the edge of shallow waters. Mill refuse can be thrown on top of lily pads or water plants. Corn partly shelled or on broken cobs is best. Waters should be planted in the summer if any ducks are staying about, or just as early as the ducks begin to come in. Crops intended to be raised and left standing, as buckwheat, should be put in at the usual spring time of planting. I hope the Beaver Dam boys will have good luck. There is no doubt it pays to feed.

Mr. E. S. Hart, a Chicago man, absent on a three-months' trip in Mississippi, writes his friend Mr. Van Uxem that his stopping place, Way's Bluff, Madison county, is a great field for the sportsman, and he wonders why Northern men do not go there. He reports turkeys, quail, grouse and rabbits very plentiful. Two men have in season killed 300 quail in less than a week's shooting there.

Prairie chicken shooters will not have to go outside of Illinois this year, that is sure. The State is full of birds. The three-years law has been a pronounced and unmistakable success. There are hundreds of coveys within fifty miles of Chicago. The cocks can be heard booming all over the marshes when one is out duck or snipe shooting. This is pleasant. Upland shooting, shooting of all sorts has fairly become a thing of the past in this country, yet no more gentlemanly and sportsmanlike form of sport ever existed.

Take it all around, the season on snipe has thus far proved much above the average, and bags of two or three dozen have been common. To show how open even so difficult a bird as the jacksnipe is to the gunner's art, I may cite the experience of a market-shooter, Ed. Irwin, whom I met at the Crown Point tournament. This shooter tells me that he has in the past three weeks killed 650 jacksnipe. Last year he killed over 700, and year before that he killed over 2,000. He does not hunt ducks, for purely financial reasons. Jacksnipe have brought much of the time from $2 to $2.50 a dozen, as much as mixed ducks, while the expense of shipping is much less. Irwin's hunting has been done on the Kankakee marsh, within five miles of Koutts, Indiana, on a strip not over six miles long. He says the birds work around over this ground, and often he finds them all on a piece where there were none at all the day before. He does not use any dog, and shoots a very close 12-gauge gun. I presume he must be a very good snipe shot. He told me to come with him to Koutts last Saturday, and he thought if I did he could assure me at least seventy-five snipe. I should have been glad to go had that been possible, as I should like to see a professional snipe shot at work. Rather deadly work on the game, I fear.

Golden-legged plover have been quite plentiful pretty much all over that part of Illinois just below Chicago during the past week, and large bags have been made. Plover shooting is not so very difficult, but is a pleasant sort of sport in its way, if there were not the temptation to kill too many birds. Long before this the female birds are with eggs, and it is a distinct shame to kill them when that is the case. Would it not be well for our shooters to stop now on the plover and snipe? It is too warm now to shoot. It is time now to stop shooting and to overhaul the tackle case for a fishing trip.

E. Hough.

INDIANS AND THE NATIONAL PARK.

Editor Forest and Stream:

In your discussion of the question of restraining the bands of marauding Indians who are destroying the forests and annihilating the game in all the country adjoining the Yellowstone National Park, it strikes me that you are complicating the problem unnecessarily by suggesting that Indians have inherent rights or any other rights, which need in any way hamper the Government in dealing with the difficulty, on the grounds of public expediency.

If the Indians ever had an inherent right, it was the right to keep the white man from landing on the shores of this continent, but that so-called right was trampled under foot, and in the interests of humanity it was necessary that it should be to provide for the devolpment of a higher race. For us the first and highest consideration is the well being of our own race, and to insure that we have not hesitated to deprive the Indian of his liberty to roam at will over the continents and have shut him up in reservations.

But you say the Indian has a right under treaty to hunt in the neighborhood of the National Park. Very true; but it does not follow that to deprive him of that right would constitute a wrong. The Government of the United States would be justified in withdrawing the privilege, if experience demonstrate that its exercise constitutes a source of annoyance or injury to the community; still more if it were found that the privilege operated injuriously to the Indians themselves. And I say most emphatically that as long as the Indians or any section of them can subsist by hunting there is no hope of raising them to the industrial rank and rendering them fit for citizenship.

As a sportsman too and on behalf of my brother sportsmen I protest against the continuance of the privilege. It is not that I object to the red men sharing in the sports which we enjoy. What I do object to is to see the game utterly exterminated by bands of men who make hunting the business of their life, who spare nothing and have no thought for the future.

I do not want to see the Indians discriminated against, and if the State Legislatures of Wyoming, Idaho and Colorado would pass laws limiting the game which may be taken in a season, to one or two head for each hunter, by all means let the Indians go and get their taste of venison with the rest of us as long as they conform to the law, but in the name of all the sportsmen of the United States, and of unborn generations, I protest against the Indians being privileged to extirpate the game of the country, and I hope that your representations will move the Government to the reflection that while it is commendable to be kind to one's dogs, it is not right to take one's children's bread and cast it to them. C. F. A.

CALIFORNIA SPORTSMEN'S RIGHTS.

Editor Forest and Stream:

In your issue of Nov. 28 appears a well-written letter from "Pacificator," concerning a supposed impending "row" between the so-called "pot-hunters" and the club men of this city. Now, I do not for a moment suppose the quarrels of a few duck hunters on this coast greatly concern the majority of your readers. Still, as the members of the duck clubs in this city claim to be at least as law-abiding citizens, honorable gentlemen and fair-minded sportsmen as the random bird shooter whose cause is espoused by "Pacificator," and as many of the statements in his communication are misleading and place us in an unjust light, I will respectfully request space for a reply. I speak only as an individual.

I wish, first and chiefly, to advert to the event which "Pacificator" intimates caps the climax of infamy on the part of the club men, viz., the securing of 7,000 acres of the Sonoma marsh land. He states that sixty men for $120 "pre-empted" this marsh land, inferentially by some "jobbery." Now as to facts. This piece of marsh land is the property of Hon. J. P. Jones, formerly U. S. Senator from Nevada and a member of our club (the Alameda Sportsmen's Club). Mr. Jones owns and pays taxes upon this land, and presumably has the right to devote it to such purposes as he sees fit. Our club, seeing its availability as a game preserve, secured from the owner a lease of the property for a number of years. The cream of the shooting on this preserve is a large piece of territory which was some years ago under cultivation. This is bordered on one side by a range of hills and on the other two sides by a levee following the banks of the Sonoma Creek. At one point there is a break in this levee, which permits of the partial flooding of the farm at high tide.

Located near the north end of this property is the old farmhouse, with outbuildings, which we now occupy as a club house. For a couple of years or more before we took possession, this house was at the mercy of any wanderer, but was usually occupied by casual duck hunters. We found the numerous windows all broken, the wooden walkways destroyed, probably for firewood, and even some of the ceiling planks torn away, presumably for the same purpose. However, having taken possession, we soon put things to rights, when a great hullabulloo was raised. A certain class of shooters of which "Pacificator" writes himself a member, began to assail the "selfish," "wealthy," "patrician" club shooters, who "wanted the world," who wanted to prevent outsiders from shooting on the water highways, or on non-preserved ground, or on Sundays for fear the ducks might be made wild and scarce to the detriment of club shooters. This and similar bosh was and is frantically iterated and re-iterated; and one might infer, from the frequent mention of "bloodshed," "war" and similar expressions, that these worthies contemplate going gunning in the future not for the wary duck, but for the oppressor whose iron heel has trodden the liberties of the free-for-all shooter into the mud. Oh, "Pacificator," why beliest thou thy peaceful name? Or dost thou, indeed, contemplate making peace with thy foe after the manner of the bold pioneer with his little red Indian—by cutting his throat and then exclaiming, with bloody knife brandished aloft, "Let us have peace!"

The amusing part of this "war" is that the random hunter is doing all the fighting. He loudly toots his big war trumpet; he beats his mightiest tom-tom; he arrays himself in his most awe-inspiring war paint, with his medicine men (lawyers) sitting on their haunches in the rear, urging on the braves and waiting for the spoils. All the while his enemy quietly pursues his daily avocation, for who are these "aristocrats" who go up to their club houses during the week days, not having anything else to do, shoot all day, and then at night lose such large amounts at poker that their sense of charity and justice becomes clouded to such a degree that they impudently claim exclusive right to shoot on their own preserves? I cannot speak for other clubs, but suppose they are in the main composed of material somewhat similar to ours. Outside of the owner of our Sonoma preserve I am not aware that we have a single wealthy man on our list. On the contrary, to my certain knowledge the large majority have to look to their daily wages and salaries for their daily bread. Their incomes are meager, but they do not gamble, get drunk, or waste their substance in riotous living. Thus they are enabled to expend a small sum annually in the pursuit of health and sport. The greater number of the duck-shooting members take the Saturday afternoon train for the club grounds, hunt on Sunday and return early Monday morning to their daily labors. We are not "game hogs," "aristocrats." We claim to be genuine sportsmen, observing all the laws of the land, including the game laws. Can our opponents say as much for themselves? We even go further than the statute law and prohibit spring shooting on our grounds. Does the wandering shooter ever consult his almanac when he goes in search of game? Is not every animate object, irrespective of season, utility or other consideration, the target for his aimless shooting? The accusation that we attempt to exercise a surveillance over the water highways and non-preserved ground is too absurd to take any notice of.

In short, the matter stands thus: Our club, casting about for a desirable shooting ground, found this. We approached the owner and asked the lease of it for shooting purposes. He replied that he had no present use for the property and would let us have it. We agreed upon terms, the details of which concern no one but the parties interested. I will say, however, that we hold a written lease of the property. We took possession and posted conspicuous notices to that effect, warning outsiders not to trespass. The dispossessed casual hunters naturally became enraged and declared "war." The reason is too obvious to mention.

The opponents of the duck clubs in speaking of members, I am informed, freely use the expressions "hogs," "selfish," etc. Now let us look at the matter closely and see who are the "hogs." The club takes a preserve, of course the best it can get. Its members for convenience sake build a house, ark, or what-not, and hire a keeper if they can afford it. They are content to shoot on the ground they pay for, and all they ask is that their rights to their own ground be respected, a right they would cheerfully concede to "Pacificator" or any other sportsman. They do not "want the world." On the other hand, what do their opponents ask? They explicitly ask to be allowed to roam over everybody's ground, wherever the birds fly. They are not content with a fixed share of the marsh, but "want the world" themselves. Now, who is the "hog?"

I shall make no attempt to discuss the hair-splitting legal technicalities dilated upon by "Pacificator," for I am not competent to do so; but I fearlessly assert that neither "Pacificator" nor any other intelligent man will for a moment deny in his heart the moral right of the owner of a piece of marsh land to reserve the latter, excluding water highways, etc., for his own legitimate use; and no high-minded man will, under cover of mere legal technicalities, knowingly trespass upon such ground, for he recognizes the validity of the axiom, "A man's house is his castle," even if it is a wet one. "Moral bosh," do you exclaim? Now, let us see. You, a stranger, go some promising Sunday morning at 4 A. M. with "Pacificator," who, we will say, is familiar with some popular non-preserved duck shooting ground. Presently, while rowing along the slough to your blind, you hear a great rush of wings overhead. Near by you descry a fine point of land projecting into the slough, with a clump of weeds at its extremity. Instinctively you say, "Let us run in here." "Oh, no," says "Pacificator," "that's Jones's blind;" though, as you plainly see, it is not occupied. A little further along you come to another blind, but that is Smith's, also unoccupied; and so on. Presently you come to "Pacificator's" blind, but, lo! as your boat grounds at the edge of it an unknown head pops up. Your companion's eyes flash fire. He exclaims, loudly and angrily, that some folks are "d—d cheeky!" etc. The interloper suddenly discovers that your friend is the owner (?) of this blind, and accordingly vacates it. (Incidentally, this supposed case, the facts of which are strictly in accordance with custom, illustrates the "first-come-first-served, free-for-all" principle (!!) so strenuously advocated by "Pacificator.")

To continue, has Jones, Brown or Smith any legal right to these choice locations? Not at all; but by virtue of long possession, work on the blinds, etc., they have acquired a moral right, which even "Pacificator" recognizes to be as binding as if it were a legal one. Very well, if Jones *et al*, in addition to the foregoing rights, owned the land on which these blinds were constructed, would not their rights be by that much the stronger? Does the possession of the legal right weaken the moral one? I think not.

Again, one would suppose from reading "Pacificator's" article that all available shooting ground in this vicinity is now in possession of the clubs. This is not true. On the contrary, thousands of acres of accessible marsh land, affording good shooting, are open to all on the borders of San Francisco and San Pablo bays, and on the Sacramento and San Joaquin rivers. If the shooting on these unoccupied lands is not quite as good as on club grounds it is partly because the clubs by thoughtfulness, care and the judicious expenditure of a little money have made the feeding grounds attractive for the birds, and partly because the club men, in looking for grounds, got the best they could find. And is this so different from business principles and procedures in other affairs? Does the shrewd business man, when he finds a good investment, wait for another man to take advantage of it, or does he run to his neighbors asking them to join him in reaping good profits? No. He acts on common sense principles and reaps the reward of his sagacity. Nor is he blamed by sensible men, though he is envied by others.

I wish my shooting friends who belong to no club distinctly to understand that we hurl no such epithets at them as "d—d pot-hunters" or other derogatory nomenclature; for very many thoroughly genuine sportsmen do not hold membership in any club for various reasons; but these are not the men to advocate vicious warfare upon those who choose to club together for the sake of economy, convenience and enjoyment to secure a pleasant shooting home. I shall not attempt to portray quite another class of casual shooters. The species is well known to every one who has occasion to pass to and fro on Sundays. This fellow goes doubly armed, but his pocket pistol is much more heavily loaded (in the morning) than his cartridge box. He is the terror of the farmer, whose cattle, horses, fences and crops bear only too frequent testimony to the lawlessness of this so-called sportsman. He is a stench in the nostrils of every true sportsman, whether the latter be a club man or honorable casual shooter. Isn't it possible that "Pacificator" unwittingly makes himself an advocate of these gentry?

Finally, I predict that "Pacificator" and his coadjutors who are plunging so furiously into this aggressive "war" will find their course ill-advised; for the clubs will eventually find some means of protecting their shooting rights. If it is necessary to fence their grounds they will do it. If some other course is more advisable they will take it; nor will it be through "bulldozing" measures, but by strictly legal procedures. Bear in mind that heretofore

casual hunters very often shot undisturbed over preserved ground. The lines were by no means drawn hard and fast; but if our opponents invite a contest and are in the end beaten, certainly this privilege, which otherwise they would have continued to enjoy, will no longer be extended. Their latter end will be worse than their first.

CLUB MAN.

SAN FRANCISCO, Cal., April 15.

AT A BEAR'S HEAD.

Editor Forest and Stream:

"Kelpie's" suggestion that a bear will not always stand still while you shoot him in the head, strikes me as somewhat hypercritical. All my experience with bears, whether brown or black, whether denizens of mountain or of plain, is that they advance to the attack very deliberately— provided that you stand and face them—and afford a cool shot abundant opportunity to put in his bullet anywhere he likes. At the same time I should never think of aiming at the head of a bear, as he rose to embrace me, the spot to aim at is the white bullseye in the throat evidently painted by a kindly nature for the purpose.

I have shot bear and other game in the head by a fluke, but all my experience in that direction leads me to infer that if the ball strike the skull box at an acute angle, or indeed at anything short of a right angle, the angle of reflection is pretty nearly sure to be equal to the angle of the incidence, as in billiards.

If I were to narrate all my experiences in that direction, extending over a period of thirty years, you would smile blandly and put them in your "Camp-fire Flickerings," along with stories of doubtful veracity, so I will content myself with a single bear story very much to the point.

I had got ten days' leave and was making a hasty trip from the Gurhwal forests to Naini Tal, and camped at night in a gully on the confines of Gurhwal and Kumaoun. About 10 o'clock one of my men reported that a bear had crossed the gully, and another was following him.

Springing out of bed, I seized my rifle, stepped into my slippers, and out into the moonlight. The bear was about mid-gully, his black coat contrasting sharply with the light gray sand of the dry ravine, and directly I appeared he came to a stand, and although standing broadside on, turned his face full toward me. I aimed deliberately at his head, and in the stillness of the night the ball rattled on his skull with a note as lively as if it had been not only hollow, but empty, and down went the bear in a heap.

I could probably have run in and finished him with the second barrel—distance about 70yds,—but as I never give a bear any unnecessary chances I went into the tent for another cartridge, came out again, and while I was inserting it the bear rose and had vanished into shadow before I was ready to pull trigger on him. The next morning I started at daylight, first instructing the ranger to look for the carcass in the morning and get the skin if he could. Ten days later I was returning to duty and camped at the same spot. The ranger came and reported that he had found no blood nor sign of any kind, and knowing the exact spot I went out to look for myself. After some search I found a strip of skin from the head of the bear twisted like a corkscrew. It was about ¼in. wide and nearly 4in. long, and left no room to doubt that the ball, striking close above the eye, had traversed the skull to the back of the head without penetrating, probably even without cracking the bone.

SHIKAREE.

CAMP DELHI, Punjaub, India, Feb. 26.

A .25-BORE RIFLE NEEDED.

Editor Forest and Stream:

By his article in your issue of March 18, "Byrne" uncovers a very vulnerable point in the advocacy of .22cal. rifles, and affords an opportunity for profitable discussion of that now popular size.

Of course it goes without saying that the small-bore rifle is a great boon to all who have a fondness for rifle shooting but who, from motives of choice, economy or limited range, must abstain from using the larger sizes. But it is a question in the minds of some whether the matter was not somewhat overdone when such a diminutive size as twenty-two-one hundredths of an inch was adopted and used for the wide range of purposes to which it is now sought to apply it.

While not acquainted with the ancient history of the .22cal. rifle, I am of opinion that it was originally made with special view to purposes of gallery shooting, and regarded from the standpoint of caliber only, it has always seemed to me out of its proper sphere anywhere else.

It may be said the excellent work which improved forms of .22cal. cartridges have recently been made to accomplish contradicts this, to which I would reply that every form of .22cal. cartridges that has been used with any marked success embodies modifications of the older kinds which carried but little further in the same line, would make the said new cartridges eminently suitable for use in an increased caliber.

Now we have had from time to time vague and uncertain glimpses of a .25cal. rifle, but apparently no great amount of time, study or attention has ever been given to experiments with that caliber, which I believe to be a mistake.

True, we have the .32cal. in a variety of lengths, weights, proportions and, we may also say, diameters, for there is a most deplorable want of uniformity as to the actual measurement of rifles and bullets nominally the same in cabiber. But while the .32 is a useful and convenient size in many respects, there are objections which may be reasonably urged against it when we attempt to take it into the province belonging to the small-bore proper. For example, there is some danger in its use where the range is limited, and it is somewhat expensive to keep in ammunition when we come to use the cartridges by hundreds or thousands.

Now there is an existing hiatus between the two calibers, .22 and .32, that the .25, properly made and charged, would fill most admirably. For target purposes its good features compared with the .22 would be, notably, greater steadiness and uniformity in the shooting, less manipulating of the wind-gauge, and longer range. It would also be infinitely better as a hunting rifle for small game, as it would be more likely to disable and prevent the escape (to die lingeringly) of such game as might not be struck in vital parts, besides which it would, if properly gotten up, have a much longer point-blank range than most of the present .22 weapons. In short, it would prove a "happy medium" between the .22 and .32, and would embrace most of the good features of both the old sizes.

In the light of the vast amount of experience and knowledge which the last few years have brought to the hands and heads of makers of rifles and their ammunition, there should be but little time or trouble involved in hitting upon a suitable combination of such details as degree of twist, quantity and proportions of powder and lead, etc., as would bring out the best possibilities of the new arm. Aside from the practical advantages of .25 as compared with the smaller caliber, there is a lack of fitness in equipping a full-grown man with a weapon so trifling and toylike. It is too much like an over-sized man driving an under-sized pony. As long, however, as the manfacturers of arms and ammunition find ready market for the old styles (or slight modifications of them) there is small hope of their running the chances of success in introducing experimental innovations, and the only way to induce such departures as that outlined above is for sportsmen to express their wishes and preferences through the medium of papers like yours in such terms and in such numbers as will show just what the sentiment of sportsmen at large really is upon the subject under consideration, and I hope to hear from others upon the question of a .25cal. rifle.

NORRISTOWN, Pa., April 20. W. D. ZIMMERMAN.

CLUB ELECTIONS.—Hornellsville, N. Y., April 23.—*Editor Forest and Stream:* At a meeting of the Hornell Gun and Game Protective Association, held April 10, the following officers were elected for the ensuing year: John Griffin, President; B. J. Luther, Vice-President; William Rewalt, Jr., Treasurer: S. H. Brown, Secretary. The association never stood in better shape financially, nor with better prospects of interest taken by its members than this spring. We shall add a rifle range to the association grounds, and expect a large additional membership, as much interest is taken in this. Our association was organized for game and fish protection together with trap shooting, but owing to want of good officers of the law the violators escape in most cases. However, a great many have paid quite dearly for their fun. We are adding honorary members to our association as fast as we can, and hope in a short time to have all the game and fish protective sportsmen in our county belong to us, and by this means—when well united—we will carry a strong influence and may succeed in getting officials who will prosecute violators and get justice, too. Our laws are severe enough, but what is hardest to fight is public opinion and indifference. Game and fish protection is not generally understood because people do not comprehend its purposes; but when it is understood they indorse it, and will join in doing all they can to advance the interests of true sportsmanship. Our neighbors at Canesteo have organized a club with sixty members for a starter, and I am told much interest is taken both at trap and game protection. Let the work go on.—S. H. BROWN, Secretary.

RED HOOK, N. Y.—At the annual meeting of the Red Hook Gun Club, lately held, the following officers were elected: President, Geo. W. Cramer; Treasurer, John Bain; Secretary, Robert J. Carroll.

RAINED GEESE IN TEXAS.—This is how the Gonzales *Inquirer* tells the story: "During the rain and storm Wednesday morning occurred within a quarter of a mile of town perhaps one of the most wonderful and rare atmospheric electrical demonstrations ever viewed by most men and unprecedented in these parts. A very large flock of wild geese, high up in the sky and out of the reach of the unerring aim of the hunter were winging their flight to their far northern home, urged on by the instinct of a happy nesting and feeding ground at their long journey's end, and not anticipating the imminent and lurking danger that lay hidden in the angry and threatening clouds, while peace and harmony prevailed among the concourse that were marshaled in the shape of a letter V by the experienced leader and commander. While thus sailing serenely on, their course was being watched by a few citizens and the size of the flock commented on, when suddenly a bar of lightning from a cloud seemed to strike the leader, and then scintillate and play through the entire flock, causing terror, confusion and death, and the immediate air seemed to be full of falling and overcome birds. They fell just across the slough from town in Joe Peck's pasture, and Jack Hastings, a negro, who was watching them from his door, walked over the slough, and after killing a few crippled ones, brought fifty-two into town which he sold at 10 cents apiece. Some of them were badly bruised and torn, but it is not known whether it was caused by the lightning or the high fall. Some of the birds recovered and flew off after having fallen nearly to the ground. It is estimated that there were nearly 150 geese in the flock, and of these at least seventy-five were killed."

A WILD SECTION.—There are quite a few wolves here on the head of Little Sturgeon. I have caught three of them. They are a large, strong, ugly looking brute, and I would not care to have a pack of them attack me in the woods. The ones I caught weighed eighty pounds. Mr. Friant is having one of them stuffed and mounted, life size. This has been, and is yet, quite a country for hunting, trapping and fishing, as I have caught some of the finest speckled trout I ever saw in the east branch of the Sturgeon River, some that weighed three and a quarter pounds, and I may give you some more of my experiences where I caught wolves by the pack, fish by the ton and beaver by the tail.—H. N. (Metropolitan, Mich.).

SHOOTING PROSPECTS.—*Editor Forest and Stream:* Never before in the history of Lawrence county have quail been so numerous in the spring as they are at present. Recently, while duck hunting along the west bank of the Beaver River, I raised five coveys in about a four-mile jaunt. Last season they were quite numerous, and the large number that now exist will under favorable circumstances multiply so rapidly that the coming season will be by far the best for years.—T. E. M. (Newcastle, Pa., April 20).

KEOKUK, Iowa, March 12, 1888.—*J. F. Breitenstein, Esq., Keokuk, Ia.:* Dear Sir: The box of U. S. C. Co. paper shells that I received from you last fall I tried, and found them to be all that you claimed, and better than any shell I ever used, not one of them missing fire. Yours truly, (Signed) T. J. LOWRIE.—*Adv.*

Sea and River Fishing.

NEW ENGLAND TROUT.

Editor Forest and Stream:

The Trout supplement, of April 4, is admirable, and the illustrations excellent, but I have some doubt as to the correctness of one of the descriptions, that is of the Dublin Pond trout, of which it is stated that "the back is uniformly olive brown or gray, and not mottled like the brook trout." Now I have not seen a Dublin Pond trout for more than 20 years, but my recollections is, that the mottling was even more distinct than that of the brook trout. Livingston Stone, who had a hatching station at Dublin, for several years, can probably give exact information on this point. Is it not possible that in specimens sent to Washington in alcohol, the mottling may have bleached or faded out? I only desire to have the information correct, whatever it is.

It is not well "established," that the *Salmo sunapee* was well known before the introduction of the saibling; it was just about the same time, my first knowledge of *Salmo sunapee* having been in 1883, and I have sometimes queried whether by some mistake on the railroad cars, and a change unintentionally of similar tin cans, the saibling sent by Prof. Baird in 1881 had not found their way to Sunapee, instead of Newfound Lake? They have never been heard of in the latter water, where they were supposed to have been planted.

If, as Mr. Hodge writes me, the large trout of Dan Hole Pond, in Tuftonborough, have been pronounced by Prof. Garman to be identical with the Sunapee variety, it goes far to prove both aboriginal, but their difference in external appearance from *S. fontinalis* is so great that it is very strange to me that it should never have been noticed as a different variety before.

I am sorry to see "Awahsoose" pleading heresy on the trout question! I think I could cure him of it, could he be with me for a fortnight this summer, on the headwaters of the Connecticut. The fact is simply, that his early education was neglected!

When I was a youngster, my good mother was afraid to trust me on the banks of the Connecticut, and I was forced to take my early lessons in angling in some of the small brooks I described the other day in my letter on "Sawdust." I shall never forget my first trout! I will not attempt to describe his capture. Christopher North has done that too well for meaner pen to follow, but then his first "feesh" was nothing but a "baggy-mennow," while mine was a glorious spotted trout fully 6in. long! I did not wait to catch another, but hurried home with my beautiful prize.

A young man, since "gathered to the majority," an eminent physician in one of the Western States, was then studying medicine with my father, and the sight of the trout awakened his ardor, and he told me, if I would go to his house and ask his mother to send him a fishline, to be found in the corner of a certain cupboard, he would go to the brook with me. I did so, and he then gave me my first real instruction and showed me how to cast my line so as to let the hook float down with the current, and to be drawn naturally into the deep holes under the overhanging banks. He caught a fine string that afternoon, and I got one or two more, but I was too busy watching him and seeing how he did it, to fish much myself.

Sufficient to say, it made a trout fisherman of me forever. No doubt, as "Awahsoose" says, there is much in the surroundings, in the birds and flowers, in the flicker of the sun through the leaves, and the ripple of the water over the stones, but I have caught all sorts of fish under all sorts of conditions, and have had many a happy day on the bosom of Massachusetts Bay, or at the ledges of Rye Beach, or the Isles of Shoals; in trolling for pike and bass in the Connecticut, or casting the fly on the Northern lakes; but for a real "red-letter day" give me a balmy day in the last of May, on a mountain trout stream, now foaming and plunging over the rocks, now sweeping quietly in long curves through some grassy meadow to a still mill pond, and then repeating its plunges and its meadow meanderings, until a day spent along its banks, with a good basket of trout from 6 to 12in. long at the close, was one of unalloyed and unequalled enjoyment.

Verbum sap. VON W.

CHARLESTOWN, N. H., April 14.

Unfortunately the descriptions of the Dublin Pond trout were drawn up from specimens preserved in alcohol; but mottlings or reticulations similar to those of the brook trout usually are persistent in alcohol, and traces at least should have been observed by Prof. Garman and Dr. Bean if the fresh fish is mottled. The original description contains no reference to such markings, but it does state that "the young are much darker colored than the adults," and that their "clouded parr-marks or bands at once distinguish the young of *S. agassizii*." A good description of the colors of living individuals is very much needed, and we hope "Von W." will aid us in obtaining information on this subject.

As to the Sunapee trout, we cannot recede from the position taken in FOREST AND STREAM of April 4, and we repeat our belief that the saibling introduced in New Hampshire in 1881 have nothing to do with the ten-pound trout forwarded by Col. Hodge in the fall of 1885 to ichthyologists in Cambridge and Washington. "Von W." had knowledge of the Sunapee trout in 1883, and probably it was a very large fish even as early as that. The history of the introduction of saibling by Prof. Baird, as published in his reports, is herewith stated:

Jan. 24, 1881. Mr. A. H. Powers, of Plymouth, N. H., received 55,000 saibling eggs from the U. S. Fish Commission. Mr. Powers was directed to hatch them and place them in Newfound Lake, located seven miles from Plymouth. The eggs were all hatched by Feb. 28, with a loss in hatching of 6,515 eggs. Mr. Powers deposited 30,000 fry in Newfound Lake May 18. Dec. 3, 1883, about 600 eggs were taken by Com. Hodge. These will be transferred to another station, to be hatched and reared.

In October, 1885, and doubtless somewhat earlier, Col. Hodge saw and had in his possession specimens weighing 10lbs., which is twice the maximum weight of the saibling in its favorite localities in Europe. If we seriously consider the possibility of identifying the Sunapee trout with the saibling we must believe that the fry of May, 1882, gained 10lbs. in weight in about three years. This was one of the first obstacles we met in attempting to propose the same theory several years ago, and it will be recognized as a grave obstacle. T. H. BEAN.

FISHING NEAR NEW YORK.

III.—THE NEW JERSEY COAST.

THE coast of New Jersey, from Perth Amboy along the shores of Raritan Bay and what is known as Lower New York Bay to Sandy Hook and along the ocean front from the Hook to Barnegat Bay, is a prolific fishing ground. Barnegat Bay—at least the portion of the Bay where the best fishing is to be had—is so far removed from the city by distance that it will scarcely pay the New York fisherman to attempt a battle with the denizens of its shallow waters unless he goes for more than one day. Toward the close of this series of papers it will perhaps be well to give a directory of resorts that require more than one day to visit on a fishing excursion, and in that case a report of the angling at Barnegat Bay will be given. By taking the "newspaper train" which leaves New York at about four o'clock in the morning, Bay Head, at the northernmost end of Barnegat Bay, can be reached at about eight o'clock, but good fishing on Barnegat Bay is not to be had north of Tom's River, eight miles south of Bay Head, and the very best is at Beach Haven, which is twenty-eight or thirty miles from the head of the Bay. The fact remains that the most excellent angling along the whole New Jersey shore is in the waters of Barnegat Bay, and it will pay a New Yorker who can spare a week or more in late summer or fall to spend it at Beach Haven or among the islands at Little Egg Harbor.

The fishing resorts along the whole New Jersey coast may be reached by the trains of the New York & Long Branch Railroad. This road runs from Perth Amboy to Point Pleasant, which is only one and one-half miles from Bay Head on Barnegat Bay, trains connecting at the former place for all points along the bay as far south as Tom's River. The road runs no trains of its own, but is operated jointly by the Central Railroad of New Jersey (foot of Liberty street, New York) and the Pennsylvania Railroad (foot of Desbrosses or Courtlandt streets, New York). The Central Railroad of New Jersey runs the most frequent way trains, and is therefore, as a general rule, the most advantageous for the fisherman to take. A new time table for the summer went into effect upon both roads May 1, and trains run at short intervals until late in the fall. To reach the resorts on Sandy Hook the New Jersey Southern Railroad is taken. This road is operated by the Central Railroad of New Jersey, and runs from the Sandy Hook pier to West End or Hollywood station (Long Branch), and from Red Bank to Port Monmouth and Atlantic Highlands. It also has a connecting branch from Branchport (on the New York & Long Branch Railroad) both north and south. Resorts on Sandy Hook may be reached by taking either the steamboats from Pier 8, North River, to Sandy Hook Pier and Atlantic Highlands, or the C. R. R. of N. J. from foot of Liberty street to Branchport, and there changing to the trains of the New Jersey Southern, running north along the Hook. Steamboats also run from the city to many of the resorts, and they will be mentioned in their proper places.

Of what may be properly called coast fishing the nearest is reached from Perth Amboy, which is at the mouth of both Staten Island Sound and the Raritan River, and overlooks Raritan Bay between the south end of Staten Island and the shores of Monmouth county, New Jersey. However, there is excellent weakfishing in Staten Island Sound only two miles north of Perth Amboy, near what is know as Boynton Beach, a favorite resort for Sunday school scholars during the picnicking season. To reach Boynton Beach take the Central R. R. of New Jersey to Sewaren station (round trip fare, 85 cents), and walk southerly along the shore of the Sound a short quarter of a mile to the Beach. It may also be reached via the Pennsylvania R. R. to Woodbridge (round trip fare, 80 cents), and thence stage (fare 25 cents) direct to Boynton Beach. Here Howard Tappen has forty or fifty excellent boats, renting from 75 cents to $1 a day, and he can also be relied on for bait during the season. Fish over toward the Staten Island shore where the stakes in the water mark oyster beds, or better still ask Howard where to go, as on certain tides there are choice spots which are known to few, but with which he is perfectly familiar. If you bring your own bait get shedder crabs. I have known of many catches of weakfish at this place running up in the fifties and sixties for one boat in one day's fishing, and the fish average over a pound in weight. Meals can always be had at Boynton Beach (European plan), and at Sewaren near the station is a large hotel where prices range from $2 a day up. No liquors are sold at Boynton Beach, and it is a good place to take one's family for a day's outing, as there are swings, bathing houses, shade trees and a dancing platform.

For Perth Amboy take either the Pennsylvania Railroad or Central Railroad of New Jersey (fare, round trip, $1). From the station it is twenty minutes' walk to the shore of the Sound, or stages and hacks will carry you for ten cents. Captain Woglom keeps boats to rent at $1 a day, but he has only a few rowboats. If you cannot get boats from him inquire of Captain Thomas Liddle, the oldest and most skillful pilot of the port, whose house is but a few yards from Captain Woglom's, and he will tell you where you can get a boat. Captain Woglom has a good cabin sloop which may be chartered, and there are several oystermen close by who rent boats, but none of them makes a business of it. Bring your own bait (shedder crabs) from New York, as you cannot always be sure of obtaining it here. Perth Amboy is near famous weakfish grounds, on the oyster beds of Raritan and Prince's Bays. A good place to fish is near Buoy 10, around the point of Staten Island, or nearer shore about a mile further in Prince's Bay. Directly off Prince's Bay Light (not the Great Beds Light, which can be seen from Perth Amboy) is a good place. Porgies and the exasperating 'toadfish" are plenty here, and will consume enormous quantities of bait, so it is best to bring a large supply. The summer bluefish or snap mackerel will often take the hook when fishing for weakfish, especially if the tide is running smartly, and as they are apt to bite right through a gut snell it is best to tie your hooks on gimp. From Perth Amboy good striped bass grounds may be reached in Raritan River, a little above the long drawbridge, for which sandworms should be used as bait. The fishing in Raritan River will be treated of fully in another article.

The next resort along the line of this route is at Cheesequake Creek. Morgan station (fare, round trip, $1.15) is at the drawbridge crossing the creek, and a hundred yards up stream on the creek's banks is a quaint old inn, two hundred years old, kept by Charles Applegate, known all over New Jersey and by many prominent New Yorkers as "Pop" Applegate or "Uncle Charley." There are only half a dozen boats for hire here, at from 50 cents to $1 a day, and for three out of the six boats there are regular patrons every Sunday throughout the season. There is good striped bass fishing in the creek, but like most of the haunts of striped bass, very little success can be expected on the first visit. An angler will require several visits to learn the haunts of these fish at various tides and under different conditions of weather and water. When the bass run up the creek in huge schools, as I have frequently known them to do, the veriest novice can catch two score of them in a short time, but the bassing at other times is uncertain for the "tenderfoot." For general directions I would say try the hollow of the first bend above the inn close to shore, the "deep hole" at the mouth of Stump Creek or under the railroad bridge. If the water is muddy, go up the creek for nearly or quite a mile. No bait except shrimp can be had on the ground. Kingfish are caught near the jetties at the mouth of the creek, and so are weakfish. One day last fall Uncle Charley brought in half a boat load of weakfish from three hours' fishing off the mouth of Margaret's Creek, only a short distance from Cheesequake. Meals and lodging may be had at the inn for a small party at the rate of $1.50 or $2 a day, and no better cooking or nicer beds can be found. Only a few trains stop at Morgan station, so it is best to make careful inquiries about trains before planning a trip. The Central trains are the ones to take in the morning, but trains of both roads stop for the return trip at night.

The next place is at Keyport. Take trains of the route already mentioned to Matawan (round trip fare $1.25), and horse car (fare 5 cents) to the Keyport steamboat dock, where boats can be hired at 50 cents to $1 a day. I have fished a good deal around Keyport with very little success, although I have known of many good catches. There are striped bass in Matawan Creek, but I have fished faithfully myself for three days in succession without catching anything but toadfish and eels. Out in the bay there are places where good catches of weakfish and snap mackerel are made, to which the man who rents you the boat will direct you. At James M. Butler's Mansion House, near the water, good board may be had at $2 a day and upward, and any one who mentions FOREST AND STREAM to the Mansion House proprietor will be welcome to not only the best in the house but to good, honest information about the fishing in the vicinity. Keyport may also be reached by steamer Minnie Cornell, from foot of Vesey street (round trip fare 50 cents), at 3 P. M. every week day and 8 A. M. every Sunday, making the run in two hours.

From Red Bank (same rail route; fare, round trip, $1.50) several fishing resorts may be reached on the Navesink or North Shrewsbury River, a beautiful stream. There is excellent fishing for weakfish, flounders, summer bluefish (snap mackerel), and sometimes kingfish, striped bass, eels and plaice below Red Bank about three miles, at Fair Haven (four miles below) and Oceanic (six miles below). Plenty of flounders are caught now, the other fish in summer. It is best to rent boats at Fair Haven or Oceanic, for which place stages run from all trains (fare 25 cents), as these points are near the best fishing grounds; but if you wish to row three or four miles along the lovely banks of the river to the fishing grounds from Red Bank, or prefer to "angle" with a chunk of meat for the fat crabs which abound near the railroad bridge, walk back on the track from the depot to the bridge and rent a good boat for 50 cents a day from "Peter," a German who has a dozen boats here on the south side of the railroad tracks. At Fair Haven and Oceanic boats can be rented at from 50 cents a day up, and bait (shedder crab) can be had if you happen to run across one of the hundred "crab boys" who make a business of "scapping" soft shell and shedder crabs, which are very abundant along shore at low tide. The fishing grounds are well out in the stream, the best near the north shore. I have fished these waters a good deal, and never without success. Below Oceanic, around the bend, where the tide runs briskly, the summer bluefish are caught by trolling with small bone squid, an eel tail or anything almost that is bright and will twirl. I have caught them by anchoring in the swiftest current at the edge of the channel and allowing the hook (no sinker) to play at the end of a long line, and I caught my largest ones one summer evening with a piece of lemon peel for squid. All these resorts may be reached by steamboat from foot of Franklin street (round trip fare, 80 cents). At present this boat leaves New York afternoons, but in the summer and fall two boats run, one in the morning and the other in the afternoon.

Port Monmouth and Atlantic Highlands may be reached by New Jersey Southern Railroad from Red Bank (fare from New York, round trip, $1.50), or by boat from foot of Rector street (fare, $1). The steamer William V. Wilson also makes the run from foot of Canal street to Port Monmouth (fare, round trip, 60 cents), but she does not leave her pier at any set time. Bullinger's weekly Monitor Guide gives her time for the current week of issue. At either of these resorts weakfish are caught, and blackfish of good weight on the reefs and wherever there is a sunken wreck. They appear first about May 15, and bite near the bottom on shedder crabs or clam bait. They weigh from ¼lb. to 12lbs. Large sheepshead are often taken here. Use strongest hooks bent on gimp or piano wire, heavy sinker (resting on the bottom, with hooks above it) and shedder or clam bait. Boats can be rented at Atlantic Highlands at $1 a day at the hotel, and for less at Port Monmouth, but at the latter place there are few boats.

Highland Beach, on Sandy Hook, and the Navesink Highlands, across the Shrewsbury River, are good points from which to reach the fishing grounds opposite Spermaceti Cove. Take trains from foot of Liberty street and change at Branchport (fare, round trip, $1.55), or boats from foot of Rector street to Sandy Hook pier, thence New Jersey Southern railroad (fare, round trip, $1.20) to Highland Beach. Boats can be rented at Highland Beach pavilion, close by the depot, at $1 a day. Navesink Highlands, or the Highland Lights, connecting with Highland Beach by a bridge across the Shrewsbury, can be reached by the steamers Elberon at 9 A. M., or the Sea Bird at 2 P. M., from foot of Franklin street (round trip fare 60 cents), and boats may be hired at the steamboat dock at 75 cents a day. To reach the fishing grounds, where weakfish, summer bluefish, blackfish and kingfish are caught, row down stream about a half mile or a mile, and fish on either side of the grassy island at the mouth of the Shrewsbury River.

Surf fishing for striped bass along the ocean coast is delightful sport, and I have known of bass being caught by this method weighing over thirty pounds. September and October are the best months, but I have heard of good catches in late April and during May. The cast must be made standing on the beach or in the surf up to one's waist, and it must be made 100ft. or more so as to drop the bait just outside the line of breakers. Menhaden or "mossbunkers" are the best bait for this fishing, and the reel should hold from 300 to 400ft. of line. The rod should be about eight feet long, made of two bamboo joints, and a leather thumbstall is necessary so that the line will not cut when stopping the cast or playing the fish. The best place I know of for this sport is the beach above Long Branch, and a good plan is to make headquarters at Snyder's "Old Homestead" at Branchport (round trip fare, by rail $1.50; by steamboat Elberon from foot of Franklin street 60 cents), and walk from there over to the beach. Hotel rates are $2 a day and upward. If the fisherman goes to Long Branch direct he is no nearer the fishing ground and has to endure the stares of the dudes and dudines of the swell hotels. Platforms were erected on the beach here last fall for standing on to cast, and I presume they will be there this season. Another good place is Sandy Hook, reached from foot of Rector street by boat to Sandy Hook pier (round trip $1), thence a walk across the Hook to the beach. Other famous places below Long Branch are Key East (round trip, by rail, $2), and Ocean Beach (round trip, rail, $2).

On the public fishing piers at Long Branch and Asbury Park there is fair fishing for striped bass and occasionally sea bass and big porgies. There is a yearly prize given by Mr. James H. Bradley, of Asbury Park, for the biggest fish caught off that pier. From Asbury Park and Long Branch there are daily excursions to the Little Banks, where sea bass, striped bass, ling, bluefish, cod, pollock and other varieties are caught. The Banks fishing will be described in another article. SENECA.

NOTE.—Since the last article was prepared the writer has learned that there is a steamboat running to Rossville, S. I., and Perth Amboy, N. J., from the foot of Vesey street week days at 10 A. M. Fare, round trip, to either place by the Meta, forty cents.

A DAY AT THE GROUPER BANKS.

Editor Forest and Stream:

Looking over a late issue of the FOREST AND STREAM I noticed an interesting article on recent explorations in the Gulf of Mexico, and it put me in mind of a pleasant day spent on the Grouper Banks, which lie eight miles due west from this place. We chartered a fine schooner, the Asa Lowe, which is owned and sailed by Capt. Lowe, an old fisherman. The party consisted of five gentlemen, Messrs. Starr, Gentry, Phillips, Tate and the writer. This expedition had been planned and attempted many times, but on account of high sea outside or no wind we never could catch any groupers; so when we announced the evening before that we were going, every one laughed, and some said, "I should really like to see a grouper."

The morning broke, cloudless and as calm as could be, but we went down to the Lowe, and waited until 8 o'clock before a ripple came on the water. Starr, who is a very enthusiastic fisherman, but had his doubts about grouper fishing, was for giving it up then and there; but as we saw a sloop waiting for a breeze half a mile from the wharf, and she had started at six o'clock, we thought we would stick to it a little while longer. Well, after many tacks, we managed to go out the little pass, beating the other boat, for the Lowe is a remarkably swift sailer in all kinds of weather. The gulf lay like a lake, as blue as the sky, with scarcely a ripple on the surface. As we lazily rose and fell on the swell, we thought of the people on shore watching and laughing at us, and determined not to put back, even if we had to stay all night and anchor behind the breaker bar. At noon we were not more than four miles from shore or from the keys. The shore lies two miles inside the keys. The lead showed six fathoms of water and no groupers, as at this time of the year the fish lie in deeper water, from eight to ten fathoms. We ate our dinner and whistled for a steady breeze. At last the captain began to overhaul his sounding line, and at once every one was on the *qui vive*. No more sleeping, no more yarns, when we may be over the banks. The old captain stood on the port bow and threw the heavy lead directly aft for about 3ft., and then with a forward swing sending it 30ft. ahead. The line sang as the lead sunk and then stopped paying out. The captain looked at the bottom of the lead, shook his head and said: "Sand." A groan went up from us all. He cast again. "Rock! Luff her!" The sails shivered and the jib came down. In an instant, and before the Lowe had lost her headway, every line was in the water. The line used is a heavy cotton one, which has a heavy sinker at the bottom and one or more hooks fastened above. The fishermen never anchor, as the flukes catch on the rocks and they are unable to recover the anchor.

The manner of fishing was entirely new to me, so I will describe it, for it may be the same to others. The hooks are baited with a large piece of cut fish and the sinker is allowed to strike bottom. Then it is lifted and dropped. This is kept up all the time while fishing, so as not to allow the sinker and hooks to catch on the coral. The jerks made by the sinker sliding from one piece of coral to another resemble bites, and Gentry had a hard time, for he was constantly pulling up his 60ft. of line, protesting that he had a fish on, but he got away. Of course every one was eager to catch the first fish. The luck was with me, for I felt a decided pull and after some little play landed a large grunt. Another groan went up, as we were not out after grunts. The captain said: "Where there are grunts of that size you will find groupers," and sure enough, for Phillips began to haul in groupers as fast as he could, single and double catches, while none of us caught anything except grunts. We tried to explain it by saying the fish saw our white lines. Phillips was using a very fine line, and consequently was obliged to wear gloves, as the line cut his hands badly.

The writer caught a splendid 10lbs. grouper, and then we drifted off the rocks. We filled away again, and found another bed of rocks, and began fishing. Gentry, who up to this time had not caught a single fish, sudden-

ly straightened out, and cried to the captain to help him land his fish. After pulling like a pair of oxen they managed to get on deck a piece of coral, perfect, which weighed, probably, 50lbs. All manner of queer things were found in the branches and in the roots: starfish, queer little yellow fish with bright blue backs, etc. Gentry was more pleased with his coral than if he had caught a 20lbs. grouper. Presently Tate had a bite, and attempted to pull in, but the fish was too strong for him, for he fell over on his back, but still holding on to the line. After considerable work, and exciting work, too, he landed the finest catch of the day, a 10lbs. red grouper, and a 10lbs. black grouper.

As the wind had almost died out, we started back, and reluctantly coiled up our tackle. After a pleasant run, with all sail set, we made Big Pass by dark, and the wharf by 8 o'clock, with a string of fish that anybody might be proud of. Starr, Tate and I had twenty-eight groupers and twenty grunts. Two men could hardly carry the load up the bluff to the hotel on a stick of timber. Gentry and Phillips had an equal number. We went up to the hotel feeling very much satisfied with ourselves. The gentlemen who stayed at home and scoffed were green with envy; but ate grouper steak for breakfast, just the same.

We have had splendid fishing in the bay and inland lakes during the winter. The tarpon have not arrived here in any great numbers, but we saw a school of fourteen or fifteen sporting in a bayou. If any one wishes to spend a pleasant winter, with good accommodations, come here, for the Orange Bluff Hotel is here, and has a good manager. FRANCIS GOODHUE, JR.

CLEARWATER HARBOR, Fla.

CHICAGO AND THE WEST.

CHICAGO, April 22.—Messrs. D. P. Wilkinson, J. M. Clark, Frank Stone, Tom Waters and Ed. Van Bergen were out on the Fox River fishing last Saturday. They are all devotees to the art of casting. They caught one crawfish and one mud-puppy, but say the air was very fine.

Considerable numbers of pickerel with some bass and wall-eyed pike have already been picked up at Fox Lake, but there has been no regular sport at all.

Attention should be drawn to the manner in which wall-eyed pike and bass have been speared in the Kankakee River in Indiana during the past year. One pusher told me this spring that he had speared 85 wall-eyed pike in one night during the spring run of a year ago, and that this spring he had often killed two to three dozen in a night. The Kankakee is being cleaned out. Yet it is a good angling stream if treated right.

April 27.—To-day is a warm and beautiful day, and there is moving a mysterious something in the air which has filled up all the sporting goods stores with crowds of men who are inspecting and buying fishing tackle. This is really the first day of the fishing season, because it is the first day when the gentle angling malady has really claimed its victims wholesale. It is in the air now, and all Chicago seems eager and good-natured, as the symptoms always run of this delightful ailment.

Chicago never displayed a larger and more perfect line of angling goods than she does this spring. I presume few cities could equal the display. It shows clearly the growing interest in the pleasant and healthful sports of the flood and field, which are this year beginning to draw a large following from other popular but less rational sports. It shows also the fact, not yet fully known, that Chicago is the natural center and starting point for as grand a fishing country as there is in the United States. I hope to do what I can toward definitely confirming this statement this spring. There is a wealth of undiscovered fishing knowledge lying about here, and it ought to be looked up.

Among other gentlemen whom I saw outfitting at Spalding's this morning were Messrs. C. H. Adams of the Board of Trade and Mr. Theodore Gray. Both of these gentlemen are going East, Mr. Adams to fish in Maine waters. Mr. Gray will also visit Maine this summer, returning here about July 1, in time to catch some fish. All nonsense, going to Maine. The Maine men would better come out here. There are fish as is fish in some places not a thousand miles from here. E. HOUGH.

CURRENT RIVER CLUB.

ST. LOUIS, Mo.—*Editor Forest and Stream:* The Current River Hunting and Fishing Club has decided to erect a handsome and suitable club house, and has therefore levied an assessment of $5 upon each member. It is the intention of the club to erect the building on the banks of Current River, in Ripley county, this State. Current River is a beautiful stream with pebble bottom, and abounds with pickerel, jack salmon, pike and black bass. It is called Current River because the current in it is very swift. At times, when the water is low, there are a number of mean and dangerous rapids to be encountered in it, and an expert boatman is required to pilot one over them in safety.

Deer are very plentiful in the vicinity, and quite a number were shot and secured by the members of the above club during the past season. Turkeys are also quite numerous. Small game, such as quail, woodcock, squirrels and rabbits, are also plentiful, and good sport is to be had on them down there when in season.

There are now eighty names on the club's membership list, and the assessment, with what there is in its treasury, will give it a sufficient amount to erect the club house and furnish it, build boats and purchase whatever else may be deemed necessary for a complete equipment of the club.

The Missouri Lumber and Mining Company have donated to the club forty acres (reserving the mining and timber privileges), being the property surrounding the site selected for the club house, while the ground on which the club house will stand, including eight and one-third acres, is given to the club by S. Short of Northeast Pennsylvania in fee simple, thus insuring the club a permanent location, free from any interference whatever.

The club house is to be neatly and substantially built on a high point overlooking the river and at one of the best fishing pools on the entire river. Work will begin on it immediately, and will, it is expected, be ready for occupancy in a few weeks. When completed it will be put in charge of an experienced hunter and fisherman, who will be found at the club house at all times to attend to and furnish sport for the members. UNSER FRITZ.

CALIFORNIA'S FISHED-OUT STREAMS.

Editor Forest and Stream:

As in many other States, the trout season opened this month in California; that is the legal season opened. Very little attention is paid to game laws in this county, and, indeed, in all the other counties that I know anything about. The first Saturday of the month, with a companion, I went up on Mark West Creek to investigate the trout question. We went pretty well up the creek, about eleven miles from town. We found the creek in good condition in every way except for fishing. A native informed us that the creek was about fished out. So, somewhat discouraged, we went to work and at night we had about one hundred trout. Now, in one respect, trout are like men. Some men are to be counted and some are to be weighed. So it is with trout. These trout were to be counted.

There is a creek about twelve miles east of town that I have always heard was full of fish. I have been there many times, but until last Saturday had never fished it. It is called Sonoma Creek. Friday I made my preparations to go next day. Saturday morning I got up at 5 o'clock to start, but then the rain was just pouring down. I went back to bed and slept till six. The rain had stopped then, so I got on my bicycle and started. It was pretty muddy for a bicycle, and several times I had to g. o. p. But in an hour and a half I got to the creek and started to fish. I fished for about an hour and only got one bite, and that was a sucker. That disgusted me and I quit. I then came back toward home, and stopped at Santa Rosa Creek, about five miles from town. Here I fished all day and caught only seventeen. Like all the other trout that are caught around here they are very small. The trout here range from three to eight inches, average about five.

I learned to day that the fish in Sonoma are all below a dam, which is about fourteen miles from here. My informant said there are plenty of trout below the dam. I think I will wend my weary way out below the dam next Saturday.

I was greatly interested in the "Mexican Notes" which appeared in the last issue. The gentleman who wrote the article used to teach in a college here. I was one of his pupils. I hope he will give us some accounts of his hunting trips, something about the turkeys, deer and bear which are in those mountains. BICYCLE.

SANTA ROSA, Cal., April 16.

BIG TROUT AND PICKEREL.

IT IS evident that the giant trout are not all dead yet, if we are to believe the stories told of the ice fishing this spring. An Augusta, Maine, paper recently had an account of a "square-tail trout" just caught in Snow Pond, in the town of Belgrade, that weighed 14¼lbs. The fish after it was dressed weighed over 9lbs. In the same pond there was also caught recently two big trout, the united weight of which was over 14lbs. The town of Belgrade is noted for its ponds, there being several large lakes within the town or partly in it, and these ponds have always been noted for their fish. But of late years, or since the pickerel craze, which swept through the entire State some thirty to thirty-five years ago, these ponds have been more noted for pickerel than any other fish, unless, indeed, it be for white perch, which have afforded good sport in some of these ponds at times. Some twenty years ago there was in existence a white perch association, made up of Waterville, West Waterville—it then was, now Oakland—and Belgrade gentlemen; and later their ladies were taken into the association. But the stocking of the ponds with black bass was of no benefit to the white perch, and within a few years the association died out. Ephraim Maxham, formerly one of the editors of the Waterville *Mail*, but now asleep in the valley of the Kennebec, was a warm friend and supporter of that White Perch Association. He had in his kind heart all the genuine love of an Izaak Walton for the shining waters of the Belgrade ponds, the meetings of the White Perch Association, the rods and lines, the bait, even the chowders on the island. But there finally came to his creel one of those giant trout, which the pond was noted for before the deadly pickerel came. Ephraim was "fishing over the side of the boat," so he told the story, "with a worm and taking now and then a perch." The creel was nearly full, and he fell to chatting with a friend, and his rod hung idly over the gunwale. A little minnow became impaled on the hook through voraciously snapping at the worm, "and just to punish him," Ephraim remarked, "I thought I would let him dangle there for a while. Absorbed in talking with Mrs. ——, on our Sons of Temperance affairs, the hook dragged for some little distance with quite a long line out. All at once there came a great swirl in the neighborhood of the hook. The rod gave a bound and nearly went out of the boat. By mere chance I caught hold of it, and then I thought the hook was fast to the bottom, but only for a moment, for the bottom proved to be a very lively one, to say the least, and I began to fear for the rigging—only a dry juniper for a pole and a strong pickerel line. I was aware that I could not land the fish by main force, as we had been doing with the white perch all day, but I thought that I could tire him out and get him alongside of the boat, where we could see him. The fish tugged and pulled, and the old juniper threatened to break at every extra swirl. But the line was strong, the hook was large, and soon I drew him in till I caught hold of the line and had him up to the boat. He was a monster, and such colors! He was the biggest trout I had ever seen, and land him I must! Collins, who was managing the boat, suggested that we tip the boat down to the gunwale and then I could jump the trout in. It was done, and in a twinkle I had the biggest brook trout in that boat that I had ever seen. It weighed over 6lbs. I was king of the White Perch Association after that. I had caught the biggest and the only spotted trout seen in that pond for years.'

But the question in hand is that there are yet a few of those giant trout left in many of the lakes and ponds in Maine, where once they were about the only fish, except the minnows on which they feed. These lakes and ponds are all of them natural trout waters, and but for the pickerel and bass, they might again be trout waters. The natural woodsy condition of the most of these ponds still remains favorable to trout, but there are the pickerel. The pickerel not only eat up all the food—the minnows—on which the great trout could subsist, but they prey upon the young trout. It is only occasionally that one reaches such a size that the pickerel cannot master him. Then he is left to grow, and when such a trout is caught, it is one of the giants such as is mentioned at the beginning of this article. The pickerel lakes and ponds of Maine are all fed by streams, and these streams are all trout streams, if you go up far enough to find rapid water, and above such rapids as the pickerel cannot stem. Here the small trout continue to be hatched, and they would go down, and doubtless do go down, only to be destroyed by the pickerel, instead of growing up to be giant trout as in days gone by. If great Jupiter with a thunderbolt would only blot all these pickerel out of existence, and then throw the bass and sticklebacks over into the ocean, what trout waters we again might have! SPECIAL.

THE SALMON IN NORWEGIAN SEAS.

A POINT always obscure in the history of this fish is the knowledge of its actions at sea, where it is reputed to pass a large portion of the year and where, however, there has been no record of its capture. Monsieur, the Marquis of Ferronnays, has propounded a new theory in regard to this subject, which appears to me well worthy of attention. "We always have," he remarks, "Norwegian sailors in our ports, and they all tell us that in their country, when they engage in fishing along the shores, they take in their nets large, medium-sized and small salmon at the same time; that is to say, salmon of all ages and every degree of development."

This proposition, in its present form, is a little vague and does not give evidence of the careful observation which one would demand in considering a statement so novel; the question which it raises is always so interesting that I desired at once to have the opinion on this matter of the man best qualified to inform us—Mr. Robert Collett, professor of zoölogy in the University of Christiania, the well known ichthyologist, who has in recent years prosecuted a study of the Salmonidæ of northern Europe, with the intention of publishing the results of his work. The following letter, dated Jan. 9, which my esteemed colleague has obligingly written me, answers the question directly:

"As to the statement concerning the Norwegian fishermen in their relation to the salmon fishery along our shores, the case stands thus: During the summer thousands of salmon are caught in nets along the coast, from Lindesnæs to Finmark; most of them are young, but there are some adults also. They evidently follow the shore, seeking the mouths of rivers, in which they ascend to spawn. Salmon certainly never spawn at sea, but only in the streams; at the end of autumn they descend again to the sea, in the depths of which they pass the entire winter, never being captured on the shores at this season. Very rarely a male remains in fresh water throughout the winter; when such an individual is caught in the following spring, it is found to be excessively thin, because food is very scarce in rivers. During its sojourn in streams the salmon really eats almost nothing; in the sea, during the winter, it grows rapidly, for it is a voracious animal, feeding on herring, sand launce and other fishes. The young sometimes leave the rivers, but rarely until they reach the age of twelve to fourteen months, and more frequently two years. At this period they measure from 6⅝ to 6¼in. long. They remain at sea until they are ready to spawn; the river which they ascend is most frequently the one in which they were born."

This extract * * * shows that on the coasts of Norway the same conditions apply to the salmon as on our own shores, except, perhaps, as regards the abundance of the fish and certain facts as to the time of its appearance, differences which may be satisfactorily explained by the difference in climate.

To summarize: (1) The salmon in Norway is not caught far from the coasts, but near the shore; (2) when both young and adults are taken the young are not kept; (3) there is no fishery except in summer when the fish attempt to ascend fresh waters to spawn.

It results unfortunately from this disposition of the question that the presence of the salmon at sea is uncertain, for though Mr. Collett, and all ichthyologists, admit that this fish after having deposited its eggs in fresh waters retires to the depths of the sea, this is merely an inference, doubtless natural, but wanting direct proof. The animals which this savant mentions as constituting the food of the salmon throw no light on the subject, as they are without doubt such as it captures when approaching the shores; the sand launce (*Ammodytes*) especially is a shore species.

If, on the other hand, the salmon secretes itself in great depths, how comes it that the numerous dredgings made in this region have not yet yielded any, or that a specimen has not even been secured accidentally, like certain other fishes from the same regions, after severe storms? The non-capture of the salmon seems the more extraordinary since the rapid increase in the size of the fish in salt water indicates sufficiently that its life therein is a very active one.—*Léon Vaillant, in Revue des Sciences Naturelles Appliquées, February, 1889.*

TROUT FISHING NOTE.—Leonardsville, Madison county, N. Y., April 27.—Trout fishing does not open up very propitiously in this section this spring. The fact is, there are but few trout here in what are known as trout streams. It seems a shame that right here in the natural retreat of the speckled beauties, where purling, splashing brooks of limpid water abound, they should be almost exterminated. The writer is familiar with the streams of northern Michigan, and on the small tributaries of the Upper Muskegon we have met with splendid trout fishing in stocked waters, where it was very difficult to force a passage through the jungle of cedar and evergreens that fringed the banks of the log-clogged creeks. The water was yellow and sluggish, and had scarcely supported suckers prior to the introduction of these mottled gamesters. They are multiplying very rapidly up there, while grayling are on the decrease. Fish for grayling on the headwaters of the Manatee and Pine, and for royal speckled trout on the upper tributaries of the Muskegon. A State hatchery is located at Paris, near Reed City, which is the savior of the fishing interests in that region.—BOXER.

SALMON IN THE HUDSON.—A fine 21lbs. salmon was taken last Thursday in a shad net off Keyport, N. J., and for a day or two after that was to be seen on the slab at Blackford's, in Fulton Market. This is the sixth large fish of this kind reported this year. It has been suggested that this year some might be taken with the fly below the dam at Troy, but we have not learned that any successful attempts to do this have been made.

MAINE ANGLING PROSPECTS.

THE promises for an early trout season at the Maine lakes are more favorable. The season is unusually early, and though at the present writing the ice is not yet out of the Androscoggin Lakes [the Rangeleys], yet the indications are that they will be cleared earlier than usual. The ice can hold in Umbagog but a few days longer, so the reports say, and this lake is the first one of the Androscoggins to clear. Capt. Farrar has gone down to his place at Cambridge, N. H., in order to be there as soon as the lakes are clear. He told me last evening that he expected to hear that the ice had gone out of Umbagog. This is at least two weeks earlier than for many years, this lake not usually clearing before the 12th of May. He will start his steamers on their regular trips up the lake to Sunday Cove, and the team will be put on to the Middle Dam at once. Thus those desirous of reaching the Narrows, Richardson Lake, for the early fishing can do so. The Narrows are doubtless already clear, as the ice is always very thin there, and goes out a week or two before it does in the lake, either above or below. The fishing at the Narrows, before the ice is out of the rest of the lakes, is something about which big stories are told.

A report last evening said that the ice was out of Moosehead, but I am not able to confirm the statement, though doubtless the lake will be clear in a few days. There will be a grand rush for the early fishing at the outlet as soon as the ice is out. Weld Pond is clear of ice, but at last accounts the landlocked salmon fishing had not been up to expectations. It is evident that the smelts have not begun to run, as this event always marks the season of greatest success with the landlockers. There has been considerable fishing in the streams of Maine, and some full creels have been made, but after all the water has been unusually low in the southern part of the State and trout fishing not much of a success. It is this season that a curious feature of the Maine fish laws comes into play. The statute provides for an annual close time between the first day of October and the first day of May, but provides that inhabitants of the State may take trout and landlocked salmon during February, March and April and convey to their own homes. Usually this law is operative only as to fishing through the ice, which fishing has been pushed to a shameful excess this year, for the streams are rarely open before the first of May. But this year there has been a good deal of opportunity for fishing through April, and the practical working of the law is the same as it would be if the open season begun on the first day of February, except that fishermen from out of the State are debarred from fishing till the first of May. There is a good deal of dissatisfaction concerning this clause of the law, expressed by sportsmen who have annually visited Maine for a number of years. The feeling is that the lakes and streams are being thoroughly stripped by this winter and spring fishing, and the danger to Maine is that the attention of these sportsmen will be turned to other waters. Indeed, the Inglewood Club, with waters and leases in New Brunswick, is promising to be very popular with many Boston sportsmen who have been in the habit of visiting Maine on former seasons. A gentleman was saying to me the other day that he was tired of hearing of ice fishing in Maine, and now that streams were being stripped before the first day of May, he had made up his mind to desert Maine altogether and become a member of some New Brunswick club. But the latest report from the Maine trout fishermen, those who dwell in the State, indicate that they are waiting anxiously for the ice to clear from the Androscoggin Lakes. At Lewiston, Paris and Norway the trout fishermen have their tackle all ready for an early start for Richardson Lake as soon as the ice gets out. But their enthusiasm is not generally shared in by Boston sportsmen. Even among those who are usually waiting and waiting for the ice to start from the great trout lakes, I have scarcely heard the subject mentioned yet. It is too early, and busy merchants, who annually expect to go afishing the last days of May and early in June, can hardly get ready to start the first of May.

Salmon fishing at Bangor has not proved to be much of a success this year, though the opening was very early and a few are being taken. Mr. Fred Ayer is keeping some Boston sportsmen posted, and as soon as he telegraphs them that the salmon are rising rapidly, they will take the next train for Bangor. SPECIAL.

FISHING ON THE WEST COAST.

WE have had three winter trips of fishing and hunting on the west coast of Florida. The first, from Cedar Keys to Sarasota Bay, was a failure, being too far north for winter fishing, and there are so many inhabitants along the coast that there is but very little game to be got. The second trip we went south as far as Cape Romano, and were quite successful in fishing. An account of this excursion was printed in your paper last June. Last winter we extended our trip further south, to Rogers River, the most southern part of the Ten Thousand Islands, which was the place we had fixed upon to begin our winter sports, and to cruise northward among those islands, as would suit our convenience.

Rogers River empties into the Gulf through a cove or bay of quite shoal water, interspersed with numerous oyster reefs and with plenty of feeding ground for the vast number of fish that inhabit these waters. Mangrove snappers, groupers, cavallia, jew, redfish and catfish fairly swarm along the coast, and sharks soon make known their presence. There we found numerous tarpon, which readily took the bait, as did the other fish. We then worked our way by a very narrow, crooked and shoal channel, through the oyster reefs that extend entirely across the mouth, until we reached the river proper. There we found water from ten to fifteen feet deep. In some places we could not reach bottom with our setting poles. We went inland some fifteen miles in the hope of reaching the mainland, where we could find game, but we were disappointed in this, as the river heads in the open everglades, where we saw no signs of either ducks or deer. Successful hunting is done on the mainland.

On the flats at the mouth of the river there were a great many small blackhead ducks, of which the people of the United States Coast Survey, who were located there surveying, shot a great many; but there are no large ducks or geese. The surveyors had also killed a number of deer on the islands. This river seems to be but a long, deep, narrow sink, and is fresh water, bordered on both sides with mangrove. There are some hammocks of fertile land, which, we found to our surprise, in that out-of-the-way place, are farmed. Tomatoes and other truck crops are cultivated, shipped to Key West, thence to New York in the winter. The river abounds in fresh-water fish, but I did not see one tarpon in it, nor did I ever see one in fresh water.

From Rogers River we cruised among the islands, beginning at Pavilion Keys. They are mostly low mangrove islands, which are overflowed by the tide. Some of them are larger and higher, and some have hammocks, where deer may be found. It was too hot for us to do much hunting, 75° to 90° in the shade, in the sun as high as 116°. Hot as it was, strange to say, we kept some venison for two weeks without any sign of being spoiled, nor were we troubled much with mosquitoes or insects.

I saw but little apparent difference between these and other clusters of islands and inner bays along the southern coast. I have been informed that, some years ago, these islands were the home of the plume birds of South Florida, but the plume bird hunters have nearly destroyed them. The flamingo is no longer seen there. There are a very few game birds, and most of them are willet. In all channels small fish are abundant and readily take bait, I call all fish small except tarpon. In the shoal bays that have a lead of deep water from the main channels, tarpon are numerous at favorable tides, and can be caught with hook and line. The same may be said of the islands, bays and fishing from Gordon's Pass to Rogers River.

Gordon's Pass bounds a point of mainland on the south which extends to the Gulf, where the city of Naples is being built, and where the Ten Thousand Islands are said to begin, and ends at Rogers River, the whole of which appears to be the winter home of the tarpon. There are tarpon in the waters of Oyster and Carlos bays. Quite a number were caught there last winter, but I did not see one here to a hundred that I saw south of Gordon's Pass. P.

LATE SCHOOL OF SPAWNING COD.—Capt. J. W. Collins has just received a letter from Capt. Stephen J. Martin, of Gloucester, Mass., announcing the arrival off Cape Ann about April 20, of a very extensive school of large gravid cod, the two sexes being about equally divided, and most of the females being ready to spawn. The bulk of the catch has been made about five miles to the southeast of Norman's Woe, at the entrance to Gloucester Harbor. On Saturday, April 21, fifteen small open boats with two men each and a trawl of 1,000 hooks took a total of 27,000lbs. of cod; one boat caught 3,000lbs., the fish averaging 24lbs. each as they came from the water. Some of the little vessels, of ten to fifteen tons, with six or eight men in the crew, took as much as 8,000lbs. in a single day. It is the opinion of the fishermen that this school of cod has followed in a school of herring which has recently appeared around Cape Ann and yielded large catches in the trap at Kettle Island, near the mouth of Gloucester Harbor. Two years ago a similar school of cod came in off Gloucester about this time of the year and remained until after the middle of May, some of the boats making their best catches about May 10.

SAFETY-PIN FISH STRINGER.—*Editor Forest and Stream:* Before reading Mr. Lilly's article on the "fish stringer," I had been experimenting with numerous devices to secure a good stringer, and came to the conclusion that the large safety-pin, usually used for fastening shawls or blankets, would do; so procuring a couple of dozen of the largest that I could find I knotted them on a good strong cord a couple of inches apart and believe that it will make a good stringer. They are easily procured, easily used and perfectly secure, as after the fish is strung it serves to lock the pin. The pins I use are 3¼in. long. Let the brethren try and report.—KOSHEE (Gravenhurst, Ont., April 16).

Fisheulture.

VIRGINIA FISH COMMISSION.

THE annual report of the Superintendent of Fisheries for the year ending Dec. 31, 1888, announces the completion and partial equipment of a new hatching station for salt-water fishes on the eastern shore of Virginia. The State now has two permanent hatcheries, one of them devoted to rearing salmon, trout, grayling, redeye, black bass and other fresh-water fishes. This establishment is leased to the U. S. Fish Commission, which pays a yearly rental and furnishes a certain supply of young fishes for Virginia streams. The superintendent, Mr. John T. Wilkins, Jr., has begun to investigate the fisheries in the tidal waters of the commonwealth. He finds a perceptible decrease in the average yield of traps and seines, and a falling off in the size and weight of the fish caught. The aggregate yield of the fisheries in 1888 slightly exceeded the product of preceding years, but this was secured by a greatly increased number of traps, with a corresponding increase in the number of men and the amount of capital employed. Pound-nets, which were not used before 1875, now occupy most of the available locations on both sides of Chesapeake Bay. In 1880 the number of pound-nets in Virginia waters was 162. The value of the fish caught, including menhaden, was $906,068. In 1883 the number of pound-nets had increased to 412, and the catch, including menhaden, was valued at $1,258,576. The number of pound-nets operated in 1888 was about 550, and their product, including menhaden, was worth about $1,265,000. This shows conclusively that the Virginia fisheries are on the decline, and the superintendent carefully studied the means of arresting this decline. He would not restrict the number of fishermen, nor establish a close season covering the spawning period, but recommends that the State encourage the artificial propagation of *Salmonidæ* and *Cyprinidæ* in streams and ponds, and make liberal appropriations for hatching and protecting the marine and anadromous fishes which constitute the chief objects of the fishery in the tide water section.

The menhaden industry, though of comparatively recent origin, has grown rapidly in the last decade. In 1880 the business was carried on by 102 sailing vessels, and the total yield was 88,213,800 pounds of fish which sold for $320,589. The fleet in 1888 numbered 180 sailing vessels and 17 steamers; the industry gave employment to over 6,000 persons, and its product is estimated at a value of $450,000. "There seems to be no limit to the supply of these ubiquitous fish, the annual catch varying year after year with conditions not well understood."

The oyster industry in Virginia is still very important, but is diminishing in value owing to illegal tonging and dredging. In 1886 the business employed 18,064 persons, and the capital invested was $1,361,106; the number of bushels of oysters caught and sold was 6,837,320. The earnings and wages amounted to $3,135,923. In 1887 the capital invested was $1,400,000; the earnings and wages amounted to $2,968,840; the number of bushels obtained and sold was 5,400,000, and 15,700 persons were employed. In a short time the Virginia people will be forced to cultivate the oyster according to the system adopted and successfully applied by Connecticut, Rhode Island and New York. At present the uncertain tenure of planting grounds prevents the development of the industry.

The shipping of crabs and crab meat has become a valuable enterprise, in many localities assuming greater proportions than the oyster trade. The products of the canneries find their way now to markets beyond the Mississippi.

The new hatchery, known as the Glebe Hatchery, is on the eastern shore, between Hungar's and Nassawadux creeks. This location is convenient to the pounds and traps taking the largest lifts of Spanish mackerel, which is the species principally sought after for purposes of artificial propagation. The spawning season of the Spanish mackerel usually opens in Virginia waters about June 21 and lasts until the end of August, or rarely as late as Sept. 10, the greatest number of ripe fish arriving from July 1 to Aug. 15. In 1888 the best run of fish passed up the bay from June 10 to 25 and as this was close season for pound nets the hatchery could not secure the eggs until a later run of smaller fish came along; 4,000,000 eggs were secured, but the percentage of fertilized ova was smaller than was expected.

"It was observed that during the prevalence of east, northeast and north winds the run of Spanish mackerel, bluefish, pompano and trout (weakfish) materially decreased below the average, while on the other hand, during west and southwest winds, the catch was above the average. The largest lifts were taken, however, immediately after a west or northwest gale. Menhaden or alewives are observed by the lookout vessels to be more abundant in moderately calm weather, with southwest or westerly winds. Easterly winds do not seem to injuriously affect the in-shore catch of menhaden."

Mr. Wilkins recommends that the prohibition of pound net and fyke net fishing during the month of June be discontinued, as it entails a loss to the fishermen of $50,000 annually.

THE MENHADEN INDUSTRY.

Editor Forest and Stream:

I have noticed the communication by Mr. L. Maddocks in your issue of the 11th instant, and particularly the unwarranted criticism therein of my aim with reference to the menhaden question. Surely no word of mine is open to such stricture. I have censured no one for defending the menhaden fisheries. I have, however, deemed it in place to publicly refer to certain contradictions and inconsistencies in the statements of some writers on the subject, to the end that a fair understanding of the matter might prevail. For example, if I should contrast the statements in Mr. Maddocks's present article that "neither is menhaden the dependence of the coast fisherman as a bait supply," and "Herring * * * are now considered a better bait and are used in preference to menhaden," with that attributed to him at Augusta the past winter, and deemed reliable, that "as a bait supply these menhaden are invaluable," I certainly ought not to be charged with censuring him.

On the other hand, when he remarks, with reference to menhaden, that "we become fully convinced that the operations of man with all his appliances has not, cannot and will not ever perceptibly diminish their numbers," and then states that "in support of the assertion we have the testimony of the highest scientific authority," I take issue with him. Ichthyologists have contrasted the enormous quantities of menhaden consumed by predaceous fishes, etc., with the comparatively limited number taken by man; but I venture to assert that they are not on record as stated by Mr. Maddocks.

For my views as to the departure of the menhaden from the region beyond Cape Cod ten years since, and their return in 1888, I refer Mr. Maddocks to your issue of Nov. 29 last. Furthermore, I will put this prediction on record on this point: If the menhaden steamers defer their operations this year to the same date they did in 1888, the Maine coast will abound with menhaden the coming June. I go further. It is my belief that a conjoined time and distance limit applied by law to seining menhaden, will be of inestimable benefit to the fisheries of the Atlantic coast.

As to the sentiment expressed by your correspondent, that there should be no restrictive fish laws, the view is utterly repugnant to the enlightened tendencies of the day.

I refer with hesitancy to two statements made by Mr. Maddocks which I quote in full: No. 1. "Another delusion Mr. Martin is laboring under (which is common to many writers) is that menhaden as they swim are food for any food fish on our coast." No. 2. "Investigation has proved conclusively that few food fish have the ability to prey upon the menhaden or subsist upon it as a daily food." If Mr. Maddocks will allow me I will make a correct application of "scientific authority," and quote from Prof. Goode, with whose statements I leave him to square his own. Says the Professor: "All the large carnivorous fishes feed upon them, namely: The pollock, the whiting, the striped bass, the cod, the squeteague and the garfish are savage foes. The swordfish and the bayonet fish destroy many. The bluefish and bonito are, however the most destructive enemies." Are the above enumerated fleet-finned fishes without ability to prey on the defenseless menhaden?

Mr. Maddocks closes thus: "In view of all the facts the unprejudiced mind must conclude that the only proper use for the menhaden is to be converted into oil and guano."

Let me state that high authority, in alluding to the characteristics of the menhaden, states that its legitimate mission is to be eaten.

In conclusion let me assure Capt. D. T. Church, apropos of his article in your issue of the 18th inst., that writers favorable to the food fish interests do not argue that menhaden are in process of extermination, but that the menhaden steamers do either catch up almost entirely the in shore schools, or drive them out to sea. Capt. Church's reference to the large run of menhaden in 1888 and the profitable season of the menhaden men resulting therefrom, and his bold offer to prove the facts, were wholly anticipated in my article in FOREST AND STREAM Nov. 29 last. In his last article he states that "since 1880 the striped bass * * * have given direct testimony that they can look out for themselves by coming back in great numbers after long periods of scarcity." In an article of February, 1888, he states: "Striped bass have been absent several years."

To the menhaden men in general it may not be out of place to remark that the fishermen and anglers aspire to no dominion, they seek no supremacy. They believe that in the interest of food fishes and of the whole people the menhaden must be protected by man against man. ARTHUR MARTIN.

WASHINGTON, April 20.

FISH PROTECTION IN CALIFORNIA.—By an act of the California Legislature approved March 4, 1889, section 635 of the Penal Code was amended to read as follows: 635. Every person who places or allows to pass into any of the waters of this State any lime, gas, tar, cocculus indicus, sawdust or any substance deleterious to fish, is guilty of a misdemeanor. Any person who shall catch, take or carry away any trout or other fish from any stream, pond or reservoir, belonging to any person or corporation, without the consent of the owner thereof, which stream, pond or reservoir has been stocked with fish by hatching therein eggs or spawn, or by placing the same therein, is guilty of a misdemeanor. Sec. 2. This act shall take effect on and after the first day of September, 1889.

FIXTURES.

DOG SHOWS.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.
Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.
Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary.
Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Club, Toledo, O. T. B. Lee, Secretary.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.
Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.
Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary pro tem., Mill's Building, New York, N. Y.

DOG SHOW MANAGEMENT.

Editor Forest and Stream:

As one of the oldest of dog show habitués I offer these suggestion, few and simple in themselves, yet overlooked by nearly all of our bench show managers. The very successful season just closed gives promise that future seasons will be still more prosperous, and that dog shows have come to stay. As a rule the shows of the past season have been well managed, but at the same time there have been many little things left undone that if attended to would have added to the comfort of the exhibitors, and consequently to the success of the show. As soon as it is decided to hold a show it is of paramount importance that the committee should first select a competent man, one well versed in dog lore, for superintendent, and a local man is always to be preferred, as he will be more or less acquainted with parties in the city or town that take an interest in dog matters, and will know at once where to go to secure entries, his friends will take an interest in the show on his account, and this will add greatly to its success; being thoroughly acquainted in the city, he will be able to give general information to visitors. Persons coming to the show as a general thing wish to be shown around the town, and ought to be placed in the hands of responsible parties. Most handlers when they reach a show wish to run out and buy a few trinkets, either for their dogs or to take home with them, and the first party they look up is the superintendent. If he replies, "Indeed, I don't know, I am a stranger here myself," the visitor, being strange, feels as if he were lost. On the other hand, if the superintendent says, "You can get what you want right down here, and Mr. So and So is going down that way now," and calls some one up and introduces him to the stranger, the latter feels as if he had fallen in with old friends. The new acquaintance will be able to inform the stranger of the principal attractions of the city, where he can get a good hotel at reasonable rates and the character of the same; in fact he will find him a bureau of information on subjects relating to his visit, and his kindly influence will have a great deal to do with the success of the show.

When the person is once selected for the position of superintendent, he should have absolute control of everybody and everything connected with the show, and such work as making premium lists, contracts for building, painting, feeding, etc., should be made by him, subject to the approval of the board of managers. One of the greatest troubles at shows is the lack of discipline, the superintendent being often such in name only. He issues his orders and tries to live up to the printed rules, but one of the exhibitors asks him to do something contrary to them. He replies that it is impossible, and refers to the rules governing the matter. The exhibitor, not satisfied, meets one of the board of managers and states his grievance. Mr. Manager swells out with his importance and says; "I'll fix that for you. You go and tell the superintendent that Mr. So-and-so wants that done, and that will be all right." This opens up a loop-hole for every crank at the show; very soon there is some one else with a grievance or wanting a favor; he applies to the superintendent and is refused; goes away grumbling, meets the first exhibitor and tells the story, and gets for a reply: "O, he has not got anything to say. I'll introduce you to my friend, Mr. Manager, and he will fix it for you," and they go through the same performance. Very soon the superintendent finds there is no use issuing orders, and for the rest of the week he tries to look pretty and lets the show run itself. Now, if the manager had asked the first complainant if he had spoken to the superintendent and had received the reply that he had been refused, he then should have said: "I can do no nothing for you, as we have given him absolute control of the show. If you have any complaints to make against the management, please make them in writing and hand them to the secretary, and the executive committee will investigate them at their meeting." These meetings, by the way, should be held at least once a day during the show, to hear complaints and charges. Such a course on the part of the managers would give the first lesson in discipline, and would stop the grumbling that is heard at nearly all the shows, and would at the same time encourage the superintendent, who would feel "these people respect me, and I must keep things moving along smoothly to show the directors that I am worthy of their respect and understand my business."

A source of great complaint is the class of men that are picked up for attendants, that branch of the business being generally left until the last hour, when there is so much of a rush to prepare the building for the reception of entries, that the superintendent takes up anything that has two hands on it, and as a general thing picks the men up around some gin-mill corner, where they put in most of their time. They know nothing about work or dogs, and even if they did, from their physical condition from idleness they are unequal to the task of remaining on their feet from twelve to fifteen hours. A very good lot of men could be obtained by applying to the heads of the fire department, as they have always a lot of applicants wanting to be placed on the regular list, and, as a rule, these are young men full of snap, and the training they get by taking the place of regulars as substitutes makes them prompt in action, and they understand the value of discipline; then, too, they must be men of nerve and pluck or they could not stay in a fire department twenty-four hours. As a rule, they are above the touting for "quarters" for doing their proper duty, that is so disgustingly common at shows. They should be young men and workers, as they have plenty to do at a dog show. When they are selected, they should be supplied with a cheap uniform, consisting of cap, blouse and trousers. They should also be numbered, and the show room be divided off into sections according to the number of hands—the sections corresponding with the number of the man in charge. Should anything get out of order the exhibitors would know who has the place in charge, and call his attention to it. If not remedied, a complaint to the superintendent would soon remedy it. There is nothing better to make a man tidy and keep things tidy about him than a clean, neat suit of clothes. Get uniforms; they will pay in the general appearance of the show, for what detracts more from the general appearance of the show than a lot of fellows running around and going into the judging ring, one with no coat on, but with a dirty shirt with elbows out, and another with a greasy old coat, which he is afraid to take off as the remainder of his apparel will not stand inspection?

Another source of complaint is the high benching. The general custom is to have benches 3ft. high from floor for setters and pointers. The stall being narrow and the dog being chained, they have no chance to jump. Often the handler has to pick up his dog in his arms and place him in his stall and then crawl in after him to make fast his chain. I think a bench 2ft. high would give more satisfaction both to exhibitor and visitor. A dog could be placed in his stall without trouble, and visitors would be able to see the animals in full. As it is at present, if a setter dog is standing on his feet in his stall, one-half of the lady visitors can only see him one-half the way along his ribs.

Bench shows are generally held in large, roomy buildings, and the amount of dry straw and lumber used for benching makes them very inflammable, and every precaution should be taken for the safety of the building and of the dogs. Here the firemen attendants will come in; half a dozen of them at Columbus would have prevented that sacrifice. A very cheap device for freeing the dogs could be arranged by passing a gas pipe the entire length of stalls, with a hole in the pipe about the middle of each stall. Into these holes an iron pin should be driven into the pipe and extending out about 2in. Place the pipe so as to let the ends of the pins rest on the stall floor, place a large ring around pins to fasten the chain to. Now, by having a lever fastened to the pipe at the ends of the stalls you could let loose all the dogs in the range of stalls in one motion, and with the right kind of men for attendants, there should be no more Columbus horrors.

Another source of complaint among exhibitors is the contracting of diseases among their stock. I think the fault lies chiefly with the exhibitors, as you will find them always looking up something for their dogs to eat, and if the poor dog is full and does not wish any more they think he must be sick, and at once run out and get him some dainty and almost force him to eat, the dog having no exercise and lying around for a week stuffed like a sausage. The principle I have used successfully, as I never lost a dog from disease contracted at a show, is that as the dogs have very little to do, I give them very little food, and if the dog refuses it I take it away from him and don't try him again until the next feeding time. If he still refuses, take it away again, and he will find his appetite about the next meal time; at least I have always found it the case.

I think more dogs contract diseases at shows in the following manner than in any other way. When they are taken into the exercising yard the handler thinks he is doing them a great kindness by letting them loose to run about. They keep snuffing and smelling and get their feet covered with droppings to smell and lick when replaced in their stalls. Now, if the previous dog has a disease I don't know of any better way of inoculating a well one with it than by filling his head and lungs with the fumes of it. The evil could be obviated a great deal by having a man in the yard whose duty should be to shake air-slacked lime over the droppings and at once remove them. Another essential to health is, after reaching home to give your dog a thorough washing with carbolic soap or Little's soluble phenyle. By doing this you will remove at once all foul taints or mucus that may remain on their coats or skins. After washing, dry them well and take them out for a run. If a dog looks a little off give him a good run and it will do him more good than any physic. That is his natural medicine and nothing kills him quicker than to be tied up when not well.

G. WASH. MOORE.

PITTSBURGH, Pa.

GRIT.

TO put it mildly, it is exceedingly exasperating to invest $50 in a high bred setter or pointer pup, spend a hundred dollars more on having him broken, and then on the opening of the season have him beaten out of sight by some old scrub of a native, built on the lines of a beef steer. Yet I do not believe that I am alone in this sort of experience.

There is one quality in dogs which bench shows do not encourage at all (and field trials very little) that is more essential in an all day hunting dog than all other points combined, and that is grit. How often do we see men having naturally brilliant talents, beaten in the race for money or fame by men who are their inferiors in everything except grit. And it is just the same with dogs.

I was first impressed by this fact as it appertains to dogs some nine years ago, when I became possessed of just such a setter as is described a few paragraphs above. He was a Laverack of the bluest blood, with magnificent chest, body and legs, and he came from the breakers recommended as "one of the best dogs he had ever handled." As I was a fair shot, when the quail season opened, after promising some dozens and half dozens of birds to sundry intimate friends, I went to Beasley's Point, Cape May county, New Jersey, where at that time very fair shooting could be had.

The morning after arriving at the hotel I sauntered into the barroom after my usual before breakfast "soda." The landlord happened to be there and opened a conversation with me.

"That's a mighty purty dog of yourn, tied out in the barn."

"Yes," I answered, "rather a nice looker."

"Any good on birds?"

"Supposed to be," I replied.

"Well, if I were you 'uns I'd take old Jerry along, he is sorter acquainted with the fields, and 'pears as if he knows just about where the birds is, and p'raps your dog 'll hunt better with company—most of them you city fellars bring down does!" and with this he kicked out from behind the bar about the worst specimen of a dog I had ever seen (I had never attended a bench show then).

He was a double-nose pointer, about eight or nine years old, and solid liver in color; his front legs were as much out at the elbows as the bulldog Robinson Crusoe, and his stifles as straight as those of the St. Bernard champion Otho; and he was as swaybacked as the cocker champion Doc.

But as my trainer had written me that my dog hunted better in company than alone, after breakfast I took him along (as the landlord said he would follow any one with a gun). Up the road he trotted at my heels, while my magnificent Laverack was so eager that I had hard work to keep him under control.

The first good looking field we struck I sent my dog on and tried to keep old Jerry back, but it was impossible. He made a bee line for the edge of the woods on the opposite side, and while the Laverack was prancing around in great style, but to little purpose, had a point.

This sort of thing kept up all day, and when I returned to the hotel I had to acknowledge that old Jerry had found about 90 per cent. of the birds.

Every one who has hunted in this part of Jersey knows that the country is very rough on dogs. Sand burrs are thicker than grass, and briers flourish like the proverbial green bay tree. The next morning old Jerry was the same as ever, only perhaps a little more fresh, yesterday's hunt having limbered up his old bones, while my youthful Laverack resembled one of the pair of Kilkenney cats, that had been hung together by their tails over a rope all night. His pads were so sore that he could scarcely put them on the ground, his ears all torn and his coat in a most ragged condition. That day he worked until noon and then gave up.

Now, the point I want to get at is this: Here were two dogs, one fitted by nature with a superb formation of shoulders, legs, chest and body to do almost any amount of work, and the other built for nothing except lying alongside of a hot stove; yet the ill-favored one by his "grit" entirely distanced the other in hunting qualities. My dog was better broken in every respect, probably had a better nose and was much harder in flesh, as it was the beginning of the season, and old Jerry had done nothing for six months except lie around the bar-room.

Before I left I offered my dog and $50 for Jerry, but the owner respectfully declined.

"You aint the fust man," he said, "that has come down here with a fine dog, and wouldn't give a three-cent piece for Jerry, that has offered to swop before he went home."

The next time that I was forcibly impressed with the value of "grit" in dogs was on the eastern shore of the Chesapeake Bay. There were several Chesapeake Bay dogs owned by the man on whose land I was shooting, and which were used to retrieve the ducks shot. Some were curly-haired and others had flat coats.

"Which," said I, "do you consider the better kind?"

"I dunno as it makes much difference; sometime it's the straights, and sometimes it's the curlys—the kind as gets the most ducks, and goes into the water when yer tell 'em to is the best."

This was his reply, and I saw afterward he was right, because on a very cold day one or two dogs with coats as close as that of a seal refused to go into the water after a few times, while a bitch, who was so mangy that she resembled a Mexican hairless, went in every time she was ordered. It is grit, not coat, that is required in a Chesapeake Bay dog.

I once had working for me a very mild-spoken Englishman, who, contrary to manners and looks, was quite a celebrated trainer of fighting dogs. When I discovered the fact, he had a bull-terrier that he was putting in condition for a battle. Being interested in dogs of all kinds, I went to inspect the pit fighter. This dog was anything but a vicious looking dog, and had the mildest brown eyes I had ever seen in any breed, excepting a toy spaniel. He was very loosely put together, not suited in any way that I could see for the terrible task before him.

"How can you tell, I inquired, whether a dog is game or not?"

"No one can," he replied, "except by trying him, nothing counts in bull-terriers but grit."

I afterward learned that this mild-looking, ill-put-up dog had killed the dog he was matched with, after two hours and thirty minutes' fighting, and in that time there were only three scratches.

In closing I would cite as an argument in favor of "grit," the breeds of game fowls; the exhibition games have been improved in "station," closeness of feathering, wicked eyes and snake-like heads. Any one not acquainted with fowls would say that a pit game had no show at all in a battle with an exhibition game, but, in fact, the reverse is the case, because in breeding for show points the chicken fancier has neglected that most essential quality—grit.

S. REICNAF.

DOG TALK.

THE Boston correspondent of the Providence *Sunday Journal* is responsible for this: "The price which Mr. B. paid for a pug for his wife is one of the themes for the jokers at a certain club here. He determined to make a Christmas present to the lady of a little dog that she wanted, and although the price asked, $50, seemed to him rather large, he agreed to it, and arranged to have the pug delivered at his office the afternoon before Christmas. At the time agreed upon Mr. B. was obliged to be in New York, and he arranged to have the dog sent to the office of his brother. When the dog came to Mr. B.'s office, his clerk paid for it; when it was brought to the office of his brother, the latter paid for it again; and the dog seller, finding the trade so profitable, offered to take the pug on to Mr. B.'s house. His offer was accepted, and he not only took the dog home, but collected from Mrs. B., to whom he had a note from Mr. B.'s brother, an additional $50, with which he disappeared, not to be found since."

When attending a dog show, it is always interesting and often amusing to watch the handlers while the judging is going on. As a rule they are themselves excellent judges, and it is nearly always an easy matter, by watching them closely, for one to spot the dogs they fear will beat their favorites, and the merest tyro can frequently by this means select the dog that ought to win, whatever the judge may think of him. We have often had no end of fun while watching their proceedings and listening to their remarks derogatory to some competitor, ostensibly addressed to a brother handler, but carefully aimed and discreetly modulated for the judge's ear. Not many handlers venture this, but some of them do, with what result the judge alone can tell. We do know, however, that more than one judge has caught on to the defect of an animal, simply through the painstaking care of the handler to cover it up. Some of them are quite expert in putting the best part of their charge forward, and the judge must understand his business if he obtains more than a fleeting glimpse of any portion of the dog's anatomy except that which shows him up to the best possible advantage. All of these "tricks of the trade," however, are generally of little avail with an experienced judge, but nevertheless they serve a very useful purpose in relieving the tedious monotony of the reporter's task

The fall campaign will open the second week in September with three dog shows, London and Ottawa, Canada, and Toledo, Ohio. We are informed that several other shows will be held during the fall, but the dates are not yet decided upon. It seems a pity that the dates should clash especially in places that are relatively neighbors, and it is to be hoped that some arrangement will be made whereby this may be avoided in future.

Mr. W. H. Joeckel, Jr., of Hoboken, N. J., has recently received from Sydney W. Smith, Esq., a letter dated April 16, in which he states his intention of visiting the United States to benefit his health, and to observe how St. Bernard interests are progressing. He will sail May 1 on the White Star Line steamer Britannic, due in New York about May 9 or 10.

The St. Joe Kennels, of Niles, Mich., have sold for a long price their well-known mastiff dog Wacouta Nap to Mr. E. Reyder, of Chicago, Ill. We understand that the dog will be withdrawn from the public stud.

Entries for the Derby of the Pacific Coast Field Trial Club, to be held at Bakersfield, Cal., Jan. 20, 1890, close May 1. The address of the secretary is H. H. Briggs, 313 Bush street, San Francisco, Cal.

We are sorry to learn that Mr. J. W. Dunlop, of Utica, has had the misfortune to lose by death from distemper several valuable St. Bernards.

PROPOSED NEW YORK DOG LAW.—New York, April 20.—*Editor Forest and Stream:* I wish to call your attention to Bill 578, Assembly, introduced by Mr. Mase, and now in Committee of the Whole. It provides for taxation of dogs for sheep protection, but makes no exception in favor of breeding kennels. It should be amended or defeated, as it would be a serious drawback to breeding interests if passed as at present.—H. T. FOOTE. [We have not seen a copy of this bill. Its provisions should be carefully guarded, so as to work no injustice to breeders.]

TOLEDO DOG SHOW.—Toledo, O., April 24.—*Editor Forest and Stream:* The Toledo Kennel Co. claim Sept. 10 to 13, 1889, for their first annual bench show, which will be held in connection with the Tri-State Fair at Toledo, O.—TOLEDO KENNEL CO.

AMERICAN FOX HUNTING.

I.—VIRGINIA STYLE.

Editor Forest and Stream:

Whether deserved or not, "Tallyho" has been handled without gloves for his article on New England fox hunting. In the discussion of the matter there was a conspicuous absence of what "Wells" would term "the courtesies of a newspaper correspondence." Yet "Tallyho" has but expressed the universal sentiment of sportsmen in the section where I dwell.

Belonging to a club for years which owns one of the best packs of foxhounds to be found in eastern Virginia, while not competent to say that the methods of our New England friends are unsportsmanlike, when the evidence of sportsmen and gentlemen who are in every way our peers proves the contrary, yet I am entitled to speak for this part of Virginia; and if one should put hounds on reynard's trail here, and then lie in ambush and shoot him as he runs by, the act would be considered that of a treacherous assassin, of which no true sportsman would be guilty. When, however, the practice is restricted to mountainous and broken districts, where it is difficult to ride to the hounds, custom has made fox shooting legitimate sport, even in the South. So, as appears from a communication in your issue of the 31st ultimo, it is deemed legitimate sport in some localities to surround reynard with a regiment of men, and after he has been chased around by ladies, to ignominiously beat out his brains with clubs. But the man who would pursue either of these methods here would be drummed out of the company of gentlemen sportsmen, and relegated to the society of those who shoot quail on the ground, catch trout in a gill-net, snare grouse, *et id omne genus.*

Of all recreations fox hunting as practiced here and elsewhere in the South is the most delightful. It is indeed a royal sport, brought to this country by our forefathers from England, along with laws and institutions which have made us a great and liberty-loving people; and while a snobbish affectation of English tastes and manners is contemptible in the extreme, yet I confess to be one of those who see in England much to admire. If some of our New England sporting friends will pay me a visit in the fox hunting season it will afford me great pleasure to entertain them and show them the difference between the Northern and Southern methods of fox hunting. I am sure they will be pleased.

We have in eastern Virginia three kinds of foxes, *i. e.*, two distinct varieties, the red and the gray, and two kinds of the latter, which though classed as the same variety, have marked differences in their running qualities. The red fox is the largest, fleetest and most difficult to catch, or, in huntsman's parlance, to "kill." The little swamp gray fox is much more easily caught than the common gray, while the latter affords far more sport than either of the other kinds. During the year just ended, from the commencement of the season, viz., from the full moon in July to the first of January, we caught twenty-nine gray and two red foxes in meets in which I participated. Our pack consisted of seventeen hounds besides puppies, and all told we jumped about forty foxes, not over one-fourth of which escaped. An account of two of these hunts will serve to show the difference in manner of running between the red and the gray fox.

There came a warm south wind with rain, which lasted nearly all day, but cleared up toward evening. By break of day next morning a friend and I were in the saddle, with our pack in splendid trim, going where we had seen fox signs the day previous to the rain. The dogs, as anxious for the hunt as the huntsmen, disappeared in our front in the twilight. We had gone two miles without hearing a note, when as we reached a hilltop overlooking the James, we heard a single yelp in the valley beyond. Then came the deep-mouthed bay of John, whose sobriquet is "Old Reliable." The rest of the pack, running from all directions, soon joined in, and moved with such celerity as to indicate that the trail was hot, and that they had come suddenly upon reynard. My companion just then stopped, and requested me to wait for him to fix his saddle. I chafed at the delay, which was never more inopportune, for while he was doing so the dogs, in full chase, got a long start, and ran almost out of hearing. Supposing the quarry to be a gray fox, and familiar with the course it would probably take, which would describe the arc of a circle, we attempted to recover our ground and gain on the dogs by following its chord at full speed. But when we reached the point where we expected to intercept them all sounds from the pack had died away in the distance. After vainly consuming precious time in endeavoring to hear them by changing our positions from one hilltop to another, we retraced our steps supposing they had gone some other course. After going a mile we came upon the tracks of fox and dogs where they entered the road, and rapidly followed on the trail for over a mile to a creek. Here the fox had turned at right angles out of the road and gone south, and from their tracks we saw that the leading dogs had overrun the trail for a short distance, but quickly returned to it. They then crossed a swamp, when the fox again got in a road, which he seemed loathe to leave, till forced to do so, when he would turn off into the woods, where he would skillfully dodge, and then return to the road. From all this we saw, after going for some miles, that it was a red fox, and that we would hardly get in the chase again; so we reined up and followed on more leisurely. All along people were standing out of doors, and would tell us that the dogs, close behind the fox, were far in advance. We heard of a number of persons who had joined in the chase. Among them was Joe Martin, a poor but honest and industrious man, and an ardent lover of the chase. He afterward told us that he was out of fuel, and while his wife was getting breakfast he hitched his only horse to a wagon to haul some wood. As he was about to start his ear caught the notes of the hounds. Nearer and nearer they came, until he could distinguish the notes of some of the dogs with which he was as familiar as he was with the voices of his children. Onward they came, making the hills and forests resound with their exciting chorus, till finally the fox, a noble red, in all his glory, with head erect and tail straight behind him, crossed the field near Joe's house, and not two hundred yards behind him were the foremost dogs, while immediately in their rear, so close that they might have been covered by a blanket, came the main pack. The scene was too much for Joe. In a twinkling the harness was off the horse, and casting a look to his wife, "to mark he would return in haste," he sped after the hounds. The horse was a well-bred animal, and partook of his rider's zest for the chase, and for over an hour followed over fences and ditches, and through fields and forests, never once being thrown out, until they reached the banks of the North Anna River, where the fox was overtaken and killed by the dogs, fully twelve miles from the spot where he had been struck.

The distinguishing features of our red fox's habits were displayed in this chase. Its habitat is among the river bluffs and bottoms, and it runs with great speed straight forward, and to great distances, seldom doubling as the gray fox, and preferring roads. It will frequently take to earth, but will never climb a tree; while the gray fox frequently climbs trees, but seldom takes to earth.

On the full moon in the month of December the weather was so warm that during the coolest part of the night the thermometer did not indicate less than forty degrees above zero. We took advantage of the opportunity for a chase. We had gone but a short distance when a trail was struck, which proved to be that of a gray fox. But it was so far ahead, that although the dogs worked assiduously at the trail for two hours, we were, at the end of that time, about as far from the fox as when we first struck him. So we blew the dogs off, and started to return. The country in which we were hunting was undulating, mostly grown up in old field pines, and destitute of fences or cultivated fields, but intersected by numerous roads, the soil of which was sandy, making them delightful for riding. The night was wonderfully bright, and the acoustic properties of the atmosphere perfect. Two or three dogs were in front of us, while the rest, under the impression that the hunt was over, followed behind. Suddenly those in front struck a hot trail and the entire pack instantly joined them. For a long distance they ran eastward and parallel with the road we were in, and then doubled and ran for two miles or more in a westward direction, through dense pine woods to an extensive swamp. Here the fox dodged and doubled, until finding an opportunity to get a start, he would leave the swamp and take to the woods and fields again. But the dogs never lost his scent, and time and again compelled him to return to the swamp and pursue the same tactics. We were never out of the roads, and never out of hearing of the dogs. Sometimes they would run nearly in a circle around us, and sometimes would run for several miles in a straight course, but would come back again. Many times the fox crossed the road near us, always hard pressed by the yelling pack, and finally was forced to take to a tree. Some of the party held the dogs, while others made the fox jump out, but although we gave him several minutes the start, the wind had been completely knocked out of him, and he was speedily overhauled and killed. This chase lasted fully two hours.

The fox hunting season ends here on March 1, for in that month the red fox brings forth its young, while the gray is fully one month later. M.

NORTHSIDE, Va.

MORE CALLS FOR JACKRABBITS.

THE interest in coursing seems to grow, and the desire for inclosed meets seems to be hampered only by that old question of how to obtain the jackrabbits. The man who starts a jackrabbit farm will make a fortune. Mr. Charles E. Ireson, of Toronto, writes our Chicago representative as follows:

"A number of gentlemen of this city have decided to start a coursing club, providing they can secure the jackrabbit which is a native of the Western States. Can you give me information that would enable us to procure some? Do you think that they would be able to stand the journey, and what do you think it would cost to procure them? If you would kindly answer the above questions you would greatly oblige a number of sporting gentlemen who wish to practice their greyhounds by holding coursing meetings."

There is hardly any reply which can be made to queries like the above. There is no place in the United States where jackrabbits can be had on demand. Doubtless a small army of men with nets could capture quantities after some experiment and great expense, on the plains of Colorado, or in the California valleys, but it is very probable that a thousand jackrabbits would cost a thousand dollars. Dr. Van Hummel always insisted that he could catch plenty of jackrabbits in Colorado, but his remarks were made before and not after an actual attempt at it. Mr. Allison, of the Hutchinson Grounds, has the key to the jackrabbit question. His jackrabbit farm is stocking itself. It is probable that the best plan for would-be meets is to obtain a few pairs from Mr. Allison or somebody else, and then to start a farm, waiting for the multiplication of the hares, which is rapid

A SENSIBLE VIEW.—The Chicago *Inter-Ocean* deserves mention. It is the one journal of that city which gives field sports any intelligent handling. Most of the other papers are content to steal an occasional few columns from some abler and broader paper which recognizes the growing importance of such news, or to fill a number of columns with slush about pugilism or the dry goods clerks' amusement of base ball; but the *Inter-Ocean* is wise enough and broad enough to do far more than this. Its issue of April 21 has the following in an editorial upon the local dog question, which is certainly more humane and more interesting than the usual stereotyped editorial of the daily press: "Partly as a result of newspaper censure, partly in deference to popular indignation because of the outrages perpetrated last summer, the local law has manacled the dog killers. The new order requiring the impounding of estray and unlicensed dogs for a length of time sufficient to allow owners to reclaim them is both just and humane. It puts an effectual stop to the brutalities of policemen and others who delight in dog killing, and equally availed themselves of the loose order two years ago to shoot down or poison all sorts of dogs that chanced to get for a moment beyond the guardianship of their owners. The warfare upon dogs is due to popular ignorance and superstition, man's best friend being by man pitifully misunderstood and wofully abused. While it is, perhaps, proper enough that keepers of dogs should be taxed, that each dog owned in a corporate town or city should be licensed, or be subject to seizure and drowning, a vast deal of needless cruelty, of downright barbarism is practiced, the sole justification of which is the fallacious notion that dogs have an annual going mad period, during which time they are a public danger."

MISINFORMATION.—New York, April 22.—*Editor Forest and Stream:* I beg that you will allow me a small share in your columns to reply to certain statements that have lately appeared in your paper, and have emanated I believe from Mr. Chas. H. Mason. I do not know the authority Mr. Mason has for stating that the greyhound Lancashire Witch has been retired, and it seems rather singular that he should follow up that assertion with the statement in criticising the Worcester dog show, that Cassandra is the finest greyhound in America. Before I became the owner of Lancashire Witch, and while she was yet the property of Mr. H. W. Huntington, Mr. Mason was lavish in his praises of Lancashire Witch, and I will say without fear of contradition that she was never in better condition than at the shows this year in New York and Philadelphia. I wish, therefore, to contradict the statement concerning her retirement, and to express my surprise that Mr. Mason should go into print with criticisms so grossly at variance with his former expressions, nor can I accept his fulsome laudation of Mr. Huntington's Cassandra as sincere or warranted by the opinions of competent judges of the greyhound. In criticising greyhounds it seems to me that Mr. Mason gives too free a play to personal bias.—SARAH LEGGETT EMORY. [It appears that we were misinformed about the retirement of Lancashire Witch. It further appears that our correspondent was also misinformed in relation to the report of the Worcester dog show, as Mr. Mason did not attend that show and did not write a word of that report.]

CENTRAL FIELD TRIAL CLUB.—*Editor Forest and Stream:* At a meeting of the Central Field Trial Club, held at Philadelphia April 10, the following officers were unanimously elected: President, Mr. E. R. Coleman, of Lebanon, Pa.; 1st Vice-President, Mr. J. M. Tracy, of Ocean Springs, Miss.; 2d Vice-President, Mr. Eugene W. Durkee, of New York city; Secretary and Treasurer, C. H. Odell, of New York city. I am directed by the club to again give public notice that entries for our Derbies close May 15. Any one desiring further information can receive same by applying to C. H. ODELL, Sec'y and Treas. Central Field Trial Club, Mills Building; New York city.

THE DUQUESNE KENNEL CLUB.—At a meeting held by our most prominent sportsmen, at the rooms of the Sportsmen's Association on April 23, the Duquesne Kennel Club was formed with a capital stock of $3,000, with the following officers: S. L. Boggs, Pres.; J. O'H. Denny, Vice-Pres.; John M. Chaplin, Treas.; and W. E. Littell, Sec'y. The Directors are: S. L. Boggs, J. O'H. Denny, William Wade, Dr. J. S. Phillips, J. H. Lyle, Jas. McKnight and W. E. Littell. The object of this club is to improve the different breeds of dogs, the establishment of a kennel club, and to hold bench shows. The club will apply for admission to the American Kennel Club, as soon as possible, and will hold a show next March, which will be run on a liberal basis. The premium list will be liberal, about $2,500 in cash prizes given, not including specials. Spratts will be secured to do the benching and feeding, and Prof. Parker to amuse the people with his trained dogs. Everything will be done that can be done to make the show a success. The Duquesne Kennel Club is an entirely new organization, and is in no way connected with the Western Pennsylvania Poultry Society, or any other society or association.—W. E. LITTELL, Sec'y D. K. C. (Pittsburg, Pa.)

ST. BERNARD PUPPY MEASUREMENTS.—*Editor Forest and Stream:* Last Christmas I was the recipient of a grand present from Miss Anna H. Whitney in the shape of the rough-coated St. Bernard puppy, Odacsep, by imported Beauchamp and out of imported Lady Hanley. Odacsep being six months old to-day, I took pains to measure him accurately, the result being as follows: Weight, 103lbs.; extreme length, 67½in.; height at shoulder, 26in.; spread of ears, 19½in.; girth of chest, 32½in.; head, 19¾in.; muzzle, 13½in.; forearm, 10¼in.; forefoot, 8½in. He is not fat, but in good growing condition.—C. VAN W. FISH (Cleveland, O., April 12).

CHICAGO DOG SHOW.—Chicago, April 22.—*Editor Forest and Stream:* Please accept sincere thanks for your kindly criticisms of our late show. No one knows and appreciates its many failings better than myself, nor can any one appreciate your indulgence more fully than I do. It was a first effort, and I can assure you that with some other at the helm next year Mascoutah will steer clear of some at least of the rocks upon which she struck this.—R. B. F. DURKEE.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Toledo Don and Toledo Duke. By Toledo Kennels, Toledo, O., for liver and white pointer dogs, whelped Aug. 31, 1888, by Duke of Hessen out of Polka (Bang Bang—Countess).

Cavalier, Buff Beaufort and Belle Beaufort. By Geo. W. Lovell, Middleboro, Mass., for liver and white pointer dog and lemon and white and black and white bitches, whelped March 4, 1889, by Beaufort H. out of Belle of Maine.

Lily of the Valley. By Rural Kennels, Wakefield, Mass., for white English setter bitch, whelped June, 1885, by Bolus's Blue Dick (Blue Dash—Jolly May) out of Bella Gladstone (Gladstone—Jessamine).

Annie Lisle, Rosebud and Zylla II. By St. Cloud Kennels, Mott Haven, New York, for red Irish setter bitches, whelped March 25, 1889, by Royal Ruby (champion Glencho—Lady Edith) out of Zylla (St. Cloud—Princess Ida).

Marguerite and May Blossom. By St. Cloud Kennels, Mott Haven, New York, for red Irish setter bitches, whelped March 26, 1889, by Kelso (champion Glencho—Sweetheart) out of Zephyr (St. Cloud—Princess Ida).

Sarsfield's Blaze, Iowa Lad, Western Chief, Nepaul and Flash Boy. By F. H. Perry, Des Moines, Ia., for red Irish setter dogs, whelped Dec. 24, 1888, by Sarsfield (Garryowen—Currer Bell II.) out of Nino (Elcho—Noreen).

Prairie Rose, Nina and Corinne. By F. H. Perry, Des Moines, Ia., for red Irish setter bitches, whelped Dec. 24, 1888, by Sarsfield (Garryowen—Currer Bell II.) out of Nino (Elcho—Noreen).

NAMES CHANGED.

Patsy to Clarcmont Patsy. By F. H. Perry, Des Moines, Ia., for red Irish setter dog, whelped Aug. 20, 1885, by Frisco out of Nellie IX.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Marguerite II.—Shrewsbury Spring. J. H. Day's (Red Bank, N. J.) pointer bitch Marguerite II. (A.K.R. 5155) to W. V. Bennett's Shrewsbury Spring (Mainspring—Fly), April 19.

Toodles—Macbeth. Dr. G. W. Dixon's (Worcester, Mass.) pug bitch Toodles (A.K.R. 2147) to W. C. Wing's Macbeth, April 29.

Young Topsy—Bradford Ruby II. Geo. W. Hood's (Middletown, O.) pug bitch Young Topsy (Joe II.—Topsy) to Ebenhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), April 20.

Kelpie—Ben Hill. E. O. Damon's (Northampton, Mass.) English setter bitch Kelpie (Doncaster—Princess Pearl) to J. S. Huston's Ben Hill (Druid—Ruby), April 23.

Bess—Phil Warwick. Mr. Jewett's (Lakeville, Mass.) English setter bitch Bess to Geo. W. Lovell's Phil Warwick (Cid—Victoria), April 25.

Winnie II.—Elcho, Jr. E. O. Damon's (Northampton, Mass.) Irish setter bitch Winnie II. (Frisco—Grouse II.) to Dr. W. Jarvis's Elcho, Jr., April 20.

Lady Edith—Tim. J. H. Ackroyd's (Sayerville, R. I.) Irish setter bitch Lady Edith (Rory O'More—Lady Berkley) to Max Wenzel's Tim (Biz—Hazel), April 21.

Belle—Tim. Nelson McIntosh's (Providence, R. I.) Irish setter bitch Belle (Chief—Bizreena) to Max Wenzel's Tim (Biz—Hazel), March 17.

Sally—Tim. Geo. Langran's (Yonkers, N. Y.) Irish setter bitch Sally (Chief—Princess Alice) to Max Wenzel's Tim (Biz—Hazel), April 22.

Jersey Beauty II.—Red Dash. Jas. Holt's (Phillipsburg, N. J.) Irish setter bitch Jersey Beauty II. (Tim—Jersey Beauty) to J. M. Fuchs's Red Dash (Arlington—Doe), April 21.

Yoube—Chief. Max Wenzel's (Hoboken, N. J.) Irish setter bitch Yoube (Elcho—Rose) to his Chief (Berkley—Duck), Feb. 16.

Ready—Red Dash. Max Wenzel's (Hoboken, N. J.) Irish setter bitch Ready (Chief—Yoube) to J. M. Fuchs's Red Dash (Arlington—Doe), Feb. 10.

Rosie—Chief. Max Wenzel's (Hoboken, N. J.) Irish setter bitch Rosie (Tim—Yoube) to his Chief (Berkley—Duck), March 12.

Black Meg—Black Pete. H. S. Reynolds's (Poughkeepsie, N. Y.) cocker spaniel bitch Black Meg (Obo II.—Darkie) to J. P. Willey's Black Pete (Obo, Jr.—Phonsie), March 19.

Venom—Trentham Baron. H. W. Holmes's (New York) bull-terrier bitch Venom (Grand Duke—Marguerite) to F. F. Dole's Trentham Baron (Trentham Dutch—Trentham Belle), Feb. 27.

Royal Rose—Trentham Baron. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Royal Rose (Randolph—Nell) to his Trentham Baron (Trentham Dutch—Trentham Belle), April 2.

Bess—Trentham Baron. E. B. Curtis's (New York) bull-terrier bitch Bess (Dutch, Jr.—Young Venom) to F. F. Dole's Trentham Baron (Trentham Duch—Trentham Belle), March 28.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Rural Neva. Rural Kennels' (Wakefield, Mass.) English setter bitch Rural Neva (Pride of Dixie—Fairy Belle), April 20, six (three dogs), by A. M. Tucker's Gus Bondhu (Dashing Bondhu—Novel).

Lady. Ray Tompkins's (Elmira, N. Y.) Irish setter bitch Lady (Rory O'More—Gay), March 15, seven (five dogs), by Max Wenzel's Tim (Biz—Hazel).

Yoube. Max Wenzel's (Hoboken, N. J.) Irish setter bitch Yoube (Elcho—Rose), April 20, seven (four dogs), by his Chief (Berkley—Duck).

Red Belle. J. H. Hitchcock's (Sing Sing, N. Y.) Irish setter bitch Red Belle (Glencho—Tara), April 12, thirteen (seven dogs), by Max Wenzel's Tim (Biz—Hazel); all since dead.

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Harlequin. White and red bulldog, whelped Aug. 6, 1888, by Lion out of Thespian, by R. B. Sawyer, Birmingham, Conn., to H. D. Kendall, Lowell, Mass.

Merry Monarch. Fawn bulldog, whelped April 27, 1884, by champion Monarch out of Penzie, by R. B. Sawyer, Birmingham, Conn., to A. L. Day, Saybrook, Conn.

Wacouta Nap. Fawn, black points, mastiff dog, whelped Aug. 25, 1884, by Lion out of Bess, by St. Joe Kennels, Niles, Mich., to E. Ryder, Chicago, Ill.

Cavalier. Liver and white pointer dog, whelped March 4, 1889, by Beaufort H. out of Belle of Maine, by Geo. W. Lovell, Middleboro, Mass., to H. D. Kendall, Lowell, Mass.

Ginger. Liver pointer dog, whelped June, 1885, by Ned out of Brownie, by Geo. W. Lovell, Middleboro, Mass., to Dr. W. C. Woodward, Kingston, Mass.

Pearl of Pekin. Silver fawn pug bitch, whelped March 1, 1889, by Boycott out of East Lake Virgie, by Eberhart Pug Kennels, Cincinnati, O., to Hugh Kelly, Lexington, Ky.

Dash. Black, white and tan English setter dog, whelped Nov. 8, 1888, by Gloucester out of Snowflake, by Geo. W. Lovell, Middletown, Mass., to Fred Harrison, Fall River, Mass.

Royal Ruby—Zylla whelp. Red Irish setter dog, whelped March 25, 1889, by St. Cloud Kennels, Mott Haven, New York, to Mr. Smart, Rye, N. Y.

Topsey Brant. Fox-terrier bitch, age not given, by Rattler out of Vic, by N. Hucker, Buffalo, N. Y., to A. W. Van Loghem, Kalamazoo, Mich.

DEATHS.

Blemton Gingersnap. White, black and tan fox-terrier bitch, whelped Dec. 10, 1887 (champion Lucifer—Blemton Gingerbread), owned by L. Timpson, Red Hook, N. Y.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

M., Baltimore.—On Friday, about 4:30 P. M., I left my 2-year-old setter bitch in perfect health, and about an hour after was called home and found her purging blood. She did not seem to be suffering any pain and was not tender to the touch, no hawking, nose cold and no desire to drink water. I was thrown off by the blood and suspected some injury. Went to see a doctor, who thought she was injured by a bone or something. On reaching home about 8 o'clock she had not moved out of her house. I brought her in the house and laid her down; she laid this way (passing blood a little every now and then) until about 10:30 P. M., when she began to cry and moan every little while, and draw up and stretch her legs. I gave two teaspoonfuls of laudanum in whisky and water (her teeth were clinched then), and she died about three or four minutes after I gave it. The doctor examined her the next morning and found her insides very much congested; he said she was undoubtedly poisoned, he thought either by arsenic or corrosive sublimate, as he did not have time to analyze. Will you kindly give me your views? I don't think there were symptoms of arsenic. Would corrosive sublimate act like this or any other poison? She had not been out of the house that day. How soon does arsenic take effect? Ans. From description, should think bitch was poisoned by some corrosive poison—arsenic, corrosive sublimate, oxalic acid. Symptoms of arsenic poisoning: Great pain over abdomen, vomiting of blood, purging blood, great thirst, collapse. Corrosive sublimate very similar, but less vomiting. Oxalic acid same, less thirst and vomiting.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BULLARD RIFLE MATCH.

IN view of the many entries and interest taken in the first series of our matches by the riflemen of the country, we desire to call the attention of all rifle clubs and military companies to our match No. 4, fifth series, an individual match, the highest individual score to win; number of shots, 50; prize, the Bullard champion off-hand marksman's badge, a valuable gold medal, to be won by an individual three times before it becomes his private property, to be contested for twice a year, in May and October. It has now been won twice by Mat Gindele, of Cincinnati, Ohio; once by George H. Wentworth, Dover, N. H., and once by J. A. Huggins, Pittsburgh, Pa.

Rules governing the match are as follows: Notice of entries and applications for targets should reach us before May 11, in order that we may make the necessary arrangements to supply all with targets in season for the match. Conditions as follows:

1. Open to all members of rifle clubs and military companies in the United States and Canada.

2. Competitors to be active members of local rifle clubs, or of any regularly organized military company.

3. Distance, 200yds., strictly off-hand; position, standing; the elbow may rest against the body.

4. Target, American standard (Hinman).

5. Any officer or soldier of the National Guard or Regular Army of the United States or Canada using the rifle furnished by the state or government, and having the regulation 6lb. pull and regular open sights, as furnished for said military rifles, shall be allowed five points for each score of ten shots. No cleaning between shots.

6. All practice shooting necessary allowed before matches.

7. Each rifle club or military company may enter as many men as they see fit. Scoring shots, each man fifty, and fired on one target.

8. To be shot on any of the following days: May 20, 21, 22, 23, 24, 25.

9. Competitors may select which ever of the above dates is most favorable for making their scores in the match.

10. The targets and score cards to be signed by the referee and president or secretary of the club, and forwarded by mail to the Bullard Repeating Arms Co., Springfield, Mass., U. S. A., not later than twenty-four hours after completion of match.

11. Practice shots must not be made on the scoring target.

12. No contestant will be permitted to shoot under an assumed name.

13. Any contestant using a military rifle as issued by State or government, 6lbs. trigger pull, with same sights as issued for said rifles, will be allowed 5 points for each score of 10 shots.

14. The referee will test the trigger pull of all rifles before the matches commence. All the rifles must pull 3lbs., except military, which will be 6lbs., maximum weight of target rifles, 10lbs.

15. Ties will be shot off and dates fixed by the Bullard Repeating Arms Co.

16. Any sights may be used for target rifles except telescope and magnifying. Military rifles must use sights issued by the State or government for military rifles.

17. The president of each rifle club, and commanding officer of each military company, will appoint a referee, who shall see that the above rules are adhered to throughout each competition. In case of any dispute arising, the referee shall decide in accordance with the above rules, and if still under protest, the referee and the captain of the team shall submit the matter to the Bullard Repeating Arms Co., whose decision shall be final.

18. Targets will be furnished free by the Bullard Repeating Arms Co. on application.

19. The individual making the highest score will be awarded the Bullard championship off-hand gold badge.

20. The Bullard Repeating Arms Co. will fix the dates in May and October of each year for the competition for the championship badge until won three times by the same person, when it becomes his private property. BULLARD R. A. CO.

MINNEAPOLIS, April 18.—The Minneapolis Rifle Club had its usual weekly practice shoot to-day at 200yds., off-hand:

Badge Shoot.

Weeks	7	8	6	6	10	7	7	7	9	7	—74
Marshall	8	8	10	7	5	8	5	7	9	6	—73
Hoblit	7	7	6	4	5	4	5	6	8	7	—59
Merrill	4	5	4	6	6	7	5	4	4	10	—56
Morgan	8	9	4	4	8	3	7	3	9	6	—63
Maudlin	8	5	6	4	8	6	8	8	6	7	6—64

Weeks wins the badge.

Highest scores made during the day:

Weeks	8	8	8	4	8	8	6	10	10	7—77
Marshall	8	9	9	9	5	10	10	9	9	5—83
Hoblit	6	6	4	10	9	6	6	10	7	6—70
Merrill	4	8	9	6	5	8	5	6	9	10—70
Morgan	8	8	6	6	7	9	9	10	7	10—80
Maudlin	4	7	6	9	6	10	6	9	6	10—73

GUELPH, April 24.—The first practice of the Guelph Rifle Association took place on Tuesday, and notwithstanding the high wind and early season, good scores were made. The two old Wimbledon men, Messrs. Crowe and Ogg, topped the score with 86 and 84 points, respectively.

BOSTON, April 22.—Amendment Day was celebrated by the Massachusetts Rifle Association by a special rifle shoot at their range to-day, and the bullseye hunters were very numerous. The shooting conditions were bad, there being a high fish-tail wind from 10 to 12 o'clock, and this caused low scores as a rule, though some of the best shooters were on hand. Mr. Lee won the gold champion medal and Mr. Munroe won the gold medal in the 20-shot rest match. Following are the best scores finished to-day:

Champion Medal Match, 200yds.

H L Lee	7	6	8	8	10	7	5	6	9	8—74
J A Frye	10	5	8	6	8	10	9	4	6	6—71

PISTOL TARGETS.—Inclosed two targets were made with a Stevens "Lord Model" pistol, by Mr. C. L. Daily, of Altoona, Pa., Nov. 4, 1887. The targets are regulation targets, "pistol" for 50ft. They were made square off-hand under the rule, 50ft. range.—L. G. INGERSOLL.

Score..... 10 9 10 8 10 9 9 8 10 7 7 10—107

Score..... 9 8 9 6 9 8 9 10 8 10 8 10—104

TORONTO, April 22.—A three-cornered match was fired on Friday last, simultaneously over the Aurora range, between Bradford, King City and the Toronto team. Aurora and Bradford shot in the champion contest, while Bradford and King City shot a friendly match. Aurora won by 32 points from Bradford, while Bradford won by 57 points from King City. The following is the score, at 100 and 200yds.:

Aurora			Bradford.			King City.		
	100	200		100	200		100	200
J C B Johns	45	40—85	D Neilly	45	43—88	Wm Ross	42	33—75
R Mosley	44	40—84	Jos Neilly	44	36—80	Geo Charley	43	26—69
W Machell	40	40—80	G Simmons	47	25—75	B Hollingsh'd	39	28—67
H Ross	44	35—79	N A St Clair	42	30—72	Dr Norman	36	30—66
E Braund	44	29—73	P Matt	45	26—71	A Weir	44	19—63
M Fleury	37	34—71	J Doolittle	35	33—68	J W Crossley	4	18—62
A Neilly	36	33—69	J G Neilly	37	26—63	J H Ross	37	24—61
D Eade	34	32—66	S Metcalf	41	22—63	E J Davis	37	19—56
C A Petch	38	26—64	Jas Neilly	35	25—60	J Hollingsh'd	38	17—55
A Love	34	22—56	R Neilly	34	21—55			
	727			695			638	

This match left the two leading clubs a tie on winnings and the president ordered that the tie be shot off at Holland Landing Monday, April 22, which was done, and resulted in Bradford winning the match by 22 points and championship by one match. The shooting was first-class and exciting:

Bradford.		Aurora.	
N A St Clair	85	J E B Jones	91
J G Neilly	81	Eli Braund	87
Pete Matt	80	A Love	76
Dan Neilly	79	C A Petlie	77
Sam Metcalf	79	M Fleury	74
R Neill	77	E Eade	74
G Simmons	73	W Machell	72
J A Neilly	69	R Moseley	63
J Doolittle	67	A Neilly	63
Joe Neilly	63—753	H Ross	53—731

The Bradford team is now the champion of the associated clubs. On the first day of May, 1888, there was a rifle association formed. The meeting was held at Aurora and the association was named the Ontario Small Bore Rifle Association. There were eight clubs in the Association. Since that time the different clubs have been competing for the championship.

BOSTON, April 27.—The regular shoot of the Massachusetts Rifle Association was held to-day, with a large number of riflemen present, and some fine scores were made. The shooting conditions were very good, with a light wind from 1 to 3 o'clock. Mr. Francis (Rabbeth) won the gold medal in the 20-shot match, and Mr. Clark the gold champion medal. Next Tuesday this association will celebrate inauguration day with a special rifle shoot, with all the prize and practice matches open for rifle and pistol. Wednesday the trap shooters will open a new series of matches. Following are the scores made to-day:

Champion Medal Match—200yds.

C C Clarke	9	7	7	7	7	8	10	9	10	9—83

	10	9	7	10	7	8	8	8	6	6—79
	8	9	7	6	6	5	7	7	7	7—69—211

ST. LOUIS, Mo., April 27.—A fair attendance was present at the last shoot of the St. Louis Pistol Club. Summerfield again won the medal. Only one more shoot remains of the present tourney and Perret who is now high on the general average will no doubt become the final winner of the medal. A .22cal. Stevens pistol and a 20-yards standard American target is used for all shooting. The scores are as follows:

M Summerfield	8	7	7	8	10	9	9	7	8	10—83
L V D Perret	8	6	9	8	8	6	10	8	9	7—79
F A Fodde	8	6	7	8	9	10	6	7	10	8—79

J Albach	7	0	7	6	6	7	4	6	5	7—55

UNSER FRITZ.

ANOTHER NEW CARTRIDGE.—A rifle cartridge has been invented in France, and some surprising results have been obtained with it at the Vincennes ranges. The new cartridge, which is similar in appearance, weight, and every other detail to the Lebel cartridge, is claimed to possess considerable advantages. In the first place, the metal jacket is entirely dispensed with, and the cartridge can be instantly adapted to all military rifles, especially the Grass which is still borne by the French territorial corps. Finally, the cartridge is said to be smokeless, and does not foul or clog the barrel, while the cost is 70 per cent. below the price of the ordinary cartridge.—*Broad Arrow.*

MINNEAPOLIS, April 24.—The Minneapolis Rifle Club held their usual weekly shoot to-day, and the scores were good considering that the wind was strong and the light streaky. The scores were as follows, Morgan winning the badge, being allowed 5 points by using a military rifle. 200yds. off-hand: Weeks 66, Marshall 75, Maudlin 74, Merrill 73, Morgan 73. Highest score during the day: Weeks 81, Marshall 82, Maudlin 75, Merrill 73, Morgan 73. Total of 5 scores: Weeks 373, Marshall 381, Maudlin 355. Total of 4 scores: Merrill 258, Morgan 289.

TIME MATCH.—Mr. F. Hoefle, of the Miller Rifle Club of Hoboken, and Mr. G. Zimmerman, of the Bull's Head Rifle Club of Harlem, will shoot a match at Morrisania Park for $500 a side on May 7. The one making the greatest number of bullseyes in four hours will be declared the winner. They will begin the match at 1 o'clock, and time will be called at 5 P. M.

LINDSAY, Ont., April 25.—At a meeting of the Victoria county Rifle Association, held in the Council Chamber here last night, it was decided to hold the spring match over the range here on May 29. A liberal prize list is being published. All matches open to all comers.

About a year ago the *Globe* called attention to and published large extracts from a book entitled "Uncle Lisha's Shop," written by Mr. Rowland E. Robinson, and published by the Forest and Stream Publishing Co. We described it as perhaps the most original, fresh and pleasing contribution made to American humorous literature for years. This judgment was warmly echoed back to us by a number of well-known Canadians who bought the book on the strength of our recommendation. Several of them, including one of our really meritorious poets, were so much delighted by Uncle Lisha that they took the unusual course of writing to thank us for praising it publicly. So far as we know, Mr. Robinson's remarkable talent has not been applauded at all in his own country except by the readers of FOREST AND STREAM, in which the Uncle Lisha sketches first appeared. He has now issued (Forest and Stream Publishing Co.) a companion volume, "Sam Lovel's Camps." The highly amusing and natural French Canadian "Antwine," who appeared in "The Shop" is to the fore again in these camps. He is almost funnier than before. But we sadly miss "Granther Hill"—the voluble, toothless, inspiring old blowhard who had been in the Revolutionary War, who boasted that his advice had always made his commanders victorious, and who bragged most vivaciously on every occasion. The sketches of Mr. Robinson, we may explain, are dated away back to the time of the first steamboats. Sam Lovel's camps were on Lake Champlain and tributary creeks. This book is rather less amusing than Uncle Lisha, but still is incomparably more interesting and valuable in any right literary sense than nine hundred and ninety-nine novels in a thousand.—*Toronto Globe.*

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

May 7, 8.—Two days' trap-shooting tournament held at Pittsburgh, Pa. Guaranteed purses of $200 offered. For programmes of tournament, Elmer E. Shaner, 122 Diamond Market, Pittsburgh, Pa.

May 7, 8, 9.—Williamsport Rifle and Gun Club's tournament, Williamsport, Pa.

May 14, 15, 16.—Ohio Trap Shooter's League tournament, Cleveland, O.

May 14, 15, 16, 17.—Iowa State Sportsman's Association's annual tournament, Des Moines, Ia. A. C. Miller, Secretary, Des Moines, Ia.

May 16, 17.—Olean Sportsmen's Association tournament, Olean, N. Y.

May 21, 22, 23.—Minneapolis Gun Club tournament, Minneapolis, Minn. James Pye, Secretary.

May 29, 30, 31.—South Side Gun Club tournament, Milwaukee, Wis. C. W. Milbraith, Secretary.

May.—Nebraska State Sportsmen's Association's fifteenth annual tournament, Norfolk. B. B. Locke, Secretary.

June.—Annual tournament Sportsmen's Association of the Northwest, Tacoma, Washington Territory.

June.—Ninth annual tournament Southern Illinois Sportsmen's Association, Belleville. C. P. Richards, Secretary.

June.—Kansas City tournament.

June 3, 4, 5, 6, 7.—New York State Association for the Protection of Fish and Game tournament, Albany, N. Y. Horace B. Derby, Secretary, Albany, N. Y.

June 6, 7 8.—Southern Illinois Sportsmen's Association's ninth annual tournament, Belleville, Ill.

June 10, 11, 12, 13, 14.—First tournament of the American Shooting Association, at Cincinnati, O.

June 18, 19, 20, 21.—Illinois State Sportsmen's Association's tournament, Grand Crossing, Ill.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

MORE ABOUT THE LOYD SYSTEM.

CHICAGO, April 2.—In the comment on the Loyd system given in an earlier article under the head "Have We Found It?" it was stated that in the present article further examples would be given to test the working of the system under wider conditions, especially in the case of distributing the money when the number of shooters in any one tie was less than the number of moneys in the class. It will be easier to understand this by means of an example, which may be worked out as follows:

BLACKBIRD MATCH.

Twenty-four birds, $5 entry, 100 entries:

100×$5=$500 : $500—$48 (cost of birds)=$452=Pot-money.

Divide pot-money into 10 moneys (which will give so many chances to win that it may be called a fair return for the heavy entrance fee of $5). We will then have 10 moneys of $45.20 each, each of which will be divided into per cents as below:

$45.20 { (1)..$18.08=40 per cent. (2).. 13.56=30 per cent. (3).. 9.04=20 per cent. (4).. 4.52=10 per cent.

The scores for place will be as many as the number of moneys. Let us suppose that the ties stand as below:

No. birds killed.	No. shooters killing.
24	2
23	4
22	3
21	5
20	7
19	3
18	10
17	11
16	9
15	6

One pot of $45.20 belongs to any four shooters killing 24 straight. It happens that only two shooters broke 24 straight. What disposition shall be made of the money? It may be seen that first money is $18.08; and that is thought to be enough for first money; also, $13.56 should content a winner for second money, when he has bought 40 chances to win something with his $5, instead of only three chances to win. Therefore, into the box put two balls, numbered 1 and 2. The drawer of No. 1 wins $18.08, of No. 2 $13.56. There remain to be carried on down to the lower shooters the third and fourth pots of $9.04 and $4.52. We will call these two sums credit moneys, and mark them thus:

Credit.. { (3)..$9.04. (4).. 4.52.

It is seen that there are four ties on 23; that is, there is a use already for each pot of the money, $45.20, which belongs to the 23 class. Therefore, put into the box four balls, numbered 1, 2, 3, 4, and let these four shooters draw. No. 1 draws $18.08; No. 2, $13.56; No. 3, $9.04; No. 4, $4.52. Nobody is left to whom we may give our loose credit money. It therefore goes on further down.

In the 22 class we find three shooters. We put in the box balls 1, 2, 3, which draw $18.08, $13.56, $9.04. We therefore have left to add to our credit money $4.52. The latter now stands:

Credit.. { (3)..$9.04. (4).. 4.52. (4).. 4.52.

In the 21 class we have five shooters tying. We have, therefore, a chance to use one of our credit moneys. In using these we always begin at the top. The ties in 21 may then be said to win the following amounts:

21 class... { (1)..$18.08. (2).. 13.56. (3).. 9.04. (4).. 4.52. (5).. 9.04.

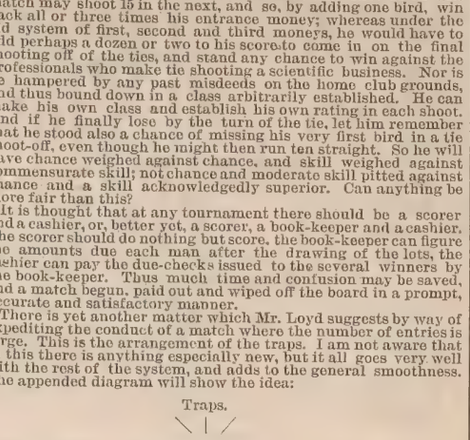
The amount each man wins is determined by lot as before. It will be seen that we have now wiped out one of our credit moneys, which now stands thus:

Credit. { (4)..$ 4.52. (4).. 4.52.

In the 20 class there are seen to be seven ties. Balls 1, 2, 3, 4 will win $18.08, $13.56, $9.04, $4.52. We then have left three shooters; among these we have our two credit moneys to divide. The one who draws a blank gets nothing; the two who draw balls 5 and 6 win $4.52 each. Our credits are now wiped out for the time.

In the 19 class, however, we find only three shooters. When these have drawn balls 1, 2 and 3, there remains pot (4), of $4.52, which, therefore, is to be passed on as a credit money.

In the 18 class there are ten ties; quite enough to use up the four pots and the additional credit of $4.52, still leaving five men disconsolate.



The ties on 17, 16 and 15 are decided by lot. In case of any class holding more shooters than pots, the result is decided at once by lot. In case of the number of tie shooters being less than the number of pots, the pots thus left undrawn are passed on down as above illustrated. The fewer the men in the upper ties the better for the men in the lower ties. The system is devised in favor of the men in the lower ties. The carrying on lower of the undrawn moneys in any pot is, as may be seen by the above example, a thing so simple that no mistake can possibly be made. It may be well, however, to tabulate the whole matter as below:

Birds.	Ties.	Winnings.					
24	2	$18.08	$13.56	...	....	...	....
23	4	18.08	13.56	$9.04	$4.52	....	....
22	3	18.08	13.56	9.04	....	....	....
21	5	18.08	13.56	9.04	4.52	9.04	....
20	7	18.08	13.56	9.04	4.52	4.52	4.52
19	3	18.08	13.56	9.04	....	....	....
18	10	18.08	13.56	9.04	4.52	4.52	....
17	11	18.08	13.56	9.04	4.52	....	....
16	9	18.08	13.56	9.04	4.52	....	....
15	6	18.08	13.56	9.04	4.52	....	....

In adding up the shooters who got into ties for place, we find that 90 men got place on merit. Of these, 40 won money greater or nearly equal to their entrance fee; only 20, therefore, were turned under by the dice. Out of these 20, the very great majority would have won absolutely nothing under any other system. Under this system they stood a chance to win, and still stand a chance with next match. As for the 40 shooters below 15, they have not yet learned to shoot well enough to win, but they would be much further from winning under any other system than they are under this. The man who shot 14 in this match may shoot 15 in the next, and so, by adding one bird, win back all or three times his entrance money; whereas under the old system of first, second and third moneys, he would have to add perhaps a dozen or two to his score to come in on the final shooting off of the ties, and stand any chance to win against the professionals who make tie shooting a scientific business. Nor is he hampered by any past misdeeds on the home club grounds, and thus bound down in a class arbitrarily established. He can make his own class and establish his own rating in each shoot. And if he finally lose by the turn of the tie, let him remember that he stood also a chance of missing his very first bird in a tie shoot-off, even though he might then run ten straight. So he will have chance weighed against chance, and skill weighed against commensurate skill; not chance and moderate skill pitted against chance and a skill acknowledgedly superior. Can anything be more fair than this?

It is thought that at any tournament there should be a scorer and a cashier, or, better yet, a scorer, a book-keeper and a cashier. The scorer should do nothing but score, the book-keeper can figure the amounts due each man after the drawing of the lots, the cashier can pay the due-checks issued to the several winners by the book-keeper. Thus much time and confusion may be saved, and a match begun, paid out and wiped off the board in a prompt, accurate and satisfactory manner.

There is yet another matter which Mr. Loyd suggests by way of expediting the conduct of a match where the number of entries is large. This is the arrangement of the traps. I am not aware that in this there is anything especially new, but it all goes very well with the rest of the system, and adds to the general smoothness. The appended diagram will show the idea:

The traps are seen to be so arranged that the shooter need not be troubled by the light at any time of the day usually devoted to shooting, since out of the four batteries three can always be chosen where the sun is not in the shooter's eyes.

Under a system of traps as above, it is Mr. Loyd's suggestion that the shooters be divided into squads of 5. This will obviate all figuring for place among shooters who would like to know how much they "ought to make." It will always permit the rapid carrying on of two or three matches at the same time. Thus a shooter might enter a 9-birds match at $1 entry, in a 9-birds match at $1.50 entry, and in a 12-birds match at $2 entry. He steps to battery No. 1 with his squad. In a moment the book-keeper has their 45 shots recorded, and they are out of match No. 1. At once they step over to No. 2 battery, and that book-keeper soon has their record there. While still warm, and without any tedious wait, they pass to No. 3 battery. At their heels follows the second squad. The report of the gun is incessant. The scores fill out rapidly. The system is applied; the ties are not shot out; the book-keeper calls out the names of those who are to throw dice for winners. Their checks are passed to them, and they stand aside for the next class. No error is possible under the simple rules given above. The men get their money at once, and the beginner at the trap carries away something to induce him to go into the next match. Two or three matches are shot where only one would be or could be under the old way. There is no waiting for long-winded ties. All is action, and general action. Two or three shooters shoot where only one shot before. Two or three targets are broken (and therefore sold) where only one was before. Two or three shells and loads of ammunition are used (and therefore sold) to one before. The professional shooter steps back into line and dresses to the amateur shooter who steps forward into line. They are all in line. The amateur has more chance, and the professional less, than before. It is the amateur who upholds sport, not the professional. It is the amateur, patient but overloaded as he is, who is upholding trap-shooting to-day, and not the professional. Sport was made for the amateur, and ceases to be genuine sport when others enter it. This is the system of the amateur. I trust it may bring to Mr. Loyd the credit which to me at least it seems he deserves.

E. HOUGH.

OMAHA TOURNAMENT.

OMAHA, Neb., April 16.—The Hardin tournament commenced this morning at the new grounds on the Iowa side of the river. They are admirably chosen, being on a meadow about a quarter of a mile from the bridge, with a splendid background. The day was pleasant and fine scores were made. Among those present from abroad were Chas. W. Budd, Des Moines, Ia.; Geo. Hughes, Fonda, Ia.; J. J. Lesch, W. V. Cane, E. Hairgrave and Geo. Nicoll, Seneca, Kan.; W. J. Legg and A. N. Atty, Sutton, Neb.; Jake Crabill, Clarinda, Ia.; F. J. Palmer, S. B. Fleck, Steve Reynard and W. H. Harrison, Grand Island, Neb.; E. M. Westbrooke, Vail, Ia.; J. R. Elliott and Frank Hamilton, Kansas City; J. Schuneman and R. H. Larkin, Cheyenne, Wyo.; T. A. Lewis, St. Louis; Rollo Heikes, Dayton, O.; T. R. Massey, J. Van Dusen and S. J. King, Logan. The shooting began promptly at 9:30 with a sweepstake shoot at 15 standard targets, 3 traps, 18yds., $2 entrance. Following is the score:

Budd	011111111111111—14	Atty	011111011111111—13
Hughes	001103101111001— 8	Nicholi	111111011001111—12
Ketchem	111111101111011—13	Crabill	111111111111111—15
Hardin	111111111111011—14	Parmalee	111111111111111—15
Hairgrave	111111011110101—12	Fleck	110111011100111—11

Crabill, of Clarinda, Ia., and Parmelee, of Omaha, divided first money, $28.50; Budd and Hardin second, $18.25; Ketchem and Atty third, $12.50; and Hairgrave and Nicholi fourth, $9.25.

Second event, 8 live pigeons, modified English rules, 30yds. rise 80yds. boundary, $7 entrance, 4 moneys:

Hughes	11111111—8	Reynard	11111110—7
Budd	11111111—8	Nicholi	11111011—7
Elliott	11111111—8	Ellis	11111101—7
Smith	11111111—8	Fleck	01011111—6
Hardin	01111111—7	Hairgrave	10011101—5
Parmalee	11111011—7	Crabill	01110101—5
Schuneman	11111011—7	Ketchem	11010011—5
Pawnee	11011111—7	Cave	10011011—5
Westbrooke	11110111—7	Kennedy	01101011—5

Hughes, Elliott, Budd and Smith divided first, $56; Hardin won second in the shoot off, $48.50; Fleck third, $20, and Crabill fourth in shoot off, $18.50.

Third event, 10 single sparrows, 3 traps, National rules, 80yds. boundary, both barrels, $7 entrance:

Hughes	1101110011—8	Pawnee	1111111110—9
Smith	1100011011—6	Fleck	1111101110—8
Budd	0001111011—6	Schuneman	1001010013—4
Heikes	1011110111—8	Reynard	1101100011—6
Parmalee	0111111111—9	Ketchem	1101110010—6
Ellis	1101010111—7	Hardin	1011100101—6
Elliott	1001011111—7		

Parmalee and Pawnee divided first, $37.40; Heikes and Fleck second, $27.20; Ellis third on shoot off, $22; Budd and Hardin fourth on shoot off, $16.

Fourth event, 6 single and 3 pair standard targets, 18 and 15yds. rise, entrance $4, four moneys:

Parmalee	111111 11 10 01—10	Elliott	111111 10 11 10—10
Ellis	111111 10 10 11—10	Crabill	010111 11 10 10— 9
Budd	111111 11 10 11—11	Kennedy	101111 10 10 11— 9
Heikes	111101 11 10 10— 9	Hardin	001111 11 01 11— 9
Fleck	011111 00 01 11— 8	Jack	111111 10 11 11—11
Harrison	001011 01 10 10— 6	Mumma	110101 01 10 10— 7
Shields	110111 10 11 11—10	Nicholi	101111 10 11 11—10
Ketchem	101111 10 11 11—10		

Budd and Jack divided first, $30.40; second, Ketchem, on shoot-off, $22.50; third, Heikes, after shooting off, $13.50; fourth, Fleck, $8.50.

Fifth event, special shoot, 12 single standard targets, entrance $5, four moneys:

Budd	111111111111—12	Kennedy	101111001111— 9
Heikes	011111111111—11	Jack	100010011111— 7
Shields	100001110001— 5	Smith	110111110101— 9
Harrison	110011111011— 9	Elliott	110011111011—10
Brewer	111011111100— 9	Schuneman	111011111011—10
Mumma	011111111001— 9	Atty	110111111100— 9
Parmalee	111111111111—12	Ketchem	111101111011—10
Westbrooke	101100110112— 8	Hardin	111111111110—11
Ellis	010101011111— 9		

Budd and Parmalee first, $40; Heikes and Hardin second, $30; Ellis, Ketchem and Schuneman third, $22; Brewer, fourth, $15.

Sixth event for the first day was at 7 live pigeons, 26yds. rise, one barrel, American rules, $10 entrance, 4 moneys:

Heikes	1111111—7	Fleck	1011110—5
Ellis	0111110—5	Benjamin	1101111—6
Budd	1010111—5	Kennedy	1011111—6
Hughes	1111110—6	Schuneman	1111001—5
Smith	1011011—5	Snyder	0111111—6
Westbrook	1111100—5	Mumma	1110010—4
Parmalee	1110111—6	Jack	1110111—6
Shields	0110011—4	Hardin	1111111—7
Musselman	1000111—4	Field	1111111—7
Pawnee	1110111—6	Reynard	1111001—5

Heikes, Hardin and Field divided first money, $90; Hughes second on shoot-off, $70.50; Schuneman and Reynolds third, $50.10; Shields and Mumma fourth, $40.35.

April 17.—The second day broke damp, rainy and gloomy, and shooting did not commence until after 10 o'clock, but was kept up until nearly dark. The first shoot was a special sweepstake, 5 live birds, modified English rules, entrance 25 cents, 2 moneys:

Jack	11101—4	Nicholi	11111—5
Mulford	10111—4	Morgan	11101—4
Gwin	00111—3		

Nicholi first money. Ties on 4 divided second.

Second event same as above, entrance $3:

Smith	11111—5	Budd	00111—3
Hardin	11111—5	Harrison	00111—3
Schuneman	11111—5	Hughes	11111—5
Nicholi	01111—4	Mulford	11111—5
Crabill	11111—5	Pawnee	11111—5
Wellington	01111—4	Fleck	01011—4
Parmalee	10111—4	Jack	11111—5
Ellis	11111—5		

First money shot away in birds; second divided by Parmalee and Fleck, $10.50.

Third event, 15 single standard targets, 3 traps, 18yds. rise, $8 entrance, three moneys:

Hardin	111111111111101—14	Parmalee	110111111111111—14
Crabill	111111111111111—15	Harrison	001011110101100— 8
Budd	111111111111111—15		

Crabill and Budd first money, $28; Hardin and Parmalee second money, $18.50; Harrison third money, $10.25.

Fourth event, 6 singles and 3 pairs standards, $5 entrance, three moneys:

Parmalee	111110 11 11 10—10	Elliott	111111 11 11 00—10
Ellis	111111 11 01 10—10	Ketchem	100001 01 11 11— 7
Budd	111111 11 11 10—11	Hughes	111110 01 01 11— 7
Heikes	111110 11 01 10— 9	Crabill	111110 11 01 10— 9
Fleck	101111 00 01 11— 8	Jack	111111 11 01 10—10
Harrison	001011 01 10 10— 6	Nicholi	110111 01 01 11— 9
Shields	111011 00 11 11— 9	Hardin	111111 11 01 10—10

Budd first money, $30; Parmalee and Hardin second, $15.50; Nicholi third, $9.50.

Fifth event, 10 English sparrows, 28yds. rise, both barrels, $5 entrance, 3 moneys:

Ellis	1001100101— 5	Pawnee	0111101111— 8
Heikes	1110111111— 9	Budd	1111111110—10
Hughes	0110110111— 7	Fleck	0110011011— 6
Parmalee	1001100011— 5	Reynard	1100111110— 7
Field	0010110011— 5	Smith	0110111101— 7
Hardin	1110001110— 6		

Budd first, $20; Heikes second, $16; Pawnee third, $12.50.

Second event, 7 live birds, 30yds., modified English rules, 50 cents entrance, 4 moneys:

Budd	1111111—7	Ellis	1111111—7
Hughes	1111111—7	Field	1111011—6
Fleck	1111111—7	Hardin	1111101—6
Heikes	1111111—7	Smith	1111101—6
Harrison	1111111—7	Pawnee	1111100—5
McGreer	1111111—7	Westbrooke	0111010—4
Parmalee	1111111—7	Hoffmayer	0111000—3

Ties on 7 divided first, $35.50; ties on 6 divided second, $27; Pawnee third, $18.80; Westbrooke fourth, $9.40.

Seventh event, 12 single standard targets, 18yds. rise, entrance $3, 4 moneys:

Crabill	111111011101—10	Parmalee	111001110111— 9
Ellis	101110111111—10	Reynard	111110101111—10
Harrison	110110000100— 5	Nicholi	110011101111— 9
Heikes	011101111111—10	Jack	101010000000— 3
Fleck	011010011101— 7	Pawnee	110110101001— 7
Hardin	111111111110—11	Schuneman	111111011110—10
Budd	111011111111—11	Nason	011010111011— 8
Field	111100011101— 8		

Heikes and Hardin first, $28.50; Heikes, Reynard and Schuneman divided second, $19; Parmelee and Nicholi third, $14; and Field and Nason fourth, $7.50.

April 18.—First event, 7 live pigeons, modified English rules, 30yds., use both barrels, $7 entrance, four moneys:

Budd	1111101—6	Crabill	1100111—5
Farrall	1111111—7	Beard	1011110—5
Parmalee	1111111—7	Smith	1111110—6
Hughes	1111111—7	Nason	0101110—4
Dean	1111111—7	Ellis	1111111—7
Heikes	1110111—7		

First money all shot away in ties: Smith won second, $15.40; Crabill and Beard divided third, $10.25, and Nason won fourth, $7.50.

Following this came a private match between Prince and Griswold, 10 live birds, 30yds., English rules, $20 a side:

Prince	0011111111—8	Griswold	0111111111—9

The event of the day was the shoot at 50 single standards, open to Nebraska only, for the championship badge, donated by Max Meyer & Bro.:

Welling	38	Kennedy	44
Ketchem	41	Beard	42
Shields	35	Pawnee	40
Karll	36	Harrison	38
Parmalee	47	Brewer	46
Hardin	43	Nason	39

Parmalee won badge.

Third event, 10 English sparrows, 30yds. rise, both barrels, $5 entrance, four moneys:

Heikes	1111110111— 9	Parmalee	1111111111—10
Ellis	1110110010— 7	Hughes	1111111111—10
Budd	1111111111—10	Nason	1010101111— 7
Shields	0011101111— 7	Farrall	1111110111— 9
Pawnee	1111111111—10	Crabill	1101111101— 8
Smith	1111111110— 9		

Budd, Pawnee, Parmalle and Hughes divided first, $38.50; Heikes, Smith and Farrall divided second, $23.50; Crabill third, $15.40; Nason, Ellis and Shields, $7.60. There were a few other events shot, but of not enough importance for publication. This practically closed the tournament.

SKINNER.

MASSACHUSETTS RIFE ASSOCIATION.—On Wednesday May 1, and succeeding alternate Wednesdays, viz.: May 15 and 29, June 12 and 26, July 10 and 24, Aug. 7 and 21, Sept. 4 and 18, Oct. 2, 16 and 30, Nov. 13 and 27, Dec. 11 and 25. The Massachusetts Rifle Association will in addition to the regular practice and sweepstake matches offer for competition of all shotgun shooters, the prizes named below, on the following conditions: Competitions, 18, entrance 25 cents each day, score to consist of 15 clay-pigeons from 5 traps, and 15 standard targets, sweeps optional. Prizes to be won on the aggregate of each competitor's best scores as follows: First prize on 16 scores, second on 15, third on 14, fourth on 13, fifth on 12, sixth on 11, seventh on 10, eighth on 9, tenth, eleventh, twelfth, thirteenth and fourteenth on 8, fifteenth, sixteenth and seventeenth on 7. After the first prize has been awarded competitors in the 16-score class will stand on their first 15 scores as actually made, as competitors in the 15-score class, thus becoming eligible for the second prize, and so on down the list. Ties to be shot off at 4 clay-pigeons and 5 standard targets. Competitors to have choice of prizes in the order of the ranking of their scores. First prize is a Parker 10-gauge hammerless gun, fine Damascus barrels, extra fine shooting (made expressly for this match), valued at $100, and other prizes, valued at $175. All the above competitions will take place at Walnut Hill range, and will come off at the designated time, regardless of weather. Class shooting in all matches. Shooting to begin at 9:30 A. M. The gold coin and Merchandise match will be shot at 12:30 P. M. Birds 2½ cents each to non-members.

MINNEAPOLIS, Minn., April 25.—To-day came out beautiful and perfect for the trap-shooters, and as a consequence a large crowd attended the Minneapolis Gun Club's weekly badge shoot, although the motor dosen't "mote" yet on account of the street railroad strike. Private and public conveyances were used. The club will have two shoots per week from this time forth until the tournament on May 21—Mondays and Thursdays. Some good shooting was done, as the scores will show.

First event, 10 single Peorias, $1 cutrance, four moneys, 5 screened traps, Minneapolis rules:

Murphy	1110111111—9	Cutter	1110101110—7
Whitcomb	1010111111—8	Mike	1101100111—7
Kennedy	1110110111—8	Brady	1101110011—7
Griffin	1110011111—9	Kimball	1110111111—9

All ties div.

Second event, 6 singles and 2 pairs Peorias, 18 and 15yds. rise, $1 entrance, four moneys:

Skinner	111111 01 10—8	Marshall	111010 10 11—7
Brady	110110 01 10—6	Shott	001111 11 00—6
Whitcomb	111100 11 11—8	Murphy	111011 10 10—7
Chantler	011110 10 10—6	Mike	111101 10 11—8
Lawrence	111001 11 10—7	Cutter	101011 11 10—7
Osmer	111101 10 11—8	Kimball	111001 10 10—6
Perkins	011011 10 11—7	Ensign	111111 10 10—8
Kennedy	111011 10 11—8	Stokes	110111 10 10—7

Ensign, Osmer and Skinner first, Marshall second, third and fourth div.

Second event, badge shoot, 10 single and 5 pairs Peorias, same rules, entrance $1, four moneys:

Skinner	0111111111 11 11 10 11 11—18
Whitcomb	1101111110 10 10 10 11 10—14
Lawrence	1111110101 11 11 10 10 11—16
Osmer	1111101111 00 10 10 11 00—13
Ruby	1111011110 11 00 10 10 00—13
Chantler	0010111111 10 10 10 11 10—13
Shott	0110011111 00 11 10 11 10—13
Sheppard	1001110111 10 10 01 10 10—12
Nicholson	0001101111 11 00 11 10 10—12
Scott	0100001111 11 10 10 11 10—12
Marshall	1101111101 11 11 11 10 10—16
Perkins	1010111110 00 11 11 00 01—12
Latz	1111010000 11 11 10 00 10—12
Kennedy	0011100101 11 10 10 11 11—15
Hopper	1101010011 10 10 01 11 00—11
Kimball	1111111110 11 11 10 01 11—17
Brady	1111111011 10 10 10 10 10—14
Griffin	1110111001 00 00 10 00 11—11
Warwick	1000011111 10 11 10 01 10—12
McClary	0111011101 00 11 11 01 10—13
Beekman	1111101110 00 10 10 10 11—13
Murphy	0010111111 10 11 10 10 10—14
Ensign	1111111111 10 11 11 11 10—18
Cutter	1101100001 10 11 10 00 10—10
Mike	1111111111 10 10 11 00 10—15

Stokes first money and senior badge; Skinner and Ensign second; Kimball third and Lawrence fourth.

Third event, "Tribune" badge shoot, 9 singles and 3 pair Peorias, entrance $1, 4 moneys:

Stokes	1111111100 10 01 10–10	Marshall	1111111101 11 10 11–13
Ensign	1111110011 11 11 11–13	Nicholson	0110101001 00 01 10– 6
Lawrence	1011111111 10 10 10–11	Morse	1101111011 01 10 10–10
Dunn	1001111111 11 10 00–10	Latz	1000001101 11 11 00– 8
Cutter	1111111111 10 11 10–13	Warwick	1001011101 11 11 11–11
Skinner	1011011111 11 11 10–12	Kimball	1111111111 11 11 11–15
Whitcomb	0100110111 11 10 10– 9	Mike	0111111001 10 10 00– 8
Ruby	1111001101 00 11 10– 9	McClary	1111100000 11 01 11–10
Shott	1011010101 11 01 10–10	Hopper	1100011111 00 10 11– 9
Boardman	0101101010 11 11 00– 9	Pratt	1111010111 10 11 10–11
Griffin	0010111110 11 10 10– 9	Kennedy	0101111011 10 11 10–10
Osmer	1111011110 10 10 10–10	Murphy	1110110000 11 11 11–11
Chantler	1111111111 10 11 10–13		

Mr. E. Kimball, who won first money on a straight score, was formerly a member of the club, but three years ago he removed to California, where he still resides. He has not forgotten how to handle a gun, though he has not shot since he went away. It was a hammerless, and though not used to it, and being balked nearly every time he tried to shoot, "he got there just the same." Ties on 13 div. second money, but shot off for badge, Ensign winning; Skinner third and Lawrence fourth.

SAN FRANCISCO, April 20.—The San Francisco Gun Club held its usual monthly shoot to-day at Adams Point, and despite various counter attractions, had quite a pleasant reunion. The grounds, which have been renovated, were in fine condition, and the birds were up to the usual standard. The shooting all round was, however, hardly up to the usual average in the club shoots. Only 70 per cent. were killed inside the boundary, and of these quite a number were second barrel kills, though it must be stated that several of the deaths were effected at a tremendous range, 70 odd yards in one instance. Schultze powder was used in nearly every case. The scores in the club shoot at 12 birds, 80yds. boundary, Hurlingham rules, were as follows:

J W Jellett	2000102212O1— 7	Williams	2010011020O0— 5
F M Swett	1200111010122— 9	G F Sanborn	2122210211221—11
R B Woodward	1122120121222—11	G F Stone	0010220102210— 7
Howard Black	2111101211O2—10	H W Woodward	0202020200O1— 5
F Fisher	1200021110O0— 7	J K Orr	1121011112O1—10
G Leviston	2011101112l0— 9	E W Chapin	2211010222O1— 9
F S Butler	1220111101l2— 9	Dr Shorb	0101101020O1— 6
H Hamilton	1020211111O1— 9		

In the team match, at 6 birds each, Hurlingham rules, the scores were:

Orr (Captain)	111021—5	Jellett (Captain)	221112—6
F Butler	111211—6	Black	011121—5
Swett	111111—6	Leviston	102201—4
Hamilton	000110—2	Chapin	011010—3
Williams	00020—1	H G Woodward	200001—2
Shorb	112122—5	Fisher	200102—3
R B Woodward	121221—6—31	Moore	122112—6—29

WORCESTER, Mass., April 26.—The regular series of classification prize shoots at Coal Mine Brook Range under the auspices of the Worcester Sportsmen's Club were continued this week. In the classification each man has a possible 30 in a total of five events of six birds each. class A includes all of 22 or more and the purse is $25, class B all below 22 and the purse is $15. The prizes are 50, 30 and 20 per cent. in each class. The result of this week's meet follows:

Class A.	Classif'n.	Prize.	Class A.	Classif'n.	Prize.
Dr Bowers	26	10	E S Knowles	22	8
G N Wheeler	27	9	A R Bowdish	22	7
C H Howe	25	9	E T Smith	22	6
E F Swan	22	9	M D Gilman	26	5
G W Russell	23	8	G J Rugg	22	5

Dr. Bowers first, Wheeler, Howe and Swan div. second, Russell and Knowles div. third.

Class B.	Classif'n.	Prize.	Class B.	Classif'n.	Prize.
Geo. Sampson	16	9	E Jewett	15	6
C R B Claflin	17	8	H Colvin	15	5
A L Gilman	21	7	L R Hudson	14	3
A D Franklin	18	7	F Forehand	8	3
C Crompton	21	6	C Forehand	8	2

Sampson first, Claflin second, Gilman and Franklin div. third. In the classification bluerocks and clay-pigeons were used and in the prize score bluerocks only thrown from open traps.

PITTSBURGH TOURNAMENT.—An open tournament under the management of E. E. Shaner and R. R. Davison, will be held on the grounds of the Herron Hill Gun Club on Tuesday and Wednesday, May 7 and 8, $200 is guaranteed. The programme provides 16 matches at single birds as follows: May 7.—Match No. 1, 10 bluerocks, 5 traps, entrance $1; No. 2, 9 Keystones, 3 traps, entrance $1; No. 3, 20 bluerocks, 5 traps, $50 guaranteed, entrance $3; No. 4, 9 Keystones, 3 traps, entrance $1.50; No. 5, 10 bluerocks, 5 traps, entrance $2; No. 6, 21 bluerocks, 3 traps, $50 guaranteed, entrance $3; No. 7, 10 bluerocks, 5 traps, entrance $1.50; No. 8, 9 Keystones, 3 traps, entrance $1. May 8.—No. 9, 10 bluerocks, 5 traps, entrance $1.50; No. 10, 9 Keystones, 3 traps, entrance $1.50; No. 11, 20 bluerocks, 5 traps, $50 guaranteed, entrance $3: No. 12, 9 Keystones, 3 traps, entrance $1; No. 13, 10 bluerocks, 5 traps, entrance $1; No. 14, 21 Keystones, 3 traps, $50 guaranteed, entrance $3; No. 15, 10 bluerocks, 5 traps, entrance $1.50; No. 16, 9 Keystones, 3 traps, entrance $1.50.

ELIZABETH, N. J., April 23.—Two pigeon shooting matches took place to-day on the Elizabeth Gun Club grounds. The first was between H. Stewart and H. Folsom for $10 a side, 10 birds each. Stewart won, killing 6 to his opponent's 5. The second match was between John Anthes and H. Schulthies. The loser had to pay for a supper for 20 besides the $5 stake. Anthes won, killing 3 birds to Schulthies's none. Both matches were at 21yds. rise, 80yds. boundary.

STATEN ISLAND.—At New Dorp last week the diamond medal donated by Samuel Burbank, was shot for by teams of 10 men for the following clubs. The Jeanette, Algonquin, Clifton, Emerald, and First German Gun Clubs of New York. The conditions were 6 live birds each man, and was won for the second time by the Jeanette Club, they killing 48 out of the 60 birds shot at.

ST. PAUL, April 20.—The St. Paul Gun Club has its weekly shoot each Saturday. The shooters face the north, and to-day a very hard northwesterly gale was blowing, which made good scores very difficult. It was next to impossible to find the left-quartering bird in doubles. The following visiting sportsmen were present: R. M. Anderson, Stillwater, Minn.; J. H. Balsom, Hudson, Wis.; H. W. Jones and Lee, of Atwater, Minn., and Warwick, Lawrence and Dunn from Minneapolis. After the first sweep of 10 single birds, the individual badge was shot for by Chantler, who won it last week, and Barnes, who challenged him for it; $5 entrance, 15 singles and 5 pairs Peorias, 5 screened traps, 18 and 15yds.:

Chantler	1111111111110111	10 10 11 10 00—19	
Barnes	1111011111100111	11 11 11 10 10—20	

Barnes won the badge and is challenged for next Saturday by Burke. Then followed the regular events.

First event, $1 entrance, 16 Peorias, 6 screened traps, 18yds. rise, Keystone rules, two prizes:

Dunn	1001111101—7	Lawrence	0111101010— 6
M F Kennedy	1000100111—5	Pfister	1100011101— 6
Balsom	1101011111—8	Richeson	0000010011— 3
Chantler	0111111111—9	Lee	1111111111—10
Barnes	1011001101—6	Cummings	1110100010— 5
Warwick	1111010101—8		

Lee first, Chantler second.

Second event, 10 single Peorias, 5 screened traps, Keystone rules, entrance $1, three prizes:

Dunn	1100111001— 6	Richeson	0001100001— 3
Kennedy	1110101111— 8	Lee	0111100111— 7
Balsom	1111111110— 9	Cummings	0101011010— 5
Chantler	0111111101— 8	Boyd	0010010100— 4
Barnes	1111110111— 9	Bennett	1111110111— 9
Warwick	1010010100— 3	Fish	1101010100— 4
Lawrence	1011010100— 5	Burke	0101111111— 8
Pfister	1111111111—10	Holt	0101111101— 7
Jones	1011111111— 9	Pratt	1011000011— 5

Pfister first, Barnes and Bennett second, Burke third.

Third event, 5 singles and 2 pairs Peorias, 5 screened traps, 18 and 15yds. rise, Keystone rules, three prizes:

Dunn	11110 01 11— 7	Richeson	10101 10 00— 4
Kennedy	11011 10 01— 6	Lee	11101 11 11— 8
Balsom	11111 11 11—10	Cummings	01111 01 11— 7
Chantler	11111 11 11— 9	Boyd	10110 10 10— 5
Barnes	11110 10 11— 7	Bennett	11111 11 01— 8
Warwick	11000 10 10— 4	Fish	11101 11 10— 7
Lawrence	01000 00 00— 1	Burke	11101 00 01— 5
Pfister	01111 11 11— 8	Holt	10110 11 00— 5
Jones	11100 11 10— 6	Pratt	01111 10 10— 6

Balsom first, Bennett second, ties on 7 div.

Badge shoot, $2 entrance, 10 singles and 5 pair Peorias, 5 screened traps, 18 and 15yds. rise, Keystone rules, 4 prizes:

Dunn	1011011101 10 11 10 01 11—14
Kennedy	1111101110 11 11 10 11 11—16
Balsom	1111011111 10 11 11 11 11—18
Chantler	0111111111 10 11 10 10 11—16
Boyd	1111011011 11 11 11 01 00—14
Barnes	0111101111 01 11 11 11 11—17
Warwick	0110101011 10 01 11 01 01—12
Lawrence	1111110110 00 11 10 11 10—14
Pfister	1111111011 11 11 11 11 00—17
Jones	0011111111 11 10 11 11 10—16
Richeson	1010001101 11 10 00 01 11—11
Lee	1111111111 00 10 11 10 10—15
Cummings	1111010011 11 11 00 11 10—14
Bennett	1111111110 10 10 11 10 11—16
Fish	1111000011 11 11 10 11 11—15
Burke	1111111100 11 01 10 11 10—15
Holt	0111001101 11 11 01 11 11—15
Pratt	1100000100 10 01 10 10 01— 9
Harris	1010001001 10 00 10 00 00— 4
Kilby	1110110111 10 11 01 01 11—16
Blakely	1111001100 11 11 11 01 01—14

Balsom first. Ties on 17, 3 singles and 1 pair, 18 and 21yds. rise: Barnes 111 10, Pfister 101 10. Ties on 16, 3 singles and 1 pair, 21 and 18yds. rise: Kennedy 110, Chantler 10, Jones 0, Bennett 111 11. Ties on 15, 3 singles and 1 pair, 21 and 18yds. rise: Lee 110 10, Fish 00, Burke 00, Holt 011 11.

Fifth event, 5 singles and 3 pair Peorias, 18 and 15yds. rise, 3 prizes:

Kennedy	10111 11 11 10— 9	Cummings	11110 00 01 00— 5
Balsom	11111 10 11 11—10	Bennett	11110 11 10 10— 8
Chantler	01010 11 11 11— 8	Blake	11001 10 01 11— 7
Boyd	00111 11 10 00— 6	Holt	00111 01 01 11— 7
Barnes	11100 10 11 10— 7	Fish	01111 10 11 11— 9
Jones	11110 11 10 11— 9	Kilby	11110 00 10 11— 7
Lee	11111 11 11 11—11		

Lee first, Balsom second, ties on 9 divide third.

PINE IRON WORKS, Pennsylvania.—April 20.—The Pine Gun Club shot to-day the eleventh badge match at 10 clays, but with a disabled trap. The scores ran:

J N Boughton	1011001011—6	J T Romig	0011101011—6
S H Schaefer	1010111111—8	J Dierolf	0001111001—5
R B Eagle	1000111100—5	M Romig	0000110000—2

CORRY, Pa., April 25.—The Corry Gun Club shot to-day with the following scores:

F Babcock	1111111111111111111111101—23
Scott	1011111010111111111111—22
Blydenburg	1010001111111011111111101—20
Austin	1110111111110010111111001—19
Lewis	1011100111011110110111101—18
H Arnold	1111101010010010011011—17
Nichols	0111111110100111011000111—17
Swan	1100101001101111111100111—17
Edwards	1011111110100101000001111—16
Mead	1100011011100101011011110 –16
Waggoner	0110111010111100010101—16
Ellis	0011100101011111000101112—16

Berliner 15, Wilson 15, Kelleher 14, Blair 13, Gartner 13, Jacobson 9, Starbird 7, Brown 6, Newman 5, Bentley 4, Dunbar 4, Van Wert 2.

The gold medal was won by Fred Babcock, silver medal by Scott, and silver medal by T. J. Van Wert.

TORONTO, April 25.—The Stanley Gun Club's second shoot for the gun presented by Messrs. W. McDowall & Co. to the club, which took place this afternoon on the latter's grounds, resulted in favor of W. Emond, with a score of 23 out of 25. The scores are: W. Emond 23, F. Mallett 10, T. Sawden 19, C. Kemp 18, W. Felstead 15, J. Rice 14, T. S. Bayles 13, S. McClure 8. Sweep No. 1, 15 birds: Emond 13, McDowall 12, Casey 11, Andrews 8, Stone 8. Sweep No. 2, 5 doubles, 6 singles: Feistead 13, Casey 13, Emond 12, McDowall 9.

WELLINGTON, Mass., April 27.—There was a fair attendance at the grounds of the Wellington Gun Club to-day, and several clean scores were made in the sweepstake matches. In the silver pitcher match, Lee won with a straight 15, while there were several who scored 14. In the sweepstake match the winners were as follows: Six bluerocks: Chase and Sanborn. Five clay-pigeons: Baxter. Six bluerocks: Sanborn. Five clay-pigeons: Melcher and Sanborn. Six bluerocks: Bradbury, Choate and Chase. Five clay-pigeons: Choate and Schaefer. Six bluerocks: Melcher. Six bluerocks: Schaefer, Piper, Choate and Lee. Six bluerocks: Sanborn, Field, Dill and Schaefer. Seven bluerocks: Chase, Field and Lee. Six clay-pigeons: Schaefer. Six bluerocks: Chase, Stanton and Lee. Six bluerocks: Choate and Sanborn. The Wellington Club will hold a shoot next Tuesday, beginning at 1 o'clock, when sweepstakes matches will be in order.

NEWARK, N. J., April 25.—The open-to-all sweepstake at 25 live birds, that took place at Erb's grounds to-day, drew a large crowd of spectators. It was expected that the event would have 20 entries, but only half that number were on hand with their money. The weather conditions were good, and a stiff northeast breeze blew across the traps. The birds furnished by Erb were far above the average; scarcely one of them lingered at the trap after it had been pulled. W. Tell Mitchell shot Mr. Freche's score as well as his own, but did not succeed in getting a place for him. The shooting of Captain Jones was a pretty piece of work, and he should have had a clean score, his sixth bird, scored as lost, falling stone dead just out of bounds. Mr. Caperon, of Baltimore, and Chas. Smith both lost two birds that were hit hard, but luck was against them and they got out of bounds. The conditions were modified Hurlingham rules, 12-gauge guns, at 28yds. rise. The purse was divided into four moneys, "South Paw" Heritage was the referee and Jacob "Pointer" Pentz official scorer. Score:

A Freche (30)	1002200112111222111110010—18
C M Hedden (30)	0211221212102222212211222—23
F Class (28)	2121111021121121212210)—22
Chas Smith (30)	2111o121111122211101o0011—20
W Lindsley (30)	2221211211o1102111201112—21
W T Mitchell (28)	1221101221101211221211—23
Capt Jones (28)	1112222112111212112212)—24
H Sigler (28)	2110112031161221210w.
Caperon (28)	1112111201211111210011100—20
S Castle (28)	2011120121111111211o1221—22

o Dead out of bounds. Capt. Jones first, W. T. Mitchell and C. M. Hedden divided second, F. Class and S. Castle third, M. Lindsley fourth.—THE KAY.

NEW JERSEY STATE SHOOT.—A meeting of the New Jersey State Sportsmen's Association for the Protection of Fish and Game was held in Newark, N. J., on April 24. The association had held no meetings since 1884, and many of the clubs that were then members had passed out of existence. Dr. W. N. Pendell the president called the meeting to order; Secretary Hayes called the roll, and the following clubs answered: The Essex of Newark was represented by Dr. Pendell and W. Hayes, South Side of Newark by W. H. Hobert and J. H. Burnett, Forresters of Newark by Jacob Pentz, Midway of Mattewan by Jas. H. Bedle, Frank Hyer and J. L. Terhune, Jersey City Heights of Marion by W. Fred Quimby, Al. Heritage and Wm. Hughes. The minutes of the last meeting were read and approved, and upon the call for new members the following clubs were proposed, unanimously elected and their delegates admitted: Middlesex of Dunellen, represented by W. L. Force and T. H. Keller, New York Suburban represented by Chas. Richards, and the Newark of Newark and the Mercer clubs of Trenton, who were not represented. The most important business of the meeting was the adoption of shooting rules, and caused a great discussion. A committee composed of Messrs. Pentz, Hobart and Hughes was appointed by the chair to draft a set of rules, which it presented to the meeting. The American Association rules, with the following amendments were accepted: Section 2, Rule 2, was eliminated entirely; Rule 10 was also done away with, leaving the boundary to be decided by the managers of the tournament. Rule 11 was amended by striking out the weights of guns, handicapping the gauge only, 10-bores at 30yds. and 12-bores at 28yds. rise. Rule 16, the position of the gun at the scores, caused a lengthy debate, but it was finally carried that "the gun must be held below the armpit until the bird is on the wing." Rule 17 was changed making the penalty a lost bird for failure to load the gun. Rule 28 was amended, making all ties to be shot off at 3 birds. For double bird shooting the following changes were made. Rule 5 was amended as follows: "If the miss fire occurs with second barrel the shooter shall fire at another pair of birds." Rule 8 makes all ties to be shot off at 3 pairs. For inanimate targets the American Association rules were adopted entire. The fixing of a date for a tournament was deferred until the next meeting; also the election of officers. A committee was appointed to revise the constitution and by-laws, and have 500 copies of the rules printed. The action of the State Association will do much toward booming pigeon shooting in New Jersey, as they intend to see that the laws are enforced. The meeting adjourned subject to the call of the president, and will possibly meet again in May.—THE KAY.

EMERALD GUN CLUB, April 15.—At Seaview Park, New Dorp, Staten Island. Use of two barrels, 10 live birds, 5 ground traps, 21, 25 and 30yds. rise, Emerald Gun Club rules:

Dr G V Hudson (30)	2212111111—10	George Remsen (30)	0002121111— 7
John Measel Jr (30)	0111111201— 8	T P MacKenna (25)	1101110020— 6
T J Chrystal (25)	1021210021— 7	R Regan (25)	2100021111— 7
N Measel (30)	0222201120— 7	L C Gehering (30)	2221011111— 9
H Rubino (25)	0102001001— 4	Thos Codey (30)	1111210010— 7
John J Ryan (21)	1100101101— 6	John McAdams (21)	1010100000— 3
John Merrill (21)	0001010110— 4	M W Murphy (21)	1110200101— 6
Charles Horth (21)	1000101011— 5	S McMahon (25)	1212121000— 7
Col J H Voss (32)	1101102110— 7	P J Keenan (25)	1211000100— 5
Philip Butz (30)	1111220111—10		

On shooting off ties Butz wins first prize, Chrystal second and J. J. Ryan third. Referee, Col. John H. Voss; scorer, John Merrill.—THOS. P. MACKENNA, Rec. Sec.

WELLINGTON, Mass., April 22.—To-day's tournament was largely attended by sportsmen from the various clubs of all the New England States and of New York. The first prize winners were as follows: Five pigeons—Bond, Moore and Chapin. Six bluerocks—Stanton, Sanborn and Ingersoll. Five pigeons—Schaefer. Six bluerocks—Wheeler. Five pigeons—Lee, Dan and Bradstreet. Six bluerocks—Choate and Stanton. Six bluerocks—Sanborn, Bradbury and Schaefer. Six pigeons—Wheeler and Nichols. Six bluerocks—Dill. Five pigeons—Melcher, Rockworth, Moore and Wheeler. Six bluerocks—Field and Schaefer. Six bluerocks—Bradbury. Five pigeons—Dodge, Schaefer, Choate, Stanton and Bradbury. Ten bluerocks—Schaefer. Ten pigeons—Swift and Schaefer. Six bluerocks—Warren and Schaefer. Six bluerocks—Dodge. Five pigeons—Lee, Schaefer Warren and Stanton. Six pigeons—Stanton, Wheeler and Schaefer. Three pair pigeons Baxter. Six bluerocks—Stanton, Sanborn and Bradbury. Six pigeons—Wheeler, Warren, Stanton and Schaefer. Six bluerocks—Moore and Lee. Six bluerocks—Stanton, Rockworth and Swan. Three pair doubles, pigeons—Stone and Wheeler.

RED BANK, N. J., April 25.—A live pigeon shoot, under the auspices of the Riverside Gun and Rifle Club, took place this afternoon. The first event was a sweepstake match at 7 birds, and there were eleven entries. Following are the scores: Wm. T. Cooper 7, John Cooper 7, E. M. Cooper 6, J. B. Bergen 6, Ed Throckmorton 6, W. H. Knapp 6, James Cooper 6, Dr. Ed Field 6, Mel. Cornwell 4, Edward Bussell 4, Chas. Grassinger 3. John Cooper and Conover divided first money. In the shoot-off for second money Ed Cooper, Throckmorton and Knapp tied on 8 birds and div. Cornwell and Bissell divided third money, and Grassinger received fourth money. An interesting match at 14 live pigeons afterward took place between Mel. Cornwell and Com. Bussell. The match was arranged some time ago, but no opportunity to shoot it had been offered until yesterday. The person who lost the match was to pay for a supper and banquet. Cornwell will stand the treat, as he killed but eight birds, while his opponent scored 10.

OAKLEY.—Miss Annie Oakley, the lady wing shot, accompanied by her husband and manager, Mr. Frank Butler, sailed for Europe on the 20th, to be gone three years, under engagement to Buffalo Bill's Wild West show.

READING, Mass., April 22.—A large attendance from Lawrence, Stoneham, Wellington, Reading and Boston was at hand at the shoot to-day, and about 5,000 birds were demolished. The principal events of the day were the individual and team scores for the Boston Gun Club prizes. In the individual match at 50 clay-pigeons, 10 Peorias and 5 bluerocks. W. Green was first, Jones second, Conant third, North and Payson fourth, W. Kirkwood, West and R. E. Whittle fifth, Willis and Davis sixth. Russell, Brookes and D. Krikwood seventh. Edwards, Archibald and Blanchard eighth, Witham ninth, Bancroft tenth. In the team match, 3 men, 10 Peorias and 10 clays each, the Boston Gun Club team No. 2 took first place with 44, the Reading Gun Club second with 42, Boston Gun Club team No. 1 third with 41, Reading Gun Club No. 2 fourth with 40, Wellington team fifth with 37.

NEWARK, April 25.—There were 400 sportsmen at Erb's Shooting Park to-day to witness the sweepstake shooting. The feature of the day was a 25-bird sweepstake, open to the world, $25 entrance fee, under Hurlingham rules. Ten well-known experts entered. Capt. Jones, of Jersey City, killed 24 out of the 25 birds, and won first money, 40 per cent. of the $250 purse. C. M. Hedden, of Newark, and W. Peck Mitchell, of Lynchburg, Va., killed 23 each, and divided second money, 30 per cent. Frank Class, of Pine Brooks, and Sam Castles, of Newark, scored 22, and divided third prize, 20 per cent. Milt Lindsley, of Hoboken, killed 21 of his birds and won fourth prize, 10 per cent. The following were unplaced: Chas. Smith, of Plainfield, N. J., with a score of 20 kills; H. Caperon, of Baltimore, with 20; A. Freche, of Newark, 18, and Henry Sigler, of Montclair, 17. The birds were of the highest class, all strong flyers and quick to get away.

BROOKLYN, April 27.—A pigeon shoot had been arranged to take place to-day at Dexter's Park, Jamaica Plank Road, by a number of well known wing shots who reside in the vicinity of the Hill and have recently organized a gun club, but owing to the heavy rainstorm the shoot was postponed. Several got as far as the Twenty-sixth Ward, but only two reached the shooting ground, and these, not to be balked of their afternoon's sport, shot off a long pending match that had been made between them at the Unknown Gun Club shoot. L. Hopkins challenged W. Gilman to shoot a match at 25 birds each, 25yds. rise, for a prize valued at $100. L. Hopkins led on the tenth round by one bird, was tied on the sixteenth, and finally won by one bird. The heavy rain made the shooting difficult, most of the birds being fast incomers. The score:

W Gilman	1111001111111111011011—21
L Hopkins	1101111111111101111011—22

Referee and scorer, C. Dellar. The new organization will be known as the Crescent Gun Club and the officers will be elected at the next meeting. It has not yet been decided on what grounds the club will shoot, as Saturdays are the best available days for the majority of the members and Dexter Park will be engaged for baseball on that day during the season.

AMERICAN SHOOTING ASSOCIATION.—The programmes for the American Shooting Association's tournament, to be held in Cincinnati, Ohio, the week of June 11, are in the hands of the printer, and the classification blanks are now ready. Both will be mailed on application at the office, room 184, Steward building, New York city. The classification blanks will be mailed, without further notice, to the many that have already applied for them.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

JERSEYVILLE, April 25.—The Jerseyville Gun Club gave an all-day shoot at their shooting park in this city to-day. It was an ideal day for shooting, except a little too much wind at times. There were here from a distance Dr. N. L. Spencer, Bunker Hill, Ill.; J. E. Haggerty, Jule Simenski, J. Longworth and Ed Meyer, of St. Louis; Ed Spencer, Ed Robley and Chas. McAninch, Carrollton, Ill., and members of the Kane (Ill.) Gun Club, who shot the Jerseyvilles a team match during the day. Some very good scores were made. Following were the scores:

Shoot No. 1, at 5 American clays, entrance 25 cents: Simenski 5, Tack 4, "Roy" 5, Robley 5, Burleigh 4, Dr. Spencer 5, E. Spencer 4, McAninch 3. All ties divided.

Shoot No. 2, 7 American clays, entrance 50 cents, three moneys: Simenski 7, Tack 7, K. Spencer 7, Robley 4, Burleigh 5, Dr. Spencer 7, McAninch 6, "Roy" 5, Chappell 6. All ties divided.

Shoot No. 3, 9 American clays, entrance 50 cents, 3 moneys: Simenski 8, Tack 9, Hansell 8, Felter 6, Robley 3, Chappell 6, Dr. Spencer 7, "Roy" 9, Gibbons 2, E. Spencer 7, McAninch 8. All ties divided.

Shoot No. 4, 8 American clays, entrance $1, 3 moneys: "Roy" 8, Robley 8, Hansell 8, Gibbons 5, Simenski 9, Allen 5, Tack 6, Hagerty 7, Hutchison 9, E. Spencer 7, Dr. Spencer 9, McAninch 8, Felter 5, Hodges 6, Kight 6, Chappell 8, Longworth 6. All ties divided.

Shoot No. 5, 6 American clays, $1 entrance, 3 moneys: E. Spencer 6, Simenski 5, Robley 5, Hagerty 6, Longworth 5, McAninch 6, Warren 4, "Roy" 6, Dr. Spencer 6, Hansell 6, Chappell 6, Anderson 5, Hutchinson 6. Dr. Spencer, Hagerty, McAninch and Hutchinson first; ties on second div., Warren third.

Shoot No. 6, 9 American clays, $1 entrance, 3 moneys: Simenski 7, "Roy" 9, Hutchinson 9, Kight 9, Hagerty 7, Hodges 6, E. Spencer 8, Hansell 8, Chappell 8, McAninch 9 Felter 6, Allen 7, Longworth 6, Gibbons 6, Parker 7, Robley 6. All ties div. as usual.

Shoot No. 7, 6 American clays, 50 cents entrance, 3 moneys: "Roy" 5, Longworth 6, Hagerty 6, Tack 5, Chappell 5, Kight 4, Gibbons 5, Green 3, Hodges 3, Hansell 6, Hutchison 6, Simenski 5, Dr. Spencer 5, Burleigh 5, McAninch 5, Felter 5, Anderson 6, Parker 5, Allen 5. Ties on first divided, Simenski, Gibbons and Burleigh second, Kight third.

Shoot No. 8, 6 American clays, 50 cents entrance, 3 moneys: Simenski 6, Gibbons 4, Felter 3, Hodges 5, Kight 3, Warren 3, Longworth 3, Chappell 3, "Roy" 4, Hutchison 6, Cockrell 3, Tack 4, Stoeckel 5, Allen 3, E. Spencer 5, McAninch 3, Dr. Spencer 4, Anderson 5, Hagerty 4, Green 3, Robley 4, Hansell 6, Roberts 3, Parker 2, McClure 3. Ties on first and second divided, Gibbons, Hagerty and "Roy" third.

Shoot No. 9, 6 standards, "walk-around," 50 cents entrance, 2 moneys: Tack 6, Roberts 4, Beatty 6, Spencer 4, McAninch 7, Green 5, Robley 4, Felter 3, Anderson 4, Warren 6, Hansell 5, Stoeckel 4, Hutchison 6, Allen 5. All ties divided.

Team shoot, 9 men on a side, at 25 American clays, 3 traps, unknown angles, between Kane Club and Jerseyville, losing side to pay for the birds:

Kane Team.

Anderson	1100011111111101111010101—19
Gibbons	1010110110011110110001111—16

Stoeckel	1101110111711100111010111—20
Beatty	1111001111101111111111111—22
Hansell	0111111010110110011111111—19—182

Shoot No. 10, 6 American clays, 50 cents entrance, 3 moneys: Warren 5, Hansel 6, Ed. Spencer 6, Tack 6, Burleigh 6, Green 5, Bowman 0, Stoeckel 4, Hutchinson 5, Roberts 2, Felter 4, Robley 5, Anderson 2, Allen 6, Green 2, Parker 4, Beatty 5, Hodges 0. All ties divided.

Shoot No. 11, 6 standards, "walk-around:" "Roy" 6, Simenski 5, Longworth 5, Dr. Spencer 6, Hutchinson 4, Anderson 6, Beatty 6, Hagerty 5, McAninch 4, E. Spencer 6, Robley 5, Chappell 6, Roberts 2. Ties divided.

Shoot No. 12, 6 American clays, 50 cents entry, three moneys: Hutchinson 6, Burleigh 3, Tack 6, Robley 5, Anderson 5, Beatty 5, Felter 4, Hansell 3, E. Spencer 6, McAninch 5, Stoeckel 6. Ties div.

Shoot No. 13, 6 standards, "Walkaround," 50 cents entry: Haggerty 3, "Roy" 6, E. Spencer 6, Chappell 5, McAninch 5, Stoeckel 6, Dr. Spencer 4, Longworth 3, Robley 4, Simenski 6, Anderson 5, Beatty 5. Ties divided.

Extra shoot, 50 cents, 1 money, won by Tack.

Shoot No. 14, 6 standards, "walk-around," 50 cents entrance: Simenski 3, McAninch 5, Longworth 4, Dr. Spencer 5, Robley 3, Hagerty 6, "Roy" 6, E. Spencer 5, Finke 4, Beatty 5. Ties div.

Match at 25 standard targets for purse of $20 between J. Hagerty of St. Louis and Fred Chappell of Jerseyville:

Hagerty	1101111111111111111011111—23
Chappell	1111111111111111100111111—23

The tie shot off at same number of birds:

Hagerty	1101101011111101101101111—19
Chappell	1111111111111111111111111—25

The same kind of a match was shot by Ed. Spencer of Carrollton, Ill., and Ed. Meyer of St. Louis:

Spencer	1111111111111111111111111—25
Meyer	1101111110111111111111111—23

Spencer won by a clean score. Mr. Hagerty then offered to shoot either of the gentlemen a match for $100 at 100 live pigeons, but they could not get it up for some reason or other.—HAMMERLESS.

MINNEAPOLIS, Minn.—The sixth annual tournament of Minneapolis Gun Club will be held May 21, 22 and 23. Open to the Western States and Manitoba. Professionals barred. With $1,100 in guaranteed purses and many special cash prizes. The officers of the club are: President, L. Harrison; Vice-President, M. Whitcomb; Secretary, Jas. Pye; Treasurer, J. S. Cutter; Field Captain, F. C. Lawrence. The Minneapolis Gun Club rules, which have been in use for the past five years in the tournaments, will govern in all cases. These rules are nearly identical with the rules of the Keystone Target Co. The committee reserves the right to equalize the shooting by handicapping.

The programme includes Tuesday, May 21: Shoot No. 1. Peoria blackbirds.—Ten single rises, entrance $1.50, birds included, four moneys, 40, 30, 20 and 10 per cent.

Shoot No. 2 at 6 singles and 2 pairs, entrance $3, birds included; $100 guaranteed.

Shoot No. 3, at 10 singles, entrance $1.50, birds included, four moneys, 40, 30, 20 and 10 per cent.

Shoot No. 4, at 9 singles and 3 pairs, entrance $4, birds included; $150 guaranteed.

Wednesday, May 22.—Shoot No. 5. Peoria blackbirds.—At 10 single rises, entrance $1.50, birds included, four moneys, 40, 30, 20 and 10 per cent.

Shoot No. 6, at 6 singles and 2 pairs, entrance $3, birds included; $100 guaranteed.

Shoot No. 7, at 4 singles and 3 pairs, entrance $1.50, birds included, four moneys, 40, 30, 20 and 10 per cent.

Shoot No. 8, at 15 single rises, entrance $4, birds included, $100 guaranteed.

Thursday, May 23.—Shoot No. 9. Peoria blackbirds.—At 10 singles, entrance $1.50, birds included, four moneys, 40, 30, 20 and 10 per cent.

Shoot No. 10, at 6 singles and 2 pairs, entrance $3, birds included; $100 guaranteed.

Shoot No. 11, at 10 singles, entrance $1.50, birds included, four moneys, 40, 30, 20 and 10 per cent.

Shoot No. 12, at 9 singles and 3 pairs, entrance $4, birds included: $150 guaranteed.

Special shoot for those who have shot in all the matches and have not made an average sufficient to win or tie on any of the 25 average prizes, at 7 singles, each shooter to pay for his birds. First prize $20 in cash, presented by the club, and to the one making the poorest score in this match a pair of crutches.

SAN FRANCISCO, April 14.—The California Wing Club held its usual monthly shoot to-day at San Bruno. Had the weather been more suitable the club would have had a very successful day. The birds were the best lot that have ever been sent down to San Bruno. In the club shoot thirteen members and three invited guests faced the traps. Messrs. Fay, Haas and Slade will for a month, if not longer, have the club medals in their possession. Club shoot at 12 birds, Hurlingham rules, handicap according to gauge of gun, 80yds. boundary: Fay 11, "Slade" 9, "Hood" 8, Haas 10, Sperry 5, Cross 7, Smith 6, Mally 8, Heeth 3, Lewis 6, D Vault 6, "Randle" 6, Liddie 6, "Johns" 11, McMurchy 11, Schraeder 7.

THE BIG CANADIAN SHOOT.—The St. Hubert Gun Club, of Ottawa, Ont., holds its second annual tournament on May 24 and 25, and all the shooters of the Dominion will be there to measure scores. The programme provides: Friday, May 24—Open Sweepstakes—Entrance $2, 15 single Peoria blackbirds, 18yds. rise, 5 traps, birds 3 cents each; four moneys, 40, 30, 20 and 10 per cent. of entries if not more than 25 entries; if more than 25 entries and less than 40 entries, five moneys; if more than 40 entries, six moneys. Team Match—Open to teams of 5 men from any recognized gun club in Canada, 5 traps, 15 single Peoria blackbirds to each man, 18yds. rise, entrance $5 per team, birds 3 cents each; entries close 18th May next, post entries 25 per cent. extra. First prize, Lansdowne challenge cup, presented by Lord Lansdowne, late Governor-General of Canada, and $50 cash, and merchandise prizes. Friday, May 25—Individual Match—Open to members of all recognized gun clubs in Canada, 25 single Peoria blackbirds, 18yds. rise, 5 traps, entrance $2, birds 3 cents each; entries close 18th May next, post entries 25 per cent. extra; $150 in fifteen prizes. Fourth Match—Open to teams of three men from any recognized gun club in Canada, 15 single Peoria blackbirds to each man, 5 traps, 18yds. rise, entrance $5 per team, birds 3 cents each; four moneys, 40, 30, 20 and 10 per cent. of entries; any club may enter as many different teams as it sees fit in this match; conditions as to qualification of team members same as in first team match. Merchandise Match—In addition to the above matches there will be three traps set apart at which shooting will be carried on throughout the tournament for a number of valuable prizes presented by friends of the club; entries unlimited; 50 cents each entry, including birds—9 matchless blackbirds; only one score to count for any one competitor; the "Stark Matchless Blackbird" will be used in this match.

SAN FRANCISCO, April 13.—The Blue Rock Club held its monthly shoot at Adams Point to-day, and, despite the unfavorable weather, seventeen members turned out and two friends joined in as guests. The scores were spoiled by the wind, which blew directly across the traps and made the left-hand disks very puzzling. The guests differed widely, for while Mr. Hay (Michigan) is a very good field shot, he requires more practice at the trap, and should recollect that "it is the pace that kills," and get on to his bird quicker. Mr. McMurchy is a well-known sportsman, a winner in many tournaments, and a good representative of the Scott gun for this coast. The score for the handicap (according to gauge of gun), for members, 10 singles, modified American rules, was as follows: Adams 10, Sanborn 6, S. E. Knowles 5, Stone 8, Mahew 8, C. W. Kellogg 7, Tubbs 9, Beck 9, Putzman 8, S. I. Kellogg 8, White 4, Abbott 5, W. J. Golcher 8, Noyes 5, Norton 9, McMurchy 8, W. G. Hay 8. In the handicap for members under same rules and conditions, at 10 pairs, double rise, the score was as follows: Adams 15, Sandborn 12, S. E. Knowles 15, Stone 12, W. Mahew 12, C. W. Kellogg 12, Tubbs 16, Beck 10, Putzman 11, S. S. Kellogg 13, White 7, Abbott 10, Hawks 10, McMurchy 15, F. R. Noyes 13, Golcher 8, Norton 12. Horace Briggs officiated as judge and gave general satisfaction.

CAPT. BREWER.—Capt. John D. Brewer, the famous American trap shot, returned to Philadelphia on the 27th ult., after a prolonged stay in London. He asserts that he is done with England, as the sportsmen there have handicapped him to such an extent that it is impossible for him to win anything. It is the highest compliment that could be paid to him, but Brewer says he wants dollars, not doughnuts. Brewer is in fine health and spirits, and is anxious for a match with Dr. Carver, at any kind of rules, any number of birds and any gauge of gun, for any amount from $1,000 up.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: H. C. ROGERS.....
Secretary-Treasurer: GEO. W. HATTON } Peterborough, Can.

Vice-Com.	Rear-Com.	Purser.
Central Div.	W. R. Huntington.	E. W. Masten.....T. H. Stryker, Rome, N. Y.
Atlantic Div.	W. P. Stephens.....	L. B. Palmer.....F. L. Dunnell, 186 Jerolemon St., Brooklyn.
Eastern Div.	H. E. Rice, M. D.	Maxton Holmes.....H. D. Marsh, Springfield, Mass.
N'thern Div.	Robert Tyson.....	S. S. Robinson.....Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

FIXTURES.

MAY.

May 27 to June 1. Delaware River Meet, Delanco.
May 30 to June 2. Passaic River Cruise.

JUNE.

8. Ianthe. Spring, Newark.
15-17. Puritan, Annual Meet, Nantasket.
15. Brooklyn Annual.
16. Puritan, Record Races, No. 2.
16-17. South Boston, Local Meet, Potticks Island.
17. Puritan, Record Races, No. 3.
22. N. Y. C. C. Annual, Staten Island.

JULY.

4. Puritan, Record Races, No. 4.
10-22. Atlantic Division Meet.
13-29. W. C. A. Meet, Ballast I'd.

AUGUST.

—. Pequot Meet, Thimble Islands.
7-23. A. C. A. Meet, Sugar Island, St. Lawrence River.

SEPTEMBER.

8. Puritan, Record Races, No. 5. 14. Ianthe, Annual, Newark.

A. C. A. REGATTA PROGRAMME.

THE regatta committee has announced the following programme for the races at the coming meet at Sugar Island in August:

RECORD EVENTS.

1. Paddling—Classes II. and III., decked, ½ mile.
2. Paddling—Class IV., decked, ½ mile.
3. Paddling—Classes II. and III, open, ½ mile.
4. Paddling—Class IV., open, ½ mile.
5. Combined—Paddling and sailing, ½ mile alternately, total 3 miles, Classes II., III., IV., A and B.
6. Sailing—Classes A and B, 4½ miles.

TROPHY.

7. Trophy—Sailing, 7 miles.

OTHER EVENTS.

8. Paddling—Classes II., III. and IV., open or decked, 1 mile, B.
9. Paddling—Tandem, Class IV.
10. Paddling—Club, any canoe not over 16ft.
11. Paddling—Upset, open canoes to have ½ minute start, but must be emptied, 150 yards.
12. Hurry scurry.
13. Sailing upset.
14. Sailing—Cruising race.
15. Gymnastics and tournament.
16. Kit competition.

Canoes noted as decked to enter events 1, 2 and 8, must be decked one-half their length, have effective keel or centerboard, and two watertight tanks or bulkheads; in other words, be properly equipped cruising sailing canoes.

Open canoes in events 3, 4, 8, 9, 10 and 11 to use single-blade paddles. In all other cases any paddle may be used.

RED DRAGON C. C.—This club has now a membership of 27. A series of monthly record races has been arranged for the coming season, and a cruise down the Delaware from Port Jervis is planned. The club has now a new canoe from the lines of the Guenn, and also a new Fly, besides a canoe designed and built by her owner, Mr. Wiser, Jr.

PURITAN C. C.

THE season, never having really closed this winter, has practically closed now for a few weeks. This lull is a necessity, as boats must be put in order before the new season is inaugurated. The Puritans are busy embellishing their property by putting a lawn about their club house; new lockers have been built and other features added. Com. Baxter now has his new canoe, christened Puritan, in the house. She measures 15×30¾, is smooth as a gooseberry, and has every feature requisite for success. She was built by Robertson, of Auburndale, who has also built a 14.6×28, 30-pound paddling canoe for the secretary. The membership of the club now comprises twenty-three active and ten associate members. The fleet consists of twenty-five canoes, five of the number being canvas. An interesting evening was passed last week, at which lunch was served and the reading of last summer's logs listened to.

The spring crop of novices about Boston are now calling attention to canoeing by their capsizes. On April 16 two boys, aged 15 and 18 years, went out on the Charles River in a canoe. The boat "turned turtle," and one of the boys, in attempting to swim ashore in rubber boots, was drowned. These are the accidents which give canoeing the reputation of danger, which it bears to a certain extent. Moral, in the words of Lawrence: "Don't give up the ship"—stick to your boat.

The Harvard C. C. opened one of their paddling races to the P. C. C. on April 23, but owing to sickness the Puritan crew did not turn up at the starting line. At the last meeting of the club four applications for membership were considered. The Razzle-Dazzle, a St. Lawrence skiff turned into a cruiser, is the latest addition to the fleet. She is 18.6ft.×42in., has a 60lbs. iron centerboard and is decked, except an 8ft. cockpit; her owner, Mr. Huntington, can sleep under the deck. Canoeists are welcome at the club house at City Point, and A. C. A. men are doubly welcome.

JAMES WELD CARTWRIGHT, JR., Secretary.

MONTREAL C. C.—A general meeting of this club was held in the M. A. A. A. rooms on April 26, Mr. W. J. White in the chair. The election of officers was the chief business transacted, Mr. White being elected Com. and Mr. H. Molson Purser. The lieutenants will be elected by the different districts so soon as the local meetings can be held. It was decided to leave the programme for the Queen's birthday to the decision of the officers. Several suggestions were made; one that the club should attend the races at Pointe Claire on May 24, and cruise around Ile Perrot on the 25th being largely favored. Other cruises suggested were the Chauteaugay, Yamask and North rivers, but July 1 was mentioned as a more suitable holiday for a long cruise. The membership is rapidly increasing, and the success of the club is now assured.

HARTFORD C. C.—The adjourned annual meetiag of the Hartford Canoe Club was held at the residence of John D. Parker, on Sigourney street on April 25. Several new members were admitted, and it was voted to make a reduction in the membership fee. The minutes of the annual meeting showed the re-election of the following officers: Dr. George L. Parmele, Pres.; John D. Parker, Sec.; W. B. Davidson, Treas.; Lewis Q. Jones, Com.; W. G. Abbott, Member Ex. Com. The club house is in good condition, and there is coming promise of an excellent season's sport. The annual meeting of the Eastern Division of the American Canoe Association will be held July 4 at Calla Shasta.

Yachting.

FIXTURES.

MAY.

24. Miramichi, Opening Cruise.
24. Hamilton, 30, 25, 30 and 35ft.
30. York-ville, Opening, Oak Pt.
30-June 2. Portland, Cruise.
30. Brooklyn, Open, Gravesend.
30. Cape Cod, Cape Cod Bay.
30. Detroit, 1st Pennant.

JUNE.

1. Quincy, Cash Prizes.
1. Larchmont, Spring.
1. Great Head, Pennant.
1. Hamilton, 20ft. Class.
3-5-7. Katrina-Shamrock, N. Y.
5. Dorchester, Open, Club.
6. Monatiquot, Opening, Pt. Pt.
8. Buffalo, Pennant, Buffalo.

NEW YACHTS OF THE YEAR.

THIS list of new yachts includes all built since the close of last season, and is complete, so far as sailing craft above 30ft. and steamers above 50ft. are concerned. A number of catboats and small craft, as well as some of the smaller steam launches are not included, but we believe that the record is complete as to the decked yachts, and that the dimensions are practically correct in all cases. Some of the yachts mentioned in our list of Jan. 24 do not appear, the designs having been made, but no orders given for the boats. One or two new forties or thirties are still talked of, but it is too late now for much building for this season. There is but little likelihood of any 70 footers being built, and the building for the present season may be considered at an end. The value of the sailing fleet may be estimated at about $300,000, and the steam fleet, though smaller in numbers, will cost about as much. This does not include a very large fleet of the naphtha launches, to say nothing of the many small steam craft. The number of sailing craft is 52, of which 35 are cabin craft with accommodations for cruising. The list includes 18 racing yachts, 9 of them being in the 40ft. class and 3 in the 45ft. Besides these many of the smaller craft are intended for local racing. The showing is on the whole a most encouraging one, and gives hopes of a permanent growth of yachting in all localities.

ANTEDILUVIAN FALLACIES.

MR. SAMUEL H. POOK, Consulting Naval Constructor, U. S. Navy, has lately written to the *Field*, giving still further reasons for Thistle's defeat, as follows:

"After seeing Thistle and Volunteer out of water on the same day, I had a talk with the sailing master of Volunteer, and gave him my opinion that he would win the race, all other things being equal. My reasons were that the Volunteer had a better shape, was lighter in the hull; she had less displacement, and a greater power of carrying sail and the sail to carry. What she lacked in lateral resistance was supplied with the judicious use of the centerboard when it was necessary to use it, which would give her a greater lateral resistance with a smaller midship section, and little or no drag.

"I advised all my friends to bet on the Volunteer for the reasons given, for if both boats were equally well handled, which they were not, there was no doubt in my mind as to the winning boat. I think the Thistle was handled even better than the Volunteer, and that, to change crews, with all the advantages which the Volunteer had in displacement and lateral resistance, that the Thistle would have been beaten much worse than she was with her own crew. I never saw a better drilled set of men working than they were with us. You know a racing crew is picked up in a week, and only for the occasion. Our boats beat because they are centerboards, and because on the top of the water; we never consider it a fair race to race a centerboard with a keel boat. And it is not, and you can never beat us at that kind of racing. You should demand that the race be a keel boat with a keel boat, a centerboard with a centerboard. I have seen a centerboard scow at San Francisco beat every sailing boat in the fleet. I would never sail a keel boat against a centerboard, and consider it a fair race. I want to see a fair race—keel boat against keel boat, centerboard against centerboard. I think that not only should length and breadth of boats be the same, but the mean draft of water amidships be alike, and the area of the midship section be also fixed as conditions of the race. When this is done, there may be some fairness in the race, and the skill of handling will tell. I think that the only fair races ever made in our waters was when keel boats and keel boats, and centerboards with centerboards; and if you ever send any more boats over, your stipulations should have reference to my statement—*i. e.*, if you wish to win.

"SAML. H. POOK (Consulting Naval Constructor U.S. Navy)."

It will be news to Americans who know how well all of General Paine's yachts have been manned, and how Mayflower's trained and picked crew was turned into Volunteer to undergo weeks of practice, to learn that the crew was picked up in a week for this special occasion. Such was the practice a dozen years since, but Mr. Pook will find that American yachts are now manned in a very different way, and that trained crews are kept aboard through the season, extra men, when needed, being usually had from some yacht which is not racing. Even more absurd are the statements that American yachts win because they have centerboards and are on top of the water, and that it is considered unfair to race the keel against the centerboard, or that light displacement must win over heavier. Where has Mr. Pook been during all the years that Fanny, Gracie, Hildegarde and the rest have been sailing on top of the water, with big sails and small displacement, in the vain effort to catch Shedouin with nearly 12ft. draft; or while Clara has been beating these same boats, though two classes below them? Perhaps he has not yet heard of such boats as Pappoose, Baboon and Saracen, all keel boats that come the shoal centerboard craft do not pretend to enter against. As far as the issue of keel and board is concerned, it has been long since finally decided between the heavy displacement keel craft and the light displacement centerboard, in favor of the former; and the only question left unsolved to-day is whether a keel boat of large displacement, but with a centerboard like Chiquita, is faster than a boat with more keel, no centerboard, and a little more displacement. Such statements as we have quoted might be passed over if made by a longshore boat builder or sailing master, but coming from such a source they can only do harm in leading to the perpetuation of error and false theories.

NEW 45-FOOTERS.

MR. BURGESS has designed this season three compromise yachts of 45 l.w.l., two of which are now afloat, the third being under way at Lawley's. Unfortunately each of the three is destined for a different location, so that they will not come together; but all are designed for racing. The first one, launched a couple of weeks since, is the Nepenthe, owned by Mr. T. R. Richardson, of New Orleans. Being intended for use in shoal water, the draft is limited to 4ft. 9in., the other dimensions being: Length over all, 58ft.; l.w.l., 45ft.; beam, 17ft. Unlike the other Burgess boats of the year, the midship section shows no S-curve, but is more like the old boats, with a straight deadrise from rabbet to bilge. The keel is 9in. deep outside and 12in. wide, straight from stem to stern, the stem having a decided forefoot, while the sternpost has very little rake. The yacht has a clipper stem and the regulation long overhang, with the same sheer as most of her sister boats. The bulwark is 7in. high, including a 2×4 oak rail. Of course a cabin house is needed, under which is 6ft. 2in. headroom under beams, with 5ft. 8in. under deck forward—a very good height. The boat is very substantially built, the frames, of oak, being spaced 15in.; nine in the bow being single, about 3×3in., the rest double sawn. The shelf is 4×5, clamp 6½×1¾, with three bilge clamps of the same size. The cabin is roomy and very handsomely finished in mahogany, the joiner work being neat and tasty. On each side is a fixed berth in the wings, with a locker in front, the fronth of the berth being framed in carved pillars of mahogany. At the fore end on each side is a cellaret locker with drawers, and a closet above: while other lockers are arranged at the after end. The companion is wide and easy of access. The centerboard trunk extends to the deck, with owner's room and w. c. to starboard and a stateroom to port; while the galley contains an icebox and pantry. The forecastle is large and lofty. There is a large cockpit, in which is a Diamond steerer.

The second yacht, the Nanon, for Mr. C. E. Ellis of the Quaker City Y. C. of Philadelphia, launched on April 25, is of the same length, but 6in. narrower, and 1ft. 9in. more draft: the midship section showing a decided hollow at the rabbet, while the forefoot is well cut away, running up into a clipper overhang. The keel has a little drag, with a moderate rake to the sternpost. The sheer plan above water and the deck plan are similar to those of Nepenthe, with a cockpit and cabin house; while the arrangements and finish below are practically the same. Messrs. Lawley have done good work on both the boats, their fittings being very neat and ship-shape, while the joiner work is also excellent. Both will be cutter rigged, according to the latest fashion. The American Ship Windlass Co. has supplied the windlasses, of their well known pump brake variety. Both yachts are painted white, with copper bronze bottoms. The third boat is for Mr. C. D. Owens, one of the owners of Sachem, and will hail from Providence. She will be similar to Nanon in dimensions and details.

A NOVEL FORTY.

A VERY decided novelty in the way of a racing forty is now building at Mariners' Harbor, on the north shore of Staten Island, at the shop of Captain Louis N. Tonns, who has designed her. Unlike the other new boats of her class she is of very light displacement, only 10 tons, of which it is expected that nearly 6 tons will be in the form of ballast, all inside. She is a centerboard craft, with no outside keel, and is 44ft. over all, 39ft. 6in. l.w.l., 12ft. beam, and 4ft. 9in. draft. The sternpost is plumb, the keel has some drag, rising in an easy curve from the sternpost to the stem, with a marked forefoot, being nearly plumb above water. The midship section shows a V form, the frame lines being all drawn with one mould, straight from the rabbet to the bilge, with considerable deadrise, the topside rounding in a very little at the deck. The after overhang is quite short and of a V shape. The diagonals are naturally very easy, and almost as fine aft as forward, the model being clean cut throughout. There will be 5ft. 8in. under a low cabin house. The centerboard trunk is formed of two cast-iron girders by way of bedpieces, with flanges on top and bottom, to which the lower plank of the casing and the keel are bolted with screw bolts. The frame is of sawn hackmatack, of light scantling, the plank of white cedar, and nothing has been wasted in weight. The sail plan is very small, being but little more that the square of the load line, so that she will receive a large allowance from the rest of the class. It is intended to enter the yacht in all the races of the season.

THE CRUISE OF THE ORINDA.

BY W. H. WINSLOW, M.D.

[Continued from Page 267.]

EASTPORT is built upon the shores and gently undulating hills of Moose Island, which is connected by a bridge upon the west side with the mainland. Its business is done upon a main street running parallel with the shore and the few short streets running down to the wharves. There are a few stores of considerable size and architectural style, but many of them and most of the dwellings are cheap, common and cramped. Quite an extensive business in done is furnishing vessels with supplies, outfitting fishermen, and forwarding interior traffic, but the place has a poor look. A man said to me, "We are all poor down here and must work hard. No one can afford the time to sail a yacht, much less to build one."

We strolled over the city and were much pleased with the pretty cottages and well cultivated gardens surrounding them. In this climate so bleak and dismal six months of the year, the summer is made the most of, and every one has his house surrounded by the homelier flowers so dear to boyhood: the lilac, sweet william, daisy, bachelor's button, geranium, hollyhock, snowball, tiger lily, morning glory and sunflower. How many sweet reminiscences these awaken of careless years and happy scenes now fading from memory and seeming like dreams in the busy minds of these hustling times.

We thought of taking a six o'clock dinner ashore, but got some steak, pies and fruit and voted unanimously to have it aboard our little craft. It was dark when we had finished; we hoped to go ashore, but the yacht had begun to pitch considerably, the wind had increased from the N.E. and rain began to fall. Meringue and I knew what these signs meant; a diagnosis of a northeaster was made and treatment ordered: Welch Pool behind Deer Point, two anchors down with plenty of cable, topmast housed and tarpaulin over the companion way. We made sail and got out quickly; the tide was running swiftly in and we were obliged to make several tacks before we reached the other shore. Then it was very difficult to make out land and vessels and the proper place to anchor because of the darkness, but the water was bold, we kept on as long as we dared and succeeding in dropping anchor in a safe place near the shore, helped in the matter by the bell of a little English church that was calling to evening service. It was none too soon, as the wind was hard and the sea rough outside the point. Everything was snugged down and topmast housed and we went to sleep early, but many times during the night Meringue and I were out to survey the wildness and gloom of an ugly night.

The next day was Saturday and I let Meringue go to his home at Pembroke, to return Monday morning.

It was shocking weather, a dismal, rainy day, and after dinner, when tired with reading and smoking in our cosy cabin, I challenged Jerry for a visit to the hotel. The sea was rather lumpy, the wind blowing a mild gale, and we concluded we had better go in our wrinkled, salty, well-worn sea togs, because of the likelihood of swamping, or in finding only servants in charge at the hotel, the glasses showing few persons ashore. So we had a hard pull to the wharf, and tied up head and stern to keep the boat from chafing. We went up the walk, looked into the windows of the office and some of the lower rooms and saw no one; then we walked down along the bluff and looked at the billiard room and ten-pin alley, and came back past the windows of a sitting-room, where a glimpse of pretty girls' heads and a dudish youth was taken rapidly. The hotel was occupied. We rang the bell, a servant ushered us into the spacious hall, and the landlady welcomed us cordially. The landlord was away, but she showed us the hotel, said we could correspond for terms and offered us luncheon. Then we spoke of guests, and learned there was over a dozen still lingering, mostly hay fever patients and their friends. Who were they? Two ladies from Pittsburgh and, alas, one was a patient of mine. Would I see her? I glanced at my muddy shoes and trowsers, my slept-in coat, my flannel shirt and unshaved face in a hall mirrow, and hesitated. Then I looked at Jerry's trousers, thin in legs and three inches short, his wrinkled coat, faded blue flannel shirt, and the scarlet peeling nose, and shuddered.

"What do you say, Jerry?"

"We ought to leave our cards, at least. What would your patient think if she knew you had been here and not called upon her?"

"I only saw the lady once; probably she has forgotten me, and will take us for a couple of tramps, but your mother is well known by everybody in society, and that may help us out. Anyway, I'm suffering to see some one from old Pittsburgh, and believe I would call on the Duke of Allegheny, the Count of Monongahela, or Penitentiary Convict No. 4293, if he hailed from that place, so let's sail in."

We approached Madame and handed our cards, which fortunately we were able to write out from an office supply. Madame knew me after a cautious scrutiny of my disguise, and introduced her niece; then I introduced Jerry remarking in a *aside*, "the son of Mrs. Judge J——." I felt like a steer; Jerry was red as his necktie. It was very awkward for a moment; then the ladies made us remember we were gentlemen, and we spent a very pleasant half hour talking over Pittsburgh news and our wild cruise. We were glad to say adieu and to get out in the rain, however, for Jerry kept rubbing his chin—he kept a razor aboard—and looking at my stubbles, and I could hardly keep my eyes off of his trousers. When we got far away from the hotel—we dared not stay to luncheon—we laughed aloud, and swore we would never, no never, visit a good hotel again in sea togs and cruising rig.

The hotel did a large business in '88, and Mrs. L. said it was never dull there in the season. She had been so occupied with walks, drives, tennis and other pleasures that she was really glad of a rainy day to get rested. Mrs. L. said many hay fever victims found perfect relief there, and there had been numerous sufferers from all parts of the country. I knew her to be a great sufferer from this annual misery, and few of the usual resorts afforded her relief. Here she had passed the season in perfect health, and she was enthusiastic in her praise of the hotel and the climate. Taking her experience in connection with the statement of Lieut. Greely, "that Eastport just opposite is as dry as Minnesota," I formed a favorable opinion of the place, but I saw many points to criticise in the locality, and shall present them at some future time.

We had a hard pull aboard and got there just in time, as I had let Meringue go to his home at Pembroke for two days and the yacht was left alone. It began to rain heavily, the wind had been hard from the southeast, but, sheltered by Deer Point, we had laid to our two anchors comfortably in a fleet of a dozen vessels. The wind hauled suddenly to the southwest, came with a cold blast along shore, then burst into a furious gale, turned all the vessels around, tripped their anchors and set nearly all of them dragging toward the rocky shore. In a moment we were across one bow and barely escaped another vessel's stern, and with lots of cable out, walking right away toward the rocks. Men half dressed, dressed and in oilskins were running over the vessels, shouting, pulling, veering, pushing and taking lines to moorings, wharves and the few vessels that still held to the bottom. Some narrow escapes from collision were made, some vessels got too near the rocky shore for comfort, and I was terribly anxious, but fortunately the wind ceased as suddenly as it had begun, hauled around into the northeast and all ceased dragging. Such a tumult and snarl had rarely been seen in Welch's Pool, and this was the best anchorage around there. If the blow had lasted five minutes longer most of the craft would have been ashore and badly battered. I got a fisherman to aid us, took in our fouled anchors, had him put us in better holding ground nearer the wharves, let go both anchors and took out a line to a mooring as an extra precaution. Then we had a "smoky sou'wester" of Jerry's make, changed our wet clothes, cooked a square meal and slept with one eye open till nine o'clock the next morning.

There was still a strong breeze and sullen sky next morning, but the rain had ceased, and we spent the afternoon rambling over the village of Welch Pool and along the adjacent shore roads. There are about two dozen houses and stores clustered upon the shore near the two excellent wharves, which are just inside of Deer Point and sheltered from easterly gales. The point separates Dunn's Beach from Friar's Bay; it has high rocky shores, but is nearly level and covered with grassy spots and a fine grove, in the midst of which is a modern wooden summer hotel, with fine piazzas and most magnificent marine views east, west and north. A porter's lodge at the grand gateway toward the village—for the property belongs to the same company as Tyn-y-coed and is fenced in from common people—had the U.S. arms and "American Consul's Office" upon its front, but was closed. The hotel was not opened in '88, we believe, because the other hotel was sufficient for all comers and is generally preferred, but our guide informed us that there was a stronger reason. A portion of the point behind the building was laid off in grass for a tennis court and play ground upon the very site of the cemetery, all the remains possible being removed to a new one beyond the village. To make a play ground in such a spot above the mouldering remains of their ancestors excited indignation and enmity among the islanders, and it was common talk that summer visitors sympathized with them, and were, also, a little afraid that ghosts might scud among the trees and play tennis in the small hours of the night. A keeper lived in a latticed cottage near the gate, who gave us permission to enter the grounds, and we were glad to avail ourselves of the opportunity. The hotel had the dilapidated look of a house in chancery, but with guests, furnishing and furbishing, would be preferred by me for a season's rest, ghosts or no ghosts.

The next morning I went to Eastport by the steamer for stores, and returning with a box of edibles, I asked the captain if I would have to pay any duty upon them. He answered: "You'd better ask the Customs officer at your elbow." I was fairly caught, but the handsome representative of the Canadian Government smiled and assured me I could pass without inspection. He was a very intelligent man about 35 years of age, and had lived and traveled much in the United States. He thought the common people of Canada were in favor of commercial union with us, but that while a political union had many points in its favor, it would be a long time before it came.

It was dead calm and we dried up everything, took in our mooring rope and one anchor, and began to think of moving. I had intended to do considerable exploring around Quoddy Bay, but it was the last week in September, we had had almost a constant battle with northeast weather and head winds, and thought anxiously of the run to the westward, the near approach of the end of vacation, and the necessity of getting into winter quarters. Where should we go? Up the St. Croix to St. Andrews and Calais, up Cobscook Bay and tributaries, or into Johnson's Bay. The Coast Pilot is very strong in its advice to strangers not to venture into the first two without a pilot or a tug boat. The tide rises and falls about 23ft. It is impossible to sail against the full flood or ebb. At certain points and channels it causes such whirls, eddies and rushes as to render sailing vessels almost powerless. Only an experienced pilot who knows how to take advantage of these and to avoid the rocks and shoals upon which they tend can guide a vessel with safety. One must get anchored or aground before the ebb or he will be swept down river again. The great bluffs along the rivers often deprive a vessel of wind and she must go where the current drives her. Circumstances were not propitious for venturing up river, because there was not time enough for us to get up on the afternoon flood to an anchorage before dark, nor could we start long before daylight and begin such difficult navigation. I have had a dread of tidal river currents ever since the Pilgrim was turned completely around by one off Pull-and-be-damned Point in the Piscataqua below Portsmouth, and it makes me ugly to feel that my movements must be regulated by tides. It is bad enough to be the sport of the winds, I know now why the great flood waves of the Bay of Fundy are called bores. All the tides beyond Machias Bay are bores of the most annoying and dangerous character, and I decline their acquaintance forever. Never will I venture into their foggy, rainy, windy, billowy, deceitful, treacherous, spiteful region again.

So we were content with a near view of the mouths of the St. Croix and Cobscook and a sail around Johnson's Bay. We got underway at 3 P. M. and ran down Friar's Bay; there was a large Quoddy sloop ahead of us and a large schooner beyond her. A light south wind was coming over the land and we all had to beat down. We overhauled both vessels rapidly, and had them fairly outsailed, when the schooner set a large maintopmast staysail that caught much wind above the hills and she drew away from us. The sloop, our fairer game, put up helm, payed off sheets and started for the Pool. I hailed the skipper and asked him to come on and try it and not give up so, but he growled he was not going to lose his supper, and we put him down beaten. We anchored far up the bay near a half dozen lumber vessels, waiting for a favorable wind for getting out the narrows, and spent a pleasant night; but the tide runs at the rate of three miles an hour even here, and we gave plenty of scope to avoid dragging into the great Cobscook, just north of us.

The day dawned finely with the wind strong southwest, and we ventured into Lubec Narrows at 11 o'clock, homeward bound. The tide was running out gently, but the wind was ahead and we had to beat all the way down. It was quick and exciting work in so narrow a channel, but Meringue was at home; he piloted, I steered, and the sharp turns and close shaves we made caused tingles along my spine. There was a shingle beach at one place on the west side, and some large boulders out in deep water. We ran rather close to them, and a family on shore called and gesticulated wildly for us to go about, which we did promptly. A Quoddy fisherman was behind us, and two others leading us by a mile. When we passed West Quoddy we had gained considerably upon the sloop astern. When we reached Grand Menan and went about, one of the leading vessels was on our port beam a half mile to leeward, and the other was a hundred yards ahead of us. We kept steadily after her and would have caught her soon but she dodged into Dark Harbor.

"You see now what we can do with Quoddy fishermen," said I to Meringue. "Yes, we have beaten them fairly, that's a fact," he replied. We hugged the Grand Menan shore to get the full force of the ebb, struck across to the Main shore, the wind fell, mist began to gather, and we reached anchorage in Lubec River by towing, about 8 P. M. This harbor is much like Camden, for high hills kill the shore breezes and the tide has its own sweet will of a craft.

We were off at 6 A. M. next morning with a breeze from the northeast. We set the spinaker for the first time and ran rapidly across Machias Bay, shaping our course to go outside of Moos-a-bec. When abreast of Mark Island, with the Mead Lighthouse in sight, a wild squall came out of the bay and forced us to take in the gafftopsail and spinaker in double quick time, and we had only got them smothered and down below, when we were obliged to haul down the staysail and come by the wind preparatory to reefing. The squall was soon over, but a steady strong breeze set in, the scud flew fast and furious, dashes of rain came, and I decided it would be dangerous to attempt unknown waters and the course outside Great Wass and the other island in such threatening weather. So we hauled up for Mark Island and managed to run into the eastern end of Moos-a-bec Reach. Meringue said it was going to be thick outside and we had better stop at Jonesport, but I was so anxious to get to the westward, here was just the breeze we had wished for, and we fairly flew through the Reach, expecting to run into Cape Split. Once outside, the weather was no worse, and I determined to try to pass Petit Menan Point and make Winter Harbor that day. Oh! fatal error of judgment. Would I had taken my good sailor's advice. We had passed Nash Island about two miles, running along rapidly under whole mainsail and jib, when the gale burst suddenly upon us in all its fury. The sea rose in two minutes as high as housetops and came curling after us in huge volumes, causing the yacht to plunge and roll and yaw threateningly, while the fierce blasts against the mainsail threw the yacht around and upon her side every few moments in spite of my great exertions with the tiller. During one of these rolls my handsome binnacle broke adrift and went over the lee rail.

"Shall we go after it?" asked Meringue.

"No." I shouted, looking at him with astonishment, and getting one glimpse of the brass and glass as it sank beneath the waves.

We were in a desperate strait just then, and it required prompt and courageous action to get out safely. Cape Split was far behind us; the islands to port were surrounded by reefs, shelterless and dangerous; Mount's long reef stretched a line across our bow, lashed by mad seas and shrouded in foam and mist; Bois Bubert Harbor, or Pigeon Hill Bay, was upon the weather bow, its entrance dangerous to approach on account of the Petit Menan Bars and the ledges and shoals which obstruct the passage from the eastward; Narraguagus Bay was upon the starboard beam—too broad and unsheltered for any small vessel to ride out a gale in—but leading to a little narrow, flats-bordered river of the same name and the town of Millbridge, about eight miles away; Harrington River and Pleasant Bay east of this to windward, and so thickly crowded with shoals and unbuoyed ledges as to be out of the question. The wind would permit us a good close hauled full upon the starboard tack into Narraguagus, and it promised a safe retreat if we could once get in. Meringue had never been there. We had no time to study the Coast Pilot; a good chart wet and torn lay under my feet in the cockpit, and we made out Ship Stern Island dead to windward and Pond Island and its lighthouse ahead. The yacht was brought to the wind and sheets trimmed in, not too flat, and we began to plunge through the water, throw the spray all over us, and point just to windward of Trafton Island. It was now blowing a heavy gale, we could not reduce sail, because we needed every foot of it to drive us against the sea to make the weather of the island, and we did not dare to lose the time and our weatherly position in reefing. It would have been a difficult undertaking, because Jerry was shivering, frightened and useless in the companionway, and my man and I would have had everything to do. So we kept on, Meringue held the main sheet and eased a little during fierce puffs, when we heeled till the water was nearly up to the steering well, and I held the jib sheet by a single turn, steering with the other hand and legs, watching the chart and the shore anxiously. It was a question for a while whether Trafton Island was an island or the western shore, there were so many islands to look after; then, as we passed Ship Stern and Dyer's Island, a small island appeared not on the chart—an island surrounded by foaming breakers, with rocky shores and trees—represented by only a few dots upon the chart, but blocking our way. Horrors! What should we do? Which side of it should we go when every side looked frightful? Give it a good berth to windward and look out for breakers ahead. After a while we came to a red buoy off its northern side, and knew we could pass between it and Trafton, which we were now sure of by its northern spindle. Then we opened up the river and the human habitations far up its banks, and began to breathe easier, though the gale was wilder and the rain was cutting like hail. It was fortunate for us that the tide was nearly up and still flood, as it helped us on and enabled us to run across the flats and pay little attention to the narrow river channel. On we sped like a gull before the gale, easing the staunch and beautiful craft into the eye of the wind by tiller and sheets during wilder gusts, and giving a good full as soon as the wind was steadier. Up the little river, past the warehouses and the wharves, into the narrow stream as far as the chart showed a channel, we shot like an arrow, came head to wind, hauled down the jib and dropped the heavy anchor and mainsail. Saved! Again a cutter had saved us.

We went below as soon as all was snug on deck, put on dry togs and began to feel comfortable, keeping an eye upon the shore marks to see if the yacht was drifting. The gale had steadily increased in violence and hauled to the southeast, considerable sea had risen even in this sheltered place, and, during a strong blast, we started shoreward. We had to go up in the pelting rain and let go the other anchor, but even this did not hold us against the terrific wind. The yacht drifted still and was soon out of the channel, over the flats, where she would thump and be high and dry at low tide. There was no rest for the weary and wet. The workers at the sardine factory shouted and pointed out our danger, but we heard not a word. What could we do? We must move into the channel. We were used up and almost disheartened. I felt I had had scrapes enough for one season and longed for all night in. While we were discussing the poor anchors and poor, soft holding ground, the schooner Honest Abe, Capt. O. Strout, lumber loaded, came in from sea and anchored just outside of us. Meringue waved us in the tender to get permission to tie to her, which was readily granted. Then I got the sardine boat to put us alongside, and we made fast—line after line and fenders galore. They were necessary, the sea threw us against the schooner as if to crack us like an egg shell, but Meringue was vigilant, and only a little paint was rubbed off. About dark the schooner began to drag with two heavy anchors down, and the captain said we would have to cast off and had better get alongside the wharf just twenty feet away at her stern. Just think of it, a schooner with two extra heavy anchors and cables, away up in the land in this narrow river dragging from the force of the wind across the river—the chop did not affect her much. We could not have reached and secured the yacht to lie aground against that hard wind, but gloriously managing her. I was completely fagged out and in despair, and now we thought for the third time. I went below in no enviable frame of mind and told Jerry what must be done, while Meringue went aboard the schooner and had a long talk with the captain. I stuck my hand in the wind and rain occasionally to observe things, and pretty soon Meringue shouted the glad tidings that the captain said we could hold on a little longer, as he thought the worst of the gale was over. The lulls were longer than the puffs now, and by 10 o'clock the wind had diminished to a moderate gale and we turned in happy.

Millbridge once had a mill upon the river and still has a bridge above navigation. It is a village of pretty, well-kept cottages, straggling along both sides of the river for a mile or two, and, as every one has plenty of lawn and garden, these homes of many active and retired sea captains are fair to look upon. Seafaring and sardine packing are the industries of the place, and distance from the railroad insures quiet, peace and monotony. A sardine factory is a slimy, dirty, unmitigated nuisance to the attractiveness of a pretty seacoast settlement, and, as they are found in most places from Schoodic Peninsula to the Bay of Fundy, I've no further use for that part of the coast.

The next day was blowy and foggy, and a steamer came in and reported the wreck and abandonment of the schooner Herald upon Petit Menan, and great disasters to the shipping. This gale of Sept. 26 took the Signal Service unawares, and did a heap of mischief from New York to Cape Race.

The small anchors supplied to yachts are of the worst possible shape. There is too much iron in the stock and shank and not enough in the flukes; the flukes are not long enough, their radius of curvature is too short, and the palms are too small, thick and blunt. I compared my anchors with those used by fishermen which never drag, and I had the opinions of many seafaring men upon them, and their defects were apparent; yet, mine represent the stock kept by most ship chandlers in New England. Soft oozy mud, sand and hard bottoms require straighter and longer flukes and broader, sharper palms. These elements are seen in most fishermen's anchors, and such are just as valuable for other kinds of holding ground. We dragged several times when it was very unfortunate, if not dangerous. I hope yachtsmen will force anchor makers to do better, by refusing to buy those showing radical defects in shape. It would be interesting and profitable if some one would give us a table of proper dimensions for all weights of anchors to guide amateurs in selection.

Jerry went hunting for grouse, but did not get any after traveling half a dozen miles. They are scarce along the seacoast because every boy has a gun. It was not until the fourth day that the wind came out W.N.W., and we started out at 5 A. M., near the top of the flood, in company with the Honest Abe and some other schooners, which we soon distanced. We ran out west of Trafton Island, left Pond's Island and Jordan's Delight to starboard, and got a survey of the rough ledges and dangerous approaches to Bois Bubert Harbor, which we would have tried to make in the gale had we not got into Millbridge. I was glad there was no necessity, for a more forbidding entrance is not seen upon the coast. We found the wind fresh outside and were soon close-hauled under jib and mainsail for the buoy, which marks the passage across the reef inside Petit Menan Island. There was a heavy sea and rough, noisy tide upon the bar, and the sea was breaking heavily upon the gap, making us feel a little fearful of consequences, but we had been assured it was safe to cross, and the C. P. said so, so across we went just north of the buoy without mishap, and were glad to leave it behind us. Away we went, dashing the spray in our faces and heading more and more in shore until we were obliged to go about, the wind hauled until it was southwest, and we had a hard beat and rough sea all the way to Southwest Harbor, Mt. Desert, where we dropped anchor at 5 P. M. It was cold, but glorious pleasure.

Southwest Harbor is continuous with Somes' Sound, a beautiful sea lake, which stretches north several miles between lovely mountains that dip their feet in its waters and are covered with most exquisitely tinted shrubs and forest trees, and with the broad bay that extends between Cranberry Island and the bold foothills, dark ravines and magnificent south shore of Mt. Desert. These fine reaches of protected water, surrounded by some of the finest scenery in the world, are admirable for boating and sailing and would be perfect were it not for the calms, fitful winds and squalls consequent upon their proximity to the mountains. However, many pleasure craft are found there in the season, and pleasure, health and comfort are found by multitudes of people, who reside in the cute cottages and tasty villas around the shores.

We made all sail at 5 A. M. with a fine north wind, ran quickly out of the harbor, past Bass Harbor, across Union Hill Bay and into Eggemoggin Reach. The breeze lessened, the sun became warmer and our hearts lighter as we proceeded. Many vessels were seen in misty mirage apparently seeking aerial ports, loons sported around us at tantalizing distances, long strings and compact flocks of black ducks kept just out of our gun shot, and we kept up a fusilade with our rifles without hitting anything. We nearly caught a smart little sloop that had been before us all day, as we came out of the western end of the Reach, but, as she made very long tacks off shore, and we kept closer in, I concluded she was bound south. Somehow, we did not get ahead fast, and, as we approached Cape Rosier, I noticed a heavy tide setting east. Then the little craft had gone about away off shore, and was heading up the bay. They had cleared the tide, and flew across our bow as we started for a long leg off to escape the tide of the cape. It was mortifying to have victory thus snatched from our grasp, but superior knowledge must have its reward. We got around after a while, and kept off for Belfast, and had the satisfaction of getting our opponent abeam as she passed into Castine. Dr. Davis gave us a gun as we dipped our colors in the shadows of Turtle Head, Steel's Ledge Beacon loomed warningly through the darkness, the lights of Belfast came out one by one like belated stars to guide us home, and we dropped anchor at last upon familiar flats, where in youth I had lured the shadowy flounder and the sportive tommycod. Our great cruise was ended safely, and we celebrated with a gun, a bottle, and all the fireworks in the Ordnance Department.

ST. LAWRENCE Y. C.—The St. Lawrence Y. C., of Montreal, has lately elected the following officers: Com., G. H. Duggan; Vice-Com., C. H. Lerin; Rear-Com., T. L. Paton; Meas., F. Scott, J. F. Gibson; Sec'y, W. J. Wallace; Treas., John Aird. Committee, J. G. Monk, Geo. Gabler, M. Perrault, W. S. Clouston, J. Irving, J. Simmons. The headquarters of the club have been changed from Valois to Point Claire.

NEW ENGLAND YACHT RACING ASSOCIATION.

THE annual meeting of the New England Y. R. A. was held on April 24 in Boston, with Pres. J. B. Rhodes in the chair. The following clubs were represented: Dorchester, Beverly, Hull, Jeffries, Lynn, Quincy, Salem Bay, South Boston, West Lynn, Cape Ann, Corinthian, Great Head, Chelsea, Savin Hill, Monatiquot, American. The treasurer's report showed a balance of $296.36 on hand. The following officers were elected: Pres., W. Loyd Jeffries, Beverly; Vice-Pres., Arthur Fuller, South Boston; Sec. and Treas., G. W. Mansfield, Salem Bay; Executive Com., L. M. Clark, Dorchester, B. B. Crowninshield, Beverly, J. Fred Brown, American, the president and vice-president *ex-officio*. P. M. Bond of the Hull Y. C. presented the following amendments to the rules and regulations: Rule 4, measurement, page 15, fourth line: strike out the word "aft." Rule 11, crew, page 17, second line of Rule 11, amend by changing the word "five" to "four;" which amendments were indefinitely postponed.

The association now includes 17 clubs. Since its formation there has been a constant struggle between the unlimited sandbag sailors, who navigate and float about City Point and Dorchester; and the clubs situated on deeper water, who wish to encourage a safe and serviceable type of yacht. The two parties have been thus far evenly balanced, and promise to continue so for some time, the result being that a compromise, in the form of a prohibition on shifting ballast and a rule of length +½ overhang, has been in force for some time. This has proved satisfactory to neither side, and efforts have been made by one party to remove the restriction on shifting ballast, and by the other to pass a length and sail area rule. The result has been to hinder greatly the work of the association, and now the Boston *Globe* goes so far as to recommend that the two parties should separate entirely. It seems impossible that for a long time at least the open boats will consent to a rule including sail, and there is no likelihood that a club which has once fairly tried a length and sail area rule will go back to any form of length rule, so the deadlock is likely to continue or else to break up the association. Before matters are allowed to reach this extreme it might be worth while to try a compromise, such as we suggested to the New York Y. R. A., making one set of rules for open boats and another for decked yachts. This would probably be acceptable to all parties, and would be far better than to give up the organization entirely after so much has been done.

THE VALKYRIE AND THE AMERICA CUP.

SIR: In "Topics of the Week," under the heading "Yachting," in your issue of the 13th inst., you comment upon certain reported opinions of Mr. Fish and Mr. Malcolm Forbes, given, as you say, "in reference to Lord Dunraven's desire to have a 70-footer matched against Valkyrie." Permit me to say that I have expressed no such desire. In addition to the dimensions required under the deed of gift, I gave the New York Yacht Club Valkyrie's length on the l.w.l., and stated, for their information, that she would come within their 70ft. class, but I made no comment whatever upon the fact.

Whatever his private views on the sportsmanlike aspect of the case may be, it would, I think, be most unbecoming on the part of a challenger to express any wish as to the class of vessel to be selected to meet him. I have not done so, and am quite ready to sail against anything that may be brought out against me.

As to what class of vessels should compete for the Cup, there is, no doubt, much to be said on both sides of the question. The conditions of the deed of gift, requiring that a challenging yacht shall exceed 30 tons Custom House measurement, and shall cross the ocean on her own bottom, are sufficient security for the quality of the vessel. Considering the importance of length as an element of speed, the argument that the Cup should be held by the fastest yacht afloat might tend, as it appears to me, to result in the supremacy of the longest purse, or in the suppression of international racing. The merits, therefore, of the argument against yachts of comparatively small size sailing for the America Cup are not very clear. A 70-footer under ordinary circumstances stands a poor chance against a vessel of 86ft. length, like Volunteer, and no one will deny that a match between vessels of the same class is more interesting, as a race, than one in which any great disparity of size on the part of the competitors exists. But defending an international cup is an exceptional case, and no reasonable objection can be taken to Volunteer if they choose to bring her out.

The other day one of your correspondents expressed an opinion with which I am inclined to agree, namely, that in order to win back the America Cup we ought to build for that express purpose. If I fail I trust that British yachtsmen will develop that idea. My ship is a compromise. I cannot afford the luxury of a vessel built mainly for the purpose of crossing the ocean and competing for the Cup. Valkyrie was designed for racing here in the 60 rating class; but as there appeared to be no other prospect of a challenge, I departed from my original intention as little as possible, but to the extent of constructing her to sail in the 70ft. American class.

What she may have to sail against remains to be seen. The challenged enjoy certain advantages, and very properly so. They know their opponent's dimensions for six months before the race; they can build for the special purpose of beating that particular vessel if they think fit; and they can try their whole fleet and select the best—great advantages, no doubt. But the challenged if always conceded an advantage over the challenger will make use of it, and it would be ridiculous to complain of their doing so.

ADARE, Ireland, April 17. DUNRAVEN.

—*Field, April 20.*

CLASSIFICATION BY CORRECTED LENGTH.

Editor Forest and Stream:

I see by the newspapers that Gen. Paine has presented the Eastern Yacht Club with a cup to be held as an international challenge cup in the 70ft. class, and he thereby adds to the debt of gratitude which all American yachtsman owe him for what he has done for the sport. As I understand the terms of the gift the competition is to be limited to yachts 70ft. and under on the waterline, and it will no doubt do much to develop building in the 70ft. class.

It is very unfortunate, however, that Gen. Paine does not take the opportunity this gives him of checking the tendency to enormous sail area which our unfortunate system of classification encourages. He is understood to be in favor of keeping sail area within reasonable limits, and in giving this cup he has it in his power to do much to prevent the present extravagances.

If competition in the 70ft. class becomes active through international racing we shall have the experience which we have had in the 40ft. class repeated, where area of lower sail has already reached upward of 2,500 square feet. Under this new stimulus we shall no doubt soon see 70ft. boats approaching nearly the present figures of the Volunteer class. It is only a question of giving them more power, and from present appearances it looks as if the advantages more than offset the penalty paid through present time allowance.

No doubt the measurement for time allowance will be changed so as to bear more heavily on sail, but it is very doubtful if that will accomplish the desired end. The most sensible way of dealing with the problem is to change the classification and classify by corrected length, in that way the class limit would be a check on extravagances in sail, which could only be indulged in by decreasing length of hull. The limits of the various classes would be built up to, and in a short time there would be no question of time allowance between most of the boats, and improvement would be sought in more careful design and in improvement in details, which are lost sight of under the present system, where increase of power and sail are the prime requisites.

The system of classing by corrected measurement is now in use in England, where I am glad to say they have adopted substantially the rule of measurement in use here to arrive at their rating for time allowance, but they differ from us in that they use that rating for classification also. I know of no valid objection to the plan, and I wonder that our clubs do not adopt it, particularly as by so doing there would be substantially but one system of measurement and classification the world over.

The way would then be comparatively clear to an arrangement between our leading clubs and those enrolled in the Yacht Racing Association in England for such mutual changes in details as would bring the leading classes in both countries into conformity.

The modifications necessary to accomplish this end would be fewer and of less importance than is generally supposed, and it would not be necessary to change the present system of time allowances, which in this country are based on measurement in feet, and in England on tons. It would only be necessary to agree upon a common system of measuring sails, and such a mutual change in the class limits as would bring one or two of the leading English classes into agreement with corresponding classes here. There is great danger that Gen. Paine's cup will after the first race be of no interest to any one, for while we may, under the encouragement given by our rules, build boats of 70ft. waterline with enormous power and corresponding sails, it is not to be expected that the honor of winning that cup will induce Englishmen to build boats useless to them for any other purpose.

We no doubt will have a large fleet of these boats, extravagant in cost and maintenance and wanting in all good qualities, but which can easily defeat Bedouin, Shamrock, Titania, Katrina, or any 70ft. boat now afloat, but which rightly should be racing in a higher class. QUARTER LIFT.

NEW YORK, April 23.

THE RIGHT OF LUFFING.

Editor Forest and Stream:

Would you be good enough to allow me the use of your yachting columns to bring prominently before yachtsmen the question of luffing to extremity, a practice authorized by yacht clubs generally, but one which seems to require attention.

In 1882 this subject was seriously reviewed in Great Britain, but the Y. R. A. allowed the matter to lapse, instead of using their influence and weight to govern and guide the many existing clubs. I therefore put the question to your experts:

Is it advisable to alter, amend, or sweep away the luffing rule, which, though a very old yachting regulation, may be bad in principle and lead to disaster in these days of keen competition and national rivalry?

The rule of the road at sea says, in accordance with obvious reason and common sense, that when one vessel is overtaking another she shall keep out of the way of the overtaken vessel, and that the later shall keep her course.

The rule of all yacht clubs and associations says that "a vessel may luff as she pleases to prevent another yacht passing to windward" of her.

This latter rule, it will be observed, is not merely at variance with the law, but is diametrically opposed to the law. The rule of the road says that the overtaken vessel is to keep her course; the rule says she may get in the way of the overtaking vessel if the latter attempts to pass her to windward. It is just possible that in civil proceedings, arising from a collision due to this regulation, a judge might hold that the owners had by implication agreed to sail under yachting rules, but the law does not recognize agreements, express or implied, to risk or sacrifice life, and if a sailing master by recklessly luffing across another vessel's bows brought about an accident which caused death, it would be useless to plead in a criminal court that he was right according to all yachting rules.

We have then this marvellous state of things, that a man might be sentenced to penal servitude or imprisonment for doing what the rules of our yacht clubs especially authorizes him to do. Such a dangerous anomaly ought not to be allowed or continued, and it is further observed that there are good grounds for contending that, besides being opposed to the law the rule is bad in itself. The object of a yacht race is that the best yacht should win, not that the sailing masters should be permitted to indulge in petty manœuvers. If one yacht can pass another to windward it is because she sails the better of the two; if there is one principle in yachting worth contending for, it is the development of the best class or type of vessel, and not the sharp practices of sailing masters. Hence, it appears that yacht clubs are propagating rules in opposition to the civil laws of the country, and that they are doing something to prevent the development of the best type of vessels.

If an overtaken vessel on the wind has a monopoly of the course, and may luff to extremity in all cases, why should not an overtaken boat before the wind be permitted to yaw about from port to starboard, or starboard to port, to prevent another yacht from passing her. There seems to be a want of fairness and equity in this matter. REVIEW.

MONTREAL, April 19.

CORONET.—On April 25, after an absence of over a year, the schooner Coronet, Mr. R. T. Bush, arrived at New York with her owner and party on board. The Coronet sailed from New York in charge of Capt. Christopher T. Crosby on March 22, 1888, for San Diego, Col., where Mr. and Mrs. Bush, Mr. and Mrs. S. F. Denslow, and Messrs. Irving Bush and John Martin joined her. She sailed for Honolulu, then on to Yokamama, and on around the globe, Mr. Bush and his friends visiting all places of note by the way. She reached Gibraltar on March 18, sailing for New York on March 25. The weather was calm and pleasant and the trip occupied thirty-two days.

A NEW YACHT GUN.—Messrs. R. H. Brown & Co., New Haven, Conn., have lately introduced a new yacht gun possessing some excellent features. The gun is a solid bronze casting, with a breech block revolving on a strong pivot, locking itself closely when thrown into place. The ejector is strong and reliable. The gun is fitted to take the standard shot shells, paper or brass, and does not require a special shell of its own. It is made in sizes from 12 to 50in. long, mounted in various styles of carriage.

MORE CAPSIZES FOR "PODGERS."—The centerboard sloop Mischief, of Boston, capsized on April 23 off Thompson's Island in Boston Harbor. The two men on board saved their lives by swimming. The yacht was found bottom up. On April 21 two yachts of the Pavonia Y. C. capsized in New York Harbor. Both were shoal centerboard craft.

VOLUNTEER AND VALKYRIE.—*Editor Forest and Stream:* If an international trophy existed for rowing matches and the deed of gift stated that the challenger must challenge with a boat propelled by at least four oarsmen, and if a challenge were received by the holders of such trophy from a proper authority, stating that he would build an eight-oar and train a crew to race her for the trophy, what would be the opinion of all true sportsmen if the challenge were accepted, but a twelve-oar pitted against her? This is practically what Mr. Fish, Mr. Malcolm Forbes and some American yachtsmen are alleged to advocate in the case of Lord Dunraven's challenge.—THALASSA (Southampton, April 4).

MINX.—On April 13 a new sloop yacht was launched at Trenton, Mich., where she was built by Craig & Son for Hon. Nicholas Longworth, of Cincinnati. She is a compromise craft with centerboard and also 7 tons of lead in the keel; her dimensions being: Length over all, 72ft.; l.w.l., 57ft.; beam, 17ft.; draft, 6ft. 6in. She will carry the rig of the old Cora, purchased by Judge Longworth last fall; she is flush decked, with owner's staterooms, toilet room and four berths in main cabin, besides a room for the sailing master and large forecastle and galley. Her moorings will be off the Cleveland Y. C. house, and she will sail in all the regattas on Lake Erie.

THE PATTERSON'S CHALLENGE.—Vice-Com. Edmund W. Throckmorton, of the North Shrewsbury Y. C. has accepted the challenge of the owner of the Philadelphia catboat Robert S. Patterson to sail a match for $500 a side with any boat not exceeding 18ft. 2in. in length. The Patterson measures 15ft. 2in. and the Jersey boat 18ft. 7in.

PLEON Y. C.—The new 16ft. cutter which Williams is building for a member of the Pleon Y. C. is named Oswa. She is now nearly planked. Wood Bros. are also building a 16ft. boat for Mr. S. W. Sleeper, of the P. Y. C., to be called Edith. She will be sloop rigged. Williams has planted the 26ft. cat he is building.

PRINCE KARL—MALVENA.—Mr. A. J. Lovett, the owner of the cutter Prince Karl, has changed her name to Malvena.

ELFIN, schr., has been sold by M. O. Jones to David I. Jackson for $10,500.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

Answers to Correspondents.

Address all communications to the Forest and Stream Pub. Co.

☞ **No Notice Taken of Anonymous Correspondents.**

A. C. B., City.—Are there any standard widths or lengths for ground pigeon traps, H. & T. traps included. Ans. There are no standard dimensions.

C. N. K., New York.—Can you advise me as to a good place near the city for snipe shooting? Also best time to go, whether a dog is needed, decoys, wading boots, etc. Ans. If you mean English snipe go to Essex in Connecticut and shoot along the Connecticut River. It is late for spring shooting; fall shooting in September. For bay snipe take shore of Barnegat Bay or Long Island Sound. Wading boots are useful in English snipe shooting, and decoys are sometimes used for bay snipe, but a dog is not needed for either.

H. B., Heath, N. Y.—Will you be kind enough to identify the hawk described below: Size about that of Cooper's hawk, may be a trifle larger; head and neck bluish slate color; back, wings and tail same color barred with dark slate; rump ash color barred with dark slate; throat and neck light buff; breast buff; belly and lower parts buff, each feather barred with black; under parts of wings white, barred with black; iris brown; upper mandible bluish slate, tip black; lower mandible yellow, tipped with dark slate; cere and eyelids yellow; legs and feet yellow. Ans. No doubt an adult duck hawk (*Falco peregrinus anatum.*)

INFORMATION WANTED.

I have read with interest the advice that Iron Ramrod, Louis Bagger and others have given N. Orleans in regard to the small-bore rifles. Now, I would like to have some one give me advice. I intend to settle out in Montana, and I want to provide myself with a good hunting rifle, but the question is what kind of a rifle shall I get? Lately there was an old rancher here from Wyoming; I asked him what rifle he would advise me to buy, and he told me to invest in a .44-40 Winchester repeating rifle. Now, I would like to have some of my fellow readers of the FOREST AND STREAM give me their ideas about this gun and others.—G. C., Milwaukee, Wis.

While hunting last November on Gribbin Lake I found three families of beaver. I have been trying to catch some of these beaver all winter, but failed so far. I think the water is too deep and too much mud. Will some of the readers of FOREST AND STREAM be kind enough to give me a few points on trapping the beaver.—GRIBBIN, Negaunee, Mich.

Will the readers of FOREST AND STREAM please inform me where I can find bear hunting in West Virginia, Virginia or elsewhere in the east; also, what time in the fall and spring is the best time. I would also like to know if any one can tell me where canvasback ducks breed at, and if it is possible to procure eggs or young.—W. R. L. D., New Petersburg, O.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NEW YORK, Aug. 9, 1888.—*U. S. Cartridge Co., Lowell, Mass.*—Gentlemen: Your new primers gave me the best of satisfaction. I have averaged nearly 80 per cent. of kills both on live birds and targets ever since I began to use them. Yours truly, (Signed) M. M. F. LINDSLEY, Supt. American Wood Powder Co., West Hoboken, N. J.—*Adv.*

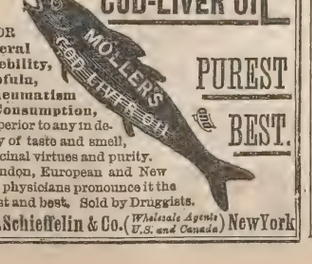
Ligowsky C. P. No. 3



The only target having the patent

INTURNED EDGE.

2,000 shots out of each 1,000 targets on account of non-breakage in shipping, trapping and falling upon ground. The only target made with the INTURNED EDGE, producing the surest breaker when hit, and surest non-breaker when not hit. Our traps are sold for the sole purpose of shooting our targets.

MOLLER'S NORWEGIAN COD-LIVER OIL

FOR General Debility, Scrofula, Rheumatism or Consumption, is superior to any in delicacy of taste and smell, medicinal virtues and purity. London, European and New York physicians pronounce it the purest and best. Sold by Druggists.

PUREST and BEST.

W. H. Schieffelin & Co. (Wholesale Agents U.S. and Canada) New York

Hotels and Routes for Sportsmen.

GRAND TRUNK RAILWAY.

When planning your summer piscatorial tour remember that this company controls over 4,100 miles of railway, equipped in the most approved modern style, and passing through a magnificent country, noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

PORTLAND, ME.—For salt water fish.
RANGELEY LAKES (via Bryant's Pond or Bethel, Me.)—For brook trout, pickerel, yellow perch, rock bass.
THE WHITE MOUNTAINS (via Gorham, N. H.)—For pickerel, trout, bass, cusk.
THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).
LAKE ST. JOHN DISTRICT.—For Ouinaniche (reached via Quebec).
THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For mascalonge, pike, bass, whitefish, pickerel, perch.
THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, mascalonge, pike.
MUSKOKA LAKES (the best place on the continent for fishing, shooting and camping, reached from various points on Northern and Northwestern Division).—For brook and salmon trout, black bass, mascalonge, pickerel.
PARRY SOUND AND GEORGIAN BAY.—For pickerel, mascalonge, black bass.
LAKES ONTARIO, ERIE, HURON AND MICHIGAN, (via stations at all principal ports).—For the varieties of fish for which they are noted.
LAKE SUPERIOR (via Collingwood, Wiarton, Sarnia, in connection with steamship lines).—For lake trout, etc.

The charges for hotels, guides, and camping at many of the fishing waters named above, are extremely low. Full particulars of same, with many valuable hints as to baits, best months and general facilities are published in a pamphlet entitled "**Fishing and Hunting Resorts of the Grand Trunk Railway.**" which will be furnished gratuitously on application to any of the company's principal agents, or of the General Passenger Agent, Montreal, P. Q.

WM. EDGAR, Gen. Pass. Agent. JOSEPH HICKSON, Gen. Manager.

Only 33 hours from New York, 29 hours from Boston to Roberval, Lake St. John.

ANGLER!

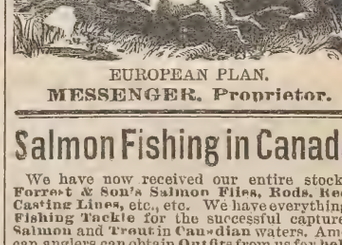
Did you ever catch a fresh-water salmon? If not, try Lake St. John; or, if you want the largest of brook trout, try Lake Edward. Bring your families at the same time, to enjoy some of the most delightful scenery in America. Comfortable hotels at Roberval and at Metabetchouan. Lake St. John, 190 miles, and at Lake Edward, 115 miles, from Quebec. Express trains each way daily.

For particulars of lakes and fishing, read "Adirondack" Murray's "Doom of Mamelons," or Kit Clarke's "Where the Trout Hide." For folders and other information address, ALEX. HARDY, Gen'l Pass. Agent, Quebec, or G. LEVE, 315 Madison avenue, New York.

J. G. SCOTT, Sec'y and Manager.

General offices, 92 St. Peter st., Quebec, Can.

The Tomahawk Lakes & Trout Lake



Are the very best fishing grounds in the State of Wisconsin. These lakes are located in Oneida county, along the newly completed line of the Wisconsin Valley Division of the *Chicago, Milwaukee & St. Paul Railway*, and the whereabouts is just being made public. Muscallonge, bass and trout in abundance.

During the season of 1889, necessary hotel and camping facilities will be provided for all sportsmen who are looking for "greener fields and pastures new."

Buy tickets to Minocqua, Wis., via the Chicago, Milwaukee & St. Paul Railway.

For further information address A. V. H. Carpenter, General Passenger Agent, Milwaukee, Wis.

Bromfield House, Boston.

Yacht Designing.

HENRY J. GIELOW,
Designer of Steam and Sailing Yachts,
And Steam Yacht Machinery and Boilers.
239 BROADWAY, ROOM 15, NEW YORK.

Yachts and Canoes For Sale.

Cruising Yacht For Sale or Charter.

The owner of a well-known yacht, 47ft. long, 14ft. beam, 6ft. draft, perfectly fitted out for the comfort and accommodation of four to six persons in the cabin, and three men in forecastle, patent w. c. and all modern improvements, will sell or charter her at a reasonable price on account of important business engagements preventing his leaving the port during the summer months. The yacht is built upon a beautiful model, has two rigs, can be sailed as a sloop, when she is very fast, or as a yawl for cruising. She was built during the winter of 1886, of best of material, under the personal supervision of the owner, and is a staunch and excellent sea boat, well suited for cruising in the gulf of St. Lawrence, and has been so employed, where capital sea trout and other fishing can be enjoyed, and salmon may be included, seal and white perpoise hunting, duck and shore bird shooting. This is an opportunity seldom offered. Address P. O. Box 1081, Quebec City, Can. Satisfactory references in New York or elsewhere given and required.

Yachts and Canoes For Sale.

FOR SALE.—THE CELEBRATED SINGLE-handed yawl Windward. Can be seen at the foot of Spring st., Newport, R. I. Address C. F. L., 14 Walnut st., Boston, Mass.

Wanted.

WANTED.—A TENANT FOR A FARM ON St. Simons Island, Georgia. A Scotchman and married man preferred. The land is well adapted for raising stock and crops of all sorts, fruits and early vegetables. Delightful climate, healthy and moderate all the year round. Daily communication by boat with Brunswick, Savannah and other points on the coast. Comfortable dwelling house and outbuildings. Terms moderate. For further information address HENRY C. ESLING, 402 Walnut st., Philadelphia, Pa.
ap25,4t

COPIES WANTED.—JAN. 6, 1881; MAY 22, June 5, 19, 1884; Oct. 1, 8, 15, Dec. 31, 1885; May 24, 1888. We are short of these issues and will pay 10 cents each for them. FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

WANTED.

A few gentlemen to join me in duck shooting. Thousands of all kinds of wild duck. For further particulars address CAPT. JNO. W. STILES, Exmore P. O., Northampton Co., Va.

SPORTSMEN SMOKERS

SHOULD ALL SMOKE OUR CELEBRATED

Hand-Made Havana Cigars.

MADE IN TWO STYLES AND SIZES.

LONDRES PERFECTO, 5in. long @ $7 00 per 100
CONCHAS ESPECIALS, 4¼in. @ 6.00 "

The favorite cigar of Rod and Gun Clubs generally. These cigars are made of the choicest tobaccos grown, and selected with the greatest care. They cannot fail to suit the taste of all lovers of the fragrant weed. Each cigar has the brand impressed on it, and every box has a label, fac-simile of the title of the popular journal, and our firm's signature, without which none are genuine. We are the only authorized manufacturers of the above brand, and to insure the smoker of the genuine we would ask you to send us your orders direct. We will deliver, free of express charges, either size, on receipt of price.

Post Mills, Vt.
(Mention this paper).

No Chemicals.

W. BAKER & CO.'S
Breakfast Cocoa

Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

Illustrated Catalogue, Sportsmen's Books, mailed for 5 cents.

For Sale.

Shooting and Fishing in Canada.

The subscriber, who has had many years' personal acquaintance as a surveyor with the forests and streams of the Maritime Provinces of Canada, as well as with those of part of Quebec, is prepared to act as resident Canadian agent for any association of sportsmen in the United States, for the purpose of pointing out and directing parties to localities for fishing as well as for hunting moose, caribou, bear and other game; also for procuring canoes, guides and hunters, and the securing of all supplies required for a camping outfit—the guides engaged would be such as are personally known to him. Proper reference given on application. EDWARD JACK, Fredericton, N. B., Canada.

Restigouche Salmon Fishing.
